TIS helped solve Best Western's immediate needs. More importantly, with TIS Best Western International now has a migration path to the future —with little concern for obsolescence.

Modern Technology For Modern Needs

TIS is a totally integrated application development and information processing system. Its entirely new architecture is designed to meet a wide range of needs. Designed for complex, high volume data base environments, TIS provides:

- Full in-line integration, so that one system can be used to meet the needs of all users with unprecedented security and control.
- A relational view of data which gives programmers and end-users complete data structure independence.
- A powerful 4th Generation procedural language to serve requirements of both programmers and end-users.
- A new Data Manipulation Language so powerful only four commands are needed to handle even the most complex logical data base processing: GET, INSERT, UPDATE, DELETE.
- An Intelligent Query language to provide instant information to end-users for virtually all ad hoc needs.
- A new DBMS component that provides unique data structuring capabilities with high performance.

Check Into TIS For Your Company's Needs

TIS is giving Best Western International a migration path to the future. Isn't it time to find out what TIS can mean to the future of your company? For more information, or for answers to your specific questions, contact our Marketing Services Department, 2300 Montana Avenue, Cincinnati, Ohio 45211.

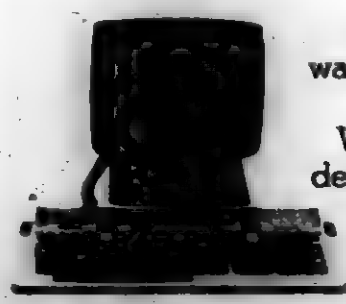
WITH DATA GENERAL, YOU WON'T BE A PRISONER OF YOUR IN-BOX.



DATA GENERAL INTEGRATED OFFICE AUTOMATION

Burying information under a ton of mail at the bottom of your in-box is not the best way to get it when it's critical to a decision.

ELECTRONIC MAIL

With Data General's CEO® Comprehensive Electronic Office, information is delivered electronically. Instantly. Unerringly.

But that's only the beginning.

TOTAL OFFICE AUTOMATION

The CEO system automates just about everything in your office. CEO electronic filing files the way you do. Its electronic calendar keeps tabs on trips, appointments, and meetings—even confirming them all.

Of course, CEO includes easy-to-use word processing. And all this is integrated with data processing for total decision support.

DON'T DUMP YOUR EXISTING EQUIPMENT

Best of all, instead of having to dump your existing equipment to automate your office, you can build the CEO system around it.

Because it not only ties in with other Data General computers, but it also ties in with the most widely-used mainframe and word processor.

Instead of just a series of personal computers, each CEO workstation becomes part of a global network, with access to data from IBM mainframes.

AS LITTLE AS $5,000 A WORKSTATION

And with the CEO system, the cost per workstation can be as low as $5,000, depending on application.

CALL NOW

For more information on office automation that's a generation ahead, call: **1-800-554-4343, Operator 05A** or write Data General, M.S. CEO 05A, 4400 Computer Drive, Westboro, MA 01580.

SYSTEMS & PERIPHERALS

POWER SUPPLIES

BITS POWER SYSTEMS, INC.
Model UPS 200, 400

Bits Power Systems, Inc. has announced two uninterruptible power supplies that it says can be permanently on-line for small system users.

Model UPS 200 and Model UPS 400 are said to provide dedicated, continuous and isolated electrical power by using utility line power to maintain a full charge on internal gel-type batteries.

The units reportedly have visual, audible and remote alarm functions and a standard battery monitor. Standard full-load back-up time is said to be 10 minutes, although external 12-volt batteries may be plugged into the units for extended back-up time, the vendor said.

The Model UPS 200, a 200W unit, is priced at $795. The Model UPS 400, a 400W unit, is priced at $995.

Bits Power Systems, Suite B114, 11020 Audelia Road, Dallas, Texas 75243.

SAFT AMERICA, INC.
AC line conditioner; electromagnetic interference filter; transient voltage surge suppressor

The Electronic Systems Division of Saft America, Inc. has introduced a line conditioner to correct high- and low-output voltages, an electromagnetic interference filter and a surge suppressor for minis and microcomputers.

The Saft AC Line Conditioner reportedly provides power line isolation and regulation while suppressing high-voltage pulse energy and interference noise. It is said to adjust output voltage even if an electrical utility should drop the voltage. It is designed to filter out noise spikes and electromagnetic spikes, which could cause the system to lose memory, the vendor said.

The unit is rated at 500Vac and features a 3% harmonic distortion maximum for a resistive load, the vendor said.

The Saft Electromagnetic Interference Filter is said to suppress high-voltage pulse noise and medium- to high-frequency noise. It reportedly has a normal-mode attenuation of 40db-plus and a common-mode attenuation of 35db, the vendor said.

The Saft Transient Voltage Surge Suppressor is said to be a two-stage, high-energy clamping protector for equipment operated off a power line. It is designed for a response time faster than five nsec. It reportedly has a threshold level of 240V, with instant recovery.

All three products are scheduled for late January deliveries. The line conditioner is priced at $895, the interference filter at $39.95 and the surge suppressor at $149.

Saft Electronics Division, 3414 W. 14th St., Tempe, Ariz. 85281.

BOARD-LEVEL DEVICES

ADVANCED MICRO DEVICES, INC.
Am96/5282

Advanced Micro Devices, Inc. recently announced a memory expansion and I/O expansion board said to be compatible with Intel Corp.'s Multibus.

The Am96/5282 provides sockets for up to 256K bytes of erasable programmable read-only memory (Eprom), 128K bytes of random-access memory or 32K bytes of electrically Eprom, a spokesman said. The I/O portion of the board reportedly includes one RS-232C synchronous/asynchronous serial port, a parallel interface with 24 lines, counter/timers, a programmable interrupt controller and a connector permitting customized I/O.

The board can support 8- and 16-bit microprocessors by providing 20- and 24-bit addressing, 8- and 16-bit memory data and 8- and 16-bit I/O addresses. The product is priced at $995.

Advanced Micro Devices, 901 Thompson Place, Sunnyvale, Calif. 94086.

PARAGON TECHNOLOGY CORP.
Paragon Model 200

Paragon Technology Corp. (PTC) has introduced the Paragon Model 200, the second in a family of turnkey color computer-aided design (CAD) systems said to be closely tailored to the needs of printed-circuit board designers.

The multitasking Model 200 uses software developed by PTC's Swiss affiliate, EIE. The system reportedly is built around a 20-MHz Digital Equipment Corp. LSI-11/23 minicomputer with an independent 16-bit proprietary graphics processor. It offers 256K bytes of memory, enabling the user to design complex boards that measure up to 32-in. by 32-in. and contain as many as 500 equivalent integrated circuits and 64 layers.

The interactive Model 200 includes a 19-in., high-resolution 64-color display with pan and zoom features, a 20M-byte Winchester disk drive for archival storage and an 8-in. floppy disk drive, the vendor said. A separate video display console permits data entry and system control, while a desktop printer can be used to produce documents required for manufacturing.

The Model 200, which includes PCD II, printed-circuit design software, a line printer and a factory training course, costs $59,950.

PTC, 2190 Norse Drive, Pleasant Hill, Calif. 94523.

COMMUNICATION NETWORKS '84 offers you 100 solutions to your post-divestiture telecommunication problems.

Charles Wohlstetter, Chairman, CEO, Continental Telecom, Inc. Keynote

P.S. Pignlatelo, AT&T Information Systems Viewpoint

Mimi Dawson, F.C.C. Policy

Howard Anderson, The Yankee Group Futures

Amy D. Wohl, Advanced Office Concepts Micro Networks

As telecommunications and data processing managers, your success depends on keeping up to date with changing technologies. At COMMUNICATION NETWORKS you can choose from 100 information-packed sessions designed to help you succeed.

You'll learn how to survive the transition into the competitive telecommunications environment resulting from the AT&T divestiture. You'll discover new applications in Local Networks, Satellite, Bypass/DTS, Public and Private Data Networks, Interconnection, Micro Networking and new management technologies.

COMMUNICATION NETWORKS gives you twelve sessions focusing on "Network Technologies." Thursday, February 2, is "Microcomputer Networking Day," a full day devoted to teaching you how to get more from your PC than just stand-alone applications.

You may even choose to develop specific skills in one of the nine full-day "In-Depth" seminars. "In-Depth" seminars will be held on January 30, one day prior to the official opening of COMMUNICATION NETWORKS.

In just five years, COMMUNICATION NETWORKS has become the leading professional communications conference and exhibit in the nation. And COMMUNICATION NETWORKS '84 promises to be even better than ever—more sessions, more speakers, more exhibitors including American Satellite Co., AT&T Information Systems, COMSAT, Digital Equipment Corp., General DataComm Ind., General Electric Co., Integrated Communication Systems, General Electric Co., Microwave Link Operation, GTE Business Communications Systems, GTE Sprint Communications Corp., Harris Corp., DTS Div., Hewlett-Packard, M/A-COM, Mohawk Data Sciences, Northern Telecom, Inc., Scientific-Atlanta, Inc., Siecor Corp., 3M Business Communication Products, Ungermann-Bass, Inc., Uninet, United Technologies Communications Co. and many more offering the latest in products and services.

The DEC Rainbow 100+. The Rainbow 100+ system unit features 256A and 8088 microprocessors, a 10 MB Winchester hard disk, a dual floppy diskette with 400 KB capacity and synchronous communications, built-in terminal emulator, printer port and 128 KB of system memory.

As an added plus for CN '84 attendees . . . you'll have a chance to win a DEC Rainbow 100+ Computer System.

COMMUNICATION NETWORKS '84, will take place at the Washington Convention Center in Washington, D.C., the telecomm capitol. It will be held on January 31 - February 2, 1984.

Call toll-free 800-225-4698 (in MA, 617-879-0700) for more information. Or fill out and return the coupon below.

COMMUNICATION NETWORKS Conference & Exposition

SYSTEMS & PERIPHERALS

BOARD from page 67

INTERSIL SYSTEMS, INC.
ISB-3430

Intersil Systems, Inc. has announced the addition of the ISB-3430 CRT controller and keyboard/light pen interface card to its STD bus product line.

According to the vendor, the light pen interface can be used in a variety of applications.

The ISB-3430 is an STD bus-compatible card that provides the user with a general-purpose, 80- by 24-char. alphanumeric and character graphics generator, the vendor said.

The board features transistor-to-transistor-level video with separate vertical and horizontal synchronization. A user-programmable, electrically programmable read-only memory for special character generation is also included.

Other features include inverse video, half-intensity and blinking display, hardware scrolling and programmable video parameters. In addition, the card provides an 8-bit parallel input port and strobe, the company said.

The ISB-3430 is available now for $364.

Intersil Systems, 1275 Hammerwood Ave., Sunnyvale, Calif. 94086.

RELIANCE ELECTRIC CO.
Model 45C92

An intelligent memory module designed to provide nonvolatile, off-line program storage for Reliance Electric Co.'s (REC) Automate 15 programmable controller is now available from that vendor.

The Model 45C92 is said to be a memory-duplication storage-and-loading device that allows users to copy, store and load programs from the Automate 15. Off-line programming capability is provided when used with REC's Mini Programmer and Intelligent CRT Programmer, the vendor said.

Also, a 2K-bit by 8-bit nonvolatile memory provides memory storage integrity without the need for battery backup and is large enough to copy any Automate 15 application program, the vendor said. It connects to the Automate 15 and its programming devices via a 25-pin, D-shell connector on their serial communications ports. The Model 45C92 costs $110.

REC, 4900 Lewis Road, Stone Mountain, Ga. 30083.

AUXILIARY EQUIPMENT

CUSTOM SYSTEMS, INC.
BMX-1

Custom Systems, Inc. has announced a disk controller for Data General Corp. users.

Plug-compatible with the burst multiplexer channel on DG minicomputers, the BMX-1 is said to allow users to select any storage module drive-interfaced disk drive for use with the DG S-140, S-280 and MV series of processors.

The BMX-1 has four disk drive connect ports with software-configurable drive characteristics on a port-by-port basis. The unit uses electronically erasable programmable read-only memory technology, which Custom Systems said eliminates the need for switches and makes all functions configurable via downline-loaded software.

The BMX-1 features an on-board 32-bit error-correcting channel for error detection with burst error correction to 11 bits in length.

The BMX-1 controller is priced at $4,995 with quantity discounts available.

Custom Systems, 5850 Shady Oak Road, Eden Prairie, Minn. 55344.

ANCHOR PAD INTERNATIONAL, INC.
Crime Stopper

Anchor Pad International, Inc. (API) has announced a device said to prevent theft of computer time and unauthorized use. Together with the vendor's Security System, it protects the processor and its components from being physically stolen.

Crime Stopper aids security by preventing unauthorized persons from even putting the computer on-line, the vendor said. It can be used either as a stand-alone measure or in conjunction with the Security System. Crime Stopper is similar in concept to a bank's automatic teller machine and is available in two styles — allowing access by key or magnetic card, the vendor said.

Crime Stopper reportedly also controls the processor's monitor disk memory and printer. Other features prohibit thieves from unplugging the hardware. The product also protects equipment from power line surges or high-frequency noises, the vendor said.

Crime Stopper retails for $100 when used as a key-access device or $150 to $300 when used as a card reader. Prices can vary depending on user specifications.

API, 3224 Thatcher Ave., Marina Del Rey, Calif. 90291.

BELDEN/CPD
Power supply cords

Belden/CPD has introduced eight electric power supply cords, each with an Underwriters Laboratory temperature rating of 105 C.

The power cords come in unshielded or shielded models. The shielded models have a Beldfoil shield, a thin layer of aluminum foil bonded to a polyester film.

The cord conductors feature a box-contact design which prevents any molding compound from entering the contact area and results in enhanced electric performance, low temperature rise and additional mechanical strength, according to the vendor.

The cords are two meters in length and have a power rating of 1,250W, 10A and 125V, the vendor said.

The eight cords range in price from $4 to $5.

Belden/CPD, 2000 S. Batavia Ave., Geneva, Ill. 60134.

NATIONAL COMPUTER COMMUNICATIONS CORP.
Rental plan

National Computer Communications Corp., a distributor of microcomputers, CRTs, printers and modems, has announced a rental plan for selected products.

Formerly, the vendor sold products to end users or provided one-, two- or three-year leases. The distributor has introduced a month-to-month rental program said to allow end users to enter an agreement for equipment needed for a minimum of 30 days. Products available under this rental program include the Digital Equipment Corp. LA120, LA12, LA34, LA36 and VT220. Several Racal-Vadic, Inc. modems as well as Texas Instruments, Inc. terminals, Computer Devices, Inc. terminals and teletype terminals are also available.

National Computer Communications, 260 West Ave., Stamford, Conn. 06904.

Move up from your System/34 without losing your investment.

Why rewrite your software just because you've outgrown your System/34? With the ESCAPE/34 software package developed by Database Systems Corp., you can migrate all your System/34 applications to the Prime 50 Series of 32-bit computers. ESCAPE/34 makes up to 95% of your RPG II statements compatible with Prime. Any remaining statements are automatically flagged for you.

Then once you're in the Prime family, you'll never have to worry about growth again. All our computers are fully compatible, clear up to a system with 16Mb of memory and 5 billion bytes of storage. And you can keep growing, with the most versatile networking in the industry, fully integrated office automation software, extensive CAD/CAM capability, and over 1,000 third-party applications.

Send the coupon today for more information, or call our toll-free number. And help us save your software investment.

MICROCOMPUTERS

Communications lacking in micros

MICRO BITS

THOMAS W MADRON

By Thomas Madron
Special to CW

Microcomputer communications programs abound — unfortunately most of them are inadequate for long-term use in large organizations.

The demands made on microcomputer communications are different for organizations than for individuals, and little of the difference is reflected in the many terminal programs available for almost any currently produced microcomputer. A discrepancy exists between software and hardware manufacturers in the audiences being targeted for micro communications. The perception of software manufacturers is undoubtedly that the primary market for communications programs lies in the personal (read: home) computer market. The major micro manufacturers, however, have clearly targeted large organizations as their primary market.

There also seems to be something of a problem revolving around the computing experiences of those designing microcomputer communications software. Many programmer/analysts seem to have had experience only on micros, or at best, on minis such as Digital Equipment Corp.'s VAX-11/700 series machines. The result of such experience (or inexperience) is a misperception of the needs for communications in large organizations and the production of communications software with an inability to communicate adequately with large IBM or IBM-compatible mainframes.

Most large organizations require some communications with IBM-style systems and many also require communications

See MICROS page 70

Turnkey out for Wang micros

Provides access to IBM mainframes

LOWELL, Mass. — Wang Laboratories, Inc. has introduced a turnkey product said to allow its Professional Computer or PIC professional image computer to access instantly an IBM mainframe data base when attached to an IBM 3270 terminal network.

Equipped with the 3278 Emulation Board, a Wang Professional Computer or PIC reportedly becomes an intelligent workstation replacement for a 3278 terminal, while maintaining the ability to operate concurrently and independently of host programs.

In addition to being a stand-alone system, the Professional Computer can be upgraded to a PIC, serve as a Wang Office Information System or VS workstation, be connected via a local interconnect option, attach to Wangnet and emulate non-Wang terminals, the vendor claimed.

Once the board is installed, a Professional Computer or PIC can attach in native mode to an IBM 3270 terminal network. Modems, telephone lines or special cabling are not required. Also, both IBM's Binary Synchronous Communications and Systems Network Architecture/Synchronous Data Link Control protocols are said to be supported.

Further, a Professional Computer or PIC with the emulation board has total display-symbol compatibility with all 3278 terminals on the network. When either microcomputer is in emulation mode, the 3278 Emulation Board maintains an image of the 3278 screen. This screen image is immediately retrieved and displayed when a user returns from local programming to 3278 emulation mode, the vendor said.

The board occupies only one I/O slot on the Professional Computer's chassis and does not reduce the amount of memory available to the user. Also, the microprocessor control program for the board resides on diskette. Other features include menu access to full screen host applications, verification of line activity and condition and an independent, on-board, serial RS-232 interface, said to alleviate the need for an IBM synchronous communications adapter board and to free an I/O slot normally required for such an interface.

Available as a stand-alone product or as an attachment to the Wangnet Cmux-3270 cable multiplexer, the 3278 Emulation Board is priced at $1,095.

Wang, 1 Industrial Ave., Lowell, Mass. 01851.

Nanostar 10 supports nine users

COSTA MESA, Calif. — Star Technologies, Inc. has introduced Nanostar 10, a microcomputer that, the company claimed, can support nine users.

The base system features 128K bytes of random-access memory, which is expandable to 512K bytes; a 10M-byte hard disk; nine RS-232 ports; one parallel port; and a 16-bit Fairchild Industries, Inc. 9445 microprocessor that operates at a speed of 18 MHz, according to the vendor. Operating systems used by Nanostar include Iris from Electronics Data System Corp. and Bits from Dynamic Concepts Corp.

The microcomputer can be upgraded with 20M or 40M bytes of hard disk storage. A QIC-02 ¼-in. streamer tape, which reads data from a hard disk at a rate of 5M byte/min and provides 20M or 45M bytes of storage, can be added.

Star software reportedly can support as many as 65 users.

The base system costs $7,200, which does not include terminals.

Star Technologies, 3180 Pullman, Costa Mesa, Calif. 92626.

Software packages seen pivotal to micro training

By Anthony J. Pesce
Special to CW

Second in a Two-Part Series

Contrary to popular belief, there is no need, when conducting a training seminar on personal computers, to dive deep into hardware for the benefit of the management audience. The need to explain the attributes of read-only memory, random-access memory, erasable programmable read-only memory and so on only confuses the purpose of the seminar.

A pivotal point to be stressed in the discussion is the role of the software package. Perhaps this section deserves some special attention with regard to the overall success attributed to personal computers. There is a great deal of difference between using a personal computer and knowing how to program a personal computer in Basic.

The software discussion should touch on the cost-effectiveness of purchasing packages vs. paying for the development of custom software. At this point, there is an excellent opportunity to describe the function of the in-house support staff that management information systems (MIS) has assembled to address the needs of its personal computer users.

An overview of each of the functions that software can perform should be included in this section. By most standards, the likely candidate for heaviest use is the software that performs the function of spreadsheet analysis or electronic work sheets, generally referred to as modeling.

There are very few aspects of an organization that cannot be modeled. The decision-making process is not binary; it is iterative in nature. This fact points out the match between function and task that the personal computer brings to management's desk.

It is a simple tool for a simple but repetitive task. Managers who use modeling can demonstrate its time-saving capacity by showing examples of tasks that can be done faster and more efficiently using a personal computer with modeling software.

The education process is a matter of condensing experience and relating it to the use of personal computers via description of the concept in actual practice.

With surveys showing that one out of 10 executives is afraid of computers because he thinks he will be unable to adapt to the new technology, it is obvious why management does not immediately gravitate to micros. Yet when management is properly educated, it is amazed at the potential of these typewriter-televisions.

The ability to take columnar information and turn it into meaningful business graphics may be the dark-horse winner in the management popularity contest. Obstacles to using color graphics media, namely the time and cost related to a graphics arts project, simply do not exist any more. With the simplest of instructions, complex models can be translated into easy-to-understand graphics.

A recent Wharton Business School study outlined the reasons that business graphics were used by more top executives:

■ The average time for a meeting is reduced by 28%.

■ The presenter is perceived as more professional.

■ Complex and detailed information is understood more easily.

■ The persuasion power of the presenter is increased twofold.

In reality, man is a visual animal. Approximately 87% of all information taken in is stored visually — that is, graphically.

As the management seminar begins to approach the three-quarter mark, the subject of connecting to the big computer surfaces. The obvious opportunity to save the step of keying in the information to be used in the model is to have the host computer send the information to the personal computer via a telephone connection.

For years, the management participants have approved MIS budgets

MICROS from page 69

with other vendors' computers. It is important, therefore, for the designers of communications software to understand the issues that go beyond accessing other micros, or information utilities such as Source Telecomputing Corp.'s Source or Compuserv, Inc.'s Infoplex. One of the most important considerations is the need for adequate file transfer capabilities. While considerable effort has been expended in developing protocols for transferring files between micros, little effort has been made in understanding the file transfer problems in large organizations.

A second area often neglected is the fact that in large organizations communications speeds are not limited to 300 or 1,200 bit/sec. In fact, it is likely that most organizations would prefer to standardize on 9,600 or even 19,200 bit/sec. In a large organization communications will probably not be constrained to dial access to mainframe systems. With newer 16-bit machines, the speed problem may have been largely solved through the use of interrupt-driven CPUs (such as the Intel, Inc. 8088s). While many communications programs, even for Zilog, Inc. Z80s, allow file transfer to proceed at 4,800 or 9,600 bit/sec, normal interactive communications will bog down at that rate.

Reason for speed problem

One reason for the speed problem is that many of the programs have not been optimized for the higher data rates, except for file transfers. A second reason is that while the programs flow control file transfers, normal keyboard communications is not flow controlled. Yet, there are many instances where it is not only desirable, but necessary for keyboard-to-keyboard communications to be flow controlled. Flow control is the ability to do speed matching so that data is not lost because the receiving computer is too slow. The most common approach to flow control is to buffer incoming data and then have the receiving system send an X-off character telling the sending station to stop sending momentarily.

There is a major exception to what has already been said. There are a number of programs available for a wide variety of operating systems and a wide variety of microprocessors, which emulate IBM's 3270-type terminal. The 3270 uses a synchronous rather-than asynchronous protocol. The disadvantage with a 3270 emulator is that a specialized RS-232C board may be required and, more importantly, the 3270 approach is restricted to IBM-style communications. Most of the existing programs emulate a remote 3275, which requires a bisynchronous port on host, which may prove problematic under some operating environments.

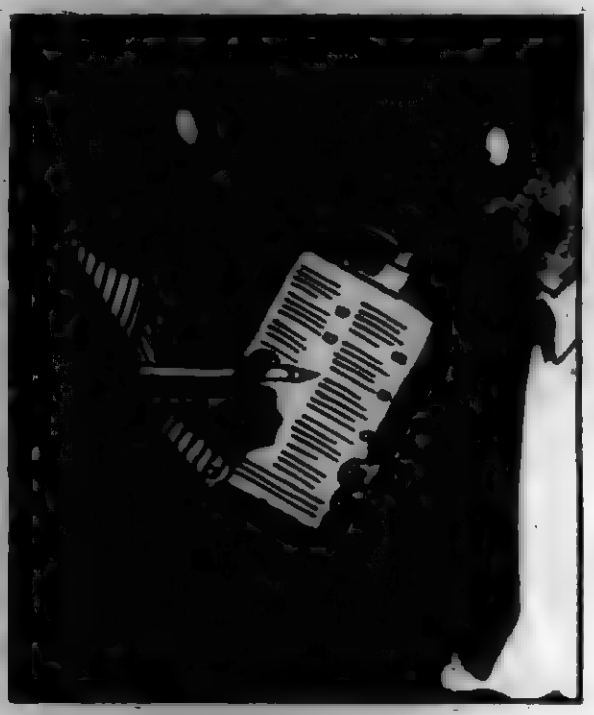
An alternative method for emulating IBM 3270-type communications is to use a protocol converter, which most frequently appears to the IBM mainframe as a 3274 cluster controller and is attached through a binary synchronous or Synchronous Data Link Control port of the front-end processor. If the organization has major systems from different vendors (IBM, DEC and others) the protocol converter solution may allow a single micro to communicate with all systems over an appropriate network and use all full screen functions of all or most systems.

If the Ascii terminal emulator on the micro and the protocol converter on the IBM-compatible system is used, then care must be taken in selecting the appropriate terminal emulator.

Software designers producing communications software for microcomputers need to catch up with the marketing strategies of the major manufacturers of micros. The software houses need to take a more comprehensive view of the communications needs of large organizations. A communications program designed to meet the needs of large organizations can also be made to meet the needs of individuals, but the reverse is not necessarily true.

Madron is manager of Computer Services at North Texas State University, Denton, Texas.

Can you answer these questions on local area networks the way you would have two years ago?



1. Is broad versus base band still an important issue?
2. Will local area networks and PBXs co-exist, be mutually exclusive or will one be subservient to the other?
3. What role does VLSI technology play in linking peripheral devices to local area networks?
4. What are the standards?

The March issue of *Computerworld On Communications* will give you answers to all the questions above—and much more. You'll get an overview that takes a close look at LAN products and technology and then examines it in the light of competing PBX technology.

You'll get information on linking mainframe computers and local area networks. You'll get an evaluation of token ring technology. And there's more! You'll get lots of special feature articles on communications topics from "Who the Bell operating companies are hanging from" to a profile of Rolm Corporation. Take a look at what some of our other features will cover for you:

- Communications processors.
- R&D in communications companies.
- Fiber optics.
- The low end of the PBX market.
- International record carriers.
- Workstation telephones.
- The future of Centrex.
- Protocol conversion.

Computerworld On Communications is designed to give you in-depth coverage of the broad spectrum of voice, image and data communications from a systems perspective. As a *Computerworld* subscriber, you'll be getting six issues of *Computerworld On Communications* in 1984—as part of your subscription! And if you need to be on the cutting edge of networking technology, you won't want to miss the March 14th issue.

If you've got communications products our readers should know about, then you need to get your ad reservation in by February 3rd. The materials are due one week later on February 10th. To reserve ad space in the March 14th issue of *Computerworld On Communications*, call one of the sales offices listed below, or call Ed Marecki, National Sales Director at 617-879-0700.

Soup up your Volkswriter.

Everybody knows Volkswriter, the word processing software package that's become synonymous with high performance. Now, there's a way to get even higher mileage out of your Volkswriter. Hook it up to a Dataproducts P Series dot matrix color printer.

The versatile P Series translates the executive class, word processing capabilities of the Volkswriter into brilliant full color charts, graphs and text. It delivers a full page of text quality print in nothing flat while its sheet feeder automatically prevents loading hassles. And the P Series uses pin feed or plain paper and has the brains to fill every appropriate line with crisp, sharp copy, even if it has to justify to do it. And the P Series color printer has dual speed capability for correspondence quality output for the Volkswriter's many word processing applications and high speed output for draft and spreadsheets.

The Dataproducts P Series color printer. Think of us as a supercharger for your Volkswriter.

For more information go to your nearest computer store and ask about the Dataproducts P Series color printer, or call Dataproducts, 1-800-258-1386.

Dataproducts computer printers

Nobody puts ideas on paper so many ways.

Volkswriter is a registered trademark of LIFETREE SOFTWARE, INC.

MICROCOMPUTERS

SYSTEMS

COMPUTER TRANSCEIVER SYSTEMS, INC.
Executport XL; Executport XL+

Computer Transceiver Systems, Inc. (CTS) has unveiled its first entry into the microcomputer market, the Executport XL series of portable micros, which reportedly features dual-processor expandability.

The Executport XL series is said to be lightweight, featuring both the 8-bit Zilog, Inc. Z80 processor and the 16-bit, Intel Corp.-designed 80186 processor. Because users can use Digital Research, Inc.'s CP/M and CP/M 86 and Microsoft, Inc.'s MS-DOS, they have access to a large base of software, the vendor said.

Two models are available: the XL and the XL+. Both models feature a 9- by 5-in. green phosphor screen that can display up to 132 col. by 24 lines and dual, double-sided, double-density, 5¼-in. floppy diskette drives with 800K bytes of formatted storage each. Other features include 22 programmable keys providing up to 44 user-defined, single-stroke functions. The units are self-contained in a leather-like case that fits under an airline seat.

The XL is based upon the Z80 processor and has 80K bytes of memory, while the XL+ adds a 16-bit coprocessor and associated 128K-byte memory to the basic machine.

In addition to CP/M and MS-DOS utilities, the following bundled software from Perfect Software, Inc. is included at no charge: Perfect Calc, Perfect Speller, Perfect Writer and Perfect Filer. The XL is priced at $2,695, and leases start at $99/mo. The XL+ lists for $3,495, and leases start at $130/mo. On-site service is included in the lease agreement.

CTS, P.O. Box 15, E. 66 Midland Ave., Paramus, N.J. 07652.

STORAGE

LOGICAL SYSTEMS, INC.
Diskdisk

Logical Systems, Inc. has introduced Diskdisk, a product that can be used to create a file that simulates a disk drive.

According to the vendor, with a double-sided, 40- or 80-track drive or a hard drive, logical drive partitions can be created as files on the physical drive.

All system functions are available as though this file were an actual physical drive, in other words, as a disk within a disk, a spokesman for the vendor said.

Diskdisk is available for Radio Shack TRS-80 Models I, II, III and Lobo Drive International's Max-80, running with Logical Systems' Lobo 5.1 operating system.

It is also available for the TRS-80 Model 4, running with Radio Shack's TRS-DOS operating system, the vendor said.

Each package costs $99, plus $3 for shipping and handling. A free catalog is available from the vendor, according to the spokesman.

Logical Systems, P.O. Box 23956, 5970 N. 55th St., Milwaukee, Wis. 53223.

VERTEX PERIPHERAL CORP.
V2100

Vertex Peripheral Corp. has added a 100M-byte unit utilizing thin-film media to its line of 5¼-in. Winchester disk drives.

Called the V2100, the drive has a 25-msec average access time and the ST412HP-standard, 10M bit/sec data transfer rate. It is intended for users with intensive microcomputing requirements, including multiuser, multitasking or image processing and net applications.

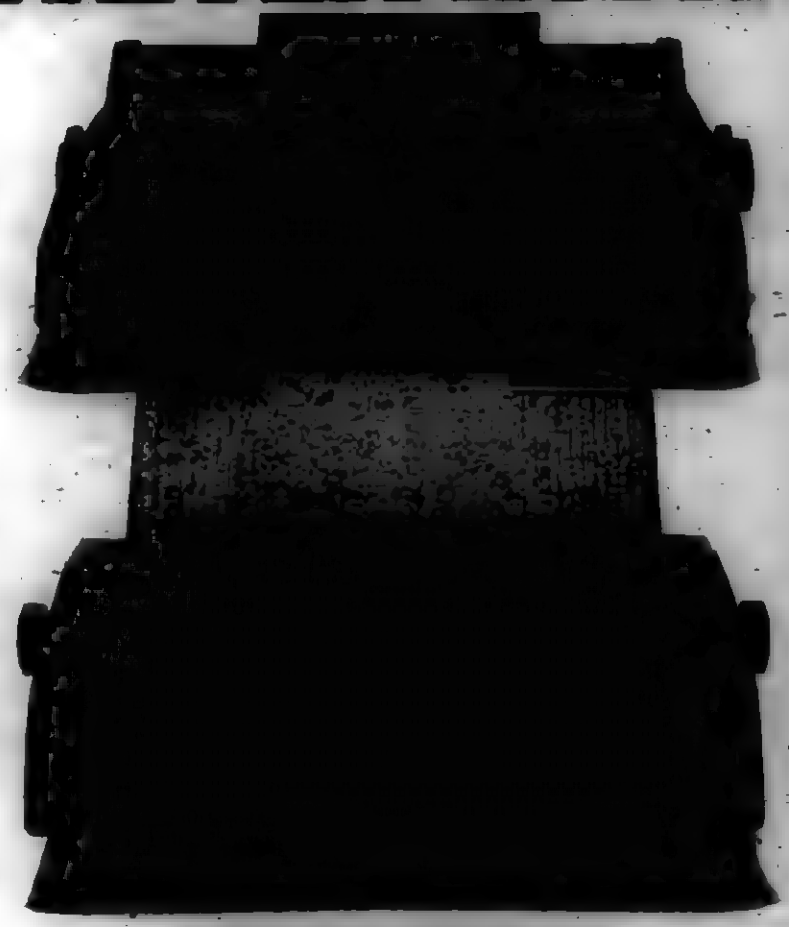
Other features include a dual-frequency, closed-loop servomechanism system, which allows continuous sampling and correction of head-to-track positioning as the disks rotate and a track density of 960 track/in. An automatic actuator lock and dedicated landing zone along with full shock mounting are said to counter potential shock and vibration damage.

The V2100 is available for a single quantity price of approximately $3,000 with OEM discounts available.

Vertex, 2140 Bering Drive, San Jose, Calif. 95131.

SPINWRITER INTR

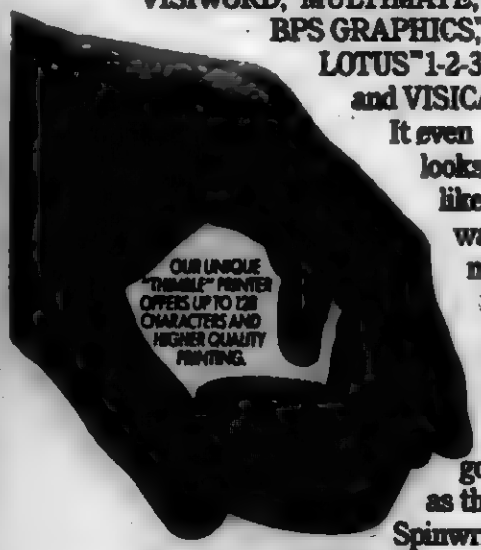
Now you have a choice of fully compatible Spinwriters for your IBM PC and XT.



NEC MODELS OFFER SPEEDS OF 200 AND 330 WORDS PER MINUTE.

First, a few words about the original, the Spinwriter 3550.

It was the first and only totally compatible letter-quality printer for the IBM PC. It plugs directly into the IBM PC and works with every piece of IBM PC software, as well as all popular third-party application packages, such as WORDSTAR,™ WORDPLUS,™ VOLKSWRITER,™ VISIWORD,™ MULTIMATE,™ BPS GRAPHICS,™ LOTUS™ 1-2-3,™ and VISICALC.™ It even looks like it was made for the IBM. Now, as good as the Spinwriter 3550 is, we recognize that a single printer can't take care of every business or professional office need. So we've added another IBM PC compatible Spinwriter: The 2050.



The new 2050 has a printing speed of 200 words per minute. And while it costs less, the print quality is still impeccable. So if low-volume letter-quality printing is what you need, the 2050 is your answer.

60 different print thimbles let your IBM PC look its best.

One of the things that gives our Spinwriter capabilities you can't even get on other printers is our unique "thimble." Each thimble holds up to 128 characters. You can even have two different type faces on one thimble or print multiple languages from a single thimble. Think of how handy

MICROCOMPUTERS

BOARD-LEVEL DEVICES

ORCHID TECHNOLOGY, INC.
Turbo-186

Orchid Technology, Inc. recently announced a processor/memory board and software package for the IBM Personal Computer XT and compatible microcomputers that reportedly will increase the processing speed of the micro from three to 10 times.

The Turbo-186 plug-in board contains an Intel Corp. 8-MHz 80186 microprocessor, a 16-bit data/memory bus and 128K bytes of system memory. In addition, sockets are provided for on-board memory expansion to 256K bytes, according to a company spokesman. The software allows programs based on IBM's PC-DOS and Microsoft, Inc.'s MS-DOS operating systems to run transparently on the 80186 processor. In addition, programs on the 80186 can be run concurrently, handling all machine I/O, and can provide disk caching and background printer spooling and communications, the spokesman said.

The package will be available in the first quarter of this year for about $1,000.

Orchid Technology, 47790 Westinghouse Drive, Fremont, Calif. 94538.

U-MICROCOMPUTERS, INC.
U-secrump/2

U-Microcomputers, Inc. has released a software protection device for Apple Computer, Inc. Apple II, Apple IIe and Apple III computers that plugs into any Apple expansion slot.

According to the company, U-secrump/2, a resin plated-circuit card, allows the end user to copy diskettes for backup in the normal way and allows transfer of software onto a hard disk or an 8-in. floppy disk or into a network.

The card includes firmware which checks out a 6-char. password and a 6-char. serial number. If the numbers don't match, the computer is halted and must be rebooted, the company said.

The price of the U-secrump/2 protection card is $40. Quantity discounts are available.

U-Microcomputers, 800 Broad St., Stamford, Conn. 06901.

JFN INDUSTRIES
AT-1 Video Attribute Add-On Circuit Board; GR-1 Graphics Upgrade

JFN Industries has announced a graphics upgrade and an add-on circuit board designed to provide screen highlighting for Kaypro, Inc. microcomputers.

The AT-1 Video Attribute Add-On Circuit Board and the GR-1 Graphics Upgrade reportedly let Kaypro users better utilize accounting programs and programs such as the Micropro International Corp. Wordstar word processing package. Available for the Kaypro 2 and Kaypro 4, the AT-1 is said to allow reverse video, reduced intensity, blinking, reverse screen, multiple terminal emulation and screen-to-printer dump. The terminal emulation code is designed to let Kaypro 2 and Kaypro 4 computers respond to codes used by the Kaypro 10, the IBM Personal Computer and the Televideo Systems, Inc. 925 terminal.

The GR-1 Graphics Upgrade reportedly is an add-on that connects directly to the Kaypro circuit board and adds Epson America, Inc. printer-compatible graphics and screen dump character translation, the vendor said.

Now available, the AT-1 with screen dump is priced at $149.95, while the GR-1 is priced at $49.95. The units are available together for $179.95.

JFN Industries, 961 N. Fuller Ave., Los Angeles, Calif. 90046.

AUXILIARY EQUIPMENT

LANGLEY-ST. CLAIR INSTRUMENTATION SYSTEMS, INC.

SPINWRITER OFFERS OVER 60 DIFFERENT TYPE FACES.

thimbles last for over 30 million impressions.

So it won't end up costing you a fortune to look like a million.

No matter what form your business takes, Spinwriter can handle it.

A Spinwriter can actually help you put your communications in better shape. It can use any of our nine interchangeable forms handling options. And they can all be easily installed and changed by the operator.

Want to dash off a few hundred original letters to your customers? Our sheet-feeder is just the ticket. It will print on your letterhead and second sheet or envelope.

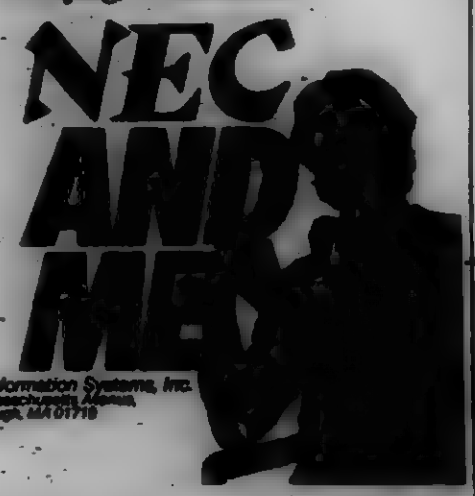
Standard features include continuous forms handlers that take paper up to 16 inches wide, variable size forms, and multi-part forms.

Spinwriters have a hard-earned reputation for reliability. Spinwriters hold the industry record for mean-time-between-failure. Over 3,000 hours. Which, in terms of average personal computer usage, adds up to more than two trouble-free years.

One reason for Spinwriters' staying power is the fact that we manufacture every major component. It also helps explain why NEC Information Systems is the number one supplier of letter-quality printers to PC users in America. Of course, someday you may need a little service. If you do, it's nearby. We have a large group of NEC-trained professionals all around the country. It's also quick. Because of our modular design, normal repairs take less than 20 minutes.

9 DIFFERENT NEC-BUILT FORMS HANDLERS. AUTOMATICALLY FEED ANY OFFICE FORM YOU HAVE.

You'll find Spinwriters at participating ComputerLand stores, Sears Business Systems Centers, IBM Product Centers nationwide, Entré Computer Centers and authorized NEC Spinwriter distributors. Or call 800-343-4418 for more information. And find out why more and more IBM PC users are saying, "NEC and me."



SPINWRITER CAN OPTIMIZE YOUR IBM PC COMMUNICATIONS.

NEC Information Systems, Inc.

NOW THAT EVERYBODY AND HIS BROTHER ARE GETTING INTO THE DATA BUSINESS, HOW DO YOU DECIDE WHO GETS YOURS?

Suddenly, companies that make everything from motor oil to wrapping tape are trying to make big money in the data business.

And so are hundreds of upstarts that never made a thing.

They all want a piece of your "office of the future." But how can you be sure *they* have a future?

Of course, that's no problem if your decision is ITT Courier.

With 325,000 terminals installed worldwide, we're neither a Johnnie-come-lately nor an upstart. Plus, we have the financial strength and the product pathway to give your office of the future a real future.

For instance, we can provide ASYNC terminals small in price. Or SNA terminals big on communications.

We can give your people personal computing power. Or a telephone system that lets them talk to computers and other people.

And, unlike everybody and his brother, you know you can count on us to be here from generation to generation.

Contact your nearest ITT Courier Representative. Or call the ITT Courier Sales Support Department at 1-800-528-1400, toll free.

ITT COURIER

YOU KNOW WE'LL BE AROUND.

tation Systems, Inc.

The tubes, which utilize European amber phospor, an etched antiglare faceplate and lead/strontium impregnated glass to block X rays, are said to be direct electrical and mechanical replacements for the original IBM tubes.

The Soft-View CRT tube replacement costs $90.95.

Langley-St. Clair Instrumentation Systems, 132 W. 24th St., New York, N.Y. 10011.

NETWORX
Wire Tree

Networx, a division of North American Philips Corp., has announced a four-outlet filtered power source for personal computers that reportedly protects against voltage surges, spikes and radio frequency interference.

The Wire Tree power source provides surge-limiting, solid-state circuitry in four grounded outlets, according to a Networx spokesman.

The product includes a 9-ft power cord and four peripheral power cords and is priced at $69.95.

Networx, 203 Harrison Place, Brooklyn, N.Y. 11237.

DIALOGUE SYSTEMS, INC.
Personal Computers: An Executive Self-Study Program

A self-study course designed for executives about the business applications of microcomputers has been developed by Dialogue Systems, Inc. in conjunction with Peat, Marwick, Mitchell & Co.

Called "Personal Computers: An Executive Self-Study Program," the course is divided into 12 modules, each of which requires 90 minutes of listening to audio cassettes.

In addition, an accompanying 150-page, self-study guide provides in-depth information about topics covered on the cassettes, unit summaries and a glossary of computer-related terms, according to Dialogue Systems.

The course is available for $275 from the DSI Micro Training Catalog.

Dialogue Systems, 770 Broadway, New York, N.Y. 10003.

TRAINING from page 69

that include an ever-growing expenditure for telecommunications. Again, this is a chance to educate management on the fundamentals of communications networks.

This topic lends itself to a discussion of the company's technology plan as it relates to the use of personal computers as management tools. Under this umbrella topic, the aspect of data management can be covered to show the value in controlling a set of information that is applicable to the person or the function that is using the system.

When discussing data management, it is appropriate to set guidelines for the organization. It gives the participants a feeling for the inbounds and out-of-bounds areas for the personal computer. Such functions as word processing fit comfortably within the capabilities of the system. However, typical uses of this capability show that draft memo writing, buck slips, sensitive communications and so on are more appropriate for management use.

Those typewriter-televisions are taking on more and more critical roles in organizations every day. The need to educate management on their potential is vital to the success of any plan for the implementation of personal computers in corporate business operations.

Soon, elementary schools in every state will have personal computers in every classroom via any one of the current bills before the U.S. Congress.

Introduction of H.R. 5573 started a national drive for education on the subject of computer literacy using personal computers.

There is no reason why intelligent, mature adults in the management community cannot also take advantage of this powerful new method of processing their organization's most valuable asset — its information.

A well-planned management education seminar on the subject of personal computers will go a long way in answering the question: "What are those typewriter-televisions anyway?"

Paoni is president of Personal Computer Management, Inc. of Wheaton, Ill., a consulting firm that provides seminars on personal computers for managers.

WHEN AMERICA'S TOP CORPORATIONS WANT TO CONTROL THEIR INFORMATION RESOURCES, THEY CALL HOLLAND.

Not so long ago, most companies believed that any information problem could be solved by adding another computer.

And another.

And another.

Inevitably, the legacy of that approach has been astronomical DP costs. Fragmented, redundant database systems. And untimely, inaccurate reports.

When those problems began to surface at some of the leading Fortune 1000 corporations, key executives all had the same response.

They called Holland Systems Corporation.

Working with top people in each department, we helped develop a functional business model of the organization. We then created the framework for designing and implementing a shared, integrated data and information system. And we left behind dynamic guidelines for meeting short- and long-term corporate information needs.

While our top-down Strategic Systems Planning™ product may complement BSP™ and similar methodologies, it goes much further. By combining appropriate software, education and method, SSP allows companies to prioritize and control data and information systems development. Often for the first time.

If you're interested in making information more manageable, call Tony Comanzi, Vice President, at 313/995-9595.

You'll be in good company.

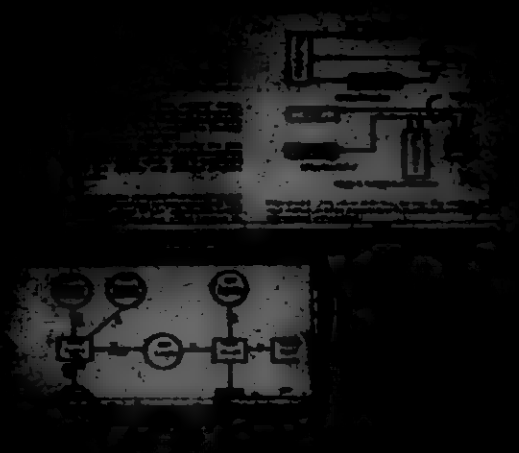
The genius of Team Xerox.

XEROX



The 8010 professional workstation has always been known as a computer of dazzling capabilities, especially in its graphics, information processing and document preparation.

But what some people may not know is that the 8010 is also the key element in Team Xerox, a system of office machines designed to work together like a team.

When part of an Ethernet network, the 8010 can work with a wide array of word processors, mainframes, personal and business computers, printers, electronic mail and file services, facsimile terminals, communicating Memorywriters, other networks and, of course, other 8010s. It also provides 3270 and TTY emulation.

Its full 17" bit-mapped screen lets you view two full pages simultaneously and open up to six documents at a time without covering up a previous document.

It's also the only workstation that can create and print documents in more than a dozen languages, including Russian and, for the first time, Japanese (Katakana, Hiragana and Kanji).

While other workstations may use Xerox innovations like the mouse, icons, windows, property sheets and combined text and graphics, the 8010 simply does more with them.

For example, the 8010's extensive software is fully integrated, to allow you to work with text and graphics simultaneously. You can draw a flowchart right in the middle of a full page of text without having to resort to a separate program and limited buffer "scratchpad" or "clipboard."

In terms of capabilities, ease of use and overall value, the 8010 would have to be considered the stellar workstation in the industry.

For more information, call 800-527-1922 (in Texas, 800-442-0152), or send in the coupon. Or ask anyone who's ever used the 8010.

*8 am to 5 pm Central Standard Time.

Xerox Corp., Box 470065, Dallas, Texas 75247.

☐ Please have a sales representative contact me.

MICROCOMPUTERS

MICROSOFTWARE

LLOYD/HARVEY CORP.
Personnel and Activity Management System

The Lloyd/Harvey Corp. recently announced a management control system to provide project and resource management capabilities to users of IBM Personal Computers, Personal Computer XTs and compatible machines as well as Fujitsu Microelectronics, Inc. machines.

The Personnel and Activity Management System (Pams) reportedly enables users to monitor projects and activities through the total development life cycle, collect historical performance and cost data at various levels, provide critical path and project variance reporting, display forecast information graphically and forecast and monitor personnel performance.

A company spokesman said the package eliminates the need for technical knowhow or knowledge of computer terminology and affords the user menu-driven, command-line and soft-function key control.

The package requires two floppy disk drives, with a minimum of 320K bytes of memory each, or one 320K-byte floppy disk drive and one hard disk drive; minimum internal memory of 128K bytes; and DOS 1.1 or 2.0 from IBM or Microsoft, Inc.'s MS-DOS or Fujitsu's E-35 operating system.

A single-machine, single-site, one-time license for the package is priced at $3,500, which includes on-site installation and training.

Lloyd/Harvey, Suite 160, 18319 Delano St., Reseda, Calif. 91335.

NEGOTIATION INSTITUTE
Art of Negotiation Computer Preparation Program

The Negotiation Institute has announced its software package designed to help middle- and upper-level executives and others called upon to negotiate to prepare for those talks.

The Art of Negotiation Computer Preparation Program reportedly asks users questions to clarify their knowledge and understanding of the issues and positions of all the parties involved. It is also said to help develop strategies and negotiating gambits and to allow the user to print final and interim reports.

Available now for the Apple Computer, Inc. Apple II, IIe and III, the package is scheduled to be available for the IBM Personal Computer in early 1984.

It is priced at $495, according to the vendor.

Negotiation Institute, 230 Park Ave., New York, N.Y. 10169.

MICRO DATA BASE SYSTEMS, INC.
Report Definition Language; Interactive Screen Definition Utility

Micro Data Base Systems, Inc. (MDBS) recently announced a facility for its MDBS III data base management system, reportedly allowing users to specify characteristics of a desired report and the prompting behavior of a program which generates that report.

Report Definition Language (RDL), according to a company spokesman, is a C language program containing all necessary MDBS data access logic and handles all sorting, control breaks, formatting and computation, the vendor said.

Also announced was Interactive Screen Definition Utility (ISDU) to allow users of MDBS' Screen Master, an interactive screen I/O manager to build or revise a screen dictionary interactively.

Releases of both products will be available under IBM's PC-DOS, Microsoft, Inc.'s MS-DOS and Unix on the Digital Equipment Corp. PDP-11. RDL is priced from $1,400 to $2,500, and ISDU is priced from $450 to $700. Both products are marketed by International Software Enterprises, Inc.

International Software Enterprises, Suite 400, 55 W. Algonquin Road, Arlington Heights, Ill. 60005.

POLYGON ASSOCIATES, INC.
Poly-TERM; Poly-XFR; Poly-COM

Polygon Associates, Inc. has announced upgraded versions of its emulation software, designed to allow the IBM Personal Computer to emulate the Digital Equipment Corp. VT100 series of terminals.

The company's Poly-T2M, Poly-XFR and Poly-COM had previously been available for Digital's Rainbow and Decmate II computers. Poly-TERM reportedly features emulation, while Poly-XFR features binary file transfer and Poly-COM combines the features of both. The software is said to allow the microcomputers to communicate with DEC PDP-11 and VAX-11 minicomputers.

The products are now available for $150 each, according to the vendor.

Polygon Associates, 9 American Industrial Drive, St. Louis, Mo. 63043.

DGA

Programming made more profitable with DGA

DGA offers you many unique time-saving features, all in an online interactive environment. Running under TSO, CICS, or VTAM in an OS/MVS system, consider the many advantages of DGA:

- **COBOL DATA DISPLAY** Dynamically maps COBOL layouts to file data. Browses, searches, updates, prints, selects and reproduces from screen display.
- **VSAM & ISAM SUPPORT** Creates, deletes, updates, compares, copies and prints records with no restrictions. All standard access methods supported with no file or record size restrictions.
- **INTERACTIVE COMPARE** Files, partial files, selected records or partial records are all accessible.
- **SCREEN GENERATOR** Uses screen painting to eliminate time-consuming CICS map coding.

If you'd like more information on how DGA will make your programming more profitable, write for our free brochure, or call 913-541-1502.

DEC: The revolving door

Personnel turnover significant

By Peter Bartolik
CW Staff

MAYNARD, Mass. — While Digital Equipment Corp. was going through some major financial changes during the past year, it was also experiencing significant personnel changes.

Since the beginning of 1983, DEC has officially announced the departure of six of its 28 vice-presidents, and DEC watchers claim the company has also experienced a large turnover rate at lower management tiers.

The most notable changes were the midsummer departures of C. Gordon Bell, vice-president of engineering, to join former Prime Computer, Inc. Chief Executive Officer Kenneth G. Fisher at his new venture, Encore Computer Corp. and the fall departure of Andrew C. Knowles III, vice-president of group management and considered to be the boss behind DEC's personal computer line, who left to take the presidency of Lexidata Corp. According to a DEC spokesman, Bell's duties were absorbed by Jack Smith, vice-president of manufacturing; splitting some of Knowles' duties were Joel Schwartz, vice-president and group manager of personal computers, and Edward Kramer, vice-president of corporate marketing.

Other departures from DEC included Robert Puffer, vice-president of storage systems manufacturing, who also went to Encore and whose duties were added to those already assigned F. Grant Saviers, formerly vice-president of storage systems engineering. Departing from responsibilities "unique to their own backgrounds and experiences" and not being replaced, according to the spokesman, were Richard

DEC settlement no surprise

INDUSTRY INSIGHT

BILL LABERIS

By Bill Laberis
CW Staff

The settlement reached between Digital Equipment Corp. and the U.S. government recently [CW, Jan. 9] and the accusations and counterclaims passed prior to settlement were not surprising when you consider — as DEC pointed out — that dealing with the government can be an imbroglio.

The government had accused DEC of fraudulently providing false pricing data in filling a $70 million minicomputer order in the late 1970s. But there was enough gray area in the government's claims to warrant the amicable $3.2 million settlement, instead of taking the case to court.

However, this was not the first time in recent months that DEC has had to settle with a government agency.

According to informed sources, the U.S. Customs Service launched what would become a 14-month investigation into DEC's import activities back in 1981. The investigation probed whether DEC had violated certain Customs statutes in nonpayment of import duties for goods made abroad and then shipped to DEC manufacturing facilities in the U.S. for assembly into various systems.

In particular, the government became suspect that DEC had violated provisions of Customs regulations pertaining to goods manufactured in the U.S., shipped abroad and then returned unused to the U.S. — so-called "American goods returned" statutes. Generally speaking, there is no import duty paid on such goods, as they were made in the U.S.

But what the Boston office of Customs investigated was whether DEC had la-

Commerce sees boom coming

By John Gallant
CW Washington Bureau

WASHINGTON, D.C. — The U.S. computer manufacturing industry will rebound strongly from a sluggish 1983 to see a real growth rate of 18% this year, and the software and services sector will do even better, according to the U.S. Department of Commerce.

Commerce statistics, prepared for the department's upcoming 1984 U.S. outlook report, show that the computing equipment industry, measured from the office equipment sector, shipped $41 billion worth of processors and peripherals last year, a 15% hike over 1982 figures.

"Assuming continued moderate recoveries in the U.S. and European economies during 1984," Commerce said, "U.S. computer industry shipments should increase by 18%, after adjusting for inflation. Shipments would then exceed $48 billion."

Reporting on international computer trade, the department said the strong dollar, combined with weak foreign economies, held the increase in exports to a mere 5%, for a total sales volume of $10.3 billion. Imports, however, rose by nearly 40% — to $4.1 billion — with Japanese imports showing a 113% jump.

In 1984, "exports will increase by 20% to more than $12 billion," Commerce said. "Assuming continued strong growth in imports from Far East suppliers, imports should register an increase of almost 60% [to $6.5 billion], resulting in the erosion of another $500 million in the U.S. computer industry trade balance."

Taking into account U.S. production, ex-

Sperry, NCR, Honeywell eye plumper bottom lines

By Bill Laberis
CW Staff

With hopes buoyed by a generally bullish view of the economy in 1984, three of the top five non-IBM-compatible mainframers have predicted fatter bottom lines in both sales and profit over the next 12 months.

The companies — Sperry Corp., NCR Corp. and Honeywell, Inc. — predicted further that increased levels of research and development spending would sustain real market growth throughout the year, provided that the domestic economic boom continues and the international economy shows at least marginal improvement over the past three bleak years.

Of the three, Honeywell remained the most reserved in its look ahead. Edson Spencer, Honeywell's chairman, complained that business worldwide "remains concerned over an uncontrolled U.S. budget deficit that threatens a return of higher interest rates." Honeywell, too, has the least market success in 1983 of the noncompatible mainframers, which include itself, Sperry, NCR, Burroughs Corp. and Control Data Corp. — the so-called "Bunch."

While Honeywell managed to get back on a growth track in terms of sales and profit, most of the growth came from its noncomputer operations, such as manufacturing process control and instrumentation. The company's information systems wing contributes 30% of the total revenues, but only 20% of the profit. In its most recent reporting quarter, Honeywell's profits climbed 35% on a modest 5% revenue gain to $1.4 billion.

Exley

Remarking on Honeywell's computer operations, Spencer said the company hopes to cash in on cost-cutting measures instituted in the past 18 months, including two major layoffs. Honeywell also expects to begin volume shipments of its DPS 88, its largest mainframe, sometime this year. Banking on market acceptance of a string of new products introduced last year and on its thrusts into new markets,

Kreger

NCR said it is looking to duplicate the strong performance it registered — both in the market and on Wall Street — in 1983.

NCR's stock price climbed nearly 90% in the last 18 months, during which time the company took steps to shatter its transaction processing mold, announcing first-time products in the microcomputer, word processing and communications network areas.

"At present, we are at the midpoint in the introduction of our [very large-scale integration] generation products with a number of new offerings scheduled for release during 1984," Charles E. Exley Jr., NCR president and chief executive officer, said. "It is our goal . . . to make our 32-bit chip set one of the standard 32-bit microprocessors used by other system builders in the industry."

Sperry parlayed stepped-up cost cutting with sizable government contracts to get its Computer Systems Division back on track in 1983. However, as with other Bunch companies such as Honeywell and Burroughs that rely heavily on their installed mainframe base to market new products, Sperry's future performance remains a question.

Spencer

Most analysts, however, concede that 1984 will be a kind year to most

DG users group calls for papers

WESTBORO, Mass. — The North American Data General Users Group has issued a call for papers from users, independent software vendors and OEMs.

The papers will be considered for presentation at the Data General Corp. group's 1984 conference, which is slated for Aug. 27-30 in San Diego.

According to a spokesman for the group, topics for papers can include new discoveries, unique concepts or special knowledge in the areas of computer technology, management or marketing.

Presentations will be based on an abstract of the paper.

Abstracts are due before Feb. 27, the spokesman said.

Data General, 4400 Computer Drive, Westboro, Mass. 01580.

Southern Bells tie Intecom knot

ALLEN, Texas — Intecom, Inc. has inked a $75 million manufacturing and distribution agreement with South Central Bell and Southern Bell, allowing the communications companies to market Intecom's family of private branch exchanges (PBX) to their business customers in nine states.

Under the terms of the manufacturing and distribution agreement, Intecom will manufacture its PBX product line at its facility here, with the system then marketed by the Advanced Systems Division of Bell South, which is a holding company for Southern and South Central Bell.

Intecom will support initial installations of the PBX for Advanced Systems Division customers, while providing training and documentation for the operating divisions.

SETTLE from page 79

beled as American goods returned a number of components that were actually manufactured abroad and, therefore, required payment of import duties. The government found DEC had done this.

The next question was: Did the firm do so with willful and fraudulent intent?

The Boston office reported its findings of "numerous unit violations" to a district office of the U.S. Department of the Treasury, of which Customs is a part. The government declined to prosecute, apparently again finding enough gray area in the implementation of its own requirements.

The government is likely to be more aggressive in addressing the alleged conduct of the 10 semiconductor companies it has been investigating for the past two years. Included on the list of companies investigated are National Semiconductor Corp. and Fairchild Semiconductor Corp.

The government believes the firms falsified documents stating that chips sold to government agencies, the U.S. Department of Defense in particular, had passed required tests, when, in fact, they had not.

SPERRY from page 79

major computer companies.

Growth anticipated

"We anticipate the continued strengthening of the general economy which, in turn, will trigger increases in capital expansion budgets and enhance computer demand through industry and government," according to Joseph J. Kroger, Sperry's Computer Systems Division president.

"As a result, we are projecting computer systems revenue to double over the next five years with an annual profit growth of 30% or more," according to Kroger.

Sperry's Computer Systems Division revenues for fiscal 1984, ending March 31, will be about $2.9 billion, according to a spokesman for the firm.

McDonnell Douglas acquires time-sharing firm

Gets Computer Sharing Services in $70 million deal

ST. LOUIS — Less than a month after its attempt to acquire Tymshare, Inc. fell through, McDonnell Douglas Corp. announced the recent acquisition of another computer time-sharing firm, Computer Sharing Services, Inc. (CSS).

The nearly $70 million deal, far smaller than the $370 package that cash-rich McDonnell Douglas tried to assemble for Tymshare, will result in CSS being incorporated as a subsidiary of McAuto, the firm's computer services division.

Robert A. Fischer, McAuto president, said that Jerrol Alkema will continue as CSS president.

Fischer said that 130 technical workers from McAuto's communications industry business unit and 35 marketing representatives will be assigned to CSS.

CSS, which had revenues in fiscal 1983 of $27 million, provides computer and data processing services to telephone companies as well as other commercial or business customers.

The company employs 275 people and operates a Honeywell, Inc.-based mainframe shop at its Denver headquarters.

Unions sue on wage law

WASHINGTON, D.C. — The computer industry's long-running battle against a federal law setting wages for government services contracts moved into federal court recently when labor unions sued to stop the Labor Department from granting high-technology firms an exemption from the wage law.

Earlier, the department had exempted from the provisions of the 1965 Service Contract Act agreements between private firms and government agencies for maintenance and repair of DP equipment, office systems and high-technology scientific and medical equipment (CW, Nov. 14, 1983).

Companies in those industries and their representatives here argued that the law, designed to prevent "wage busting" by firms seeking government contracts, should not apply to them because their service workers are highly paid and perform the same work at the same wages for government as they do for private organizations.

Labor agrees

Labor decided that applying the law to this type of work was unjustified.

Labor agreed with Congress' General Accounting Office, which said the exemption was warranted and that without it agencies might have difficulty obtaining services because providers would refuse government work rather than accept the regulated wage scheme.

Immediately after the exemption was finalized, the AFL/CIO and affiliated unions asked the District Court here to overturn the decision.

Unions upset

The unions called the Labor Department decision "arbitrary, capricious [and] an abuse of discretion."

The department is being supported in the suit by groups in favor of the exemption.

Those groups include the Computer and Business Equipment Manufacturers Association and the Computer and Communications Industry Association, which have filed amicus briefs backing the exemption.

Professional Computer perform even better.

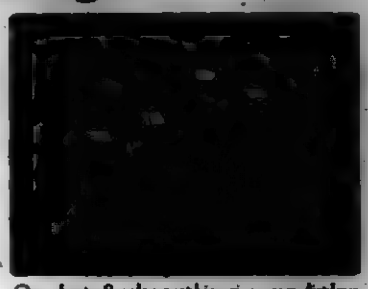
See the difference the TI Professional Computer can make with these best-sellers and hundreds more software packages.

Literally hundreds of third-party software packages are available for the TI Professional Computer. So with the TI Professional Computer, whether you need word processing, accounting, spreadsheets, data base management or advanced integrated programs, the best — and best-selling — software can help you meet virtually every business and professional need. But before you consider software alone, you should weigh one other very important point: the better the hardware, the more you get out of your software.

It's no wonder critics have called it "the optimum personal computer."

Popular Computing
October, 1983

The TI Professional Computer's outstanding monitor resolution and 8-color graphics make best-selling programs like Lotus 1-2-3™ sharper, easier to work with. And the fact that you can put three times the graphic information on your screen — in both color and monochrome — means you'll be able to take even greater advantage of the best graphics programs. For best-selling word processing packages like WordStar,™ TI's comfortable, typewriter-style keyboard is a natural. Anyone familiar with a standard typewriter keyboard can start to work immediately, without re-learning key positions.



Our sharp, 8-color graphics give your displays even more visual impact.

Texas Instruments has developed forward-looking programs to bring you innovative, easy-to-use technology.

One such package is NaturalLink™, TI's exclusive natural language interface program. NaturalLink lets you access information from subscription data base inquiry services, such as the Dow Jones News/Retrieval®

service, in plain English. So you don't have to memorize special codes to get the outside information your business depends on.

TI's revolutionary development of speech recognition is another way TI helps you get the most from your software.

Leading third-party software suppliers are developing new programs to take advantage of TI's speech technology. In early 1984, with Speech Command,™ you'll be able to say things like, "Inventory analysis, please," and have a spreadsheet displayed instantly on your monitor. Voice-operation will make the TI Professional Computer easier to use than ever before.

If you're ready for the best — and best-selling — programs, you're ready for the Texas Instruments Professional Computer. Now at participating ComputerLand stores and independent dealers. For the location nearest you, and answers to questions about your computing needs, call 1-800-527-3500.

The personal computer courted the workplace with endless promises.

A new era of problems was delivered instead. As MIS manager, you have observed: too many different brands of computers. Too many types of software. Software that's difficult to learn, limited and inconsistent in quality, and poorly backed up by manufacturers.

More troubling: there has been no way to control the information flow. No way to make these machines communicate with one another, or with the company's mainframe. No way to customize software to meet specific company needs.

Microcomputer chaos is likely to persist unless someone can bring in an effective system for managing them all, and introduce a measure of standardization.

That logical someone is you.

The logical solution is Visi On.™

What's good for the user is even better for the MIS Department.

Visi On is not a new computer.

It is not a new computer program.

Visi On is a completely new generation of business software that harnesses the power of the personal computer; a microcomputer applications manager designed to work in tandem with the operating system of the pc, and integrate any number of application programs.

Initially, four applications are available: Visi On Word,™ Visi On Calc,™ Visi On Graph,™ and Visi On Query.™ Totally redefined for the Visi On environment, each application includes features and functions that have dramatically improved performance.

Even more impressive, their strength is actually boosted when these applications are *combined.* Making maximum use of multiple electronic windows and a mouse, Visi On instantly transfers data between applications, demonstrating depth of integration to an unprecedented degree. Instead of doing just one job at a time, the user may move from project to project, backed up always by the full power of the machine.

And it's all remarkably simple. Visi On provides a single, sensible interface that makes every application easy to learn, and even easier to use.

There. Already it's getting quieter in your department...

ENTER VISI ON. Suddenly, every personal computer in your company becomes everything it ever promised to be.

Indeed, for MIS managers as well as for users, Visi On is a virtually instantaneous remedy for the problems experienced with personal computers.

Instantaneous? Yes. The system will work on most of the computers already in place. (Which also makes Visi On your simple-to-implement solution for standardizing systems and applications.)

On the off-chance a problem should befall a user, no problem. Each Visi On application program comes with the equivalent of 100 pages of Help text users may call on when there is a question. The more help the user gets from Visi On, the fewer the calls for help that come into your department.

The Visi On system also provides the basis for a complete package of communications programs. With applications software soon available, Visi On will allow personal computers to emulate both asynchronous and synchronous terminals.

And, Visi On will allow integration into local networks.

And more. And more. And more.

Additionally, Visi On is open-ended. New applications, new capabilities, and new peripherals will be added. Plus, Visi On architecture is open to all developers, with a Visi On Toolkit to help you custom design your own applications programs.

And with all of the above, Visi On introduces a new generation of software support. It's the most comprehensive program ever executed for microsoftware. Backed up by VisiCorp,™ the number one name in business software.

Sit back. Be pleased with yourself. And if you're far too modest for that, simply rest assured that legions of formerly disgruntled users now have you to thank for an efficient, productive new partnership with their personal computers.

Your management thanks you, too.

You were, after all, the one who recommended Visi On.

Visi On™

Visi On is now available for the IBM® Personal Computer XT, the Wang® Professional Computer, the Hewlett-Packard® Series 7000, the TI® Professional Computer, and the Compaq™ Plus.
Visi On, Visi On Word, Visi On Calc, Visi On Graph, Visi On Query and VisiCorp are all registered trademarks of VisiCorp.

Cbema, Adapso groups to study technology's effects

By John Gantner
CW Washington Bureau

WASHINGTON, D.C. — Two computer industry trade groups headquartered here are completing plans for separate but similar organizations to study the societal effects of information technologies.

The Information Age Institute, a privately organized and supported entity representing manufacturers, users, professional societies and academia, will be announced soon by the Computer Business and Equipment Manufacturers Association (Cbema). And the Association of Data Processing Service Organizations, Inc. (Adapso) is completing work with members of Congress on legislation setting up a government commission on high-technology issues.

The Information Age Institute will provide information and education on issues such as public acceptance of new technologies in the work place and associated political issues and human resource problems, Cbema said.

While the institute's agenda will be determined by its participants, topics such as video display terminal safety and worker displacement and retraining were cited as examples of issues of interest to the new organization.

"Very good response"

Cbema spokeswoman Charlotte LeGates said the plan has been "presented to a large number of associations and other interested organizations, and we have gotten very good response."

Because commitments to the institute are incomplete, Cbema has not released the names of organizations interested in joining. But members could come from the computer and telecommunications industries, organizations representing attorneys and engineers and the banking, insurance and air travel industries, she said.

LeGates said the institute, to be based here, will be formally announced sometime during the first quarter of this year. The size and makeup of the institute's board of directors and staff will depend on how many join the effort, she said. She indicated the organization eventually may become affiliated with a university.

According to LeGates, the institute is necessary because "the ignorance of facts surrounding the introduction of technology . . . produces fantasies and fears that discourage people from using technology with the potential to help them."

Cbema hopes an independent, widely representative organization can provide credible information on this topic. "We can't wait around for the government to have 20,000 committees and think about it," she added.

Adapso, also concerned that these subjects are not being properly addressed in a public forum, is, however, taking a different approach. The association hopes to have a bill introduced in Congress soon to set up a blue-ribbon panel representing industry, government and academia.

Its purpose, according to Adapso spokesman David Sturtevant, will be "to look at all the issues relating to technology and its impact on society at large."

Congressional supporters of the idea have persuaded the association that the commission should be financed by the government and not the private sector in order to ensure it is nonpartisan, Sturtevant pointed out.

Although plans for the commission are not complete, he suggested it could last three or four years and cost about $2 million a year. According to present thinking, the panel would direct a small staff in collecting information and sponsoring studies on various high-technology issues, Sturtevant said.

Having established "a body of knowledge" on these issues, the commission would most likely issue a report indicating problems and concerns requiring government attention, he said.

Saying "everybody is talking about these problems in very general terms," Sturtevant said the association is "frustrated" it has not been able to get the commission legislation introduced earlier. Nevertheless, he said, Adapso is confident the bill will appear within the next few months.

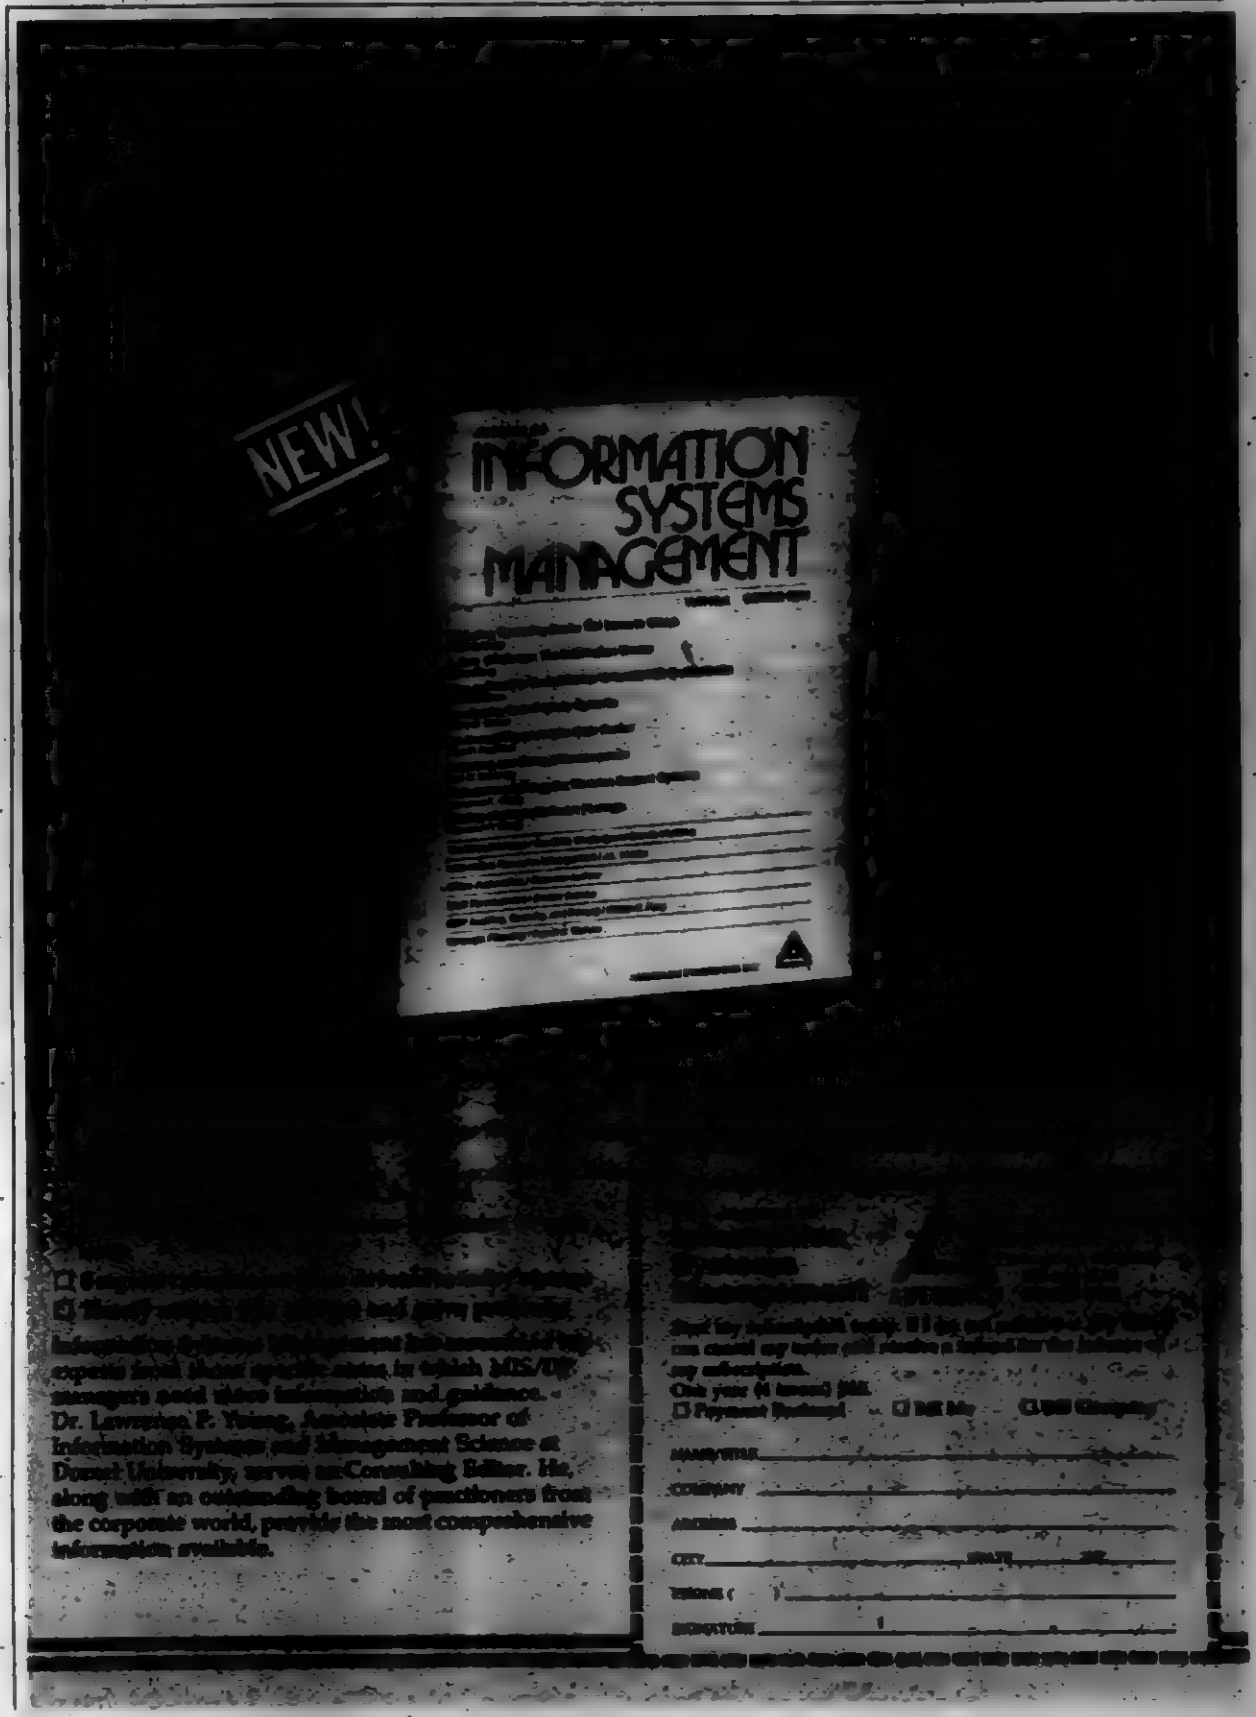
Houston to host Adapso meeting

ARLINGTON, Va. — The Association of Data Processing Service Organizations, Inc. (Adapso) will host its 60th Management Conference in Dallas March 19-21 at the Fairmont Hotel.

The conference will feature more than 40 workshops, seminars and programs covering management issues facing the membership.

Both members and nonmembers of Adapso are invited to attend, according to a spokesman for the association.

Adapso, Suite 300, 1300 N. 17th St., Arlington, Va. 22209.



Net facilitates data exchange among execs

Founded to improve caliber of Southern California CEOs

By Robert Stahl
CW West Coast Bureau

LOS ANGELES — In an age when access to relevant information can make the difference between success and failure for a high-technology company, a group of senior Southern California industry figures are trying to facilitate cooperation and exchange of information among key decision makers.

Focusing solely on the information needs of chief executives, the Southern California Technology Executives Network (Socalten) was founded last year on the principle that greater cooperation and exchange among chief executives will enable both the Socalten members and the high-tech community at large to gain greater competitive advantage.

"Our objective is to improve the caliber of chief executive officers [CEO] by increasing their overall management capabilities and practices. As a secondary consideration, we also want to gain some more recognition for Southern California as a region of high technology," explained Walter Bauer, president of mainframe software maker Informatics, Inc. and chairman of Socalten.

Since its incorporation, the network has signed on 73 chief executives, each paying a $1,000 annual fee. Other chief executives involved in Socalten include Thomas Ringer of Fujitsu Systems of America, Inc.; Gary Liebl of Microdata Corp.; and Richard Cortese of Alpha Microsystems, Inc.

> *Our research confirmed that the key to an organization's success is the CEO's performance in charting the company's strategic course, developing the management team and securing needed resources.*
> — Steve Panzer, Panzer, Swarts, Weiss & Co.

According to Bauer, about 80% of the companies that have joined the network to date are computer companies, with about three-quarters of those being software companies.

Critical success factors

Socalten is the brainchild of Steve Panzer and Jeff Weiss, partners in the Los Angeles-based management consulting firm of Panzer, Swarts, Weiss & Co. The idea, Panzer explained, arose from a study the firm conducted of critical success factors in 25 Calif.-based emerging high-tech companies, including Ashton-Tate, Corona Data Systems, Inc. and Ryan-McFarland, Inc.

"Our research confirmed that the key to an organization's success is the CEO's performance in charting the company's strategic course, developing the management team and securing needed resources," Panzer asserted. "However, when we began speaking with these executives, we sensed that most of them in Southern California experienced terrific isolation. They didn't feel they had the same network of support of their counterparts in the Silicon Valley or the Boston area," Panzer added.

In an attempt to fill this need, Socalten focuses on four key activities as a way of providing core information to its members:

- CEO round tables, comprising groups of 12 to 14 CEOs who meet once a month for intensive half-day sessions focusing on topics such as marketing, strategic planning, management development and finance.
- "The Executive Report," a monthly publication intended to provide a concise overview of relevant information from several key management, technical and market sources.
- Network conferences and seminars, in which industry leaders and experts participate. For example, the next full-day conference, titled "In Search of Excellence in the Management of High Technology," will concentrate on major industry trends, including the role of IBM.
- Membership Resource Directory, providing a description of each CEO member and his company.

MERGERS AND ACQUISITIONS

Perceptronics, Inc., Woodland Hills, Calif., has reached an agreement in principle to acquire **First Ann Arbor Corp.** of Ann Arbor, Mich., a research and development organization.

■

Wyly Corp. of Dallas has signed a letter of intent to acquire **Financial Systems of America, Inc.** of Winter Park, Fla.

■

Micom Systems, Inc. has completed its acquisition of **Industrial Computer Controls, Inc.**, Cambridge, Mass., a manufacturer of IBM-compatible protocol converters.

■

Eastman Kodak Co. has acquired the assets of **Mead Digital Systems**, a division of Mead Corp. Renamed Dicomix, the organization will continue operations in Dayton, Ohio.

■

Cognitronics Corp. has agreed in principle to acquire two San Diego-based companies, **American Computer Corp.** and **Administrative Systems, Inc.** (ASI), for an initial purchase price of $1.2 million, payable in a combination of cash and stock.

Future payments in cash and stock up to a maximum of $8.7 million are dependent on growth in revenues and earnings over the next 2½ years.

American, a hardware firm, and ASI, a software development company, have combined their products into turnkey systems for the health care industry.

■

Continental Telecom, Inc. (Contel) will acquire **Codata Systems Corp.** through the issuance of shares of Contel common stock in exchange for Codata's outstanding capital stock. Codata will be operated as a separate business entity by Cado Systems Corp., a member of Contel's Business Systems Group.

■

Crownsek, Inc. has bought a 35% interest in **Waterloo Microsystems, Inc.** and is launching an integrated office automation system utilizing IBM Personal Computers and the Waterloo Port software.

■

Emulex Corp. has announced an agreement in principle to acquire **Personal Systems Technology, Inc.** (Persyst), a maker of memory, graphics and communications hardware and software products for IBM and IBM-compatible personal computers. Basic terms of the acquisition call for Emulex to purchase 100% of Persyst's outstanding stock for 480,000 shares of Emulex.

■

Compucorp has entered into a definitive agreement with **Litton Industries, Inc.** to acquire an 80% interest in **Monroe Systems for Business, Inc.**, a Litton division.

■

United Telecommunications, Inc. has acquired **GTE Companion Service** from GTE Corp. for an undisclosed amount of cash.

■

Computer Horizons Corp. has acquired certain assets of **Cincinnati Applied Software, Inc.** of Florence, Ky., for an undisclosed cash amount.

■

Valid Logic Systems, Inc. has signed an agreement in principle to acquire **HHB-Softron** of New Jersey in exchange for stock valued at $5.5 million.

■

Recognition Equipment, Inc. (REI) has completed the purchase of all outstanding shares of stock of **Consolidated Computer International, Inc.** (CCI) for $2.7 million. In connection with the transaction, REI has entered into an agreement to manage the U.S. installed lease base of **Finecomp, Inc.** for a share of the lease revenue. CCI and Finecomp are U.S. subsidiaries of Nabu Manufacturing Corp. of Ottawa.

We've got the Swedish computer community covered. Have you?

In 1982, sales of computer hardware, software and services reached $1.2 billion in Sweden. This market is expected to grow at an annual rate of 18% with the government and manufacturing industry being most effected.

And now our new sister publication, *Computer Sweden*, can bring your advertising message to 20,000 professionals in this expanding marketplace. *Computer Sweden* is published bi-weekly in a tabloid format and will bring *Computerworld's* high standards and editorial quality to the Swedish computer community. Its circulation includes managers, marketing directors, engineering management at computer hardware, software and service suppliers, educators, consultants, DP managers and technicians.

CW International Marketing Services is your one-stop advertising service in countries around the computer world. For more information about *Computer Sweden* or any of our other foreign publications, just fill out the coupon below.

COMPUTER INDUSTRY

CHANGES from page 79

J. Clayton, vice-president of manufacturing technology, now vice-president at Thinking Machines, Inc.; Lawrence J. Portner, vice-president of corporate planning, who joined Apollo Computer, Inc.; and Roger Cady, vice-president of manufacturing distribution control product group, who did not announce his plans.

DEC has promoted two group managers to positions of vice-president and group manager: Samuel H. Fuller, who formerly headed corporate research and architecture and who now heads research and architecture, and Jeffrey C. Kalb, who headed the large-scale integration semiconductor group and is now vice-president over that group. Additionally, in January, DEC announced the appointment of Robert W. Taylor to head a new systems research center in Palo Alto, Calif.; Taylor formerly spent 13 years with Xerox Corp. in Palo Alto and previously managed the research programs at the U.S. Defense Advanced Research Projects Agency, which developed the Arpanet network.

Positive opportunity

In a recent interview, DEC President Kenneth H. Olsen said the vice-presidents left as friends, and the turnover "gives the opportunity for the bright, young grade of people to move in and take these jobs."

One DEC watcher, and sometimes critic, who agrees the changes are positive is Sonny Monosson, publisher of the newsletter "Monosson on DEC." "Any company that has grown as fast as [DEC] has probably stretched their people to the limit," he said in a recent interview with *Computerworld*. Monosson said he believes change is good for any firm and that the turnover gives DEC an opportunity to bring in new people.

Peter Lowber, who follows the company for The Yankee Group, Inc., disagreed: "I don't see how it could be good," he said. "They need the same engineering expertise they have lost."

Similar problems

Lowber believes all the established minicomputer companies are experiencing similar problems. "They're all running off to start-ups." Lowber said he thinks DEC does need new blood in the area of marketing, however.

Aaron Goldberg, DEC watcher with International Data Corp., said he was concerned with the "exodus" of people heading various "projects" for the company. Both Lowber and Monosson agreed. "They have left, too; [turnover] is just the same at the lower level," Monosson said.

None of the DEC watchers believed DEC is in any imminent danger as a result of the financial and personnel changes suffered in the past year. "There will be a DEC in 1990," Monosson's newsletter declared recently, "but a DEC confined to the technology it can command."

Lowber added, "I think DEC will hang in there; they will try to turn it around in 1984. I think they will be able to turn it around, but in a longer time frame than that."

COMMERCE from page 79

ports and imports, Commerce estimated the U.S. market for computer equipment will total about $40 billion in 1984, almost 23% more than in 1983. Imports will rise to 16% of that market, with the Japanese accounting for 10% of the market.

The government also reported employment in this sector increased 8.3% last year, from 336,000 to 348,000, and should climb another 4% this year, to 362,000.

Long-term prospects

Looking at the long-term prospects for this industrial sector, the department said: "The U.S. computer industry grew at an inflation-adjusted compound annual rate of about 19% from 1972 to 1981, when the recession lowered this average slightly. Several influences will act to depress the annual average to 17% a year through 1988, while imports could increase an average of 35% a year."

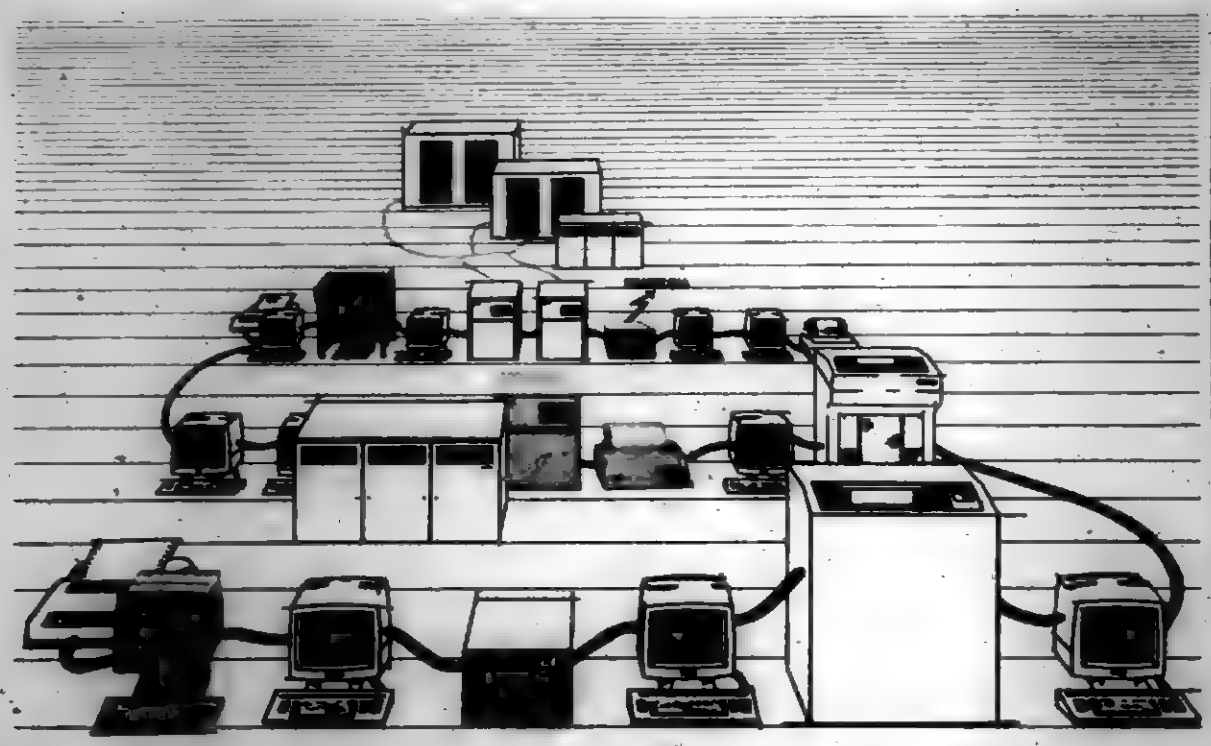
One of the negative factors, the department said, is the continued movement of production from the U.S. to foreign sites. This will be partly counterbalanced by increased use of automated production in the U.S., the continued introduction of high-value products, particularly those stemming from relationships with the semiconductor and telecommunications industries, and the rate at which foreign firms set up production facilities in the U.S.

"Foreign competition could act to restrain U.S. exports, keeping average increases at the 15% to 20% level rather than the 30-plus percent rates of previous years," according to Commerce.

Turning to the computer software and services industry, Commerce estimated that 1983 domestic revenues increased 20% to $31.6 billion. This was a slight improvement over the 18.5% increase the year before.

Commerce quoted U.S. Bureau of Labor Statistics' figures that suggested hiring in this industry expanded slowly during 1983 following a year in which declining demand in the U.S. and other countries held employment growth well below the 12% annual average from 1974 to 1981.

In 1984, assuming continued moderate economic recovery in the U.S., the domestic revenues of this industry should grow at a rate slightly below the historic average of 25%, and foreign revenues might improve only gradually because of the slow pace of recovery in major markets, the department said.



3270 Networking: No More No Man's LAN.

Imagine. 3270 Processing. IBM-Compatible Personal Computing. Local Area Networking. And SNA Compatibility. In One System.

Imagine a system that successfully settles the uncharted territory of 3270 local networking—that "no man's LAN" of unlinked and unrealized potential.

Imagine a system that delivers the power of 3270 processing, and the flexibility to build two local area networks from a single controller. Imagine being able to attach up to 120 devices to that controller. Or attaching four distinct controllers—and multiple coaxial links of up to 10,000 feet each—to any of those LANs.

Imagine the economies of a system that handles that networking with standard 3270 coax. That requires no commitment to special architectures or non-standard LAN technologies. And that, thanks to a multi-drop, station-to-station design, can eliminate thousands of feet of new coax.

Of course, such a system would have SNA compatibility. But it would also have a set of capabilities to dramatically increase throughput, while reducing hardware and support costs in any environment. Capabilities like multi-host and multi-personality support, application and address switching, and system printing.

This system would have multi-user personal computing "built into" the network—allowing you to assign true 16-bit computing power, maintain overall MIS control, and share expensive disks and printers.

Such a system would boast an intelligent display station that displays a mastery of ergonomic and aesthetic design. With multi-screen formats, anti-glare screen, low-profile keyboard, and a tilt-and-swivel pedestal with the smallest footprint in the industry. Such a system would also include a full line of printers.

Imagine. 3270 processing. IBM-compatible personal computing. Versatile, economical, powerful local area networking. In one system.

Braegen *has* imagined just such a system. They have designed it. Built it. And called it the ELAN™ System.

If such a system sparks your imagination, give us a call. We know the feeling. The Braegen Corporation, 525 Los Coches Street, Milpitas, CA 95035, (408) 945-8150; TWX: 910-338-7332.

Imagine. Then Braegen.

BRÆGEN

™ELAN is a trademark of The Braegen Corporation.

Since you'll be spending millions of dollars per month on data communications networks, you want all the information you can get. Right?

Here's how to get it.

Just wait for your February 27th issue of **Computerworld.** Then read the special report on Data Communications Networks from cover to cover. You'll get it all:

- *Local area networks*
- *public packet-switched networks*
- *private branch exchange (PBX) networks*
- *teleconferencing networks*
- *satellite networks*
- *CATV networks*
- *videotext and facsimile networks*
- *voice/data network integration*

You'll get tutorials — bylined opinion/analysis pieces by experts in the field on the use of networks and the future of the networking industry. You'll get case studies of how companies have used specific networks to solve specific business communications problems. And you'll get information on lots more — with articles on everything from microwave links to how AT&T's divestiture will affect voice/data networks.

If you spend — or are planning to spend — millions on data communications networks, then you can't afford to miss the February 27th special report on Data Communications Networks in **Computerworld.**

COMPUTERWORLD
THE NEWSWEEKLY FOR THE COMPUTER COMMUNITY

And, if you've got product or service ads that will help our readers make informed choices for 1984 — then you need to get your ad to us by February 10th. To reserve space in the February 27th issue, call one of the sales offices listed below, or call Ed Marecki, National Sales Director.

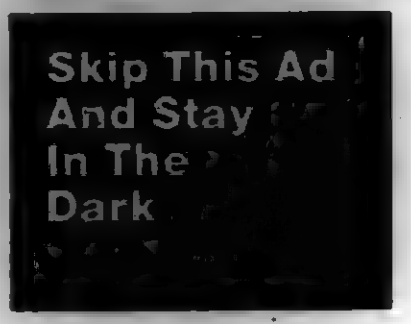
POSITION ANNOUNCEMENTS

AIRLINE SOFTWARE SYSTEMS



Respond To This Ad And Find Out What You've Been Missing!

Talk To United Airlines Before You Decide To Make A Move Or Stay Put.

If you have PARS (ACP/TPF) software experience and haven't talked to United Airlines, you are missing out on one of the most attractive career packages available.

Our APOLLO System is one of the world's most sophisticated interactive systems. Continued software development is taking United where no one has gone before. The pace of our work has created additional needs for software professionals with PARS (ACP/TPF) experience. And we have what it takes to make moving worthwhile.

Here Are Some Of The Features You Will Learn About

— Compensation—Perhaps the best in the industry and it's constantly being updated.

— Technical Advancement—Very flexible, highly defined career paths are available no matter what your level of experience.

— TLC—APOLLO is our future—our competitive edge—and everyone from the Chairman on down is behind the software team 100%.

—— A Brave New World—Learn where we are taking the reservations systems of the future. You'll be surprised.

—— Rocky Mountain High—All that Denver can offer and relocation help you need to make a smooth transition.

Can You Afford Not To Know More?

There's more to a United career than meets the eye. The potential itself makes it a "must" to at least talk to our people about what you can find here. Take that step this week.

We're Embarking on Exciting

New Directions

Signetics Corporate Information Services is embarking on exciting new directions, in a fast-paced, challenging environment where computers and advanced communications are the core of our Information Center. We've traveled a great distance in a short time, and offer tremendous growth paths for DP professionals ready to contribute.

You'll find Signetics at the leading edge of state-of-the-art hardware and software: IBM 3081-G, 3380 DASD, laser printers, VM/SP2, MVS/JES2, IMS/VS, TSO/SPF and over 40 other program products.

You're invited to set sail with us to break new ground in such exciting areas as: Distributed Data Processing; Integrated Systems; State-of-the-art Hardware and Software; New Applications Development; Worldwide Network; LAN; Office Automation Application; and personal computers.

Sunnyvale
California Opportunities

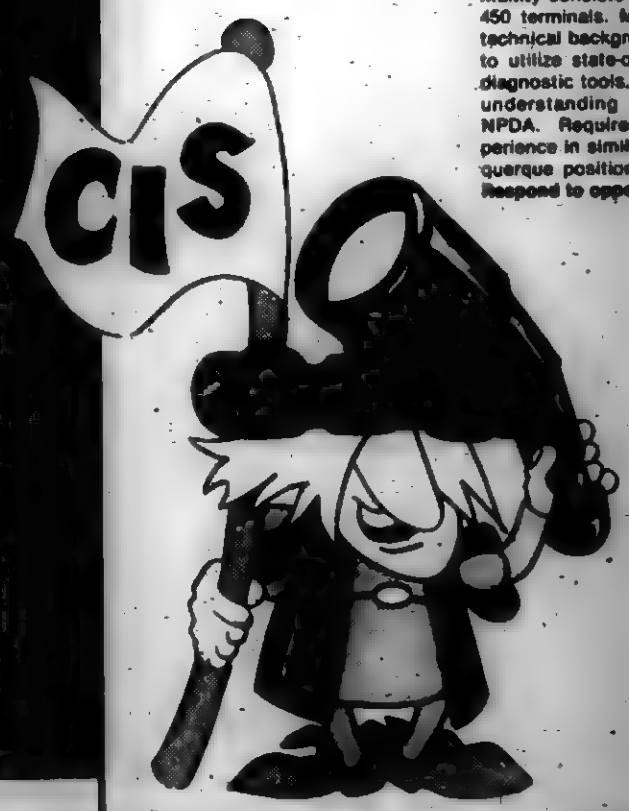
We have current opportunities available in our Sunnyvale, CA facility in the Corporate Systems Development area:

Sr. Programmer/ Analyst
BA or BS in Computer Science or Business and 4-6 years' experience in analysis/programming in an IBM MVS/JES2 environment are desired. Strong COBOL coding and debugging skills are necessary. Familiarity with IMS DB/DC is a strong plus. Openings are in finance, manufacturing and marketing applications. Respond to opportunity #906.

Sr. Systems Analyst
BA or BS in Computer Science or Business. Should have played a major role in systems development. Strong written and verbal communication skills are desired. Familiarity with structured methodology (such as SDM/70) is a plus. Successful candidate will implement financial, manufacturing or marketing systems and interface with other user groups. Respond to opportunity #908.

Data Base Analyst
You should have 5 years' experience in Data Processing, with 3 years in data base applications. Design and implementation of commerical applications also required. Data administration stewardship is a must. Respond to opportunity #910.

Network Control Operator
Monitor large IMS/VM Network utilizing SNA/SDLC. User community consists of approximately 450 terminals. Must have strong technical background and be able to utilize state-of-the-art network diagnostic tools. Must have basic understanding of NCCF and NPDA. Requires 2 years' experience in similar position. Albuquerque positions also available. Respond to opportunity #911.



Albuquerque
New Mexico Opportunities

We are moving our Corporate Computer Services to Albuquerque, New Mexico and are interviewing for positions which will play a key role in this move. All Albuquerque positions will start in California and then transfer to New Mexico with relocation assistance. This data center will consist of twin 308X processors supporting VM/CMS and MVS/JES2 users.

Computer Operations Shift Supervisor
Three-five years' operating experience (including 1 year in a supervisory role) in a large-scale IBM environment utilizing VM, IMS, MVS/JES2 software. Will manage operators, analysts and distribution clerks; coordinate user-programmer and upper management interface and monitor processing in a variety of support areas. Respond to opportunity #912.

Operations Analyst
Two+ years' experience in ABEND resolution and working knowledge of MVS JCL is required. Experience working with production cycles in a large IBM environment is necessary. Respond to opportunity #913.

Data Communications Analyst
Two+ years of hands-on experience in a large network control center. Will be responsible for problem diagnostics and terminal availability. California positions also available. Respond to opportunity #914.

Sr. Computer Operator
Two-five years of operator experience in a large-scale IBM environment utilizing MVS/JES2 and VM software. IMS and TSO experience a plus. Several shifts available. Respond to opportunity #915.

DEC Systems Programmer
BS or equivalent and 5+ years' experience required. Responsibilities include installation, maintenance and support of DEC Hardware/Software. Must have knowledge of VAX, PDP-11, VMS, and RSX 11M. Telecommunications and CAD/CAT/CAM knowledge desirable. Respond to opportunity #916.

Hardware Manager
BSCS and 4+ years' experience required. Will be responsible for management of computer hardware, including configuration layout and equipment installation, as well as vendor maintenance and problem resolution. Should have knowledge of environmental controls and performance characteristics of IBM equipment. Respond to opportunity #917.

Sr. Systems Software Programmers
Five+ years' experience. Will be responsible for performance and future requirements planning of MVS/JES2 system supporting IMS/DC and TSO on an SNA network. Respond to opportunity #918.

We will be interviewing soon in the Chicago, IL, Dallas/Houston, TX, and Washington, D.C. areas. For more information, please call Kathy Connell, collect at (408) 746-2213 or forward a letter and/or resume indicating opportunity number to: Signetics Corporation, Professional Staffing, Attn: Kathy Connell, 811 East Arques Avenue, Mail Stop 2607, P.O. Box 3409, Sunnyvale, CA 94088-3409. We are an equal opportunity employer.

BROWN UNIVERSITY

Brown University is involved in a major effort to bring state-of-the-art computing tools to the entire community of faculty, staff, and students. The last few years have seen the installation of the largest academic broadband network in the world connecting over a thousand terminals to more than a dozen mainframes. A $50 million project combining industry and University resources is currently developing workstation environments which allow for sharing and distributing information. The Computer Center, operating an IBM 3081 running VM/CMS, is looking for professionals to help provide services to users in this rapidly growing environment.

Manager of New Services

Share supervision of the technical staff of the Computer Center and manage the development of all NEW services to be delivered by the Center. Primary responsibilities include technical planning for hardware and systems software, managing the development of new hardware and software facilities, and the integration of new facilities into existing support services.

Applicants should have 1-3 years' experience managing a technical development group, a broad background in the current uses of computing, and experience integrating operating systems and applications software into cohesive facilities. Excellent interpersonal and communications skills and familiarity with the facilities and limitations of VM/CMS are also required. Experience connecting ASCII terminals and workstations to mainframes is highly desirable.

Systems Programmer

Will participate in system maintenance and the design and development of changes to the VM/CMS operating system and various systems software, install applications packages, and assist in the efforts to improve the interconnections between the 3081, the LAN, and workstations.

Applicants should have 3 years' experience maintaining and modifying the CP portion of VM/CMS, experience with non-SNA communications protocols in a heterogeneous environment and strong interpersonal and communications skills.

Interested persons should send their resume to Michael Brennan, Brown University, P.O. Box 1879, Providence, RI 02912.

Brown University is an affirmative action/equal opportunity employer

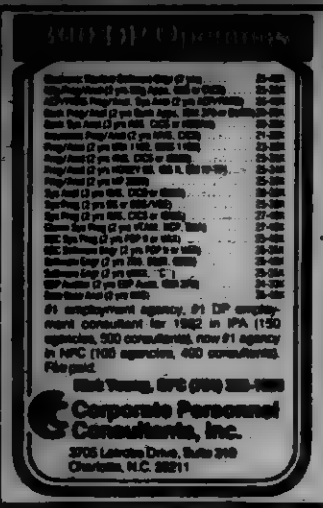
HOW TO MAKE OVER $80 000 00 A YEAR ON CICS COMMAND LEVEL PROGRAMMING

Acquire one of the most demanded & rewarding programming skills in months instead of 2 years. A complete self-study book based on CICS latest version 1.5, written in COBOL and with special emphasis on VSAM. It covers virtually every CICS technique you will ever need. Fifteen sample programs address all CICS major applications. Over 150 ready-to-use examples. Sample programs include: Menu, Add, Update, Delete, Browse, Print 24x80, Print 66x132, Print Any Size Report, Message Routing, Screen Refreshing, VSAM Alternate Index Setup and Manipulation, Constant Table Setup and Use and more.

It is hard to believe the learning can be so easy until you try it. In hours, you can start to create your own BMS maps; in days, you can start to write your own pseudo conversational CICS programs. Some CICS techniques are especially hard. When you are stuck for the technical problems, you'll be thankful you have this book.

Moonlighting on CICS projects is very rewarding. A typical 10-screen system can mean $15,000 cold cash. This book also tells you how to market your services, locate the contracts, write a proposal, make a presentation, quote the right price & draw a contract agreement without a lawyer.

But act now. Send $34.95 (plus $2.00 for shp. & hndl.) or $32. ea. for 2, $30 ea. for 3, $28. ea. for 4 and over. (shp. & handl. incl.) in Check or money order to: CCD ONLINE SYSTEMS, INC., P.O. BOX 795759, DALLAS, TX 75379. Allow 1 to 2 weeks for delivery. Full refund within 10 days if not satisfied.



Corporate Personnel Consultants, Inc.
3705 Latrobe Drive, Suite 249
Charlotte, N.C. 28211

Professional Master's Degree Computer and Information Science

Advance your career in information systems through Dartmouth's distinctive professional program. Our two-year program is designed to equip you to take a leading role in planning, designing, and developing effective business solutions to business problems.

In the CIS Program, you will study current methodologies for planning, analysis, and design; strategies and issues in the management of information systems; business organization; project management; database systems; networks and distributed processing; professional communication. Learn from guest lectures by practicing managers of information systems, case studies, and professionals-in-residence. An internship is required of each student.

If you have previous experience in the computing field but want to be equipped to assume more responsibility and leadership, consider joining us next year. For more information, write: Program in Computer and Information Science, Dept. C, Nathan Smith Building, Hanover, NH 03755.

New 1984 Salary Data

No doubt, during 1983, you knew that many firms took a hard line on awarding salary increases—or, in some cases, even enacted across-the-board cuts.

Yet, on the other hand, did you know that salaries for *some* computer professionals *soared* right on through the uncertain business outlook?

Computer salaries are up.

The new, *1984 Computer Salary Survey and Career Planning Guide* is based on contacts with more than 44,000 computer professionals and 35,000 organizations. Not only are salary averages for fifty-eight positions reviewed (including ten new ones), but high and low compensation ranges are also provided.

Included are positions in programming, software, systems design, data base/data communications, Edp auditing, operations, computer sales, marketing, marketing support and management.

In addition, the new Survey details seven ways to maximize your chances of getting ahead through a proven, seven-step system that has helped thousands of computer professionals advance their careers.

Free to computer professionals.

The new 32-page Survey is available to you without charge. Since 1966, this annual report has helped approximately a quarter of a million computer professionals understand current trends in technology and compensation, realize how and where they fit in and what they need to do to reach their full potential.

You owe it to yourself—especially if most of your career lies ahead—to call or write today.

Call today for your complimentary copy.

Call the Source Edp office nearest you for a free copy of our new 32-page report. We'll mail a copy to you in strict confidence, without obligation.

Network and Communications Manager

The University of Alaska Computer Network

The UACN provides the statewide University of Alaska system of academic and administrative computing and data communications services. The Network and Communications Manager is responsible for evaluating communications service requirements and determining the facilities needed to meet those requirements. Also, this post is responsible for evaluating, coordinating and supervising the operation, maintenance, enhancement, and planning of the communications network and its facilities. The successful applicant must possess knowledge of communications network architectures, engineering, local area networks, and data communications. In addition, skill in the management and development of large data communications networks are required.

The position is based in Fairbanks, Alaska and will report to the Director of Network and Operations. The salary range begins at $42,765 DOE.

Application letters, together with a resume and at least 3 professional references must be postmarked by March 30, 1984 and sent to:

Statewide Office of Human Resource Development
University of Alaska
202 Tanana Drive
Room 1 Bunnell Building
Fairbanks, Alaska 99701

Your application for employment with the University of Alaska may be subject to public disclosure should you be among the finalists for the position.

The University of Alaska is an Equal Employment/Affirmative Action Employer and Educational Institution.

MARKET RESEARCH PROFESSIONALS

Bring Your Creative Talents And Expertise To

ITT Telecom

And Become An Important Part Of Our Telecommitment™

The ITT Telecommitment™ is a pledge to ourselves and to our customers that we are committed to achieving the highest level of technical excellence and leadership in fulfilling customer telecommunications requirements for voice, data and information transmission.

At ITT TELECOM, in Raleigh, North Carolina, our Telecommitment™ philosophy is backed by some of the most creative and talented professionals in the industry; a team dedicated to meeting the challenges of a fast-changing industry. If you feel your highly accomplished skills match our long-range goals, look into the positions offered with our BUSINESS and CONSUMER COMMUNICATIONS DIVISION and become an integral member of the number one team in telecommunications.

MANAGER MARKET RESEARCH

Responsibilities will include managing customer needs and competitor analysis. Required is experience in office automation, integration of data/voice, advanced terminal features and local/private wide-area networking. Familiarity with commercial specification requirements is highly desirable. MBA preferred along with 6-10 years experience of which 5 years should be in the data systems industry.

MARKET RESEARCH SPECIALIST

Specializing in the advanced voice/data terminal area identifying customer needs and performing competitive analysis, you will be required to analyze competitive product information, product pricing, evaluate new and/or competitive technologies and recommend related market strategies. MBA Degree desired along with at least 3 years experience preferably with a data industry systems manufacturer. Voice experience would be a plus. Familiarity with commercial specifications requirements desirable.

MARKET RESEARCH SPECIALIST

Supporting our MANAGER, Market Research/Intelligence, in analyzing our current telecommunications products data needs/enhancements for residential, key systems and PABX markets, you will be required to generate studies and analysis and maintain source documentation for current product non-voice enhancements while acting as a back-up to our manager regarding customer and competitive analysis for future voice related requirements. Along with a proven ability to interface effectively with middle and top management personnel, an MBA Degree and at least 3 years experience with a data industry systems manufacturer is desired. Voice experience would be a plus; familiarity with commercial specification requirements highly desirable.

In addition to excellent salaries, comprehensive benefits, and ample room for career development, our location will make your move to ITT Telecom complete. In Raleigh, you will find a bountiful collection of cultural, educational and recreational pleasures all designed to meet the personal preferences of the community. Relocation assistance will be provided; a full-time Relocation Coordinator is on staff to assist with your relocation from BEGINNING to END. Please send a detailed resume, indicating position of interest and including salary history in strict confidence to: **Senior Technical Recruiter, Department CW-116, ITT Telecom, Business and Consumer Communications Division, 2912 Wake Forest Road, Raleigh, North Carolina 27611.** An Equal Opportunity Employer M/F/H/V.

Systems Programmers
Applications Programmers
Manager for Network Services

Syracuse University announces the availability of positions for highly motivated people in its Academic Computing Center and its new CASE Center (Computer Applications and Software Engineering). The CASE Center is dedicated to industrial collaboration in research and education leading to the wider use of computer technology. The Center is designed to promote academic excellence and technological innovation in two principal areas: computer-enhanced reasoning and computer tools research in artificial intelligence.

The systems used here are VM/CMS and MVS on three IBM 4341 computers, with a large interactive/terminal network. Applicants for the programming positions must have a minimum of one year experience. VM/CMS experience is desirable; bachelor's degree preferred. Applicants for Manager of Network Services should have a minimum of 5 years experience with computer communication protocols, hardware, and software. Knowledge of computer networking essential. Supervisory experience desirable.

Syracuse University's benefits include competitive salaries, advanced degree opportunities, dependent scholarships, and generous vacation and retirement plans. Closing date for applications is February 10, 1984. Send resume for CASE Search Committee, Syracuse University, Personnel Department, Employ Office, Syracuse, New York 13210.

Syracuse University, located in beautiful and culturally rich central New York, is an Equal Opportunity Affirmative Action Employer.

RESULTS

Whether you're buying, selling, swapping, hiring or looking, you get results from Computerworld classifieds.

Maybe that's why Computerworld gets more classified advertising than all the other computer publications put together!

AT FAIRCHILD WESTON: INDIVIDUALS HAVE PROJECT RESPONSIBILITY

Look to Fairchild Weston if you seek the individual challenges, responsibilities and rewards of seeing projects through from start to finish. For 30 years, we've been the leader in EMR telemetry, signal processing and data acquisition systems. Our technological excellence and innovation have resulted in steady sales growth, creating exciting career opportunities for experienced engineering and/or computer science professionals.

The following positions require U.S. citizenship, and extensive background investigations may be conducted:

SOFTWARE Q.A. ENGINEER

An exciting career opportunity exists for an individual experienced in software quality assurance. We seek a person with strong leadership skills to develop and head our software Q.A. function. Experience with real-time software specifications, design, development and documentation desired. Experience with software Q.A. mil-standards required. The successful applicant will develop and implement a Q.A. program for our system software products. A BSEE or BSCS or applicable experience preferred.

SOFTWARE SPECIALISTS

Positions require experience in the design and implementation of large scale real-time systems utilizing structured methology. Experience with VAC-11, RSX-11M or VMS operation systems and assembly language/FORTRAN required. Knowledge of signal processing, graphics, data base implementation or large scale netted computer systems is highly desirable. Project leader position requires prior experience with proposal generation and cost estimating.

Fairchild Weston offers top compensation, liberal fringe benefits, relocation assistance, and a casual but challenging work environment.

Sarasota is a beautiful beach community on Florida's Gulf Coast. Sarasota enjoys a respected school system, attractive residential communities, a low tax structure, no state income tax, and a year 'round recreational climate.

For confidential consideration, please submit your resume, including salary history, to: Tom Salmon, Manager, Professional Employment.

SENIOR DATABASE ANALYST

SEATTLE

Rainier Bank, one of the most progressive financial institutions in the Pacific Northwest, is currently seeking a Senior Database Analyst.

You will need 3 years of system programming or application experience, and must be able to design, code, test and debug programs using COBOL, and/or Assembler. In addition, you must be able to design logical and physical data base structures and should have extensive experience using appropriate IMS (DB/DC) utilities.

You will assist in the design, development, implementation and maintenance of database systems which includes consulting with technical personnel to resolve performance issues with physical database designs and applications and preparing backup, restart and recovery procedures.

Qualified applicants should address their resumes to: **Lisa Tolliver, Rainier Bank, P.O. Box 3966, Seattle, WA 98124.** Your initiative to contact us personally will be weighed more heavily than third party representation. We are pleased to be a leading Pacific Northwest equal opportunity employer *m/f/h/v*.

IT LOOKS LIKE ANOTHER BIG YEAR!

1983 was a year filled with accomplishments at Northrop Data Processing. We completed a major reorganization along divisional lines to enhance our responsiveness to a wide variety of needs. New Data Centers utilizing IBM's latest mainframes and operating systems were established. We introduced our first Information Service Center at the Aircraft Division and provided continued support to Engineering, Manufacturing and Financial functions.

1983 was a big year. As a service organization we can't rest on the success of last year. We must continue evaluating future needs and plan accordingly.

1984 promises to be a year of continued growth for both the divisions we service and ourselves. We will continue applications programming support to a full range of functional organizations and take on new challenges. In 1984, we will create additional Information Service Centers and establish the Applications Development Center as an aid to programmers. Continuing improvements to our network systems will include integration of personal computers into the framework of software services.

1984 looks like another big year for Northrop's data processing professionals. How does it look for you? If you don't see diversified challenge, success and reward coming with the new year, perhaps you should consider our broad range of opportunities.

- **Software Project/Product Management**
- **Computer Systems Planning**
- **Operating Systems Software Support Including Performance Tuning**
- **IMS Systems Software & Data Base Administration**
- **Graphics & Aeroscience Support Programming**
- **Manufacturing & Financial Applications Programming**

If you're experienced in any of these areas, we'll welcome your inquiry. For immediate and confidential consideration, send us your resume and, Happy New Year!

LOCKHEED IS COMPUTING CAREERS.

With your future in mind, Lockheed Missiles & Space company is computing special careers in advanced technology. We've got all the right components to make this the opportunity of a lifetime. All we need now is for you to accept the challenge. Look over the descriptions listed below. One of them may be just what you've been waiting for.

ADVANCED COMPUTER / DIGITAL SYSTEM ARCHITECTS
R&D positions at various levels are available, for PhD and MS in Electrical Engineering/Computer Science with several years of experience, to study and create new systems based on non-Von Neumann architecture utilizing highly distributed and parallel multi-processors (supercomputers). Work involves all aspects of computer and digital systems, including system software/firmware design, processor networking, fault tolerance, multi-processor hardware architecture and implementation, and VLSI chip design. Experience with microcomputer and microprocessor systems and architecture is essential.

DIGITAL IMAGE PROCESSING SCIENTISTS
We're seeking PhD or MS level graduates in Electrical Engineering or Computer Science with specialization in digital image processing and familiarity with computer programming. Your experience should also include algorithm development, computer simulation, pattern recognition and digital image enhancement. Positions are available in the following areas:
- Image Correlation
- Artificial Intelligence
- Automated Industrial Inspection
- Target Classification Based on 3-D Imagery

SOFTWARE ENGINEERS
Positions are available for Software Engineers to perform computer programming, architecture design, code and checkout computer programs, and analyze the results of these programs.

SENIOR DATA SYSTEMS ANALYSTS
Design and develop programming systems for processing management and central data. BS in Computer Science or Math and 6-8 years of experience desired.

MICROCOMPUTER BASED CONTROL SYSTEMS DESIGNERS
Experience with microprocessors and microprocessor based development systems with a BSEE or BSCS desired.

DATA COMMUNICATIONS NETWORK SYSTEMS SPECIALISTS
Specialists are needed to perform network design, planning, coordination, installation and troubleshooting system with knowledge of network configuration, circuit testing, modem strapping. A BS CS/EE and 6-8 years of experience desired.

SR. SCIENTIFIC PROGRAMMERS
In this position, you will participate in the design, development and implementation of highly sophisticated programs on a large scale timeshare computer system with interactive graphics terminals using both Assembler and Fortran languages. A degree in Computer Science or closely related field with a computer background and four years experience with software design and development on a large scale timeshare operating system is required. Knowledge of structured programming concepts highly desirable.

SYSTEM PROGRAMMERS
We are currently seeking professionals with expertise in either operating systems programming using EXEC 1100 internals or IBM Assembler experience with IBM IMS, OS/MVS internals in software systems design and development activities. A BS in Computer Science and 4 or more years experience desired.

EXPERIENCE WITH SPECIAL ACCESS PROGRAMS AND CURRENT SIN DESIRED.

For immediate consideration, please forward your resume to Lockheed Missiles & Space Company, Professional Employment, Dept. 653-0116, P.O. Box 504, Sunnyvale, CA 94086. We are an equal opportunity, affirmative action employer. U.S. citizenship is required.

Lockheed Missiles & Space Company

Rapidly expanding Public Sector Data Processing Department seeks

BUSINESS SYSTEMS PROFESSIONALS

LOF Glass is the largest division of Libbey-Owens-Ford Company. Headquartered in Toledo, OH, our continued expansion offers several highly visible career positions in a dynamically changing MIS environment.

SENIOR BUSINESS SYSTEMS CONSULTANT

Interface with user management and direct software projects. Positions require BS/BA + 4 years systems analysis experience or MBA/MS + 2 years systems analysis experience.

SENIOR ANALYST/PROGRAMMER

Analyze business systems needs and develop new systems using 4th generation software. Positions require BS/BA + 2 years programming and 3 years business systems analysis experience or MBA/MS + 2 years programming experience.

All positions require work experience in manufacturing applications in a large scale IBM or DEC VAX environment. TIS, American Software, McCormack & Dodge or MRP II experience highly desirable.

Send resume and salary history to:

General Director
Salaried Personnel

DEC VAX VMS
1 PROJECT LEADER
4 ANALYST PROGRAMMERS
3 PROGRAMMERS

A dedication to customer service, creativity in product development, innovation in sales and marketing and a staff of top quality people have made us the #1 company in the highly competitive bedding gift industry. If you enjoy being with the best, here's your chance to join RUSS, the acknowledged leader and trendsetter in our field.

We are presently seeking people who will participate in a major software development project. Although this project has a definite scope of 1-2 years, our rapid pace of growth and expansion dictates the need to maintain and develop a highly effective M.I.S. support team. We are replacing existing hardware and implementing new systems on a distributed network of DEC VAX/VMS computers.

Programming will be in the BASIC language. Experience in a distribution-oriented company and DEC VAX experience is highly desirable.

If you seek a formidable challenge and outstanding opportunity for personal growth while being directly involved in state-of-the-art technology, submit resume to:

Harrah's Atlantic City is an equal opportunity employer subject to the rules and regulations of the NJ Casino Control Commission.

University of Wisconsin - River Falls
Computer Science Faculty Positions

Applications are invited for three tenure-track positions beginning September 1, 1984. Responsibilities include instruction of twelve credits per quarter at the undergraduate level, student advising and curriculum development. Candidates with a Ph.D. in computer science are preferred, however, candidates with a Master's degree in computer science (or equivalent) will be considered. Salaries are competitive. Areas of interest which needed are operating systems, compiler design and management information systems.

The department has nearly 300 students majoring in computer science. Equipment includes a minicomputer laboratory and a DEC VAX-11/780.

University of Wisconsin-River Falls has a beautiful campus in a town of 9,000 population, 30 miles from Minneapolis-St. Paul.

Send resume, transcripts, and at least three letters of recommendation to:

Dr. Edward C. Mealy
Search and Screen Committee, Chairman
Department of Mathematics/
Computer Science
University of Wisconsin-River Falls
River Falls, WI 54022

Deadline date for applications will be April 1, 1984 or until positions are filled.

New and Progressive Software Development For Major Network and Operating Systems.

For exciting new challenges and greater opportunity, look to CIGNA, one of the nation's largest private investor owned insurance and financial services companies. A company where our on-going success continues to increase the importance and demand for newer and more progressive software development.

This has created many exceptional career opportunities within our Systems Division for talented software professionals in a wide variety of capacities. Right now, we have an immediate need for experienced individuals in the areas of:

Networking

This senior level position requires excellent diagnostic skills to analyze current and new network software packages for remedying existent problems and implementing new network software releases.

Minimum experience should include 5+ years in a large-scale IBM environment with solid background in ACF/VTAM, V2 – NCP, V2 – MSNF – NCCF/NPDA and knowledge of MVS operating systems. Proven project management experience is essential.

Operating Systems

This challenging, high-level position requires the ability to identify and solve systems problems to support and enhance MVS, JES2 with new operating system software.

Qualifications include 5+ years' programming experience, with 3 or more years in an IBM, MVS software support capacity. Knowledge of SMP and MVS system internals, Assembly language, and at least 6 months' experience on IBM, MVS stand alone dumps.

Excellent salary, comprehensive benefits and relocation program, and the stimulation of a progressive, supportive, high-tech environment will advance your career development. If interested in either of these specific openings or any other software opportunities, please forward your resume with salary history/requirements to: **Howard Cramer, CIGNA Corporation, Routing A-11, Hartford, CT 06152.**

Data Processing

SUNBELT OPPORTUNITY

Daniel International is one of the largest engineering/construction firms in the nation. We currently have a need for the below listed individual in our Information Systems Division at our Corporate Data Center located in Greenville, South Carolina.

IDMS SYSTEMS PROGRAMMER

Our current DBMS software includes IDMS-DB, IDD, CULPRIT, OLQ, and IDMS "Tool Kit". Installation of IDMS-UCF and ADS-O is planned.

Responsibilities of this position include IDMS-DB/DC software installation and maintenance; DBMS software problem determination and resolution, software performance analysis and tuning, technical assistance and software evaluation; assist with development of Technical Standards/Guidelines/Procedures.

BS or equivalent in Computer Science or Math is required along with 1-2 years Assembler programming experience and 2-4 years programming experience in IBM MVS and CICS/VS (or IDMS-DC) environments. Exposure to IDMS-DB/DC in a systems programming or applications capacity preferred. Experience with IDMS-DC/UCF and ADS-O would be a plus.

In addition to a nationally competitive salary structure, we offer many improved benefits. These include short-term disability, salary continuation, accidental death coverage, medical insurance and corporate profit sharing.

If you are currently working as a Systems Programmer and meet the above requirements and are looking for a new challenge and career opportunity, send your resume including salary requirements, in confidence, to: **Alan Bean, DANIEL INTERNATIONAL CORPORATION, Daniel Building, Dept. 3-0370, Greenville, SC 29602.**

Manager, Software Development

...to lead 3rd-generation product development at FORMATION in Mt. Laurel, New Jersey.

You'll have full responsibility for managing product development and enhancement of our acclaimed MRP II system — FORMAN, a commercially marketed software tool that gives the manufacturing manager an on-line system to control inventories and workplace and production costs. This is a new system, developed with the latest technology including Virtual Operating Systems and the Formation-developed Database & Transaction Management System (TMS). FORMAN runs on any 370-compatible computer, including our own F4000, a 32-bit minicomputer.

● *To qualify, you must have at least a 10-year background, preferably in Database management systems and interactive applications...with well-honed and proven management and communications skills. (You must be particularly strong in scheduling, estimating, planning, and controlling.)* Reporting directly to a vice president, you'll oversee the work of our systems programming group, TMS, and our applications group. Current projects involve such enhancements and extensions to FORMAN as financial and order-entry packages.

This opening is immediate, and offers totally appropriate compensation (including stock options) and benefits within a results-oriented, completely professional environment. Formation enjoys considerable breadth for a company our size; in addition to software, we are involved in computer hardware development, design, manufacture, and service.

● *If you feel qualified for this highly responsible position and are interested in arranging an interview at your convenience... please send your resume (with salary history) to:* Vice President of Personnel, FORMATION, 823 East Gate Drive, Mt. Laurel, NJ 08054. Formation is an equal opportunity employer M/F.

formation®

Data Processing Professionals

The INFONET Group of Computer Sciences Corporation is more than an international computer communications and information processing network. We are the world's largest in Remote Computer Services, and due to unprecedented growth, we are currently expanding into state-of-the-art IBM technology. As a result of this expansion, we are seeking Data Processing Professionals in Los Angeles and Beltsville, Maryland, in the following areas:

NETWORKING
Design, develop and maintain communications software for the INFONET network. Participate in requirements analysis and the design phase of SNA/SDLC access methodology. (Los Angeles only)

SOFTWARE DEVELOPMENT
Responsible for new feature identification, specification, design and unit testing of IBM software products. (Los Angeles and Beltsville, Maryland)

SYSTEMS PROGRAMMERS
Design, develop and maintain operating systems software for INFONET's IBM and Univac based systems. (Los Angeles only)

TELECOMMUNICATIONS
Utilize skills in traffic analysis, communications procotol, tariffs, telecommunications hardware, and have a knowledge of communications software. (Los Angeles only)

For further information, and/or immediate consideration, please call in confidence:

The NS16000, Elegance Is Everything.

An elegant approach led to a very elegant solution — National's NS16000 microprocessor and its product family. The revolutionary top-down architecture delivers 32-bit power, and memory management capabilities on par with the latest mainframes. The upward-compatibility will accommodate a shift from 16- to 32-bit hardware. In essence, the NS16000 performs more like a computer than a chip, and we think that's a very elegant package.

A "Software-Intensive" Effort.

The NS16000 microprocessor is the springboard for an entire family of products currently being developed at National's Microprocessor Systems Division. The key to their success lies in the development of software that enhances the NS16000 family's performance, applicability, and elegance. From development through marketing, our "software-intensive" effort is rapidly gaining momentum as we develop demand-paged UNIX* systems based on Berkeley 4.1bsd and 4.2bsd for National's NS16032 and NS32032 microprocessors. We are also working with Bell Labs to define a version of SYSTEM V, . . ., etc., for NS16032 and NS32032. These developments are creating opportunities for software professionals to join us in the following areas:

Sr. Software Engineers: Language Tools Development

You will be involved with developing compiler code optimizer, linker, or debugger. Requirements include two to five years' of language tools development experience; including knowledge of "C", Pascal, FORTRAN, and UNIX.

Sr. Software Engineers: UNIX System Architect

You will be defining a version of SYSTEM V for NS16032 and NS32032. Two to five years' experience in UNIX kernel development is desired.

Sr. Software Engineers: UNIX Kernel Development

You will work on porting Berkeley 4.2bsd to NS16032 and NS32032 based microcomputer systems. Two to five years' experience in UNIX kernel development is desired.

Sr. Software Engineers: Networking

You will work with developing/porting networking software under Berkeley 4.2bsd on NS16032 and NS32032 based microcomputer systems. Two to five years' experience in networking protocol design and development is desired.

Software Engineers: UNIX Utilities Porting and Development

You will be involved with porting and developing UNIX utilities. One to five years' experience in UNIX is desired.

The Rewards Of Elegance.

The elegance and power of the NS16000 will become evident as more software is developed for it. And those who develop that software will reap the rewards, personally and professionally. That's definitely something to think about if you're ready to take on the challenge of our opportunities.

To learn more about National's Microprocessor Systems Division, send your resume to Dept. MS, National Semiconductor, P.O. Box 62499, Sunnyvale, CA 94088. We are an equal opportunity affirmative action employer. Principals only please.

*UNIX is a trademark of Bell Labs.

let's talk about your career.

amdahl

Product Planners

Accept the challenge of planning the future of Amdahl's giant mainframes.

In 1970, a company was formed expressly to build one product: a mainframe computer that would outperform the mainframe that owned the market at that time. Today, that company is an international success story . . . a phenomenon. At the heart of the Amdahl phenomenon, talented planners can contribute to a second decade that will outstrip our first, with nearly double the growth.

If you have the imagination to use what you know about large-scale mainframe CPU's to project future customer requirements and industry trends, Product Planning at Amdahl could be in your future.

You'll provide a significant technical viewpoint between marketing requirements and engineering specifications; with emphasis on the bottom line impact on Amdahl. You'll write product requirements/specifications and interface heavily with Marketing, Engineering, Manufacturing and Architecture groups. Your business and technical skills will be focused on assisting top management in formulating product strategies and making key product decisions that will shape the future of Amdahl.

Requirements for the position include an MBA or BS/MS in EE or CS. Knowledge of the technical aspects of large mainframes, the dynamics of the large mainframe marketplace, and experience with the full product development cycle are definite assets.

Contact Kim Hawley at (800) 538-8460 ext. 7171 (in California, call (408) 746-7171 COLLECT). Or send your resume to Professional Employment, Amdahl Corporation, Dept. #1-010, P.O. Box 470, Sunnyvale, CA 94086. We are an equal opportunity employer through affirmative action.

Or, you can look for our classified order form located in the classified section of Computerworld. Fill it out, attach your ad with a check, and return it to us. Computerworld Classified Advertising, 375 Cochituate Rd., Box 880, Framingham, MA 01701. We're anxious to help!

APPLICATION SYSTEMS SUPERVISOR

Escape from routine...discover your place in the sun!

It's all waiting for you at Amerada Hess in the tropical splendor of the Virgin Islands.

A leader in the petroleum industry, Hess has an exceptional opportunity at our St. Croix oil refinery for an experienced Application System Supervisor with hands-on knowledge of IBM 4341 OS/VS 1 system. You'll put your 5-7 years' experience in programming and system design to practical use developing commercial programming applications in support of one of the world's largest oil refineries. This involves supervising the activities of 3-4 applications programmers who'll be assisting you step-by-step, from feasibility studies through project inception and development.

Requires a minimum of a college degree in Chemical Engineering, Computer Science or Business (MBA preferred), and strong background in business system analysis and project development; with a working knowledge of COBOL and PL-1.

We offer excellent salary, comprehensive benefits and all the pleasures of living in a Caribbean resort area. For immediate, confidential consideration, please send resume and salary history/requirements to:

David C. Roemer
Amerada Hess Corporation
One Hess Plaza
Woodbridge, NJ 07095

AMERADA HESS

Boeing helps systems programmers get their careers off the ground.

Boeing Computer Services puts systems programmers into an exciting computing environment, working with one of the world's leaders in software and computing solutions. We're at the forefront of linking mainframes to micros, developing information centers, designing networks and creating a wide variety of system and software applications.

Boeing is a great place to get your career off the ground and flying right. Now.

As you explore new hardware and software, you'll be backed by Boeing resources. Specially trained when necessary to operate emerging advanced systems. And allowed to implement and expand what you know.

We're currently seeking candidates with at least 3 years experience in one of the following:

- MVS systems programming
- VM (SP or 370) systems programming
- VTAM host support
- Dump shooting
- IBM data communications
- IMS systems programming
- CICS systems programming

There are several opportunities available. The emphasis ranges from new product development to maintenance and enhancement of existing offerings. Some positions require technical documentation skills and customer interface abilities. Your contributions will be rewarded with a comprehensive benefits package and salary fully commensurate with the professional challenges you'll meet.

Take advantage of this outstanding opportunity for systems programmers. Send resume and salary history in confidence to:

Walt Sanderson

An Equal Opportunity Employer M/F

ELECTRONICS TECHNICIAN

European Stars & Stripes (ESAS), American newspaper published in Germany is looking for an Electronics Technician. Candidate must have at least 3 years of related experience in the computer science and electronic engineering field. Ability to carry out preventative maintenance and problem solving, both hardware and software of a multi-computer system (Pentalin 6500 and Hill 59 and peripherals) used for the editing and production of the ESAS Newspaper. Must be able to use all types of test equipment peculiar to the trade, including interfacing and testing with diagnostic programs.

$22,500 p/a (adjusted on Federal pay increases) are combined plus tax-free living quarters allowance, currently up to $8,400 p/a for employees with family or $4,400 without family, group insurance and reimbursement for relocation. Applicants must send full resume and make reference to this advertisement. Applications must be postmarked on or before January 23, 1984 and must be addressed to the Civilian Personnel Office in care of European Stars & Stripes, New York Operations, 200 7th Avenue, Room 401, New York, NY 10001.

S/38 Systems Analyst

ITT Transportation Distribution Services, located in Palm Coast, Florida, seeks a dynamic, well qualified individual for this newly created position. The successful candidate will be responsible for various systems development efforts relating to transportation, cost accounting, accounts payable, accounts receivable, and PC networking.

The qualifications required include:

- Excellent knowledge of S/38 COBOL and CLP
- Proven track record in applications development
- Good communications skills/customer interface
- Bachelor's degree in Computer Science

We offer a salary commensurate with experience as well as an excellent benefits package. Please send resume and salary history in confidence to: J. Loucks, ITT Transportation Distribution Services, P.O. Box 1038, Palm Coast, FL 32037.

"A COMPUTER LEASING COMPANY'S FINANCIAL STABILITY IS VITAL."

We said that in 1973, when Randolph became a subsidiary of The First National Bank of Boston . . . and we say it again, because it is still true and even more important today.

As an important part of The First National Bank of Boston, one of the nation's oldest and leading financial institutions, Randolph has a built-in financial stability that continues to be unique in the third-party computer leasing industry.

LEASING COMPUTERS IS OUR ONLY BUSINESS.

Randolph specializes in leases for IBM 3081, 303X and 4300 computer systems and peripherals . . . firm evidence that we plan to perpetuate our computer leasing activity.
Our people have an average of 18 years experience in the DP industry . . . from 360's to 3081's. They know all about alternative financing to be sure, but they also know their way around a DP department and the hardware in it.

WE SPECIALIZE IN SOLVING PROBLEMS.

Machine installed on a rental basis? Long wait for delivery? Stuck with a lease on your old machine? Own a 3081 but need cash? Whatever your problem, we can tailor a lease that will fit your exact needs and let you start saving money right away.

SAVE $80,000 EVERY MONTH FOR THE NEXT 5 YEARS.

You can lease the same 3081 that IBM rents for more than $180,000 per month from Randolph for less than $100,000 per month. If you're renting an older machine, we can save you even more—and you'll get about 4 times the throughput in the bargain.

WHEN IS THE BEST TIME TO TALK TO RANDOLPH?

The sooner the better. But it's never too late, even if you already have a machine installed.

Our 19 years in computer leasing gives added assurance that Randolph will continue as the leader in the computer leasing industry . . . continue to live up to the terms and conditions of our agreements . . . provide upgrades . . . fulfill all of our commitments.

LET RANDOLPH HELP YOU GET THE SYSTEM YOU NEED NOW, *NOW.*

We've already done it for many of the Fortune 500 companies . . . and we can do it for you. Call Joseph B. Kelly, Jr., Executive Vice President, 800-243-5387

ORDER FORM

COMPUTERWORLD BULLETIN BOARD

Issue Date: Ads can be accepted up until the Monday preceding the issue desired. Computerworld comes out every Monday.

Classifications: Most ads will be classified according to the brand of equipment that is being bought or sold. These classifications include Burroughs, Data General, Digital/DEC, Hewlett Packard, Honeywell, IBM, NCR, Sperry Univac, Salvage, Terminals, Misc. Systems and Miscellaneous.

Copy: Copy sent in via the mail or telecopier (telecopier extensions are 410 and 451) should be clearly typewritten. Ads may be given over the phone to our team of ad takers. The standard size is 1 column by 1 inch deep. These units may be combined to form larger sized ads. Describe the equipment, very briefly, give the price and the name of the person to contact. All ads will be set up using a standard format. No borders or logos are allowed.

Cost: The price for each standard unit is $130.00 (One unit minimum and no fractional units allowed.) There are no agency commisions and no quantity discounts.

Billing: Once you've written your ad, send (or call) it in with your name and address for billing purposes and we'll run it. (If your company has never advertised with us before, we request a check with your order.)

AMERICAN SOFTWARE IN ITALY

The Gandalf SI Information Sovereign of Trento, Italy wants more American software in Italy. We are a major software house with 10 years of experience in providing quality software. American software is very much in demand in the world and it is heavily utilized in Italy. Especially an American software product is available in Italy 2 years or more after it's on shelves in America. We want to improve on this, so we are offering American software houses the following services: 1) To sell on an import agent who will introduce your American software into the Italian market. We will accept any type of software written for mini or micro computers. Originality is important. 2) To act as an investigator and consultant on the Italian computer market. 3) To establish a collaboration, a research with American software houses who want to sell their products in Italy. The Italian market is growing rapidly and promising is valid. Let's do this with success. Interested parties should write to our American contact: SI, P.O. Box 456, Hummelstown, PA 17036.

LET US MARKET YOUR PRODUCT

Leading vendor of IBM mainframe system software products seeks an additional product. We offer a worldwide distribution network and years of experience in introducing and developing products that are leaders in their market niches. As a publicly held company, we offer you the financial and marketing clout to make you wealthy. Call me directly for a quick decision.

15 pointed questions to ask MSA or any software supplier

These questions will help you when you sit down with individual software companies.

They're tough questions. Relevant ones. And any supplier who is worth his salt should be able to answer them without backpedaling.

Ask MSA

We'll answer all these questions to your satisfaction—plus any others you may have.

In fact, we're probably the best equipped to answer them. Because MSA is the software company. We offer the most complete line of totally integrated systems in the software industry, including financial, human resource and manufacturing.

So you avoid the headache of trying to tie together individual systems. (And the even bigger headache of adding to them.)

With MSA's integrated systems, there's no unnecessary duplication of data or effort. Reporting is faster. All your company's information is more timely and accurate—and in the right form.

Our technical edge comes from experience

Staying ahead is easier for a company that's steeped in software technology. MSA has spent years developing, refining, testing and enhancing our systems.

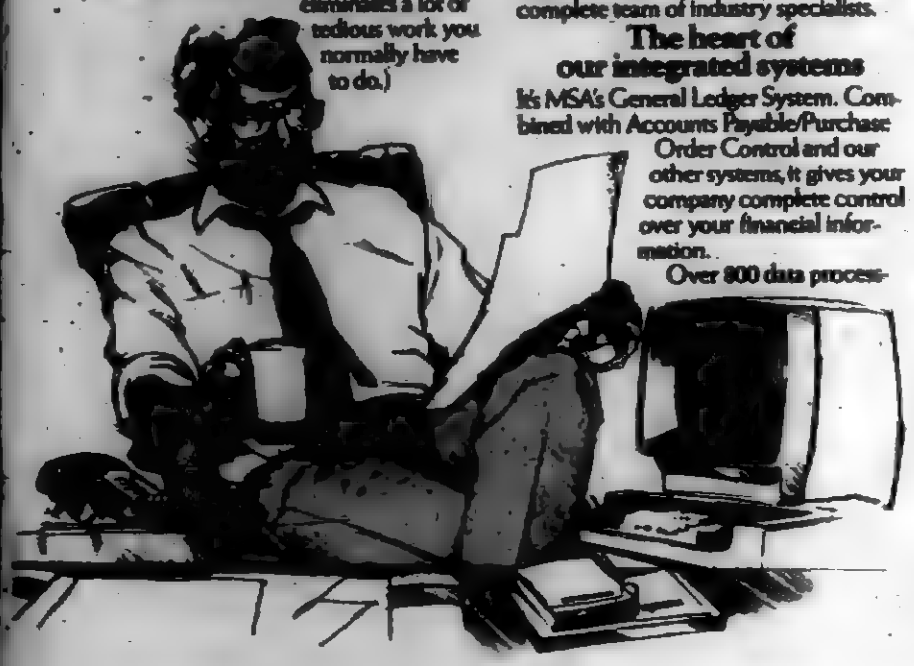
This year alone, we'll invest $25 million to make sure all our systems are technologically razor sharp. That gives us a decided advantage over flash-in-the-pan technology that may not have the bug-free logic of a more experienced system.

It also gives you a decided advantage over "custom" systems you have to update yourself.

MSA relieves you of that time-consuming burden. We update and enhance your software for a full year. Then we continue this service for a surprisingly low annual fee.

Maintenance includes keeping your system up-to-date technologically. Enhancing it with new features that make it work even harder for you.

And making sure it reflects changes in accounting procedures and government regulations, including 401(k), TEFRA, and FAS52. (That eliminates a lot of tedious work you normally have to do.)



Save this box. It can help you make an intelligent software decision.

1. Can you offer us a complete range of software systems designed to work together?
Or will we have to piece together a patchwork of systems?

2. Are your systems just record keepers, or can they really help us make decisions?
Can we pull together information from any of our integrated systems? In exactly the form we want it?

3. Can you provide business software for both mainframe and microcomputers?
Do you develop this software yourself or do you simply market it for another company?

4. Are your systems truly online so all of our information is current?
How many of your systems are online? How secure are they?

5. Will my company have to be the one that discovers the bugs in your brand new system?
Just how long have your systems actually been used, and how have they been tested?

6. Will you update your systems as technology advances and regulations change?
What are some of your most recent updates? Will you keep us current on regulatory changes?

7. Do your systems really do everything you say they will?
Or will we have to change them or add to them to get the features we want?

8. How long have you been in business?
What are your revenues? What is your growth record? Where will your company be five years from now?

9. How many systems has your company installed?
How many of these were installed in the past six months? How many of your earlier customers are still using —and liking—your systems?

10. Do your financial systems handle unlimited foreign currencies?
Do your financial systems use a common set of currency exchange rates?

11. Can you link our executives' computers directly to the mainframe—so they can get their own information?
Is that software available right now?

12. How will you make sure our own people thoroughly understand your system?
Do you have educational centers near us, or will we have to travel all the way across the country to find one? Will you be there to help during installation and after?

13. How many of your people specialize in software for my industry?
How many accountants work for you? Human resource specialists? Manufacturing experts?

14. Do your systems have built-in features that make them easier to use?
What happens if someone needs help figuring out a feature? Do you have online documentation that's easy to understand?

15. As my business changes will your system be flexible enough to change with it?
Or will we have to pay a lot to revamp it? Or even regenerate it?

© Management Science America, 3445 Peachtree Road, N.E., Atlanta, Georgia 30326

35,000 days of training

At MSA, we make sure your people have a firm grasp of our systems. Last year alone, we conducted more than 35,000 student days of customer training for over 1,800 companies. At education centers all over the world, as well as at our headquarters.

From training sessions to cassettes to complete, easy-to-understand documentation, MSA provides the most extensive Customer Education Programs in the industry.

And MSA systems are just as friendly as our people. Our online HELP feature actually guides users through our systems, and EASY-SCREEN™ lets them design their own screens without creating data processing nightmares.

If there's ever a question or problem with our systems, MSA customers are always close to service.

Our Account Managers are knowledgeable, responsive, and backed by a complete team of industry specialists.

The heart of our integrated systems

It's MSA's General Ledger System. Combined with Accounts Payable/Purchase Order Control and our other systems, it gives your company complete control over your financial information.

Over 800 data processing specialists, accountants, and financial experts work together to make MSA's financial systems the most advanced and most highly integrated in the industry.

MSA has the answers

Whatever your size—whatever your business—MSA has a total software solution.

We'll provide the highest quality integrated online software.

We'll tie your business and manufacturing software systems together, using our exclusive Extended Closed Loop™ manufacturing system.

We'll provide business software for your microcomputers, through our Peachtree Software Company.

We'll even link your microcomputers to your company's mainframe—with MSA's Executive Peachpak™ application software. A revolutionary concept that lets executives get the mainframe information they need through their personal computers.

CONTENTS

11 **Death of the Resellers?**
By Don Gooding
The telephone resale industry may break down in a tangle of new regulations slated to govern it.

15 **Cellular Radio Technology**
By Gary W. Onanich
This incipient technology is getting a lot of attention, but what forces are driving the market?

20 **Hysterical Harry Newton**
By Bruce Hoard
A day in the tumultuous life of this month's coverboy. Includes the truth about Bulgarian pay phones.

Special Section: IBM vs. AT&T

25 **Geopolitical Strategies**
By Brian Jeffrey
The fight for superiority has already spilled beyond our shores and onto an international battleground.

29 **U.S. Affiliations**
By Alain Desrenne
The two giants are seeking advantages in the U.S. by selectively choosing technology partners.

33 **Workstation Wars**
By Brian Jeffrey
Will the race for dominance in the office automation market be terminal? Who will come out ahead?

37 **Morale and Management**
By Alain Desrenne
AT&T and IBM depend more on quality, reliability and service than on individual products.

43 **In the Balance**
Michael Killen, a consultant who has made bold predictions in the past, handicaps the high-tech heavyweights.

49 **The "New" AT&T**
By Albert H. Kramer
Is it true that the more things change, the more they stay the same? Will the post-divestiture AT&T turn out to be a wolf in sheep's clothing?

53 **Counting Down To ISDN Plug-In**
By Frank Gratzer
The superhighway of telecommunications networks is fast becoming a reality, but it is still plagued with pesky regulatory problems.

57 **Overnight Mail Services**
By Katherine Hafner
Absolutely, positively, the definitive scoop on overnight mail services in the electronic age.

63 **Gap in Human Communication**
By Patti Hartigan
You may have the most sophisticated system available, but still know nothing about communicating.

70 **Blasting the Way**
By Paul Charbonnet Jr. and Glenn Smith
Many previously deprived computers may now enjoy the luxury of synchronous communications.

74 **Is the Voice-Data Mix Missing?**
By James N. Budney
The quest for this holy grail of communications winds its way through a variety of devices.

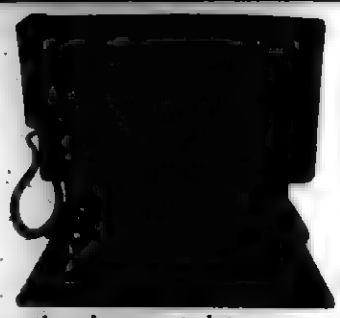
GET EVERYBODY ON BOARD.



Now there's a way to let everyone in your company chip in.

AT&T Information Systems, the company whose unparalleled communications heritage has been bringing people together for 100 years, now brings your office together. With state-of-the-art office automation that's designed to get your company moving ahead.

Electronic Document Communications, now available on System 85 and DIMENSION PBX, is an easy-to-learn software application that's hard to beat. Because it integrates your office by letting everyone prepare, send and store documents and messages with the speed and efficiency of a computer. So you can have better access to the right information in the right form at the right time.

Electronic Document Communications can streamline your office in three ways:

Preparing Information—Reduces the time, effort, cost and wasted paper between drafts by electronically creating, editing and formatting documents and messages. "The Composer," a special software feature, checks spelling, grammar, punctuation and usage. EDC even measures whether documents are readable by technical and nontechnical readers.

Moving Information—Speeds documents to many people in different locations simultaneously so they can act decisively. EDC allows you to determine the timing and cost of delivery, and even check to find out when documents were received. Using a password ensures the privacy of your messages.

Managing and Storing Information—Locates documents, and retrieves and evalu-

ates contents quickly and easily with electronic files—while reducing the possibility of losing documents. An electronic "Mailbox" allows you to quickly determine which documents to read first. EDC reduces storing and filing costs with an electronic "Archives" that allows for either short- or long-term storage, and the "Wastebasket" which enables you to permanently delete items after a determined period of time. There's even an electronic "Calendar" that checks personal schedules and arranges mutually convenient meetings.

Not only will all these features help you further integrate your office, Electronic Document Communications is itself just one part of AT&T's line of completely integrated business systems. For state-of-the-art office automation, you can implement EDC in conjunction with other applications software like Message Center/Directory, a call coverage and message system. These office management applications are now available on System 85 and DIMENSION® 600 and 2000 systems with the Applications Processor.

The result is you'll be able to improve staff productivity at every level and get everybody on board. And as new features are developed in the future, they'll be compatible with your existing equipment.

EDC was developed by Bell Labs systems designers who now work for AT&T Information Systems Laboratories. AT&T Western Electric produces EDC, and AT&T Information Systems will maintain it with comprehensive, conscientious service from the largest service organization in the industry. To find out more, call toll-free 1-800-247-1212, Ext. 879M.

AT&T's Electronic Document Communications: It's part of the integrated office of tomorrow that you can board today.

EDITORIAL

IBM at the Helm Again

The difference between personal computers and CRT terminals is getting more difficult to define as the markets they serve merge and grow larger. Not surprisingly, IBM is the company best positioned to reap the benefits of this profitable communications market. The question is, how much of the profits will be left for the competition?

IBM has a widespread installed base of mainframe computers. Those computers communicate with CRTs and personal computers via the synchronous communications mode. Most non-IBM CRT terminals and personal computers communicate via the asynchronous communications mode. IBM dominates the market for synchronous CRT terminals and personal computers. This means that IBM controls an extremely lucrative market.

International Data Corp. estimated that, at year-end 1982, there were approximately 4,365,000 synchronous communications terminals installed vs. 3,124,000 asynchronous models.

IBM has a solid grip on the synchronous CRT terminal market with its 3270 family of terminals and controllers. Currently, over a million of those units are installed. The 3270 series may not represent the ultimate in CRT terminal and controller technology, but it looks good when you are seeking IBM mainframe compatibility.

Just as importantly, IBM CRT terminals and Personal Computers are conversant with IBM's aging, but still ubiquitous Binary Synchronous Communications (BSC) networking protocol and Systems Network Architecture (SNA), the hydra that is succeeding BSC. SNA is a de facto networking standard similar in many of its aspects to the Open Systems Interconnect model being hammered out by the International Standards Organization (ISO). It will continue to thrive even after the long-awaited ISO model finally comes to fruition.

The asynchronous manufacturers seemingly do not want anything to do with the synchronous IBM world, even though the synchronous terminal market is growing faster in terms of shipments. On the other hand, IBM has taken an interest in the asynchronous world, having installed 90,000 of its asynchronous 3101 CRTs.

So much for CRTs. What about personal computers? There is no question about the current impact and future prospects for these revolutionary devices. Some pundits have gone so far as to predict that personal computers will destroy the CRT market. This seems an unlikely forecast, but it is ominous, none the less, for CRT manufacturers.

IBM made its intentions in the much-touted micro-to-mainframe link known dramatically last Oct. 18. It introduced the Personal Computer XT/370 and 3270 Personal Computer as complements to its already successful Personal Computer and Personal Computer XT.

The XT/370 offers IBM 3277 CRT emulation and connectivity to 3274 controllers. In addition, IBM says it offers roughly half the internal performance of the IBM 4321, a low-end mainframe. Beyond that, the XT/370 reportedly permits users to run many 370, 4300 series and 30 series programs unchanged on their desktops under the VM/CMS operating system. Users can access mainframe applications and concurrently use those applications with programs running under Microsoft, Inc.'s PC-DOS, the primary operating system for IBM's Personal Computer and Personal Computer XT.

The 3270 Personal Computer is said to let users access multiple host processors while retaining local computing powers. It offers the ability to run up to seven applications concurrently, four of which can emanate from a larger host such as 4300 or 3080 series processors.

Furthermore, the IBM machines may be modified for asynchronous communications with the addition of a card.

The announcement of these two products made life even more difficult for competing personal computer vendors. In the past, they could claim Personal Computer and Personal Computer XT emulation capabilities by modifying their microcomputers to act as dumb 3270-type terminals. Now that the ability to access mainframe applications running under VM/CMS has been added to the IBM repertoire, the competition has to go back to the drawing board and duplicate IBM's feat. In the meantime, IBM will be out selling computers.

IBM has put together an impressive line of products designed to sew up the IBM synchronous CRT terminal and personal computer marketplace. It seems well on its way to doing just that.

No Hassles

You're in charge of a large datacomm network. You're responsible for scores of lines, hundreds of users, thousands of terminals. Millions of dollars.

But what have you got?
Zillions of hassles.

Why?

- Because you can't see your network as your users do. You don't know if response time is too slow. Volume too high. Too many errors. And you don't know about problems until angry users call.
- Because you don't *really* know how well your network performs. Over-all. And by each application.
- Because you don't have color graphs and tables that chart performance and service levels, analyze past and preser use, pinpoint excess capacity, highlight saturation, simplify planning.
- Because you don't have real-time status and performance monitoring, much less full-color automatic alerts that spotlight problems.
- Because you need to save money on terminals and lines, but don't know which ones can be moved or eliminated.
- Because your network manages *you*—rather than vice-versa.

The Net/*Alert* network management system from Avant-Garde gives you a window into your network. At last, you can *manage* your network, cut costs, provide better service, and improve productivity.

Without the hassles.

Visit our booth at Communication Networks in Washington, D.C. for a *live* demonstration of the Net/*Alert* system.

If you can't make it because your network has you tied up in knots, fill in the coupon fast. We'll speed you information about Avant-Garde's products to simplify network management. Or call (609) 424-9620 and ask for Bill Ahlstrom.

In what areas do you see AT&T and IBM competing in the future?

Robert Pfluger, technology adviser, Shell Oil Co., Houston:

"Computers and telecommunications. With computers, AT&T will be in the microcomputer business within a year and potentially into large-scale computers later. IBM will be into the conventional telecommunications business through its association with Rolm [Corp.]. As to who will get what, I think both will retain strength in their respective areas of business right now. As for whether IBM will become a leader in communications and AT&T will become a leader in computers, I cannot say. It is too soon to tell."

Howard Talesnick, director of systems, Martin E. Segal Co., New York:

"It's a very serious question. The only thing that occurs to me is the development in hardware and what IBM is doing there. IBM has built its Information Network, and the acquisition of, or integration with Rolm, certainly makes it look like IBM is going after the communications market that has traditionally been served by AT&T. But AT&T is coming out with its own Unix-based hardware, and there has been talk about IBM coming out with hardware working with Bell's Unix system.

"I don't see how anyone can talk about forecasting market share, when there are so many developments taking place. AT&T comes out with hardware, and IBM expands its Information Network for communications. Obviously, these are areas of competition, but the future depends on the product development. For the most part, it will be a self-fulfilling prophesy. It also depends on how you define the market — the total computer market or just one piece.

"Obviously, the outsider's perception of what is taking place is that it looks like two types converging toward the same market. But that is superficial analysis. They happen to be getting closer to offering the same kind of utility. Obviously, it is incidental to their existing product line. I mean, how much is communications a total percent of IBM's business? And how much is AT&T's hardware business related to the whole communications business?

"Obviously, people have the expectation that they will be confronting each other. But what actually emerges depends on their own business plans and on what products they announce and implement."

Robert Handal, manager, telecommunications network services, Mobil Corp., New York:

"Right now, I think IBM has to sort out what to do with Rolm. I don't think IBM has its strategy set as to exactly how it is going to deal with Rolm. It is not clear how it will present that combination of organizations. I can see AT&T is still going to be dominant in communications. It has the network and research. I don't think Rolm can compete with that. I do feel, however, that IBM will have its edge because it has its [Systems Network Architecture] and hardware devices and every aspect of communications except the long lines network and [private branch exchanges (PBXs)].

"More and more, the PBX — which is what Bell is very good at — is looking like a computer. That will help Rolm in its relationship with IBM. Maybe then it can have a very serious effect, take an important market away from AT&T because of the switch.

"But I don't think that will occur because IBM has not sat down with its strategy board and said exactly what portion of the market it is going after and how it is going to do it.

"You will never knock IBM out of the computer area. It is only where the two meet that matters. IBM bought Rolm for the switch. It has everything up to the switch. AT&T has the network and the switch. They will only compete if they add things to the switches. IBM doesn't care as long as it is compatible with their products."

Tad Davies, manager of network communications, Bechtel International, San Francisco:

"IBM, of course, is part owner of Satellite Business Systems [SBS] right now. And I think that the role of communications — the PBX-type telephone communications and satellites — those are going to be the two disciplines of communications in computing, with a merging in the office workstation area. I believe that both of them will be the leaders in that field.

"I don't know if either one will take a dominant position. IBM

SAVE MONEY ON TALK FASTER.

THE CODEX 224 DIAL MODEM.

has a head start on personal computers, but as soon as the unregulated portion of AT&T is unleashed, it will be in that arena as well. In areas like that, one will be No. 1, and one will be No. 2. I doubt either will have the majority of the market. Of course, IBM has the head start: It will be tough to beat the Personal Computer.

"AT&T telephone stores will become computer marts, so to speak. I cannot really see AT&T getting into the large-scale mainframe business, but I can certainly see it getting into office automation and the movement of information. They both will be in that, and they will be in it rather heavily."

Edith Clouse, data communications analyst, Stauffer Chemical Co., San Francisco:

"I think IBM will possibly be entering the PBX market. I wouldn't be surprised if AT&T came out with some form of personal computer. It will definitely be entering the data processing market. I doubt AT&T would get involved in large mainframe computers.

"IBM might take away market share in the PBX area. In the microcomputer business, the market is still growing — the base market. But telephone systems are not new, and it is just a matter of getting new, better ones."

Thomas Isaacson, manager, telecommunications, SCM Corp., Stamford, Conn.:

"Competition between the two will be aggressive. It will be broader than competition with equipment, too. AT&T and IBM will both compete across the whole broad range of information management and transfer, and no area will be specific with either one of them. They will compete in all areas: That is their goal. Both want to offer a full range of capabilities, which includes all the traditional telecommunications capabilities and office automation, personal computing — those things.

"I think IBM will try to increase its percentage of ownership in telecommunications, either through acquisition of existing companies or by establishing its own capabilities. AT&T already has large mainframes. Now, it is a matter of making them available to users. AT&T has electronic switching systems that are enormously capable computers, but I do not think it will come out with mainframes to put on customer premises. Instead, AT&T will offer computing capabilities to users.

"I think both AT&T and IBM will become information processing companies; the distinction between the two will disappear."

Thomas Cooley, telecommunications consultant, General Mills, Inc., Minneapolis:

"Obviously, IBM is going to be in the telephone marketplace in the next couple of years, considering its association with Rolm. It will be interesting to see what kinds of products they bring into the marketplace. Through SBS and yet-to-be-announced divisions, IBM will start to offer value-added network capabilities. I think AT&T will try to compete in that area with their Net/1000 as well.

"But I think AT&T is behind in the terminal equipment area. And we will probably see more product announcements out of AT&T in the next couple of years. I do not think the System 85 is competitive yet. We will see replacements for its Horizon PBX system and expanded system products that go into larger line sizes. We will also see a personal computer from AT&T — probably in the next six months."

YOUR PHONE BILL.

If you're running 212 modems in a dial-up network, Codex has a new product that can significantly reduce your phone bills.

It's the Codex 224 modem.

At 1200 bits per second, the Codex 224 is fully compatible with Bell's 212 modem. But because the Codex 224 also runs at 2400 bits per second you can transfer more data faster and therein lies the economy.

You can run at 2400 bps full duplex asynchronous or synchronous over public telephone lines, even unattended. And because the Codex 224 incorporates advanced equalizers you're assured of high performance at higher speeds even over marginal lines. In addition, the Codex 224 automatically recognizes 1200 or 2400 bps transmissions and adjusts automatically.

And with faster file transfer and screen fills, people in the network will be able to get more done in the same time.

What all this means is that you can get better productivity and significant savings in your 212 network simply by installing Codex 224 modems.

The Codex 224, which meets the CCITT international standard, can be leased directly from Codex or purchased outright.

In short, you don't have to make a massive investment to run a better, faster, more economical network.

All you have to do is call Codex.

Call 1-800-821-7700 Ext. 895. Or write: Codex Corporation, Dept. 707-95, 20 Cabot Blvd., Mansfield, MA 02048.

'Is It Worth Doing?'

I would like to compliment you on the content of your September 28, 1983 *Computerworld On Communications*. The quality of the articles and their pertinence to today's business communications managers was exceptional.

In particular, the article entitled "Myths Behind Voice and Data Integration" by William Zachmann was noteworthy in that it addressed a viewpoint that has been hidden in the current media hype over data and voice integration in new private branch exchanges (PBXs). It is a valid editorial responsibility to expose the user to his need to ask, "Is it worth doing just because it can be done?" This article clearly suggests the jury is still out on the viability of the data and voice PBX solution to today's problems.

We look forward to your increased publication schedule in 1984.

Edward S. Milbury
Product Marketing Manager

Fill in your IBM micro/mainframe communications picture.

AST Research, the leader in IBM PC enhancement products, brightens your micro/mainframe communications picture with a full palette of economical, integrated hardware/software masterpieces. With AST Products, you can emulate IBM terminals or create PC-based Local Area Networks.

AST improves your office operating cost picture.

AST communications products give your IBM PC the flexibility to act as a terminal for your host system or as a stand-alone computer for smaller tasks. Your PC won't bog down the mainframe with unnecessary small jobs and local computing on the PC eliminates phone line charges too. Get the power of a mainframe when you need it and personal computer convenience right at your fingertips.

Applications solutions that are strokes of genius.

AST keeps pace with your ever-changing applications requirements with reliable, high quality, cost effective communications products. AST products provide support for Bisync and SNA/SDLC communications protocols as well as networking multiple PCs for sharing resources.

Choose AST products — by the numbers.

These AST communications packages are currently available:

1. **AST-SNA™** emulates a 3274/3276 controller and 3278 or 3279 display terminal using SDLC protocol.
2. **AST-BSC™** emulates 2770 batch RJE and remote 3270 display terminals using 3270 Bisync protocol.
3. **AST-PCOX™** allows your PC to connect to an IBM 3274/3276 cluster controller via coax cable and emulates a 3278 or 3279 display terminal.
4. **AST-3780™** emulates 2770, 2780, 3741, and 3780 RJE workstations using Bisync protocol.
5. **AST-5251™** emulates a 5251 Model 12 remote workstation connected to an IBM System 34, 36 or 38.
6. **PCnet™** is the first Local Area Network designed specifically for the IBM PC or XT and the PC-DOS 1.1 or 2.0 operating system.
7. **CC-232™** is a user-programmable dual-port card capable of communicating in Async, Bisync, SDLC or HDLC protocols.

Discover how well AST can fill in your micro/mainframe communications picture. For descriptive data sheets, write or call: AST Research Inc., 2121 Alton Ave., Irvine, CA 92714. (714) 863-1333. TWX: 295370ASTRUR

ALAN PEARCE

AT&T at the Regulatory Forge

Regulation — or the lack of it — is the single most important element influencing the future success of AT&T Communications, the successor to AT&T's Long Lines Division that is responsible for providing long-distance services. Competitors are fighting their battles against AT&T Communications before the Federal Communications Commission (FCC), the courts and Congress.

The prospects for approval of AT&T's massive tariff filing submitted before the FCC on Oct. 3, 1983 and slated for implementation this April 3 look good. This is because the proposed tariffs are fair. They were developed by AT&T under the intense scrutiny of the Justice Department, the FCC, AT&T's competitors, AT&T's customers, Congress and U.S. Federal District Court Judge Harold Greene, who is monitoring the Bell System breakup. The tariff filing was subjected to intense scrutiny, so it is highly unlikely that AT&T Communications made the tariffs anticompetitive.

Naturally, the tariffs are being strenuously opposed by AT&T Communications' competitors because, for the first time, there is going to be real competition in the toll telecommunications services market. These competitors want to keep the edge in pricing.

In addition, AT&T Communications will seek substantial deregulatory relief from the FCC over the next five years, looking ultimately to total deregulation. Prospects here also look good, as long as the FCC is headed by current Chairman Mark Fowler, a strict advocate of deregulation. "We are headed ultimately toward a regulation-free telecommunications marketplace," Fowler said. "Society deserves the benefits — not later, but now."

AT&T Communications is working toward that goal by lobbying for the deregulation of the introduction and pricing of new services in the marketplace. It also wants reduced FCC tariff requirements and the elimination of the long delays inherent in the compilation of supporting data in tariff and other filings. It will also seek forbearance from service-by-service regulation, which requires that rates for different services be set to produce equal earnings. It will also move quickly to define a set of existing services that should immediately be deregulated, including certain private-line and satellite-based services.

But this strategy would merely preface a huge effort to become totally deregulated at both the state and federal levels over the next five to 10 years. Fowler has already announced that he plans to launch an inquiry seeking to deregulate AT&T Communications totally. This plan is expected

ILLUSTRATION BY KRISTIE VANVALKENBURGH

to result in monumental opposition not only from competitors such as MCI Communications Corp., GTE Sprint Communications and others, but also from the many major customers of AT&T Communications.

Deregulation at the state level will probably be even more difficult, and AT&T Communications' current approach is to concentrate first on federal deregulation and then on a state by state reduction in the level of regulatory oversight. Before Jan. 1, 1984, AT&T Communications offered only interstate services and was only subject to FCC oversight. As a result, it is totally new to state regulation.

However, AT&T Communications' first concern is early FCC approval of its new tariff filing. It wanted to implement these tariffs by Jan. 1, 1984. Because of the complexity of the proposed tariffs, the FCC pushed that date back to April 3. At that time, AT&T Communications will begin a three-year effort to fight the competition head to toe.

Beginning in 1984 and continuing for a period of six years, the FCC will incrementally eliminate the $11 billion to $12 billion in annual subsidies that have traditionally gone from toll services to local telephone companies by increasing customer payments. In 1984, the local telephone companies will recover 40% of interstate nontraffic sensitive costs from customers in the form of a customer access line charge. The remaining 60% will be recovered from the interexchange carriers through the imposition of interstate access charges. However, the FCC mandates that the customer recovery must grow from 40% to 100% over the next six years, while the interexchange carrier recovery will diminish to zero.

The current pricing advantages of AT&T's competitors will erode over the next three years, assuming that Congress fails to act. Over that period, AT&T Communications has to pay the local telephone companies a premium. The reason behind this is that AT&T Communications enjoys superior connection capabilities. The premium is designed to give AT&T Communications' competitors a discount of 35% in 1984, 23% in 1985 and 12% in 1986. It will be terminated on Aug. 31, 1986, when the local telephone companies must provide equal access to all interexchange carriers.

The competitors are concerned that their costs are bound to rise over the next three years, while AT&T Communications' costs will fall dramatically. In the predivestiture environment, the Long Lines Division shouldered the vast majority of the subsidy flowing from toll to local service. Long Lines paid this subsidy on the separations and division of revenues process. The competitors paid for access to the local exchange companies based on the Exchange Network Facilities for Interstate Access (Enfia) tariffs, which were about 45% less than Long Lines' comparable costs. This equated to an average charge of 15 cents per minute for AT&T, but only 5 cents per minute for its competitors. This gap allowed the competitors to charge users less than AT&T for long-distance services.

In 1984, however, all of this will change. AT&T's competitors will have to pay a local exchange access of approximately 7 cents per minute, while AT&T Communications will pay a tariff of between 8 and 9 cents a minute.

There is a distinct danger that some of the competitors may be forced out of business. They are attempting to fight the implementation of AT&T's new tariffs, the deregulation of AT&T Communications and the elimination of the favorable Enfia tariffs.

Although H.R.4102, the Universal Telephone Service Preservation Act, has already been passed by the full House of Representatives, and its companion measure, S.1660, has been approved by the Senate Commerce Committee, it is unlikely that a single measure will emerge in the near future.

If enacted, bills such as H.R.4102 and S.1660 would significantly weaken the competitive position of AT&T Communications. They abolish the $2 and $6 per month customer access line charges for residences and single-line businesses, perpetuating the subsidies that AT&T Communications would have to pay to the local telephone companies. In addition, they perpetuate — at least for now — the Enfia tariffs, giving AT&T's competitors a 45% discount on the offering of interstate telecommunications services. This is substantial compared with the 35% discount going down to zero over the next three years.

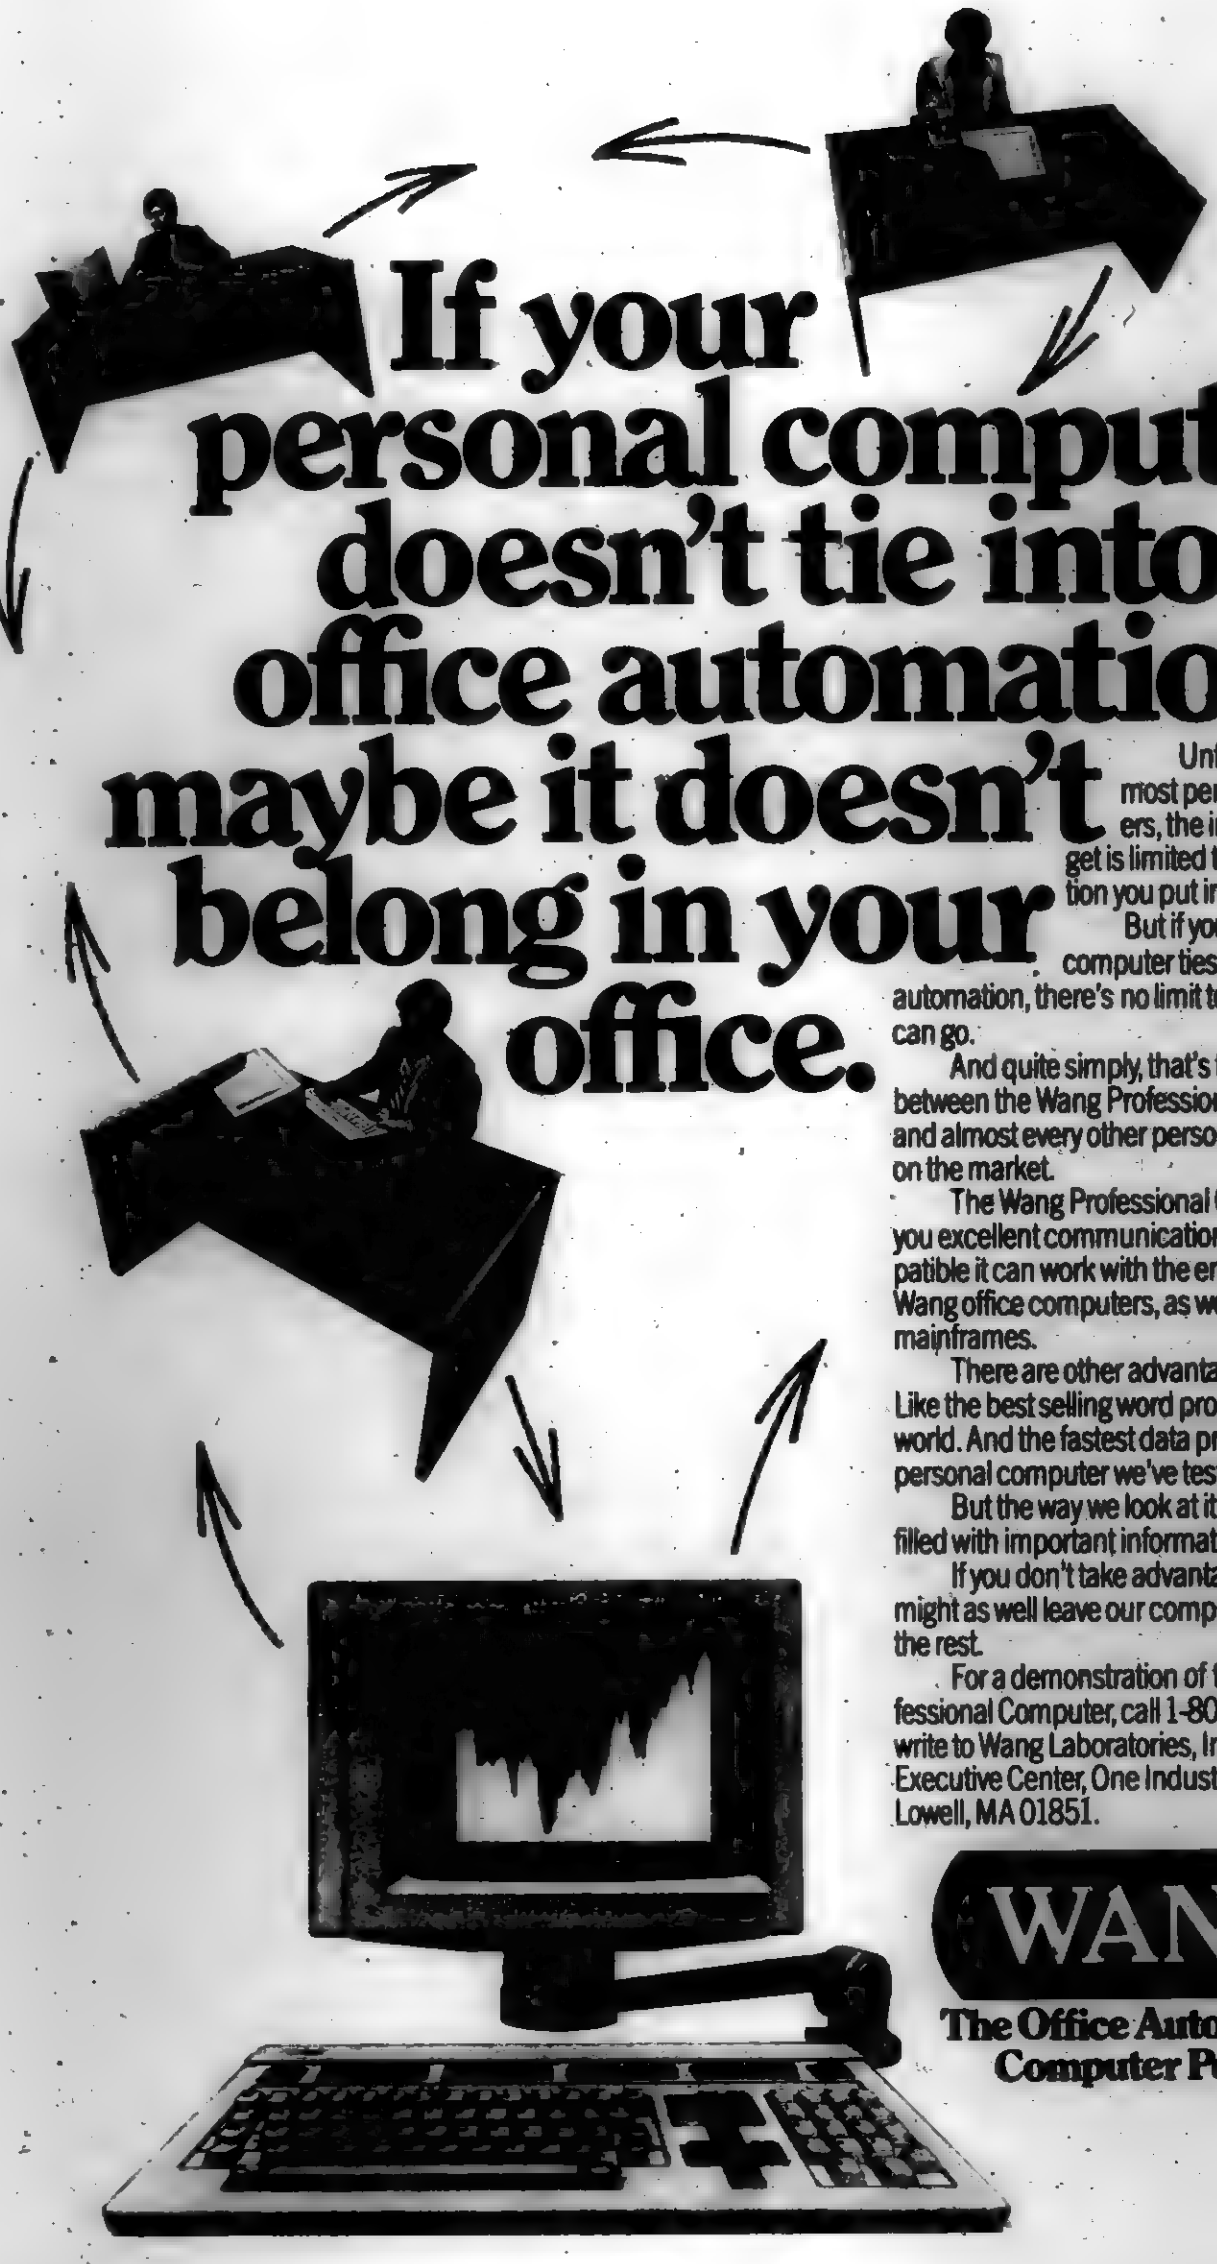
Sen. Howard Baker (R-Tenn.), the Senate leader, has promised that he will bring S.1660 to the floor of the Senate as soon as possible in January. But it is understood that the White House — which is strongly opposed to legislation weakening AT&T's competitive position — has instructed him to stall in order to kill any legislative initiative in 1984.

As a consequence, it appears that the possibility of legislation being passed in 1984 has been substantially reduced. The best time to get a bill through was before the Christmas recess. Once this failed, it gave AT&T Communications additional time to mount a massive lobbying effort against legislation.

The future looks good for AT&T Communications.

Assuming early implementation of its tariffs and no legislative restrictions on its operating flexibility, AT&T Communications will remain the dominant long-haul telecommunications carrier. Its competitors had better look out — the future for them is going to be hazardous and risky. ■

Pearce is president of Information Age Economics, Inc., Washington, D.C.



If your personal computer doesn't tie into office automation maybe it doesn't belong in your office.

Unfortunately, with most personal computers, the information you get is limited to the information you put in.

But if your personal computer ties into office automation, there's no limit to how far you can go.

And quite simply, that's the difference between the Wang Professional Computer and almost every other personal computer on the market.

The Wang Professional Computer offers you excellent communications. It is so compatible it can work with the entire family of Wang office computers, as well as most mainframes.

There are other advantages, of course. Like the best selling word processing in the world. And the fastest data processing of any personal computer we've tested.

But the way we look at it, your office is filled with important information.

If you don't take advantage of it, you might as well leave our computer home with the rest.

For a demonstration of the Wang Professional Computer, call 1-800-225-9264. Or write to Wang Laboratories, Inc., Business Executive Center, One Industrial Avenue, Lowell, MA 01851.

DEATH OF THE RESELLERS?

BY DON GOODING

Resellers were born from regulatory changes, and most will eventually perish from regulatory changes. The long-distance resale business began in 1981, when the Federal Communications Commission (FCC) allowed AT&T's Wide Area Telephone Service (Wats) and Message Toll Service (MTS) to be resold. About 200 resale common carriers, or resellers, are providing long-distance communications service today, with more companies entering the business each week. In spite of the recent entrepreneurial boom, though, resellers face an uncertain future. The Yankee Group expects only 20 to survive until 1988, with many facing potential extinction in the next two years — unless Congress comes to the rescue.

Resellers differ fundamentally from AT&T and other common carriers such as MCI Communications Corp.; they do not have networks. Instead, ▶

DEATH OF THE RESELLERS?

they resell the other carriers' network facilities, primarily AT&T's Wats facilities, but also private lines and switched services (see figure on Page 14). This distinction is beginning to blur since other common carriers such as MCI also resell Wats, and a number of resellers are building their own microwave and satellite links. In general, though, resellers can be characterized as packagers and resellers of others' networks.

Two conclusions can be drawn about the current and future state of the resale industry. First, the reason for the existence of resellers is, at least partially, the artificial gap between low-cost interstate private lines and Wats and higher cost MTS services. Resellers make their living marking up wholesale prices and selling services to users that could not economically use the same services if bought directly from AT&T.

Second, the gap between wholesale and retail prices will narrow in the future. Resale common carriers must develop distinctive services and build capacity in order to survive in the long term.

Four sets of issues will have direct bearing on the future success of the alternative carriers. These are:

- Divestiture;
- Entrance Network Facilities for Interstate Access (Enfia) and access charges;
- Federal and state regulation;
- Rate restructuring.

The Modified Final Judgement between AT&T and the Justice Department, issued last Aug. 11, stipulates that all long-distance carriers must be treated equally by the divested Bell operating companies. All central offices must offer nationwide equal-quality interconnection to the operating companies by no later than Sept. 1, 1986.

Many Bell operating companies will offer equal access to other common carriers and resellers much sooner than that, especially in major metropolitan areas, although rural areas may not see equal access until 1990.

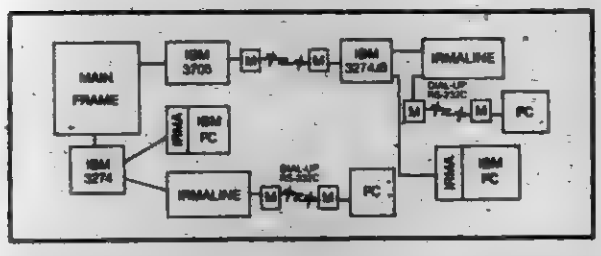
The most important change for resellers will be dialing parity. Instead of dialing up to 15 digits to access long-distance lines, resell customers will have to dial only four. Here's how it works: The operating companies will offer what they call "10XX" access to interexchange carriers. Under this scheme, all users will dial 10, but the next two digits dialed — the XX part of 10XX — will connect the user with one of up to 99 carriers.

In order to access customers, resellers are dependent on the facilities of local telephone companies. The price the alternative carriers should pay for these local facilities has been hotly debated since the industry's inception.

Local loop use is currently paid for under the Enfia tariffs filed by Bell and independent operating companies. Pure Wats resellers are not subject to Enfia tariffs, since the Wats rates already incorporate a subsidy for the local loop. However, since most large resellers use satellite and

The reason for the existence of resellers is, at least partially, the artificial gap between low-cost interstate private lines and Wats and higher cost MTS services. But the gap between wholesale and retail prices will narrow in the future.

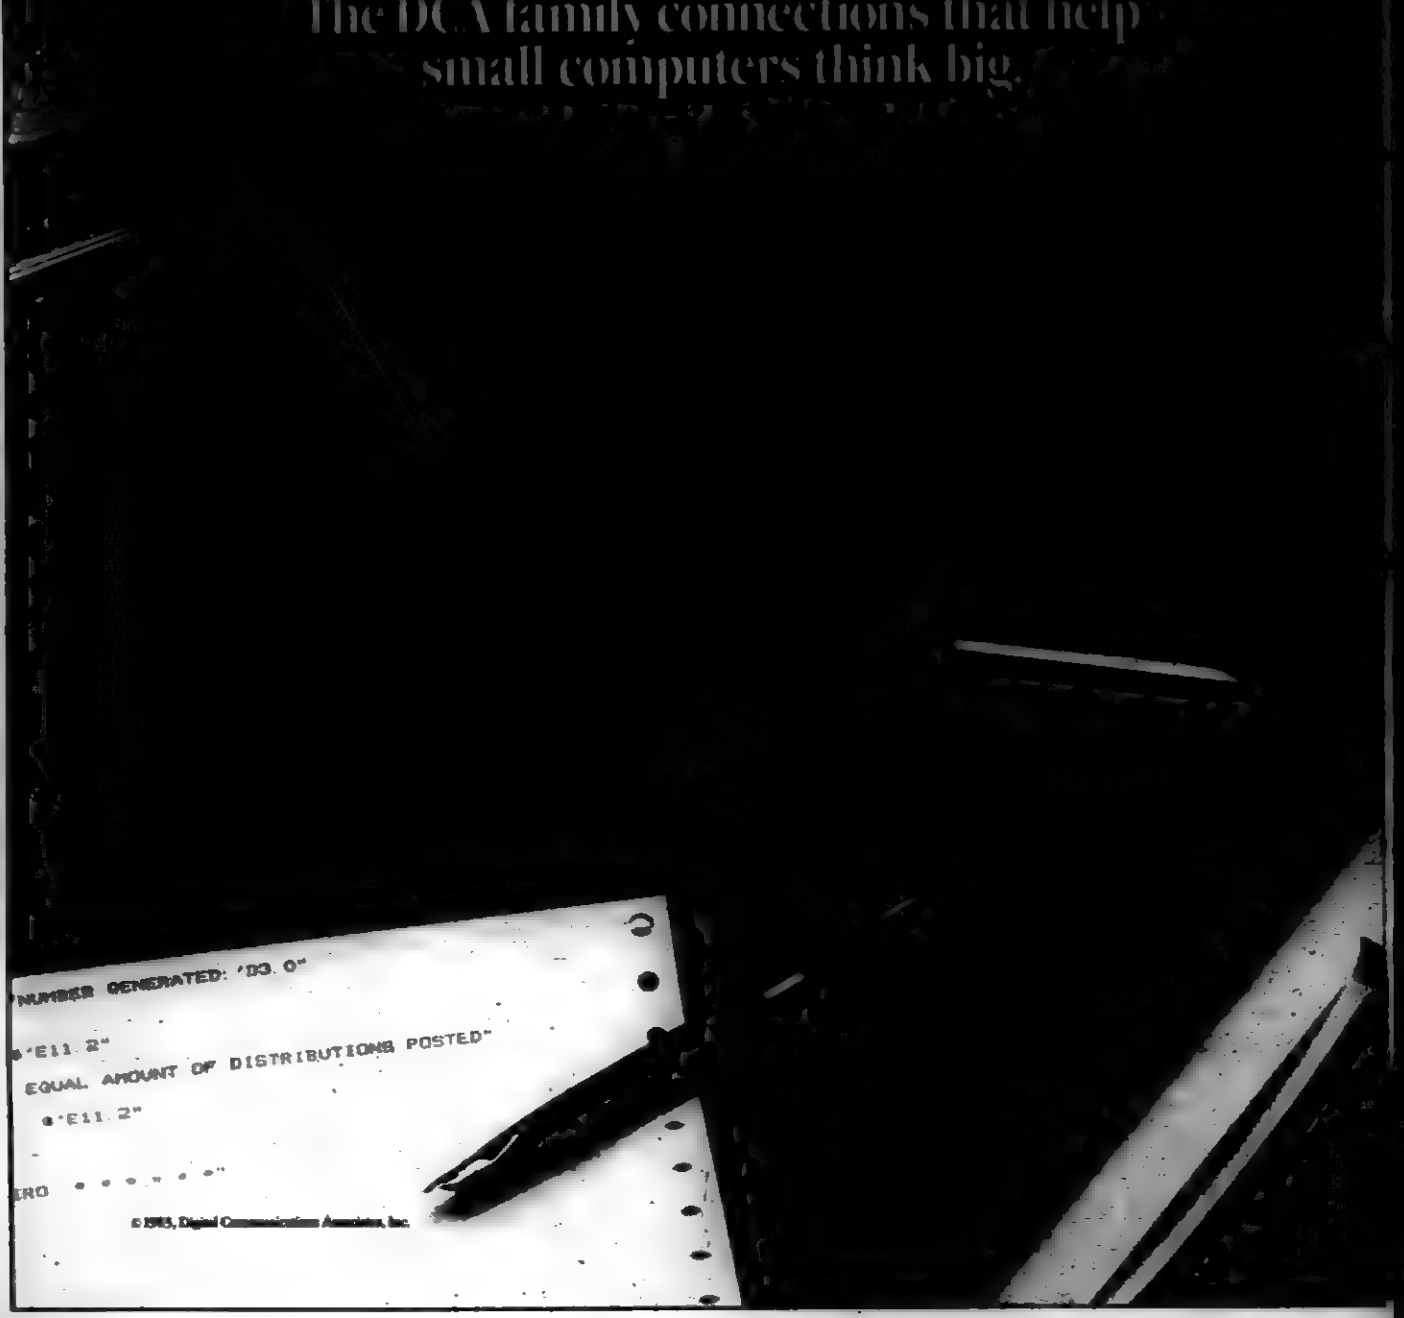
Here are two beautiful ways to get small computers on line with the mainframe quickly, easily and economically—yours from DCA, home of the industry's first coaxial cable links between small computers and IBM 3270 networks.



IRMA™ is the Decision Support Interface™ that gets IBM Personal Computers and IBM PC XTs into the 3270 mainstream via direct attachment to 3274 or 3276 controllers.

IRMA, IRMALINE, and Decision Support Interface are trademarks of Digital Communications Associates, Inc.

IRMA and IRMALINE.
The DCA family connections that help small computers think big.



FX lines, they are subject to Enfia for traffic routed to those services. The current rate is approximately $234 per month per line.

The FCC has developed a system of access charges that will replace Enfia and the separations and settlements procedures formerly used to provide a toll-to-local subsidy for the telephone companies.

The proposed charges, known collectively as carrier access elements, were filed on Oct. 3, 1983 and are scheduled to take effect on April 3, 1984. As a result of these new charges, end users will pay access charges, but the bulk of the local loop costs will still be borne by the interexchange carriers.

The proposed rates in some states not pooled with the ECA are triple the ECA rate. Interexchange carriers should examine the justification for these rates closely and challenge them if errors are found.

AT&T also filed new tariffs for all of its services last Oct. 3, and those are also scheduled to be implemented this April 3. These tariffs will be examined later in this article.

The carrier access elements — which do not apply to pure Wats resellers or resellers of MTS or Wats-like services — are divided into four categories. These are common line, end office, transport and other. The last category will not be discussed in this article.

■ *Carrier common line charges.* Every interexchange carrier will pay a per-minute charge for use of the local loop at each end of an interstate call. The carrier common line charge for AT&T will be 4.61 cents per minute at each end. Other common carriers — including MCI, GTE Sprint Communications and resellers such as U.S. Telephone Communications, Inc. — will receive a 35% discount off that amount. Every Bell and independent telephone company will charge the same rate, as their costs and revenues will be pooled by the Exchange Carriers Association (ECA). However, for the other three carrier elements, rates can and will vary significantly from state to state.

■ *End office charges.* The end office charges include elements for line termination, local switching and intercept. These charges add up to roughly 1.5 cents per access minute or 3 cents per conversation minute. Resellers and other common carriers except AT&T Communications will receive a 35% discount on the switching elements, at least until equal access is implemented.

■ *Transport charges.* A major cost disadvantage for resellers will come from the transport charges. These rates cover the cost of delivering an interstate call from the rate center in which the customer is located to the rate center in which the interexchange carrier's closest point of presence is located. The rates vary with mileage; for example, a reseller will pay .44 cents per minute to serve customers less than one mile away from its switch, but will pay 1.26 cents per minute for customers 20 miles away.

The proposed rates in some states not pooled with the ECA are triple the ECA rate. Interexchange carriers should examine the justification for these rates closely and challenge them if errors are found.

IRMALINE does the same for remote IBM PCs, IBM PC XTs, Apple Lisas and DEC Rainbows, among others, with just a local phone call to a nearby 3270 controller.

Both can go to work literally minutes out of the box. Both provide mainframe data access, selection and storage, and data communication back to the mainframe.

Put first things first. Find out more about the DCA first family of 3270 micro/mainframe connections. For information, write DCA, 303 Technology Park, Norcross, Georgia 30092. Phone (404) 448-1400, TLX 261333 DCA ATL. Or call us toll-free (800) 241-IRMA.

The new home of IRMA, IRMALINE and the rest of the TAC family.

DEATH OF THE RESELLERS?

An extra 2 or 3 cents per minute could severely decrease a reseller's profit margin.

Some of the proposed access rates filed are averaged across the country, meaning they are the same in every area of the country even though costs of service may vary from one area to another. Carrier common line charges are an example of this phenomenon.

Other access rates are averaged among a pool of telephone companies, and others are averaged within a study area. In most cases, this area is a telephone company's operating area within a single state.

Rates may be deaveraged in 1985 and beyond. Deaveraging closes the gap between charges and costs by allowing carriers to charge rates that compensate for costs in any given area. For example, carrier access elements could be charged in accordance with the time of day calls are placed. Such disaggregation was not encouraged for 1984 in the interest of simplicity. Deaveraging access charges could require tremendous amounts of paperwork, greatly increasing the complexity of establishing tariffs.

Federal regulators have been backing away from the resale industry since its inception. The Competitive Carrier Ruling adopted by the FCC in July 1982 endorsed the concept of forbearance for regulating resale carriers. That concept maintains that there will be no active regulation of resellers, but also stipulates that they must provide equal service at equal prices to all customers. The primary result of forbearance is that resellers do not have to file Section 214 applications, which are required for construction of common carrier facilities, and they no longer have to file tariffs.

State regulations are much more important to the resellers' future, since the resale of intrastate service is crucial to the viability of these carriers. Approximately 20 state agencies have allowed the resale of intrastate circuits, and the Association of Long Distance Telephone Companies (Altel), the reseller's trade association, has been working to open up other states.

Measured Wats rates are based on the amount of calling time used. Wats service based on a flat rate is also available. In most states, Wats resale is allowed only after measured Wats is implemented. But there are exceptions. Resale is allowed in Florida, but there has been a cap on the maximum monthly Wats bill of approximately $1,300. Resellers filling up measured Wats beyond that maximum essentially receive free service. This is one reason Florida is a hotbed of resellers.

On Oct. 3, 1983, AT&T Communications filed a 200,000-page proposal covering new rates for every service it offers, taking into account divestiture, access charges and changing costs. Specifically, proposed MTS rates will still be averaged, but charges for them will be decreased by approximately 10.5%, with the largest decrease for longer calls in the 431- to 925-mile band. In addition, proposed AT&T Wats rates will drop by an average of 6.9%, with the biggest savings for heavy Wats users. Proposed private line rates, as a whole, will see increases averaging 15%, although there are significant variations between services.

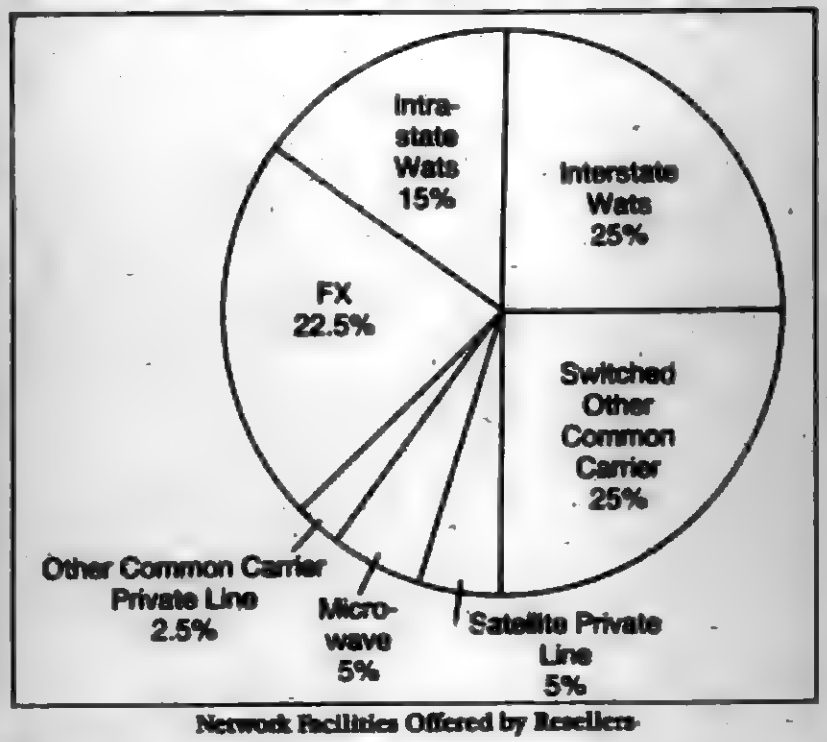
The scheduled implementation date for the proposed rates is April 3. All of them were suspended for investigation, and many are not expected to be approved.

If AT&T's MTS rates remain averaged, as the company has proposed, its night and weekend rates will barely cover the cost of line access — let alone other calling costs — while its business-day rates will produce a healthy profit. In 1984, a marginal increase in late-night traffic volume produces no extra profit (and perhaps even a loss), while a marginal increase in business day traffic is extremely profitable. Until access charges are changed (deaveraged) to reflect time-of-day use, AT&T Communications' marketing strategy will be driven by this price distortion. This can have serious effects on the competition.

Other common carriers and resellers will have to price their services similarly and will be forced to pursue business traffic and shy away from residential traffic. As a rule of thumb, carriers with a higher proportion of residential traffic will be under more earnings pressure than those emphasizing the business market. The impact of Wats rates on users depends on the volume of use. In addition, 20% of all access lines — those used under 10 hours per month — will see rate increases, reflecting the higher flat monthly fee. Users and resellers should note that AT&T did not attempt to increase its nationally averaged local access fee of $31.65 per month — except to add the $25 per month surcharge — because it had insufficient information on what the Bell operating companies would charge. This charge is certain to go up, raising Wats rates from the level filed on Oct. 3.

It is also worth noting that AT&T did not try to eliminate Wats as a service distinct from MTS. While Wats has a reprieve from regulatory scrutiny while the FCC recovers from this year's filings, I believe Wats will eventually be consolidated with MTS — perhaps by 1985, but more likely not until 1986 or 1987.

The FCC has been trying to determine the lawfulness of Wats tariffs ever since they were filed in the early '60s. In its current stage of investigation, the FCC is looking at the potential for a unified public-switched network tariff. While such a tariff would merge Wats and MTS, AT&T has indicated the tariff would include a discount for volume use. Thus, resellers could still receive a discount (although probably a smaller one) even if Wats were merged with MTS — and if AT&T's bulk discount were approved by the FCC.



Network Facilities Offered by Resellers

If AT&T's new tariffs are approved, voice-grade, private-line rates would increase significantly — 25-mile links by 61% and 500-mile links by 18%. Since many resellers use FX lines from AT&T, especially short ones in their regional networks, this rate hike will have a significant negative impact on the bottom line.

I have been anticipating a margin squeeze as a result of the post-divestiture rate changes, but the rates filed by the Bell operating companies and by AT&T Communications indicate a somewhat less severe impact than expected.

There are several negative factors involved:

- The price differential between the bulk capacity purchased (private lines and Wats) and the primary competing service (MTS) has been narrowed, slightly in the case of Wats and severely in the case of private lines.
- Resellers' regional traffic patterns require short private lines, for which the proposed rate increases were the highest.
- The carrier common line usage charge will significantly raise the cost of local access for companies reselling more than just Wats — for example, most large resellers.
- The local transport component of access charges will hit resellers and other common carriers hard, because they have few points of presence and a longer average distance between their switches and their customers.
- AT&T pricing does not cover the cost of access for marginal night and weekend calls, forcing resellers and other common carriers to base their pricing on accurate estimates of their time-of-day traffic mix.

The factors on the positive side are:

- Heavily loaded Wats lines would see rate decreases of about 10%, very close to the average MTS price cut of 10.5%.
- Transport circuits will be available at a slightly lower monthly rate than private lines for resellers that have the technical expertise to support them.

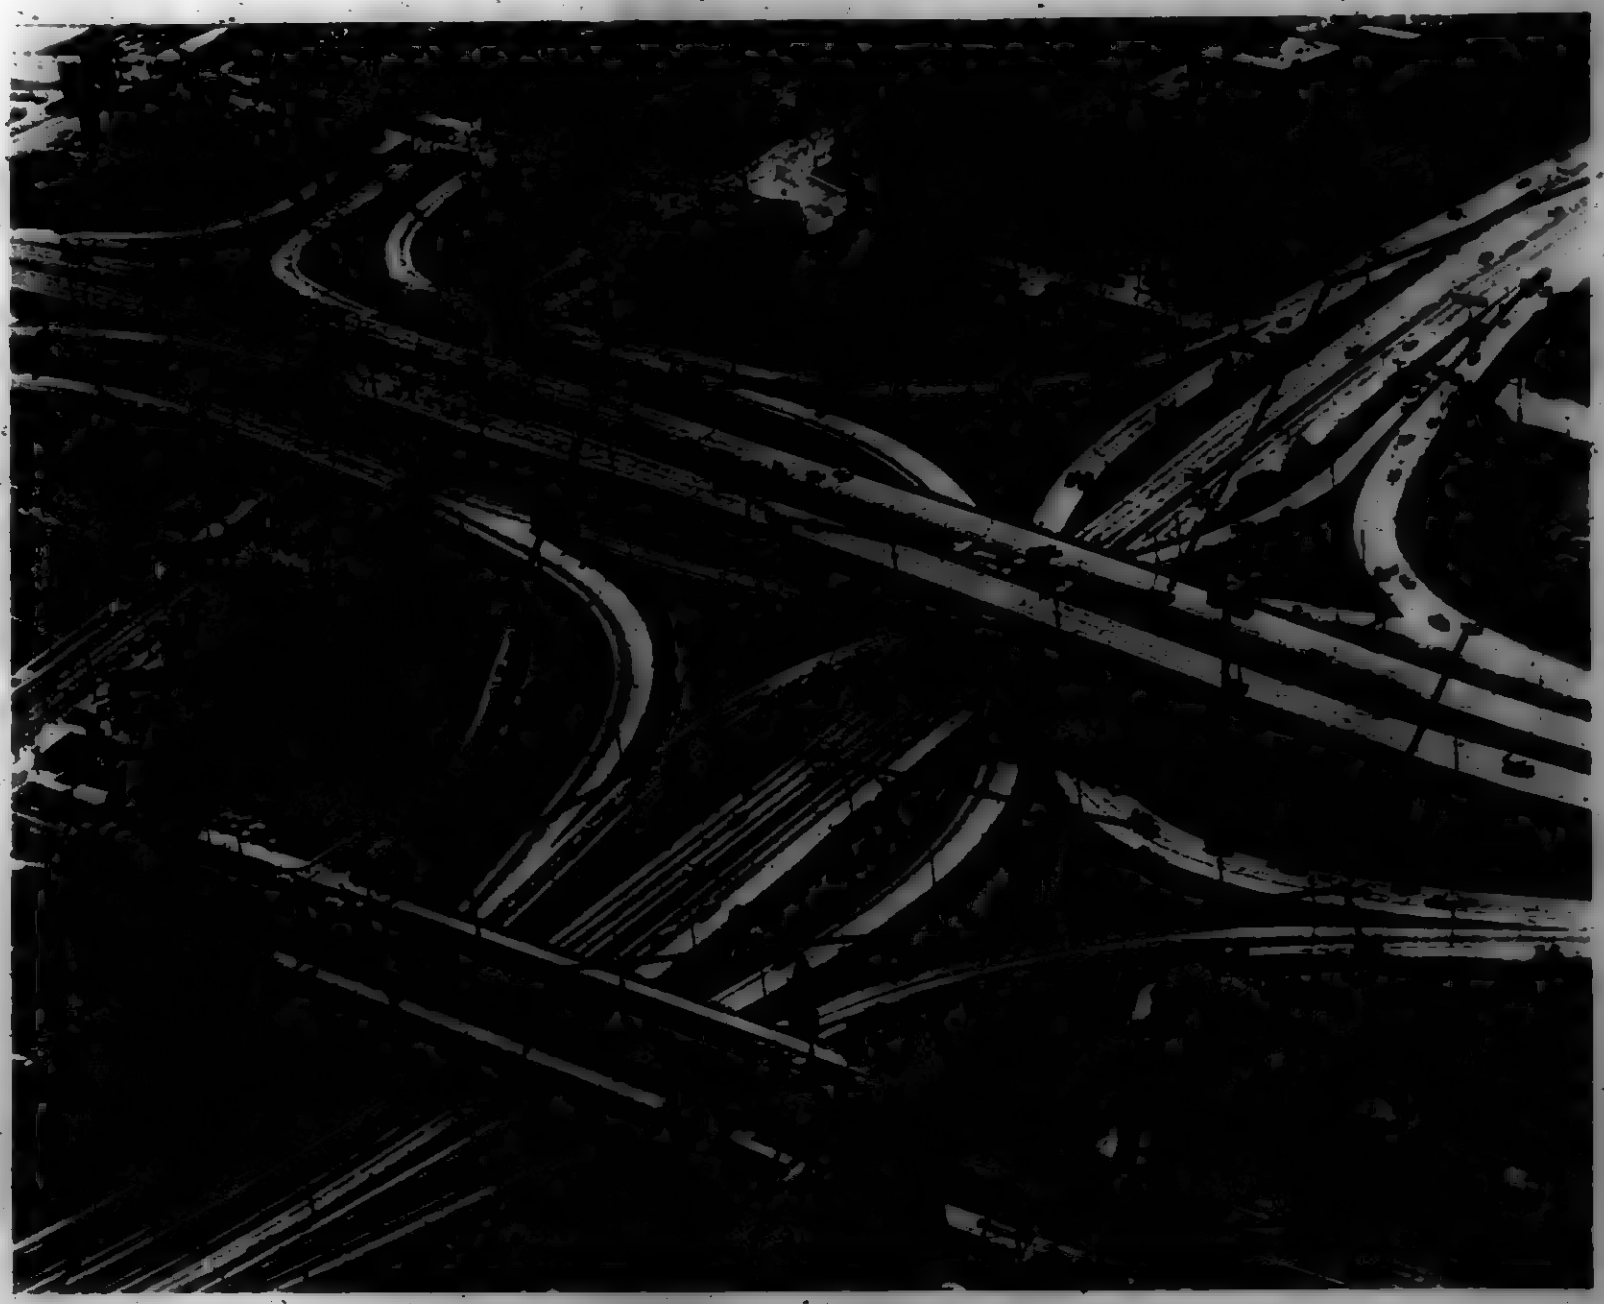
Overall, I expect that resellers' profits will be tightly pinched, if not entirely eliminated in many cases. The resellers that will suffer the least are those with an all-business customer base, with mostly resold Wats in their networks, with national versus regional calling patterns and with the expertise to perform end-to-end private-line support.

Perhaps the rates AT&T and the Bell operating companies file for intrastate communications will be even more significant. Resellers such as U.S. Telephone generate 40% or more of their revenue from intrastate communications. In this case, the news could be even worse for resellers — significant Wats rate increases relative to MTS and carrier access charges similar to those for interstate access. What conclusion can be drawn? Rough times are ahead for resellers, although niches still exist for those that can live on very slim margins.

Of course, all of this discussion is moot if our senators and representatives decide that it is time to put their footprints on the face of the industry. Communications legislation passed by the House of Representatives would eliminate the residential access charge and maintain Rnfia rates until equal access is implemented. Such a move would wipe out the decrease in AT&T's MTS and Wats rates, and perhaps even force a small rate increase. In addition, the drastic increase of resellers' local access fees would develop only with equal access implementation.

In short, resellers will greatly benefit if current legislation becomes law. While the long-term success will still depend on building facilities, resellers could have a financial respite. For resellers, which were born and will perish from regulatory changes, the most critical question now is: What will the Senate and the President do? ■

Gooding is a senior analyst with The Yankee Group, Cambridge, Mass.



TRAFFICKING IN CELLULAR RADIO TECHNOLOGY

BY GARY W. OZANICH

The next time you rent a car in Chicago, you have the option of conducting a business meeting from the middle of a freeway. The Chicago Metropolitan Statistical Area (MSA) has the first cellular radio telephone service, and the major car rental companies are among the first to install cellular phones or transceivers in a limited number of their luxury cars. Cellular radio provides mobile telephone service that is virtually indistinguishable from land-line service and is interconnected with the wire network.

Few technologies have been introduced with the fanfare and expectations that have accompanied cellular radio. This service will be available in most of the 30 largest MSAs within the next two years, and, depending on regulatory issues and the technology's success, most other areas of the U.S. should have cellular service by 1987 or 1988.

Whether the current enthusiasm for cellular technology is warranted is a difficult question. Cellular radio's most ardent backers talk of a future with cellular wrist-phones and briefcase telephones or of cellular as the ultimate bypass technology. Skeptics argue that cost considerations and competition from other forms of mobile communications will mean that the service will only be used by business executives in limited applications.

It is complicated to provide a realistic view of cellular radio because of numerous areas of uncertainty. It is necessary to consider the technology itself, state and federal regulations, cost and demand, competing technologies and rural vs. urban applications.

Cellular mobile radio is designed ▶

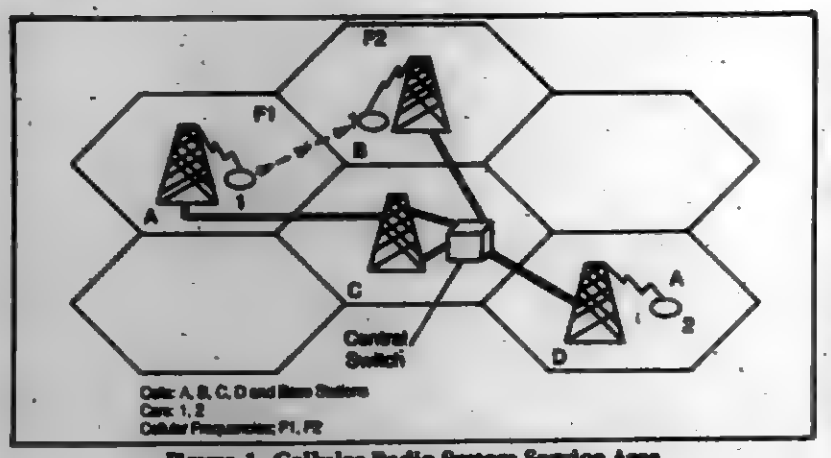


Figure 1. Cellular Radio System Service Area

to replace Improved Mobile Telephone Service (IMTS). IMTS uses 44 VHF radio channels to interconnect wireless mobile telephones with wireline telephone service. Wireline companies include the Bell operating companies and any independent telephone operating companies. IMTS uses an omnidirectional signal to service an area with a radius of up to 75 miles. It is fraught with problems such as high cost, signal degradation and limited capacity.

The issue of limited capacity is significant. With a limited number of frequencies being used to cover a wide area, there are severe constraints on the number of calls an IMTS service is able to handle. For example, New York Telephone's IMTS service for the metropolitan New York area can handle a maximum of 23 calls simultaneously. Thus, IMTS users experience long waits for open lines.

Cellular radio provides a solution to the capacity problem through a frequency reuse scheme. As shown in Figure 1, a cellular radio system divides a service area into several smaller cells. In actual implementation, the cells do not have the hexagonal shape shown in Figure 1. Each cell site contains a base station, consisting of low-power transmitters, receivers and control equipment. Each base station transmits only within its cell on preassigned frequencies. Spectrum management is achieved because the same frequencies are used by nonadjacent cells.

The base stations are connected to a central switching office. This switching office routes and tracks the cellular traffic. If a cellular phone is being used in a moving automobile, the signal is handed off from one cell to the next through the use of this centralized switch.

Cellular radio uses 40 MHz of spectrum (formerly used for UHF television channels 70 to 83) for service. These provide for a total of 666 channels, some of which are used for control circuits. The capacity of the system is technically unlimited: Cells may be subdivided into smaller cells while the power of transmission is decreased.

The number of cells in a particular service area will vary depending on use. Typically, a large metropolitan area will have from 12 to 18 cells, while a rural community may only have one or two cells. This variable cell size provides system operators with the opportunity to manage the cost of system operation by matching system size with demand.

The telephones vary somewhat in design, price and enhanced features, but their technical specifications are standard. Technically, there are two classes of phones: mobile phones, which are physically attached to an automobile; and portable phones, which have an internal power source and antenna. The portable units are extremely streamlined and include phones that can fit in the inside pocket of a suit coat.

In Chicago, the purchase price of a cellular phone is $2,600. A phone may be leased for $110 per month, including a buy-out option for $300 in 36 months. In addition, there is an installation fee of $200. Besides these costs, subscribers pay a monthly flat charge of $50, and an air time charge of 40 cents per minute from 7 a.m. to 7 p.m. and 24 cents per minute from 7 p.m. to 7 a.m. In all, cellular service costs roughly $12 to $15 per business day. In the intermediate term, costs will vary based on hardware pricing, system pay-back and tariffing.

Cellular radio is licensed by the Federal Communications Commission (FCC), with tariffing involving both federal and state policies. The FCC has been investigating the possibility of cellular radio since 1968. In 1971, Bell Laboratories detailed the technical aspects of cellular radio in an FCC filing. In 1977, two test systems, one in Chicago and one in the Baltimore and Washington, D.C. area, were authorized. In April 1981, the FCC established a nationwide allocation scheme for cellular radio systems.

In developing this licensing scheme, the FCC did not expect cellular radio to become the investment gold rush of the '80s. Each MSA, known as a Cellular Geographic Service Area (CGSA), will have two 20-MHz cellular sytems. One license is reserved for a local wireline company — for example, the local telephone company. The second will go to a non-wireline company. The wireline company is mandated to provide the non-wireline company with equal access to the local telephone exchange. In addition, each of these systems are mandated to provide access to resellers. These resellers will market their own hardware and service.

The FCC has already accepted applications for the 90 largest MSAs. Figure 2 summarizes the number of applicants for both wireline and non-wireline licenses. The reason that there are more applicants in markets 31 to 90 than in markets 1 to 30 is related to the staggered license schedule established by the FCC. The applications for the larger markets were accepted first, and the gold rush mentality has resulted in more applicants for subsequent markets.

The number of applicants for the licenses has resulted in a serious threat to expediting service and providing a competitive environment. In allocating the license, the FCC is faced with holding a full comparative hearing for

Markets	Wireline	Non-Wireline	Total
1 to 30	52	142	194
31 to 60	70	330	400
61 to 90	83	484	567
Total	205	956	1,161

each market. With this procedure, all applications must be scrutinized in a formal adjudication with the license ideally going to the most suitable applicant. This process is costly, both in time and dollars.

The FCC's response to the overwhelming number of applicants for the 90 largest markets is to encourage joint ventures — termed settlements — between the applicants. Since there are relatively few telephone companies in each MSA, there are far fewer wireline applicants than non-wireline. As a result, in most situations, the wireline companies will be granted a construction permit and operating license before the non-wireline companies because of their mutual interdependence and alleged ability to settle on joint ventures quickly. This is known as the head-start problem of cellular service.

The economic effects of a wireline head start are still being hotly debated. It has been argued by some that, with limited demand at current prices, wireline companies will garner most of the available business.

This complicated issue involves not only the length of the head start but also pricing considerations and the role of resellers. One impact of a threatened head start is a result sought by the FCC: Non-wirelines are quickly negotiating settlements.

As indicated, markets 31 to 90 have far more applicants than markets 1 to 30. This severely impacts the ability to establish joint ventures. In these markets, the only approach appears to be hard-driving litigation to chase out unqualified applicants followed by settlements by remaining applicants.

On March 1, 1984, the FCC will begin accepting applications for markets 90 and beyond. This date could still be delayed. A tremendous influx of applicants is anticipated. On Oct. 6, 1983, the FCC announced that it was seeking comments on a proposal to allocate these licenses using a lottery as opposed to full comparative hearings. This has created an uproar among some applicants and their legal representatives.

An analysis of the FCC announcement suggests that the FCC is exploring the use of a lottery for three reasons: to expedite the introduction of service in the face of a tremendous number of applications, to force applicants to think twice about submitting a license due to risk and to force settlements among the applicants. This announcement can also have a detrimental effect on the licensing process, as it may attract some less qualified applicants willing to take a chance in a cellular casino.

If the FCC does move to a lottery, there is a significant probability of a court reversal upon appeal. The treatment of all applicants as equals is likely to be considered an arbitrary decision by some because it allows the smallest, most ill-prepared companies to share an equal footing with the largest and best prepared firms.

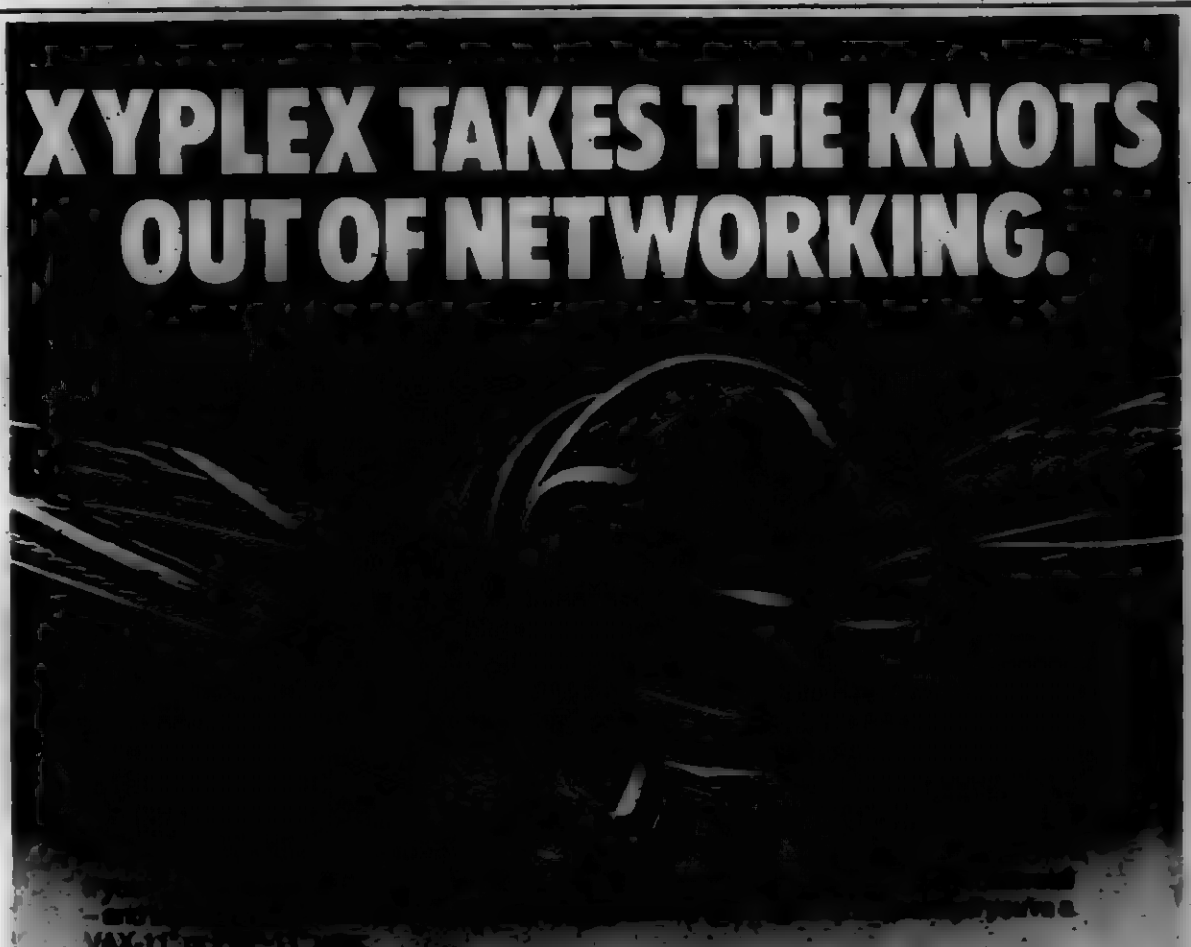
The FCC is exploring the use of a lottery for three reasons: to expedite the introduction of service in the face of a tremendous number of applications, to force applicants to think twice about submitting a license due to risk and to force settlements among the applicants.

A final regulatory issue is state regulation. After the AT&T divestiture, cellular radio will be offered by the regional Bell operating companies. As currently configured, cellular rates will be set at the state level, but some tariffing will also involve federal policy.

Following the Bell breakup, state regulators will be under significant pressure to find new revenue sources to subsidize residential telephone service. Cellular radio seems a likely target, as it is viewed as an enhanced service and will primarily be used for business purposes. Some analysts have predicted that cellular radio service will be tariffed to provide subsidy revenues. This would likely occur through the interconnect charges into the local loop.

At the federal level, there is significant debate about how cellular fits into the access charge scheme. As current policy is read, cellular may be subject to the same access charge as long-distance carriers such as MCI Communications Corp. and GTE Sprint Communications.

XYPLEX TAKES THE KNOTS OUT OF NETWORKING.



VAX-11* or PDP-11* user.

Featuring state-of-the-art technology, the XYPLEX System untangles the complexity that bogs down other integrated data communication systems.

A single coaxial cable will never tie you up.

Using XYPLEX locally, a single common cable can extend up to 32,000 feet and connect over 1,500 terminals . . . and personal computers with over 50 computer systems. Because you use less cable, your computer gains more space for more important data processing tasks at a much lower cost.

"Smart" hardware and software connections give your computer more free time.

With an intelligent microprocessor-based terminal cluster controller and a front-end host interface unit handling nearly all terminal and printer processing, your computer has more time to execute your specific business applications. And since character processing is also unloaded from the host, your terminals can run at their top speed.

So if you're a VAX-11 or PDP-11 user and networking isn't working out the way you'd planned, tie-into the XYPLEX System and see how easy and economical distributed data processing can be.

Figure 3. Cellular Radio Market Forecast

It is difficult to estimate the demand for cellular radio. Many industry analysts and license applicants have been excessively optimistic about the demand for service. The demand for cellular radio is extremely price-sensitive. Since cellular radio costs about $65 to $75 per month, there is virtually no nonbusiness user demand. Considering current prices, cellular radio will attract revenues only from business users.

A crucial element of this price is the telephone itself. The current transceiver cost of $2,600 will drop substantially and rapidly to a price of about $700 to $900. A price of $500 is definitely possible during the next few years. Yet, the high costs of system construction and interconnection will keep cellular radio priced at a premium for the next several years. Figure 3 illustrates Link Resources Corp.'s cellular radio forecast and anticipates price points during this decade.

Even if the price of cellular service does decrease, how profitable will it be? There are two major issues: First, resellers will exert downward pressure on margins. In Chicago, a reseller can lease 100 lines (numbers) from Ameritech Mobile Communications, Inc. for $42.50 per line per month — a $7.50 discount — and receive a 2% discount on air time. The reseller can price the service in any way desirable. As a result, a reseller can potentially import less expensive hardware and put together a lower cost package than a system operator. This will keep downward pressure on prices.

Second, the mobile delivery of voice service does not have sufficient dimensions for product differentiation. It will be difficult to compete on grounds other than price.

As discussed so far, cellular radio has been considered as a product complement to wireline service, a mobile delivery mechanism for voice services. In this mobile delivery arena, cellular radio will meet with a very tough competitor — paging services.

Paging services have been an explosive growth area. The variety of services include tone, voice, numeric and alphanumeric pagers. The FCC is in the process of licensing national paging services to provide for the interconnection of local paging companies.

There are currently about 2.2 million pagers in service. The cost of a pager depends on the type of service, but some types cost below $100 per pager.

In the paging industry, innovation has been impressive. Pagers capable of receiving up to 1,000 alphanumeric characters have been introduced recently. Furthermore, the inclusion of printing capabilities in alphanumeric pagers is anticipated. It may be argued that pagers, particularly alphanumeric ones, are attractive substitutes for cellular services. Much business communications is intrafirm, and paging may be considered both technologically and economically superior to cellular radio in many of these applications.

It is necessary to make one final point regarding the competition of cellular and paging: Cellular radio is an analog technology in an increasingly digital world. For example, alphanumeric pagers will be used as terminals for electronic mail, while cellular radio remains a voice-only service — or at best a potential connection for a modem. It is possible that future generations of cellular telephones will have built-in modems and associated digital communications capability. Currently, however, cellular radio is almost exclusively viewed as a product extension of existing wireline voice services.

Telephone services in rural areas present unique problems. The cost of constructing and installing capital equipment and providing service in thinly populated areas is extremely expensive. Given the AT&T divestiture, the lack of a significant population base over which to amortize costs may be an even greater problem. This breakup parallels telecommunications deregulation that is designed to price goods and services at cost as well as to instigate technological

An average sales call costs $300.

Now you can beat the averages.

You've watched it happen for a long time. Identifying your prospect, getting to him and finally selling him is getting more costly and less efficient.

The Technology Mart at Denver's new International Market Center offers you a profitable alternative to the old, exhausting process. As part of a state-of-the-art exhibit, educational and executive conference facility, the Mart will offer programs designed to attract qualified buyers. It's the one alternative that can lower both your cost per sale and your blood pressure, while supporting existing channels of distribution.

Most importantly, the new mart is strategically located in the heart of a burgeoning 11-state region that stretches from Mexico to Canada. It's a region with a proven growth rate in the consumption of technology products and services. The International Market Center Technology Mart offers an affordable, efficient way to penetrate this deep buyer base.

Leasing rates are most attractive now for late fall 1985 occupancy. To find out how your company can beat the averages, contact Bob Okonski, Vice President Technology Mart, International Market Center–Denver, 7951 East Maplewood Avenue, Suite 300, Englewood, Colorado 80111 (303) 694-1966.

INTERNATIONAL MARKET CENTER In Denver

Incomparable. World Class. At last.

A development of The Bill L. Walters Companies

progressiveness. In this environment, rural areas will lose some cross-subsidies, and in most areas, standard telephone rates will increase substantially.

The cellular radio technology could provide a relatively low-cost means of providing rural telephone service. A one- or two-cell system may be lower in cost than a wireline network. However, the current price of the cellular telephone still makes the technology an unsuitable substitute for wireline service. As the price of cellular hardware decreases, a unique opportunity for this wireless service may exist in rural markets as a bypass technology.

THERE IS NO QUESTION that cellular radio is a technology of significant utility that will be highly visible in the '80s. It is being introduced into a highly uncertain marketplace, both relative to regulation and economics. During the next several years, the price of cellular radio will limit demand almost exclusively to business users. A rule of thumb would suggest a penetration rate of roughly 1% to 1.5% of the population in the major MSAs during the late '80s. The penetration of cellular radio is difficult to predict in smaller markets, as use is highly correlated to commuting time, as well as industrial development.

The technology itself is highly robust, having the ability to provide unlimited capacity. The cost of the cellular transceivers is likely to fall. The most optimistic cellular analysts see $20 Talkmen wrist-phones. This is theoretically possible, but a context is required to view the future of the cellular industry. This context is one of regulation, interconnection charges and competition. Cellular radio is likely to provide a good return on investment to reasonable system operators who try to be low-cost providers of service through efficient operation. ■

HARRY NEWTON

BY BRUCE HOARD

HARRY NEWTON

"Can I bum a smoke?" he asks a woman. He decides they will share an ashtray on the empty seat next to her. "Sharing an ashtray is like time division multiplexing," he notes. With Harry, telecommunications is a metaphor for life.

The primary objective of Harry's European trip was the Telecom '83 conference in Geneva, and he recalls his experiences there with enthusiasm. AT&T spent $12 million on its booth, he says, pacing up and down the aisle. The Russians spent $5 million on theirs. "And the Bulgarians have the best coin telephones in the world."

"Can I bum a smoke?" he asks a woman in the third row. Abashed, she hands him a cigarette. He decides they will share an ashtray on the empty seat next to her. "Sharing an ashtray is like time division multiplexing," he notes. With Harry, telecommunications is a metaphor for life. Tilting his head back and blowing smoke out his nose like a locomotive, he gets back into Europe and coin telephones. The Louvre has lots of paintings, but no coin telephones. He claims to have rented a telephone book in Paris. "Now I know why they want to replace their telephone books — there aren't any," he declares.

He makes more declarations: Videotex is good for "such useful things as getting the weather in northern Scotland." The West German government only allows TV between 4 p.m. and 11 p.m. Geneva pay toilets flush automatically when you stand up and break an electronic beam. On and on. Rapid fire. Harry in Europe.

His gray hair tousled, he pauses and twists, switching gears. "Let's talk about the industry. Where we're going is incredible."

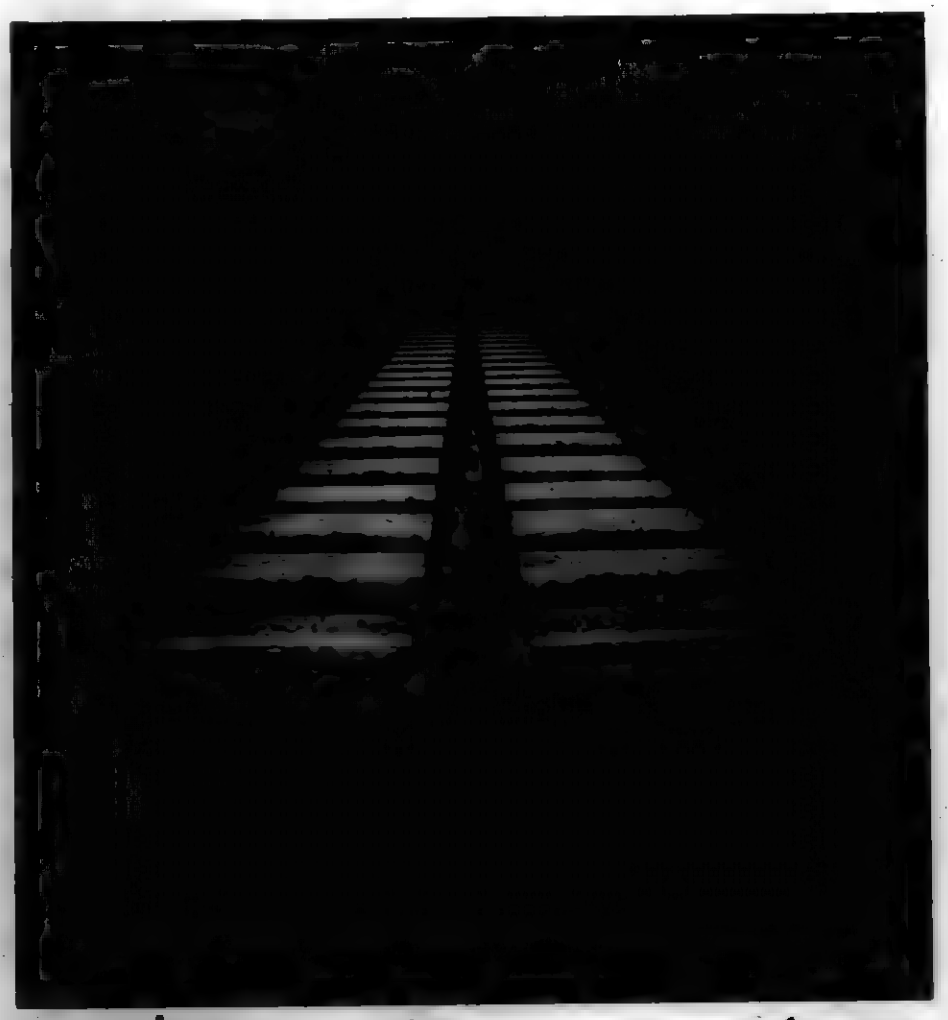
But then, abruptly back to Europe. He tried to hook the modem in his 1,200 bit/sec Radio Shack TRS-80 to a telephone line. No luck. Next memory: John deButts, the former chairman of AT&T, is now running European Postal Telephone and Telegraphs, the European equivalents of the U.S. Federal Communications Commission. "John deButts doesn't believe in competition — nothing," Harry claims.

Finally, Europe is left behind. "Let's talk about the U.S.," he says, sliding into his "Apostle of Success" role. "This is the right time to be in this business. The opportunities we face in the U.S. today are incredible." Harry, a native Australian turned American citizen, speaks with the zeal of a convert.

His voice takes on a serious tone as he deplores the downtrodden state of communications managers, many of whom are in his audience. There is a palpable mood change as he empathizes with their problems. "You can become entrepreneurs while working for someone else," he says. He mentions two users within large organizations that are making $300,000 in yearly salaries. The message is clear: If they can do it, so can you.

Harry believes that by the end of the decade, there will be an American trillionare, and that person may just come out of the telecommunications industry. "If he can make a trillion, you people can make a few thousand or a few million," he says.

At the age of 41, he has certainly been successful, but refuses to divulge whether he's cracked the million mark. One thing can be said with absolute certainty: When a person



Net/One offers something unique in local area networking. A track record.

In fact, Net/One® offers a number of things unique in local area networking. True vendor independence. Media independence—baseband, broadband, fiber optics, or any combination thereof. Remote bridges and local bridges to interconnect separate Net/One systems—broadband or baseband—between buildings, or between cities, worldwide.

And all this uniqueness becomes even more so when you look at our track record. We not only talk a great network, we've actually been delivering Net/One since July of 1980. Hundreds of our systems are already out there moving information for organizations like Control Data, Caltech, Fairchild, ITT, RCA, Boston University, U.S. Forest Service, and Ford Aerospace.

Let's talk about how to turn the equipment you have now—whatever it is—into the network you want, now, with a network you can have, now. And a network that can take you wherever you want to go from here. Net/One.

Ungermann-Bass, Inc., 2560 Mission College Boulevard, Santa Clara, California 95050. Telephone (408) 496-0111.

commands $12,500 for a two-day seminar, as Harry did on his London stopover, he is certainly riding the upside of the wealth curve.

Winding down, he is asked, "What qualifies you to be a telecommunications speaker?"

"Heavy self-promotion."

HIS FULL NAME IS Harry Newton. Period. And on the 30-mile ride into Chicago after lunch, he talks about where he comes from and what he does. He was born in Sydney, Australia in 1941. He lived there for 26 years. He earned economics and accounting degrees at Sydney University before migrating to the U.S. in 1967. He received an M.B.A. from Harvard Business School in the summer of 1969 and has lived in the U.S. ever since. His wife's name is Susan, and he has two children, Claire Elizabeth, who is 3½, and Michael Allen, who is 1½.

He founded his company, The Telecom Library, in 1972. He is president, and the firm publishes and distributes books (among them *The Magic of Becoming Successful* by Harry Newton), conducts seminars and offers consulting services. He is enthusiastic about *Teleconnect*, which was started last March. *Teleconnect* is not your average trade publication. Harry's inimitable touch — and byline — is everywhere. When you get right down to it, it is a Harry Newton tour de force.

In fact, sometimes Teleconnect resembles *Mad Magazine* more than a serious business publication. For instance, an item in last November's edition asked the question "Intel And Hershey To Merge?" And the answer? "Yes, they're merging to produce a 256K chocolate chip."

What kind of person would do these crazy things? He pauses when asked to define himself, looking out of the car window. At last, he has it. "I'd say I'm a high-tech telecommunications intellectual handyman."

This somewhat unwieldy sobriquet is soon followed by another, more lyrical one: "I would call myself an apostle of success."

It might be more appropriate to dub him an apostle/salesman, because his conversation is frequently punctuated with references to sales and marketing. You have to sell yourself, sell your ideas, sell your company. Harry tells a good story about the "self-immolation close," a somewhat apocryphal sales technique whereby a rookie salesman is told he must douse himself with gasoline and threaten to light up if the potential customer does not agree to buy.

Every occupational group should have a Harry Newton. Harry is the patron saint of telecommunications, the exemplar of what can be. He addresses his audience members as if they were family, chiding them and urging them to realize their potential. He really cares for them, but at the same time, he sees their weaknesses. He describes the typical telecommunications professional as "very conservative, unsure of his skills, a little insecure, lacking in formal and informal education and bruised because he is beaten up on by his bosses.

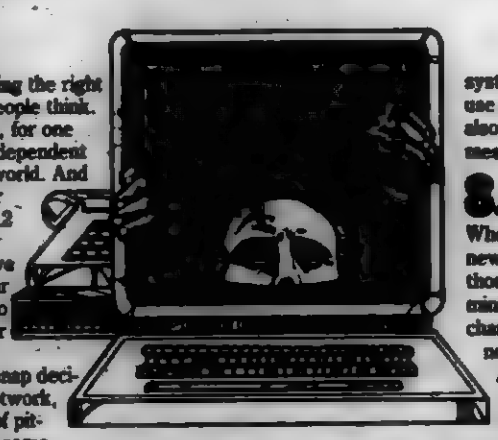
"I feel sorry for them, they're my people, I've known them for years." He says all this slowly, painfully and with compassion.

So how does this flamboyant, cocksure, Harvard-educated company president fit in with these people? He is asked if, when he speaks to them, he feels like the hometown boy that went away to success, only to return and find his friends still toiling at the local mill, locked into a lifestyle that will never change.

"So you see that too?" he replies as the car speeds along.

But Harry doesn't really believe that any of them are locked into

10 PITFALLS TO AVOID IN CHOOSING A PUBLIC NETWORK.



There's more to selecting the right public network than most people think.

How do we know? Well, for one thing, ADP is the largest independent computing company in the world. And when we built Autonet—our public data network—over 12 years ago, we did it right.

For another thing, we've listened very carefully to our clients. Especially those who have come to us from other networks.

So before you make a snap decision about a value-added network, why not look over this list of pitfalls? It just might save you some expensive mistakes.

1. Going Beyond the Outage Limits
Don't risk losing time and money to equipment outages. Every network's goal should be 100% uptime. If your network doesn't achieve at least 99.5% service availability, you don't need it.

2. The Low-Density Low Blow
Chances are, if your remote locations are really remote, you may have to pay more than you should. Other networks charge as much as $5 per hour extra for access from second or third tier cities. So be sure to compare their price schedules with your geographic distribution.

3. Personal Attention
You're going to want a lot of one-on-one support to help you control costs and increase efficiency as usage grows. Be sure you get it. Demand detailed usage summaries, customized if necessary. And make sure client support is part of the service agreement.

4. The More-Is-Better Myth
Many networks emphasize size over accessibility. So remember this: it doesn't matter how many access locations a network has. What matters is how many of them are where you need them to be. Make sure you're covered.

5. Back-Up at Black Market Prices
Don't pay double for redundancy. Make sure your network provides back-up host circuits that are effective, transparent and—above all—economical.

6. Future Shock
Can the network meet your future needs? Videotex and electronic mail included? Be sure you'll be able to get the services you need. Without going to another vendor or playing guinea pig to unproven technology.

7. Out-of-Date Updates
Does the network have a free on-line directory designed to keep you current on new services and access information? Ideally, that system should be interactive, easy to use and updated regularly. It should also give you a fast way to send messages to network headquarters.

8. The Great Software Experiment
When your network rolls out new software, be certain it's been thoroughly pre-tested on a pilot or mini-network. Never accept major changes in your software as part of a normal host interface arrangement. And never, never choose a network that schedules downtime when it will disrupt your service.

9. Troublesome Troubleshooting
"Fast response time" should also apply to service. You have every right to expect standardized "trouble ticket" reporting and tracking. And your network should be willing to call on top management to solve your problems, if that's what it takes.

10. Terminal Tomfoolery
When you invest in costly equipment, it should meet your needs — not someone else's shortcomings. Insist on optional functions for such things as special character-handling, speed, page width and other terminal features.

Now that you know some of the problems involved in choosing a public network, how do you go about avoiding them? You start by sending for our free information booklet, "Going Public: The ADP Guide to Value-Added Networks." Call or write for your copy today.

ADP Autonet
The Reliable Network Service
175 Jackson Plaza, Ann Arbor, Michigan 48106 313/769-6800

Autonet is a service mark of Automatic Data Processing, Inc.

anything of the sort. He believes the magic of becoming successful can touch them as it has touched him, and he pounds that message home. "It's a thankless job, and they haven't learned how to make it thankful," he says.

He cites IBM as an example of excellence, saying that company builds confidence in its users, wants them to be stronger so they'll know more and buy more. He puts AT&T at the other end of the spectrum, speaking of it with open contempt. AT&T used to be an exemplar also, a leader the industry could look up to, a good company to work for. Now he sees it as a tawdry caricature of its once-proud self. If it was up to Harry to redesign the AT&T logo, he would probably have kept the

bell but put a huge crack in it.

The car is pulling into the catacomb-like parking lot under Chicago's McCormick Place, the site of his second speech this day. He mounts the steps to the exhibition floor of the Intech '83 conference, where he plans to make a whirlwind inspection before speaking. He's forgotten just what it was he is supposed to speak on so he asks. The official topic is "How to Advance Your Career by Embracing Office High Technology." The actual presentation may cover anything.

Up on the floor, he commences the inspection. He is an entertaining guide, a raconteur with nonstop commentary. This company lacks direction; this one knows where it's going. That one used to. This one never will.

Ah, the AT&T booth. It's time for a little fun. Harry wants a hands-on demonstration; Harry wants to play. This request is met with frozen smiles. They know Harry at the AT&T booth. They're sorry but nobody is allowed to touch the equipment. Won't he let them show him how it works?

No. Harry wants to do it.

"I think we're not welcome here," he says offhandedly.

Not so, they assure him with now very thin, glacial smiles.

There is tension in the air. Will Harry attempt to play with the equipment anyway? Will he have to be forcibly restrained? Will the relative calm of the exhibition floor be broken by a stampede of beefy, whistle-blowing security guards? Will Harry lurch in the grip of a militant AT&T sales representative, kicking over tables, sending thousands of dollars worth of sophisticated equipment tumbling to destruction? The moment is upon us.

And Harry defuses it. Pointing to a terminal that strongly resembles a radar range, he observes, "This, by the way, was designed by a subsidiary of Amana Ovens." It is a funny comment, but the AT&T folks aren't laughing. Time to move on.

Five minutes later, he is greeted by a silent, dispersed audience of 10 people when he enters the posh, red-velvety Playhouse Theatre. "This is going to be the most expensive per capita speech in history," he mutters, taking the stage. But this audience will get the same treatment the $12,500 crowd got in London. Addressing the sparse audience, he says, "This is like somebody announced a war and nobody came." The audience laughs. He's got them already.

Eschewing the podium, he bums another cigarette and is off again. During this second talk of the day, he rolls off many of the same humorous aphorisms and anecdotes that marked his morning speech, but he's got plenty of fresh material. He talks of hospital operating expenses, jokes about Nancy Reagan, makes predictions for the future.

When, after the full hour-and-a-half, this speech too is done, he stays to pass out catalogues and sell autographed books at $5 each. Still talking as he autographs one, he declares, "This signature will be worth something if I get hit by a bus on the way out of here." ■

Hoard is editor of Computerworld On Communications.

WE HAVE 2400 GOOD WAYS TO UPGRADE YOUR DIAL LINE DATA COMMUNICATIONS

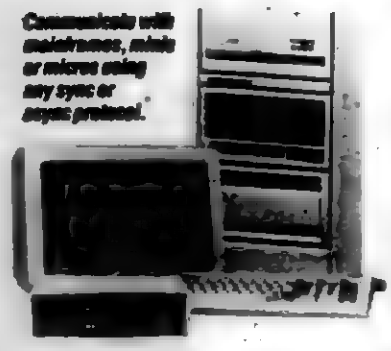
If you're still transmitting data over telephone lines at 1200bps, we'll show you how to save time and money. Our 2400bps full duplex dial modems give you all the performance, versatility *and reliability* that you require, at *half* the transmission cost, and twice the speed.

All CDS dial line modems operate at 2400bps full duplex with automatic 1200bps fallback *in both* synchronous and asynchronous modes. With our modems you can communicate from or to any terminal, micro, mini, or mainframe computer (even your PC), with support of BSC, HDLC, SDLC, X.25 or *any other* full or half duplex protocol.

Double your data rate and cut transmission costs with complete reliability.

And with CDS 2400bps full duplex dial modems, you won't have to sacrifice one bit of data integrity. Our modems all use advanced signal processing techniques, and feature automatic adaptive equalization. Sophisticated modem diagnostics including analog and digital self-test and an internal test pattern generator rapidly isolate modem faults. With a CDS 2400bps modem, your data will come through smoothly and accurately, even on poor telephone lines.

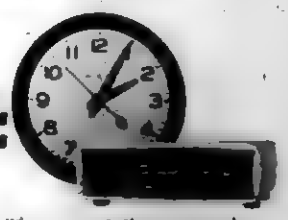
Communicate with mainframes, minis or micros using any sync or async protocol.



CDS modems combine user-friendly engineering with next-generation technology. Our touch sensitive front panel allows you to select the telephone line configuration, operating mode and diagnostic tests you need. An optional front panel synch/asynch selector lets you switch from synchronous to asynchronous transmission swiftly and easily, without monkeying around with internal modem straps.

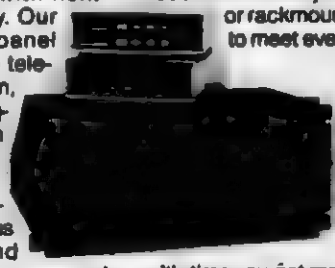
Our new 2400bps autodial modem eliminates extra telephone hardware and lets you leave your modem unattended...ready to communicate when telephone rates are lowest. It supports both touch-tone and rotary dialing systems and operates with "dumb" or intelligent terminals using keyboard or software controlled commands.

Send data at off-hour rates with 2400bps autodial.



We've built our reputation on products that give you advanced engineering at down to earth prices. Our 2400bps full duplex modems range from $995 to $1195 with attractive quantity discounts available.

There's a 2400bps full duplex dial modem in our family in either tabletop or rackmount configuration to meet every need.



Get the functions you want in the configuration you need from our full family of 2400bps modems.

It's time you got more data for your dollar. Call or write, Concord Data Systems, 303 Bear Hill Road, Waltham, Massachusetts 02154 (617) 890-1394, or contact the CDS representative nearest you.

GEOPOLITICAL STRATEGIES

By Brian Jeffrey

While the face-off between IBM and AT&T in the U.S. market seems to be developing into coalition warfare, a similar process seems to be starting in international markets, with the added complication that it involves not merely private companies but national Postal Telephone and Telegraphs (PTTs) and national governments.

But the world's two largest electronics companies cannot initiate aggressive strategies calling for a major expansion of overseas business in the politically sensitive telecommunications field ▶

without significant repercussions.

AT&T and IBM are both targeting international telecommunications markets, albeit from slightly different priorities. AT&T's main concern seems to be expanding its existing lines of business into international markets. IBM is looking to make the same kind of sideways move out of the computer business into communications abroad that it is attempting in the U.S.

The problem facing both companies, however, is that telecommunications remains a regulated business in virtually all the major overseas markets. Despite some liberalization over the last few years, transmission infrastructures are still typically controlled by national PTTs. In addition, the equipment business is dominated by a handful of favored national suppliers. They are Nippon Electric Co. (NEC), Fujitsu Ltd. and Hitachi Ltd. in Japan; the CGE Group and Thomson-CSF in France; Plessey, Inc. and General Electric Co. Ltd. in the UK; Siemens Corp. and AEG in Germany; Northern Telecom, Inc. in Canada; Italtel in Italy; Ericssen in Sweden; and Philips in the Netherlands.

The few companies without a strong national base — ITT and, to a lesser exent, Philips and Ericssen — have relied heavily on relationships with national subsidiaries with extensive local manufacturing and development activities. Thus, they too claim to be national suppliers. In particular, ITT has remained in the politically sensitive business of supplying the PTTs in many countries because of its highly decentralized approach. This approach is aimed at reassuring governments that they will not surrender any control over their national telecommunications industries by awarding business to a foreign company.

Until recently, IBM and AT&T did not desire to meddle in the patchwork of national jurisdictions governing the international telecommunications market and the political bargaining that goes with it. AT&T pulled out of the international telecommunications business in 1925, when it sold its operations outside North America to ITT. According to AT&T, the deal was made to enable the firm to focus better on its North American business. According to others, it was part of a deal with ITT to stay out of each others' markets. AT&T did not begin to get back into the international scene until the mid-'70s when, apparently in response to State Department prodding, it began to compete for some of the big telecommunications contracts put out by the developing countries.

While it was solidly entrenched in the computer markets of most of the major overseas countries, IBM did not make much of an effort to enter the international telecommunications market. It entered the computer services and private branch exchange (PBX) business in Europe, but was not a major player. The company's activities were low-key for several reasons: a lackluster product, the Carnation PBX, developed at La Gaude, which is generally regarded as one of IBM's worst research and development facilities; weak marketing; and the knowledge that the European PTTs and their favored suppliers would resist IBM's attempts to enter the market.

Moreover, the pressure of the U.S. antitrust suit, in which IBM's communications activities in Europe were cited, appears to have led to a deliberate de-emphasis on this area. IBM let it stagnate.

Both companies began to pay more attention in the late '70s, but for different reasons. For AT&T, the renewed emphasis on international sales was due to impending divestiture and a recognition that it needed to motivate itself in order to compete. A new subsidiary, AT&T International, was formed in 1980 to "satisfy international customers' information systems needs with profitable applications of AT&T technology, products and skills, providing

quality service through a coordinated, long-term presence," according to an AT&T spokesman.

AT&T recognized that it was going to end up competing across-the-board in the new information processing market in the U.S. But the primary emphasis of AT&T's international push was — and still is — on reestablishing itself as a major market player for big telecommunications procurements by PTTs.

By early December 1983, AT&T had landed a series of major international contracts. These include a microwave system, central office exchanges, PBXs and other equipment in Saudi Arabia; in Greece, a submarine cable linking the country with Egypt; central office exchanges in Korea; a microwave system in Ireland; in Taiwan, central office exchanges and cable linking the country with Guam; and central office exchanges in Egypt. AT&T was actively pursuing others. It had also formed a joint venture with the Dutch electronics giant Philips to market AT&T central office exchange systems in Europe, the Middle East, Africa, Latin America and in parts of Asia.

IBM's priorities have proven to be very different. Although not a competitor in the business of big ticket sales to PTTs, IBM had good reason to pay attention to them. After a long dormancy, the European PTTs and their Japanese counterpart, Nippon Telegraph and Telephone Corp. (NTT), began to show surprising signs of life in the late '70s. The British Post Office's Prestel videotex system also went public in 1979.

France, a little slower off the mark, responded with a series of programs revolving around the concept of Telematique — derived from telecommunications and informatique, the French term for data processing. This ambitious program was designed to develop a nationwide videotex network via the French PTT and was accompanied by a range of other projects supported by French authorities and covering many areas.

The Japanese countered with a series of programs covering areas such as mass facsimile and data base services. That program culminated in the Information Network System (INS), an ambitious long-range plan to integrate the new range of services into a common system based on a nationwide fiber-optic cable infrastructure. In addition, the Canadians got into the act with their Telidon videotex program.

IN RETROSPECT, the enthusiasm generated by these programs seems a little exaggerated. Videotex in particular proved to lack the commercial charms attributed to it. But the programs delivered a salutary shot in the arm to IBM. After years of suffering hostility from many host governments determined to promote their own computer industries and the assaults of their various national contenders, IBM finally seemed in a good position to do business.

Computer companies like International Computers Ltd. in the UK, CII-Honeywell-Bull in France, Siemens in Germany and Fujitsu, Hitachi and NEC proved to be a manageable threat. In fact, none of them would have survived against IBM in the computer market without large-scale government support and preference.

However, the new telecommunications programs posed another serious threat to IBM. The forthcoming merger of computer and communications technologies put the Europeans and Japanese back in contention. Using their control of the PTTs, governments could accord a preference to their national suppliers in the new markets far more effectively than had been the case in the computer industry. The result, as IBM rapidly recognized, was that IBM could easily be excluded from the communications systems and services areas that it had identified as primary engines of growth in

It's a call from a customer in New York who needs specifics on a business proposal. You talk briefly and then transmit the data to him in seconds from your IBM® PC with PC Express.™

Later, an electronic mail message arrives from your Houston office. New developments necessitate an immediate multi-city business trip. Again, over your IBM PC you make arrangements with your travel agent. Then you contact an information network for the latest weather in the cities you'll be visiting.

All through your IBM PC. All made possible by PC Express — a versatile, dynamic and interactive communications package on a single pc board. Complete with software on diskettes and tutorials. With PC Express, your IBM PC becomes far more than a computer.

PC Express lets you exchange both voice and data communications with other IBM PCs, XTs, IBM-compatible computers and mainframes. Including all the major information networks such as THE SOURCE.℠ THE SOURCE provides up-to-the-minute news, stock quotes, travel information, and virtual encyclopedias of data. Membership is included when you purchase PC Express.*

With PC Express, you can both send and receive electronic mail — even when you're not at the computer. A full-screen text editor makes composing your messages easy.

You'll also enjoy the versatile telephone management system. Use it to create an unlimited telephone directory from which you can automatically call numbers according to any parameters you set: area code, city, state, etc. For people who deal with people and information — bankers, lawyers, brokers, managers, sales professionals — it will be a valuable time and money saver.

In addition, PC Express lets your IBM PC communicate with mainframes and perform DEC™ VT100/52 emulation. PC Express is also available with SNA, allowing your IBM PC to emulate a 3274 cluster controller and 327X/3770 RJE terminals. So, for the first time, you can use the problem solving powers of both micro and mainframe software.

Contact your nearest dealer for a free demonstration. For the address, call 800-523-8396. See how much further you can go and how much faster you'll get there with PC Express.

PC Express from Intelligent Technologies™

all for you IBM PC."

the '80s. And there was nothing IBM could do about it.

The situation changed radically and agreeably for IBM from 1979 to 1981. The conservative government elected in the UK in 1979 favored deregulation of the telecommunications market and reduced state intervention. The following year, the Reagan administration came into power in the U.S. and revealed its intentions to take a strong line against Japanese protectionism. In Japan, the Nakasone administration proved receptive to the U.S. attitude; plans were made to make NTT a private company.

In France, the election of Francois Mitterand as president in 1981 brought in an administration that lacked its predecessors' enthusiasm for Telematique. It was receptive to IBM's arguments about its employment and R&D activities in France and its positive contribution to the French balance of payments. Even in Germany, where IBM had begun to face serious discrimination in favor of Siemens for public-sector purchases, divisions in the left-center government allowed the company better access to the German telecommunications market. In 1982, a more pro-American and antiprotectionist regime was elected.

All this represented a fairly radical reversal of IBM's fortunes. In all of the major overseas markets, IBM was faced with new opportunities, and it seized them. In November 1981, it landed a $22.5-million contract from the West German PTT to supply Series/1 and 4300-based controllers for the national videotex system. It also set about entering videotex markets elsewhere in Europe. In Japan, a combination of political pressure and the self-interest of Japanese companies allowed IBM to put together a formidable coalition of partners: Mitsubishi Corp., Japan's largest trading company, and Matsushita Electric, Japan's largest consumer electronics manufacturer. They joined a number of smaller companies as IBM partners targeting the new markets created by the INS program. In October 1983, IBM agreed to cooperate with NTT in the development of large-scale networking systems.

By early December 1983, IBM had brought about a major change in the competitive dynamics of the Japanese information processing market. Not only had it become an integral player in the INS program, it had also put together a formidable coalition of partners that looked hard to beat. More recently, the focus has shifted back to Europe, where IBM is looking for the same kind of substantial links it formed in Japan. It has been talking to a number of European groups about cooperating in telecommunications.

IBM's goal seems to be to establish itself as an integral player in other countries as it has in Japan. It plans to use cooperative agreements with PTTs and major telecommunications companies. Its attempts have been far-reaching. National aerospace companies have been approached, and there has been talk of IBM participating in various cooperative development projects and programs for the commercialization of products and technologies developed by small firms and academic institutions.

AT&T, like all companies in the big-ticket telecommunications business, has experience in horse-trading with governments. In Korea, AT&T used Western Electric to put the Lucky-Goldstar Group in the semiconductor business. It set up a joint venture with the Taiwan government to produce exchanges.

DESPITE ITS focus on the big-ticket market, AT&T is clearly looking for the same kind of partners as IBM — PTTs or private firms with an embedded presence in national telecommunications markets, good conventional and electronic distribution capabilities and political leverage with their host governments. AT&T is currently focusing on markets outside the mainstream, where competition from other international competitors is relatively weak. Its Dimension PBXs, for example, are sold via partners in Australia, Greece and Hong Kong and directly by AT&T International in other parts of Asia. The strategy of starting in the less developed, less competitive peripheral markets is similar to the way in which successive Japanese industries have begun their moves into world markets.

This is unlikely to last for long. After trial runs in the smaller markets, AT&T is likely to offer the same kind of trade-offs to the governments of larger countries trying to promote a national information processing industry with weak competitors and limited budgets. There are quite a few governments that fit that description. Prime candidates are the UK, Germany, Italy, Spain, Australia and Israel.

Despite claims to the contrary from both companies, IBM and AT&T are likely to start competing heavily in international markets in the near future, although in a different form than expected. They will compete for local partners, market access and political leverage.

This kind of competition, of course, is not new to the information processing industry. Most of the major players in both the computer and telecommunications business have played the game at one time or another. What is new, however, is that the world's two largest and most powerful electronics companies are starting to do it on a large scale.

At the moment, IBM looks stronger. With worldwide leadership in the computer industry and an embedded market presence in virtually all of the major single-country markets, it has more to offer its partners. Yet AT&T has some potent cards to play. Starting from a weaker position than IBM, it has been far more ready to transfer technologies and, under the right conditions, to accept local control of joint operations.

AT&T has also shown its willingness to provide support for local partners across a range of technologies. Central exchange, processor and semiconductor technologies, for example, all went to the Lucky-Goldstar Group. With Western Electric re-emerging as a force in the merchant semiconductor industry, tie-ups in this field may prove particularly attractive to overseas governments. Moreover, unlike IBM, AT&T has no existing market presence in the major international markets to protect and thus has less incentive to impose limitations on its local partners.

Looked at in that perspective, IBM looks less attractive as a partner. It has scarcely shown itself amenable to government-sponsored national information processing industries in the past. Its desire to retain control over its technologies is strong. It pulled out of the market in India altogether rather that accept a majority ownership of its subsidiary by Indians. Recently, it has also been aggressive against those infringing on its patents.

A remote AT&T offering a cornucopia of technologies, management and technical assistance and more substantial forms of support can look very attractive compared with an aggressive, proprietary IBM controlling a large chunk of the national computer market.

All of this opens up some interesting possibilities. A single major tie-up such as AT&T with Olivetti or IBM with British Aerospace — both of which have been seriously considered — could change the competitive position rapidly. Another possibility would be for IBM or AT&T to strike a deal with a national company, prompting that company's competitors to rush out and link up with the other American firm as a counterweight. This appears to be occurring already in Japan, where the formation of the IBM-Mitsubishi Group has triggered moves by Mitsui, Japan's second largest trading company, and Sony, Japan's second largest consumer electronics vendor, to bring AT&T into the Japanese market.

Alternatively, there is the possibility that escalation will occur as both companies seek to preempt the other. Both, for example, are looking at British Telecom, which has been turned into a private company, and NTT, which is in the same process, as potential distributors and joint-venture partners. And IBM has landed a contract with British Telecom to supply Series/1-based systems designed to enhance existing central exchanges. The contract, worth $7.1 million, involves hardware and software that provides some of the functionality of British Telecom's System X digital exchange for existing equipment. It is a stopgap measure until System Xs are available later in the decade.

Like the German PTT contract, it is small in dollar terms but a danger signal from AT&T's point of view. The central office exchange business is, after all, an important area to AT&T and not the sort of thing that IBM was expected to become involved with.

In short, there are quite a few wild cards out, and if IBM or AT&T starts playing them, there could be large-scale international competition between them sooner than is generally expected. Over the last few years, both companies have shown an increasing willingness to play these wild cards. Global competition, like global war, may prove to have its own dynamics. Once started, it is not clear that the timetable can be controlled by either party. ■

U.S. AFFILIATIONS

By Alain Desrenne

A few years ago, when it first became clear that AT&T and IBM were likely to be released from their respective legal restrictions, there was a lot of speculation about the impending face-off between the two firms. It is surprising how much of the speculation was wrong. Certainly, there was some detailed analysis, but the largest failing was simply in imagination. Most analysts seem to have assumed that while both companies would become more aggressive and competitive, they would nevertheless follow the same behavior patterns as always.

And that, it rapidly transpired, was not the case at all. IBM and AT&T upset calculations about their strengths in products and technologies by going outside the company on a large scale. ▶

U.S. AFFILIATIONS

IBM started the ball rolling in July 1983 with its agreement with Mitel, Inc. for joint development of networking systems based on Mitel's SX-2000 private branch exchange (PBX). It followed up with similar agreements with Texas Instruments, Inc. for development of very large-scale integrated interfaces for its local-area network line and with Motorola, Inc. for a proprietary IBM cellular radio system.

In addition, Satellite Business Systems (SBS), the satellite communications firm in which IBM has a one-third share, filed with the Federal Communications Commission (FCC) in February 1983 for removal of the restrictions on its relationship with IBM. These restrictions were imposed as a condition of the company receiving an FCC license.

More visibly, IBM also bought 12% of Intel Corp. and 15% of Rolm Corp., with options with both companies to increase the holdings to 30%. IBM appears to have set about exercising these options by a string of small additional purchases.

AT&T began its moves in 1983. Agreements were announced with Coleco Industries, Inc., for an on-line games service; General Motors Corp., for a pilot mobile radio option on the latter's Buick Riviera; and with three companies — Wang Laboratories, Inc., Hewlett-Packard Co. and Bailey Controls — for joint equipment certification and the implementation of Dimension System/85 PBX interfaces. According to AT&T, similar agreements with other companies are in the works.

FOR BOTH FIRMS, THE process of forming tie-ups with other market players is far from over. Both are pursuing joint arrangements in the international telecommunications market. The list of U.S. tie-ups for both is obviously still far from complete. When it first became clear that IBM and AT&T were going to be deregulated, there was a tendency to assume that they would expand largely through in-house capabilities and the extension of existing operations. With this assumption, it was reasonable to suppose that the two would only be competing in the long term.

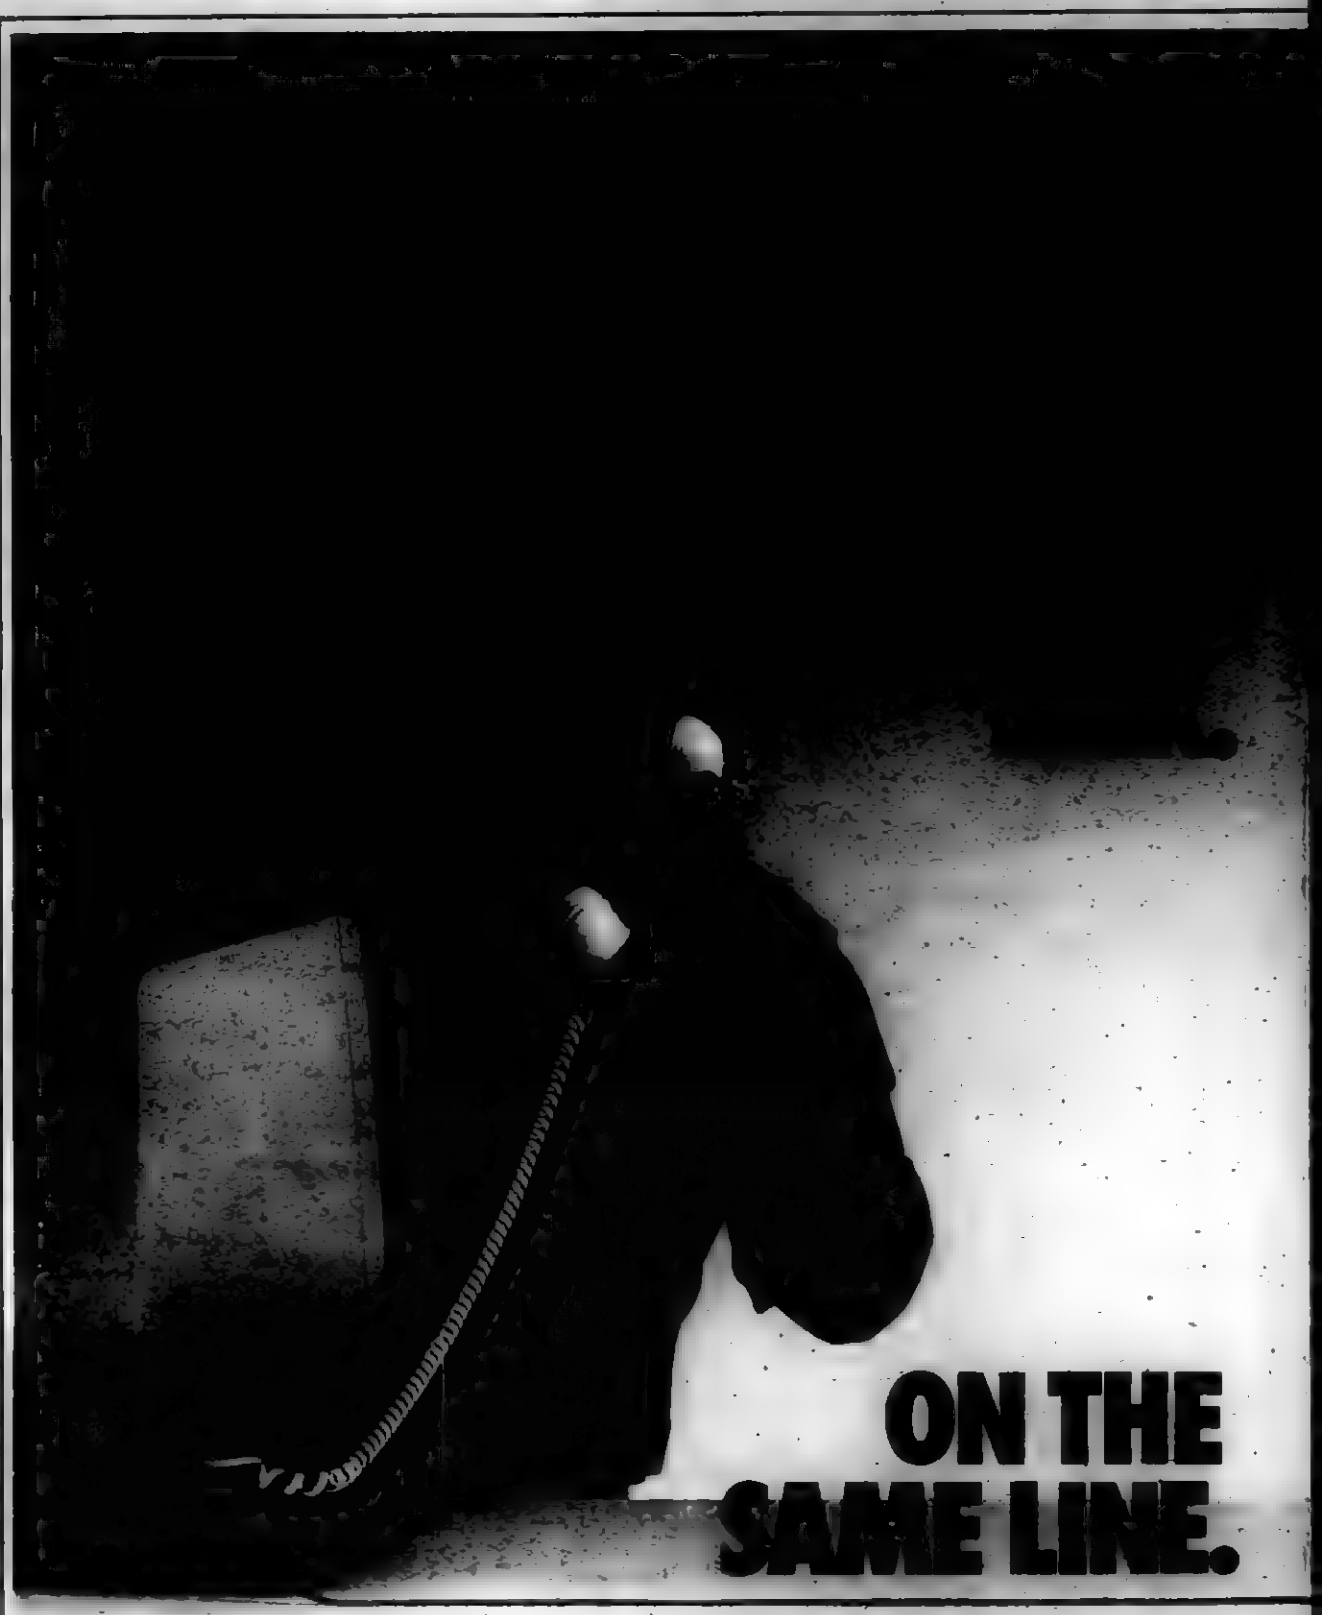
In reality, the competition is shaping up much faster, but in a different form. Both companies are forming tie-ups with direct competitors of the other. IBM is affiliated with Rolm, which competes directly with AT&T. In addition, AT&T is developing what will probably be a substantial relationship with Wang, which has been fighting a head-on battle with IBM for the office automation market for some time. Also, SBS has begun an aggressive campaign aimed at the market for AT&T bypass telephone services.

It looks like it will go further. IBM has covered several key communications areas that it had identified as areas of internal weakness — Rolm for PBXs, Motorola for cellular radio, its own Information Network for computer services, in-house capabilities and outside tie-ups for local-area networks. It still lacks a substantial presence in the mainstream telecommunications services market. SBS may supply part of this, but other tie-ups are also likely. There is really no reason why IBM should not buy 15% of MCI Communications Corp., General Instruments Corp. or one of the other big firms in this field.

AT&T got a later start, partly because its divestiture case dragged through Congress and the courts. But it is catching up fast. AT&T needs to form a partnership in the mainframe area, and Amdahl Corp. and National Advanced Systems, Inc. have been considered. In addition, AT&T recognizes that it needs a presence in the micro market faster than it could develop itself. It also needs to cover factory automation. The Bailey Controls arrangement covers only the process control business, and other sectors need attention.

Moreover, AT&T will probably cover its bases in such areas as local-area network systems, mass storage and video systems through outside arrangements. It can also be expected to expand its coverage of the minicomputer field to other companies. It is likely to follow IBM's example by buying into a state-of-the-art microelectronics firm. It is still unresolved whether AT&T will put itself into the IBM-compatible business.

As each company points out, these moves should not be interpreted as a competitive assault on the other. Both firms have done their homework on potential areas of diversification, and both have decided that most of the information processing market is a lucrative target. Similarly, both companies have investigated potential distribution channels — for example, the Bell operating companies, systems houses, third-party retailers, on-line services and telemarketing. Inevitably, both firms will use the same ones. As the two diversify and form new tie-ups, they will form the center of groups of companies that are the mirror image of each other.



The speed at which this situation has developed has been surprising — not least of all to AT&T and IBM. The sudden rash of tie-ups and buy-ins has turned out to be the result of approaches from potential partners more than the result of their own plans. IBM, for example, seems to have started with fairly limited objectives in the PBX field. It was more concerned with defending its flank in the Fortune 500 market against competition from PBX vendors than entering the market. Rolm had other ideas, and Rolm management approached IBM.

Similarly, IBM did not plan to buy into Intel, although it was looking at some fairly close licensing and development arrangements. Intel, however, was distinctly short on capital at the time and lacked the resources to respond to increased demand in the semiconductor market. This point appears to have been made by Intel management to IBM management. There were also reports that the clincher was the appearance of another large company as a would-be buyer.

Similarly, SBS clearly saw the advantages of a relationship with IBM, and IBM figures prominently in the company's attempts to build market awareness of its services.

In short, the appearance of groupings of companies around IBM and AT&T is proving to be the result of a desire to be tied up with the industry giants. It is not hard to understand this. With competition heating up in many sectors of the market, an IBM or AT&T affiliation is seen by more and more companies as a means of improving prospects and keeping shareholders happy. It is hard to find an affiliate of IBM that has not proudly advertised the relationship in its annual report. The remarkably good press generated by IBM has certainly helped stimulate the process, and it is likely that the same will happen for AT&T once it begins to show its capabilities.

Whatever the immediate motives of IBM, AT&T and their partners, it is clear that they represent part of a broader, long-term structural shift in the information processing industry.

Perhaps the best way of looking at it is to consider the industry's history. For the last 30 years, there have been successive waves of new companies: mainframe manufacturers such as IBM, Burroughs Corp., Sperry Corp., NCR Corp., Control Data Corp. and Honeywell, Inc.; the plug-compatible manufacturers; minicomputer companies such as Digital Equipment Corp., Data General Corp., HP and Prime Computer, Inc.; office automation vendors such as Wang, CPT Corp., NBI, Inc. and so on; personal computer firms such as Apple Computer, Inc. and Radio Shack; and home computer firms such as Commodore Business Machines, Inc., Texas Instruments and Atari Corp. Whether it is due to the speed of technological change in the industry or to the lack of flexibility of American corporate organization, the fact is that existing market leaders have failed to react fast enough to each new technology.

A similar process can be seen on the communications side, although AT&T's presence across the spectrum confuses the picture a little. In 1968, the Carterfone Decision created the Interconnect vendors — Northern Telecom Inc., Rolm, Mitel and so on — as a presence in the U.S. market. These firms pioneered the use of digital PBX technology. Specialist companies emerged as the leading players in other technologies, such as key systems, local-area networks and cellular radio.

The history of the information processing industry has involved specialized market players that may have diversified into other areas, but whose success has been built on a single-product market complex.

This picture is starting to change, driven by the convergence of technologies and markets. With previously distinct market segments starting to merge — a development reflected on the user side by increasing coordination and occasional merging of functions such as data processing, word processing and telecommunications — it is becoming necessary to cover the bases. As a result, the specialist vendors have scrambled to add other capabilities. Computer vendors added local-area networks, PBXs and word processors; PBX vendors added local-area network interfaces and intelligent workstations; and just about everyone added gateways of one sort or another.

Apart from the standards mess that this has created, there has been a rash of teams forming to address particular markets or technologies. A situation is starting to develop in which the specialist vendors — a category that includes firms as large as DEC, Wang or Rolm — is no longer a viable competitive entity except as a member of or supplier to larger, multitechnology groupings.

After several decades in which the trend has been toward specialization, the whole process is reversing itself. More than anything else, IBM's success in the personal computer market has signalled this. After a poor performance in

We've got people talking.

minicomputers (the Series/1 was almost cancelled at one point as a complete failure) and office automation (the confusion created by the competition between Data Processing Division, General Systems Division and Office Products Division is still far from sorted out), IBM succeeded in catching the wave of micros and riding it. Moreover, it is looking at some of the new technologies — cellular radio, videotex and CATV.

AT&T is going the same way. Its immense installed base and marketing organization provide a current base of strength on which it can build in the long term through its financial resources, Bell Laboratories research and development and the manufacturing capabilities of Western Electric. The company is reasonably confident that it can catch new waves of products and technologies.

Its problem in the short term is like IBM's in PBXs: It must defend its flank against an erosion of its current position that could prejudice its long-term plans. Tie-ups with other companies provide an excellent way of achieving this. AT&T's affiliation with Wang gives it an indirect presence in the area of word processing systems. HP does the same in minicomputers.

At a time when market dynamics are pushing the information processing industry toward the formation of large, multitechnology and multimarket groupings, AT&T and IBM are emerging as the largest and most attractive poles toward which smaller, specialized vendors are gravitating.

IN THE LONG TERM, what form will these groups take? Perhaps it is too early to judge AT&T's future, but there are better indications for the IBM group. IBM is looking for substantial relationships with its key partners. A string of small additional purchases of the equity of Rolm and Intel indicate that IBM intends to take up the full 30% option on both in the not-too-distant future. It has bought into a number of other smaller firms over the last few years.

Other purchases in the 15% to 30% bracket are known to be in the works, and the company also appears to be experimenting with other ways of tying in key collaborators. For example, Xebec Systems, Inc., a firm that manufactures components for the XT, has recently indicated that it will purchase a significant amount of factory automation equipment from IBM and its value-added resellers. For a small company, its investment is substantial, which suggests that there is more to the relationship than meets the eye.

Combined with its third-party distribution activities, the grouping of companies around IBM is beginning to look like the big Japanese groups such as Mitsubishi Corp. and Mitsui & Co. Ltd. These groups are sets of companies linked by cross-shareholdings, interlocking directorships, supplier relationships and various joint marketing, development and financing tie-ups. The resulting grouping would possess the advantages of size without the inflexibility of a more rigidly structured organization.

From the initial across-the-board competition between IBM and AT&T via affiliates, it seems likely that more direct competition for systems and services will develop rapidly as the two extend their degree of control over and cooperation with the member companies of their groupings. Given the long-term trend toward the merger of markets and technologies and the increase in competitive pressure in many market segments, the dominant forces in the industry will move more increasingly toward concentration.

This raises some interesting points. While the small, entrepreneurial company should remain a viable entity for a long time, the medium-size vendors with historical strengths in a particular market may gradually disappear as they form part of larger groupings.

There are a number of historical situations in which pressures of economy of scale led to an industry shakeout. The automobile industry is a prime example. The end product of the shakeout was a handful of large companies competing directly in the market, but with a large and healthy — at least until 1979 to 1980 — sector of independent component, subsystem and specialty suppliers.

In the information processing industry, convergence may well play the same role as economy of scale did in the automobile industry. Neither the IBM nor AT&T groupings seem cast for the role of General Motors and Ford Motor Co. The market is unlikely to become quite as standardized, and antitrust limitations may continue to have some force. The two firms, though, are clearly going to emerge as the preeminent structures in the industry. A large number of specialist companies, suppliers and distributors will be linked to them.

The parallel between cars and information processing is accurate in another sense. The whole information processing complex, like the automobile industry 50 years ago, seems to be moving toward greater stabilization on the vendor side. This is happening as the increasing sensitivity of the market to economy of scale, mass-marketing and company images raises the ante and weeds out the weaker players. The result may be that the industry structure is maturing even as the market enters its period of greatest growth. ■

Desrenne is director of European Operations with International Technology Group, Palo Alto, Calif.

ENGINEERING PROFESSIONALS

(Local Area Network Development)
—East and West Coast Positions—

System Development Corporation, a leader in innovative computer systems technology has immediate opportunities for software professionals and test engineers who are interested in participating in a major company thrust to develop a local area network product line for large-scale Military and Intelligence System Applications.

The following positions exist in Santa Monica, CA, sunny, smog-free beach community:

- Communication System Engineering - Requirements analysis, protocol specification, performance verification, simulation studies and top level hardware/software specifications.
- Software Development - Communication/protocol and operating system software design and development, microprocessor program development, formal verification and trusted software development, systems programming, UNIX-PWB system development environment.
- System Test and Installation - Test plan design and specification, network performance measurement, installation and transition planning and formal system sell-off to customer.

To learn more about these challenging positions and others, send your resume immediately to:

Nancy Sullivan
System Development Corporation
2500 Colorado Avenue

China Computerworld

电 脑 世 界

The only specialized computer publication written exclusively for the People's Republic of China (PRC).

The PRC is a huge country which now has a rapidly growing installed base of computers. And the future looks very bright for the Chinese EDP market.

Government plans call for extensive use of computers in the PRC's technological modernization, and annual EDP expenditures are expected to grow into the billions of dollars in the 80's.

A good deal of this money will be spent on foreign computer equipment and the purchase decision-makers for this equipment will be using *China Computerworld* to help them choose the products and the companies they need.

China Computerworld is a joint venture of the Fourth Ministry of Machine Building and CW Communications/Inc. Its 50,000 subscribers include the key government officials and computer managers who have EDP purchase decision authority.

China Computerworld is published on the fifth and twentieth of each month. Its tabloid newspaper format gives you a unique opportunity to introduce your products and services to this awakening giant of a marketplace.

CW International Marketing Services Department gives you one-stop advertising service in countries around the world. For more information about *China Computerworld* or any of our other foreign publications, just fill out the coupon below.

WORKSTATION WARS

By Brian Jeffrey

IBM and AT&T may soon clash in the all-important microcomputer market, a market that is rapidly proliferating.

Micros started life as personal computers, and IBM has taken to calling them workstations or discrete microprocessor-based computing devices. No matter what they are called, micros are important to both companies for two reasons. First, there is going to be a large number of them — more than 60 million by the end of the decade, according to IBM figures. Second, they occupy strategic positions in the information processing market on the ▶

desks of Fortune 1,500 executives, managers, secretaries and clerical workers.

They are also found in the offices and homes of small business principals and professionals. Micros are the direct human interface to the whole information processing complex. They are the vehicles through which new value-added communications systems and services will flow.

In addition, micros are eroding many of the traditional equipment markets for terminals, word processors, small business systems, minicomputers and even typewriters and programmable controllers. In the next decade, any company participating in these markets or selling communications systems and services is going to have to cover its bases in micros. This point has not been lost on IBM or AT&T.

In 1980 and 1981, IBM introduced two microcomputer systems — the Intel Corp. 8086-based Displaywriter and the Intel 8080-based System/23 Datamaster. These were mainly entries into traditional IBM lines of business, but aimed at lower level technologies such as word processing. It was in August 1981 that IBM moved into the then fast-growing personal computer market. At that time, personal computers represented a distinct type of product, a self-contained microprocessor-based system, typically in the $2,000 to $5,000 range with peripherals. Although personal computer users represented an occupational cross-section of U.S. business, they were typically young, well-educated and technically literate.

The distribution channels were specialized computer stores, and the applications were distinctive. Visicorp's Visicalc, which had done much to launch the whole market, was the leading package, and a handful of sophisticated word processing and data base management packages backed it up. Beyond these, there was a massive library of programs provided by third-party developers.

BY THE TIME IBM made its entrance, the market was changing. More than any other company, IBM was responsible for fragmenting the market. By the end of 1983, it was fielding a line of microcomputers that had grown from the Personal Computer to include the Personal Computer XT, the 3270 Personal Computer, the Personal Computer XT/370, the CS-9000, (a Motorola, Inc. 68000-based engineering workstation) two versions of PCjr, two 3270 terminals with personal computer bolt-on units (the Personal Computer/3278 and Personal Computer/3279) and, for the Japanese market, the 5550, an 8086-based Kanji character workstation.

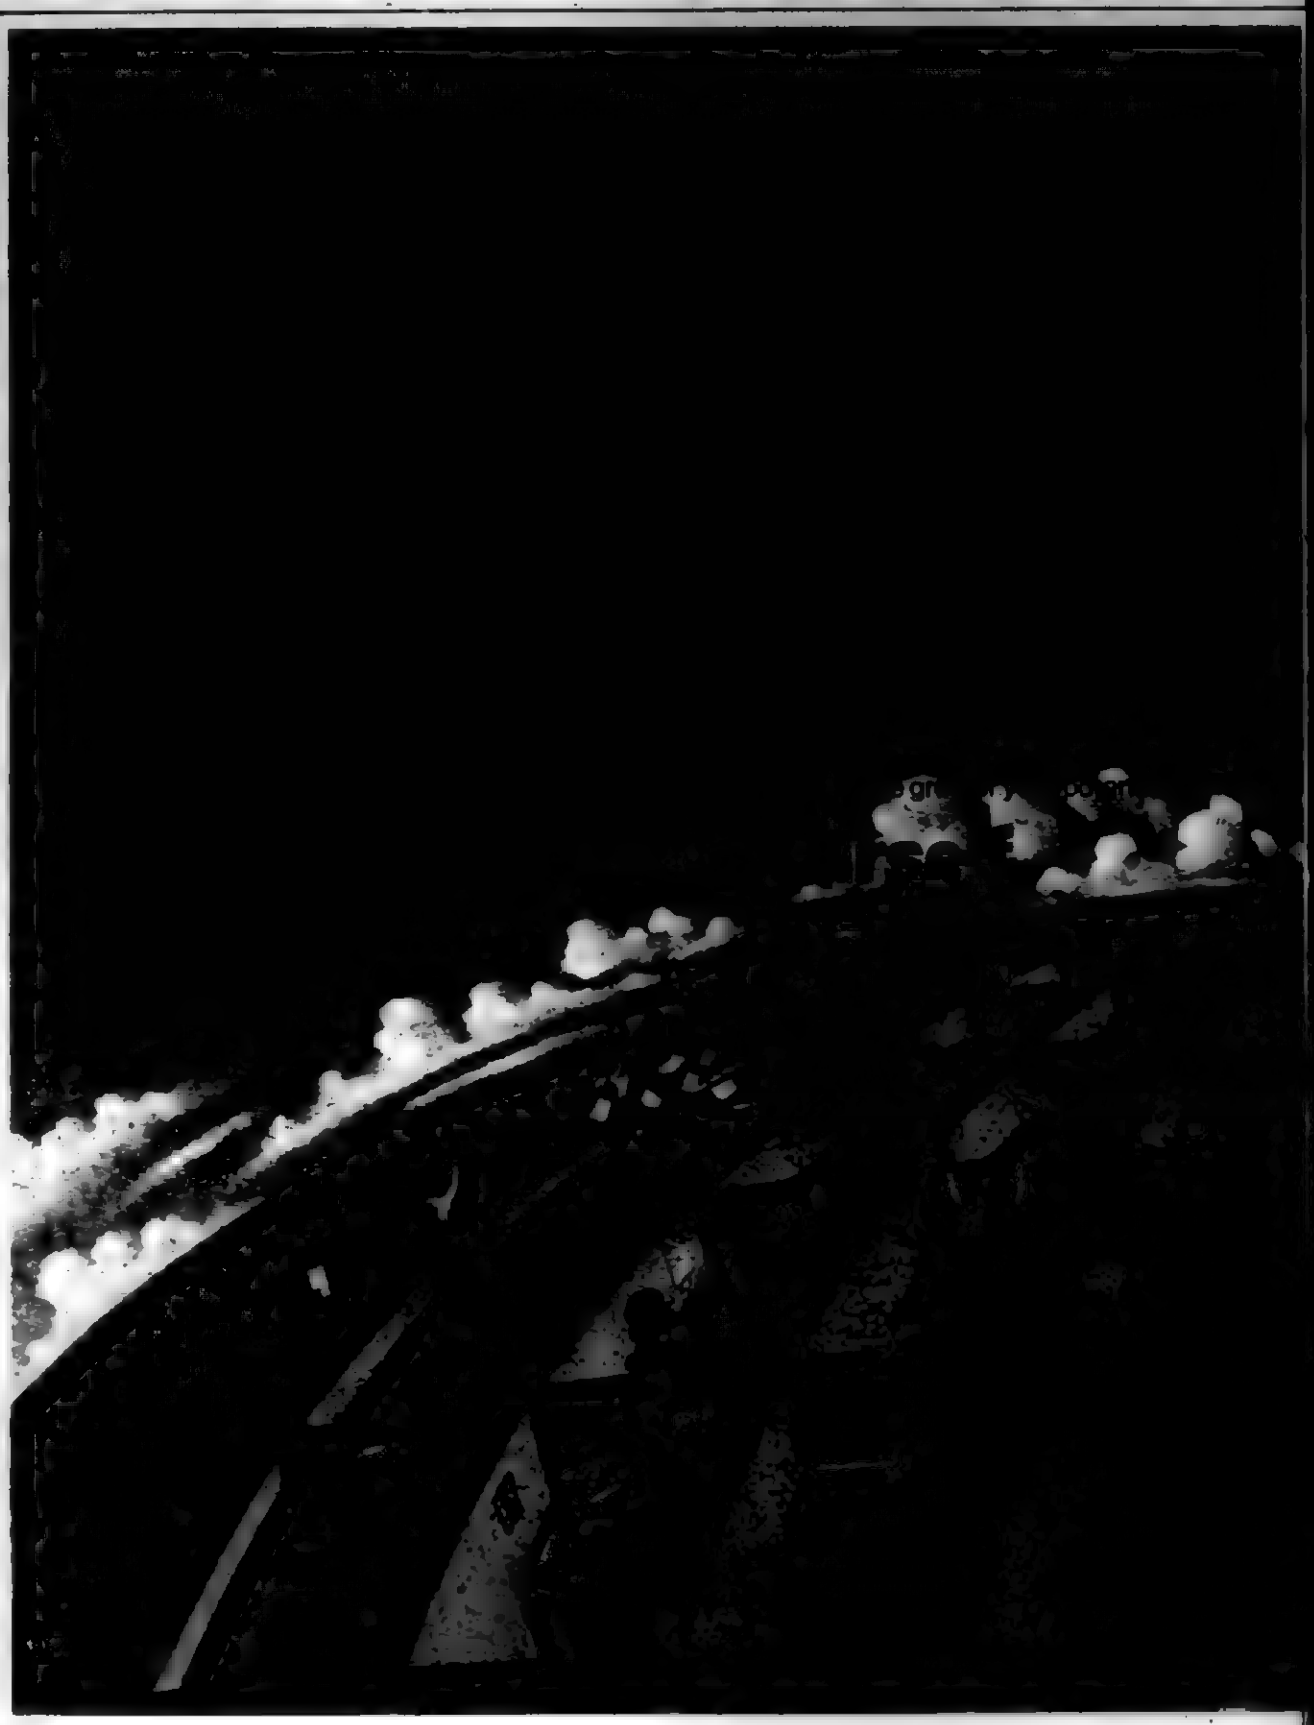
By year-end 1983, IBM had been marketing the Displaywriter and System/23 for some time and was preparing several new products in the supermicro and low-end brackets. IBM broke the microcomputer market into a number of distinct segments served by separate products and distribution channels. Briefly summarized, IBM's micro markets are:

■ *Host workstations.* These are for use in the Fortune 1,500 or other organizations with IBM central host processors. They are sold by the National Accounts and National Marketing Divisions. They combine the ability to manipulate host data with full-scale communications, personal productivity tools and software permitting local treatment of host data where appropriate.

IBM's mainstream product is the 3270 Personal Computer, which combines an Apple Computer, Inc.-type multiwindow format with personal productivity tools such as spreadsheets, light-duty word processing, personal filing and note pads. In short, the 3270 Personal Computer closely follows existing work patterns, and a clear distinction is made between mainstream — for example, host — and personal applications.

IBM offers the Displaywriter for secretarial applications involving heavy-duty word processing. Less sophisticated capabilities are available with the Personal Computer/3278 and Personal Computer/3279, or at the bottom of the line, the 3178 dumb terminal. Other products include variants of the Personal Computer XT supporting Visicorp.'s Vision and Lotus Development Corp.'s 1-2-3, which allow more sophisticated local treatment of host data. The XT/370 is designed for host programming and specialized data treatment, while the 4301, a desktop version of the 4300 series, facilitates more sophisticated executive and professional users.

The workstations in the Fortune 1,500 line are basically optional components of the total Systems Network Architecture (SNA)-based communications and office automation scenario offered by IBM. They support the data, text and, in the near future, voice capabilities available under this architecture. Leasing terms are available from IBM Credit



Corp. for the conversion of existing terminal bases and the installation of bulk lots of the newer workstation products.

■ *Small business systems.* These are for use by small organizations with up to 20 employees that cannot cost justify a larger system in the 30 series bracket. The primary requirement of these users is the automation of such procedures as accounting, inventory control, sales data management, letter preparation and mailing list management. These users require a considerable amount of hand-holding, particularly if they are converting from manual procedures, as is usually the case. For these users, IBM offers the Personal Computer XT, also available in an entry-level model, the Personal Computer and the System/23 Datamaster. The latter, however, is likely to be replaced by a new advanced workstation, a supermicro providing multiuser capabilities and allowing a migration path upward from the XT for the growing business.

This market is served by value-added dealers, which provide specialized software, support and guaranteed service, or by the local IBM Product Center, which provides less hand-holding but undertakes service, maintenance and training on a special basis. Alternatively, if there is no IBM Product Center in the vicinity, the Personal Computer and the XT may be purchased from a third-party retail store.

■ *Utility computers.* These are intended for users who already possess or have access to an IBM business computer or who otherwise do not require full-blown microcomputer capabilities. They are used mostly in the home for light-duty business processing in the evenings or on weekends. They are used to automate typing and for entertainment, personal filing, educational applications for children and students, on-line data base access and consumer electronic mail.

IBM's main products in this category are the two versions of the PCjr. The company is planning to add high-capacity storage media, video and data capabilities and access to videotex services. Later products will include a convenient portable system and a personal communications system to stay in touch while driving to work or traveling.

This market may be reached in two ways. First-time computer owners and purchasers will be able to obtain the new systems via IBM Product Centers, third-party computer stores and selected consumer retail outlets able to satisfy IBM marketing and service requirements. In addition, large-scale direct mail and telemarketing will be used for direct sales and to draw potential customers to local IBM Product Centers.

■ *Minicomputer-type systems.* In this market, powerful micros can take the place of older minicomputer systems for scientific, engineering, educational and some low-end business applications. IBM products also complement its larger minicomputer (Series/1) and mainframe (4300 series) lines. They include the CS-9000 and 4301, the latter representing the 4300 series, whose capabilities for scientific and engineering applications have not been reflected in their market penetration. Selected accounts are served by IBM Instruments and other specialized units. For the remainder of the market, conventional OEM channels are used.

■ *All-purpose small processors.* For this market, IBM offers stripped-down Personal Computers on an OEM basis. They may be used for a variety of control applications, factory device control, energy management and communications control. IBM already uses the Personal Computer for such applications in its own product line and will assist customers in the development of similar uses.

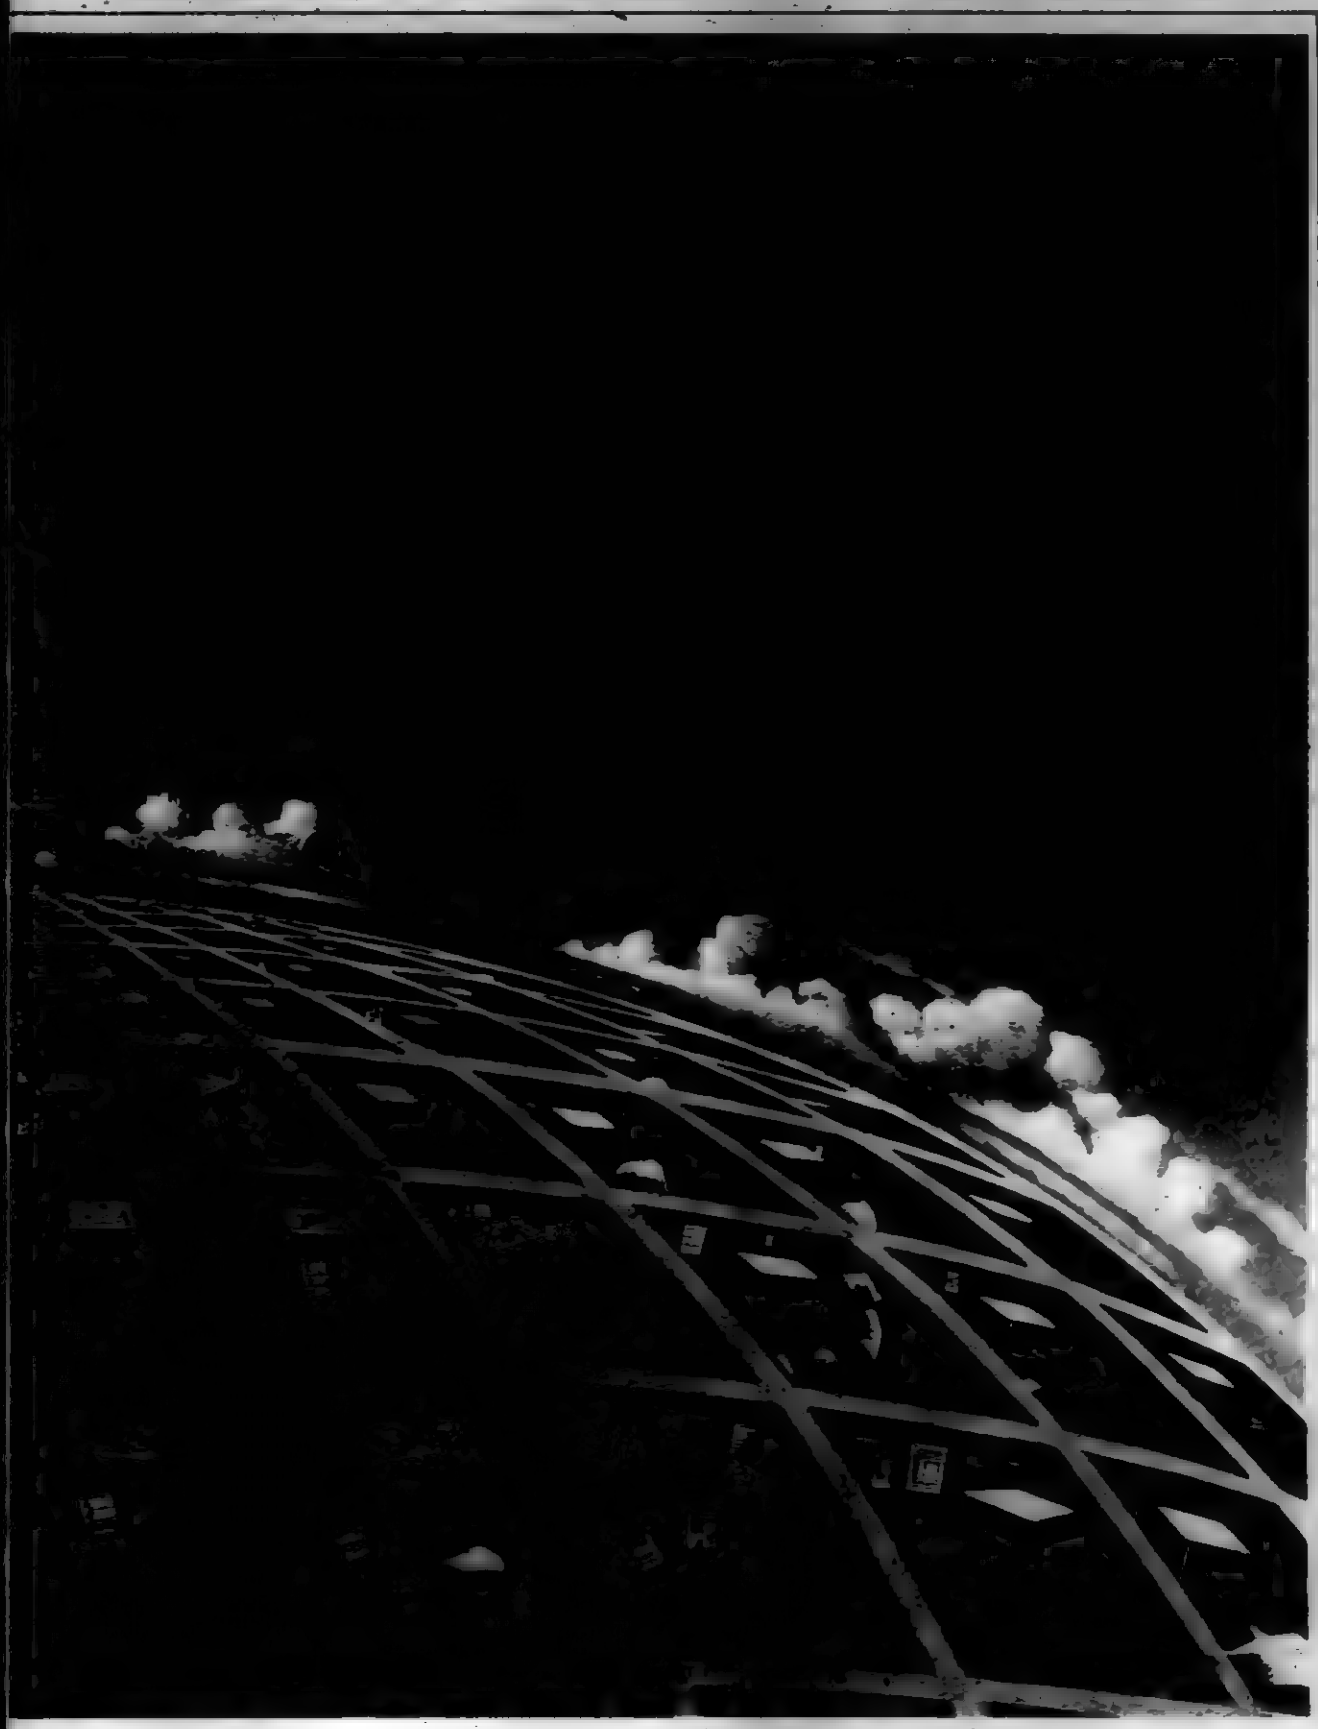
■ *Classical personal computers.* Users of these units are mainly interested in tinkering with applications such as Visicalc and Dungeons and Dragons, rather than serious applications. This user really should be buying an Apple IIe or a Lisa, but if he wants to buy from IBM, he can get a Personal Computer or an XT from a computer store or an IBM Product Center and run PC-DOS, Concurrent CP/M or Vision.

So much for the Personal Computer. IBM has, in fact, done an effective demolition job on the original market, channeling microcomputer technology more into its traditional lines of business and enabling it to leverage its corporate strengths. One of the more regrettable side effects, of course, is that IBM has pulled the rug out from under vendors such as Apple that have continued to build better products in the belief that this was still the key to success.

Like IBM, AT&T appears to recognize that microcomputers will be most useful supporting its mainstream lines of business. The three areas in which micros could perform this function at AT&T are:

■ As communications terminals for services such as AT&T Information Systems' Net/1000 and consumer and business videotex services.

■ As workstations in Fortune 1,500 environments, forming part of an



office automation scenario centered on the System/85 private branch exchange and its successors.

■ As options under a Unix architecture, forming the low end of a processor line passing through the minicomputer and potentially mainframe brackets.

It would make sense for AT&T — and IBM — to field an overlapping product line and bracket the market with a range of targeted distribution channels. Fortune 1,500 markets would probably best be handled by direct or joint marketing with a line that overlaps at the high end with the Unix line.

One such machine could be a 32-bit processor for the management and executive user, a more powerful and complex model than the IBM XT/370. It would be used for programming and specialized treatment. Other products for users with less demanding requirements could include simpler intelligent and dumb voice and data workstations such as the IBM 3270 Personal Computer, Personal Computer/3278, Personal Computer/3279 and 3178. Full communications support and industry standard operating systems and applications options would probably also be supported.

For the communications terminal market, AT&T wants to use its existing marketing strengths supported by direct mail, telemarketing and so on for the consumer and small business markets. It would also like to employ a variety of third-party retail and distributor channels.

For the Unix market, including the conventional minicomputer and supermicro markets, overlapping OEM and value-added channels would supplement AT&T's other marketing activities and cover any market niches not reached directly.

At this point, it is still unclear what AT&T will use as products. It has no presence in the existing microcomputer market and needs to penetrate the market fast, particularly in the office automation and communications services fields. Acquisitions are a possibility.

However, the most likely option involves partial buy-ins and/or marketing and development tie-ups with companies like Digital Equipment Corp., Apple and Commodore Business Machines, Inc. and others with market presence in key areas.

The synergy with Apple, for example, is so obvious that it would be surprising if it did not result in a relationship between the two. This would not preclude AT&T from introducing its own products either immediately or at a later date. As IBM has demonstrated, product overlap is a lesser evil than leaving gaps in the marketplace.

Competition between IBM and AT&T seems to be shaping up across the board, initially in Fortune 1,500 office automation markets, but later in the mini and supermicro fields.

Both companies will be competing more against other vendors than each other for a while, but given the speed with which IBM is coming on in this market and the likely impact of an AT&T entry, they are inevitably going to clash.

The communications terminal sector also looks set for a face-off. IBM is already promoting its business micros as information network terminals, and videotex access for its Personal Computer, XT and PCjr lines is a key component of IBM's move into this area this year.

The two firms are clearly going to be competing heavily for this market by the mid-'80s, with IBM initially pushing CATV-based services and AT&T pushing conventional on-line services.

IN THE FINAL ANALYSIS, IBM's marketwide quality, service and support will play a crucial role. In buying an IBM micro, one is essentially buying IBM. There is a wide range of products available according to taste and requirements, but the particular box chosen is really a secondary concern. AT&T will stress conservative values like compatibility, reliability and service. This takes the focus of competition off a box-for-box, feature-for-feature basis.

That focus turns to IBM's name, its service organization and its ability to offer a totally integrated SNA-based communications scenario and videotex services to Fortune 1,500 firms.

IBM has reached a point at which AT&T is virtually the only company that can compete with it effectively. Like IBM, AT&T is likely to place the focus of competition on the capabilities of its organization and perhaps also its affiliates. It is clearly able to handle the same kind of mass-marketing campaign that IBM has begun.

The majority of potential micro users are uncomfortable with the new technology. IBM and AT&T offer reassurance in a field of vendors, most of whom still stress leading-edge capabilities. ■

Jeffrey is director of research, International Technology Group, Palo Alto, Calif.

MORALE AND MANAGEMENT

By Alain Desrenne

The business of competing has received much attention lately, particularly in relation to AT&T, a company that supposedly cannot compete. IBM, on the other hand, has become a very competitive company.

This is a striking contrast, but just a few years ago, IBM was also known as a company that could not compete. Critics said that even though IBM was strong in the mainframe market, it could not compete in the newer, faster moving markets.

By the late '70s, IBM had acquired a reputation of being ▶

a musclebound giant. It was perceived as slow-moving, bureaucratic and riddled with a reluctance to consider solutions from outside. For much of the decade, it had mounted challenges in markets that had done less than set the industry on fire, such as the minicomputer and word processing equipment markets. Yet in October 1981, it began a massive corporate reorganization that preceded a blizzard of new product introductions, aggressive pricing and marketing strategies, innovative uses of third-party distribution, tie-ups with other companies and lawsuits.

Contrary to the general opinion in the industry, IBM accomplished this without large-scale outside hiring. The new "lean and mean" IBM is composed of many of the same people as the old IBM. The managers are long-time staff members, who only a year or two ago were running their bit of what was generally regarded as one of the most hidebound companies in the industry.

THE NEW SPIRIT AT IBM should not have come as a great surprise. As IBM employees like to point out, IBM had always been competitive. In the '50s and '60s, it fought a hard battle for the mainframe market and, in the '70s, fought off a new wave of competition from the plug-compatible vendors.

Moreover, IBM had always been competitive internally. Contention management, as IBM employees describe it, had always been the norm, with groups within the company competing heavily with each other. During the '70s, its three divisions serving the Fortune 500 market — the Data Processing Division (DPD), the General Systems Division (GSD) and the Office Products Division (OPD) — fought an intense, if fratricidal, battle for the office automation arena.

IBM's apparent lack of competitiveness was due to its preoccupation with host mainframes. Although it continued to market lines of office and small business products, IBM had become for all practical purposes a single-product company. It sold mainframes.

Like all single-product companies in a fast-changing industry, IBM discovered that success carried the roots of failure. The establishment of the 370 series architecture as the industry standard and the accumulation of end-user software investments reduced the game to an orderly hardware price/performance progression. This was dictated less by competition than by IBM's internal requirements. Even the appearance of the plug-compatibles did not significantly alter this situation: It just speeded up the process.

With an ongoing antitrust suit limiting the possibilities for diversification and with slowing growth and an aging management structure, IBM began to stagnate. Throughout the '70s, the mainframe lobby — composed of IBM employees who believed that very little of interest in computer technology had occurred since the mainframe — persisted in trying to fit the new technologies into the old mold. Systems Network Architecture (SNA) was introduced as a response to the appearance of minicomputers in IBM's large accounts. Even such things as word processing, local networking and personal computers were similarly dealt with by hanging them off hosts. Some of IBM's host-based office automation systems are perhaps best forgotten. Products such as the token-ring local-area network and the recently announced 3270 Personal Computer suggest that this orientation is far from dead.

The smaller systems groups, notably the GSD and the OPD, were more aware that a more effective response was necessary. As a result, systems such as the Series/1, 5520, Displaywriter and the Personal Computer began to find their way into large accounts to the confusion of all concerned. However, the small systems business, like other IBM lines of business, tended to be regarded as a sideline. It did not have a high status within IBM.

By the late '70s, the situation began to receive serious corporate attention. The company was losing many of its younger, more entrepreneurial managers. In addition, career blockage, IBM's commitment to lifetime employment, was reaching epidemic proportions. In addition, frustration with the firm's poor showing in the newer, high-growth markets was mounting.

The "wild ducks" — IBM's term for its more original and entrepreneurial managers — were traditionally tolerated rather than valued inside the company. But they were increasingly seen as a vital resource. With growth moving away from the old host complex and toward newer areas and with the prospect of the antitrust suit being dropped, IBM was going to need that type of manager to compete in new markets.

The reorganization and the large-scale diversification that began to be prepared in the 1979-80 time frame were to some extent a

IF YOU READ YEARS AND FROM IT WOULD BE CURRENT.

This product will comply with all applicable FCC rules prior to final delivery.

response to this. While management dissatisfaction was far from the only consideration in planning for the new structure and priorities, it was important. It was unusual for a U.S. corporation to factor employee satisfaction into multimillion-dollar diversification decisions. However, IBM has always been out of the mainstream of large U.S. firms in its emphasis on employee commitment and lifetime employment.

Whatever the intentions, the results were clearly beneficial to the wild ducks. In a massive series of reshuffling and diversification moves that began in 1981, management hierarchies were dislodged, and poor performers were sidelined en masse. The creation of new functions in new organizational units — notably in small systems and the independent business units — opened up opportunities for many of the more entrepreneurial managers.

The reorganization also created a structure that enabled the competitive spirit to be channelled outward against other companies rather than inward against other units within IBM. The National Accounts Division took the large accounts, and the National Marketing Division took the others. In addition, various independent units — later consolidated as the National Distribution Division — took third-party channels. Product development and manufacturing functions were consolidated to respond to their respective needs.

To deal with the problem of product overlap, IBM developed separate lines for each major market segment. The Fortune 1,500 market was turned over entirely to the mainframe lobby. Separate product distribution complexes were set up for such areas as small business systems, home and personal computers, OEM minicomputers and microcomputers, communications products and services and consumer products.

Distribution complexes were also set up for factory automation equipment, instruments, computer-aided design systems, medical electronics and specialized displays. In each case, the aim of the IBM unit handling the complex was to gain a share of the market. Overlap between product capabilities was dealt with by ensuring that separate distribution channels reaching distinct market segments were used. There were to be no repetitions of the office automation wars between the DPD, GSD and OPD.

IF THIS TRADITIONAL competitive spirit at IBM was to prove an asset, so, it turned out, was the traditional IBM corporate culture. This culture had always stressed a handful of key values — quality, reliability and service — rather than the advantages of particular products or technologies. As a result, its products obtained a reputation for being less than state-of-the-art. This was true, but beside the point: IBM was not competing on state-of-the-art technology. In the '50s and '60s, the key values were effective in the mainframe market.

IBM's emphasis on quality, reliability and service was singularly appropriate for host computing, a new technology that was still treated with suspicion in many organizations. Moreover, the introduction of host computing and the emergence of corporate DP centers meant the centralization of business data and processes on a single point of failure. Reliability, support and service, which IBM had made its keynotes, were powerful competitive tools.

This approach also proved effective in the office automation market during the '70s, serving to counteract the effects of some less than impressive systems. However, it seemed that the emphasis on realiability and service did not carry much weight in newer, faster growing markets outside the large accounts — for example, personal computers. But it soon became clear that that assumption was not right. IBM began a late-entry strategy with the IBM Personal Computer and, more recently, with other products and services.

IBM's strategy is clearly to let others pioneer a market. Leading-edge products are bought by leading-edge users. IBM enters at the point when products are standardizing and when the market is beginning to extend to the mainstream of business users — a group that is far more receptive to the issues of quality, reliability and service than pioneer users.

Seen in this perspective, IBM's rather staid corporate culture is proving to be a massive competitive asset. There was no need to change it to make the company more competitive, and IBM did not try to do so.

The net result was that IBM emerged in the '80s with few changes in its culture or orientation. It made a few technical adjustments. These involved breaking the hold of the mainframe lobby on corporate decision-making and confining it to the Fortune 1,500 market. It also involved rechannelling the energies and competitive spirit of its younger entrepreneurial managers into broader and newer markets. All in

THIS AD YEARS NOW, STILL

GTE presents Omni, the telecommunications system with a life span that's virtually limitless.

We've made obsolescence obsolete. As far as your telecommunications system goes, anyway.

No more changing the system every time your needs change. With GTE's Omni, the system is simply reprogrammed.

Omni is a modular system that allows you to easily add more capacity and features whenever the need arises. Often without installing new cables. (Or even touching a wire, for that matter.) So you'll always have the latest telecommunications capabilities.

And right now those capabilities are really extensive. (Including the latest data applications.) To make it even more attractive, you can frequently have all this installed using your existing telephone wiring.

Contact us today and find out more about this remarkable system. After you hear the whole story we think you'll agree that even the word "remarkable" is a bit of an understatement. For more information write Marketing Services, GTE Business Communication Systems Incorporated, 12502 Sunrise Valley Drive, Reston, Virginia 22096. OMNI Systems are available in Canada through AEL Microtel Limited (613) 342-6621.

We've simplified a complicated business.

GTE Business Communication Systems

all, it was not a bad performance.

IBM's problems, however, are insignificant beside those of AT&T. The company behaved like a utility for longer than anyone could remember and was heavily regulated for much of its history.

In 1968, the Carterfone Decision changed all that. In the wake of the decision, divestiture of the operating companies and the adoption of a more competitive posture became pressing needs as a slew of new competitors began to take chunks out of the company's markets.

As in the case of IBM, however, it would be a mistake to underestimate the extent to which AT&T was competitive during the '70s. AT&T was hampered by its existing commitments to the Dimension PBX line, regulatory problems and a natural reluctance to show too much aggressive behavior while the divestiture case was still in progress. Nevertheless, AT&T did compete heavily with the Interconnect PBX vendors, companies offering bypass long-distance telephone services, suppliers of customer-purchased telephone equipment and the like. The utility mentality was perhaps strongest in the operating companies and the Long Lines Division. Under the new structure, the former will no longer be part of AT&T, and AT&T Communications, the successor to Long Lines, will remain regulated. Moreover, as many AT&T staff were given the option of going with the regulated or unregulated entities, it is clear that many of the utility-minded have taken themselves out of the picture. And others have chosen early retirement.

In the remainder of the organization — and particularly in AT&T Information Systems — many of the same changes that have been noted in IBM also occurred. A succession of restructuring moves has broken up much of the entrenched management hierarchy. This reorganization left a new generation of managers, typically in their 40s or younger, in decision-making positions in most parts of the organization.

Moreover, some fairly substantial efforts have been made to overcome one of the key weaknesses of the old AT&T organization — the lack of contact between its different components. In addition to personnel transfers and changes in reporting structures, AT&T has run programs to put Bell Laboratories and Western Electric engineers out into the field.

The results, while variable, nevertheless belie the idea that AT&T is still the same static organization it was in the past. Similarly, most of AT&T Information Systems' regional units have been engaging in some fairly heavy training and retraining, and focus groups have been organized. In addition, customer interface sessions are occurring on a scale that would have been difficult to imagine only a few years ago.

Like IBM, AT&T also has a surprisingly strong tradition of internal rivalry to draw on, mostly between its regional units. Competition on service performance has been strong within the company for a long time. With service clearly a major competitive edge for the new competitive entity, it is a significant factor in assessing AT&T's likely future performance.

Unlike IBM, however, AT&T has gone in for some large-scale outside hiring exercises and has made deliberate attempts to change aspects of its culture. A group of executives recruited from outside by Archie McGill, the former president of American Bell, Inc., began to lay down potential changes in the mid-'70s. For a while, it looked as though American Bell, which has since been renamed AT&T Information Systems, was going to go in the direction McGill proposed. It would move toward becoming a systems vendor like IBM, with a product line and marketing staff drawn heavily from outside sources.

THE DEPARTURE OF McGill and many of the executives he brought in with him was perhaps inevitable. The dispute clearly went deeper than differences over product strategy and reporting structures. According to AT&T sources, the issue involved the extent to which AT&T was going to remain a communications company rather than a systems vendor. Many felt that McGill and his counterparts were taking the company too far too fast.

In retrospect, they were probably right: AT&T possessed a strong corporate culture, and that culture was heavily geared toward telecommunications. That covered such areas as PBXs and transmission technologies and involved a heavy orientation toward reliability and service of the communications infrastructure within companies. Thus, AT&T was probably in a better position than IBM, with its host mainframe focus, to take advantage of the convergence of computer and communications technologies.

An attempt to follow IBM onto its home ground would have been

difficult to manage. At a time when AT&T was having severe problems just getting its new structure to function properly, such an attempt made little sense. As a result, AT&T seems to realize that, for now at least, it is better playing from its strengths — which aren't small.

The introduction of outsiders at lower levels also seems to have caused more problems than anticipated. Originally, AT&T Information Systems planned a 50-50 mix of outsiders to veterans at corporate levels, with regional and functional units handling their own outside recruitment.

While integration problems were expected, the intensity of the frictions that developed between veterans and outsiders seems to have surprised everyone. The management styles of the newcomers were often highly individualistic and authoritarian. The rationale for this was that they were brought in to put the outfit in better shape, and that they should start by making a few changes. This was especially dangerous at AT&T, considering the many younger managers who regarded the reorganization as an opportunity to further their own careers within AT&T.

Those who seem to have adapted best to the AT&T environment tend to be managers not far removed from the archetypal AT&T employee — those who previously worked for companies with strong corporate cultures emphasizing organizational commitment rather than personal performance. The lesson has been learned, and outside hiring is being played down. The net result is that AT&T, like IBM, looks like it is coming through the reorganization and reorientation with a new generation of management, new perspectives and a largely intact corporate culture stressing quality, reliability and service. But IBM is still heavily oriented toward data processing, while AT&T is oriented toward communications.

The typical IBM employee and the typical AT&T employee also show some interesting similarities in personality. The new entrepreneurial managers are a slightly more complex breed than appears at first. AT&T and IBM sources agree that the best managers are those who are not motivated purely by personal success. They are, of course, not immune to financial considerations or to organizational power, but they also derive satisfaction from being part of a large organization in which their views carry some weight. As one AT&T executive, formerly with IBM, put it: "Some of us like to feel that we can influence the way things go, that what we do is going to matter. The financial considerations are there, of course, but I could probably do better with a smaller company. I like the kind of commitment here to customer service, that kind of thing. And I can have more of an influence here than in a smaller company."

BOTH IBM AND AT&T are sensitive to the issue of morale. The results of IBM's morale extend not merely to its own employees, but to its customers, competitors and the press. It seems to be taken for granted these days that IBM will succeed in whatever it touches. It is becoming a self-fulfilling prophecy. This is strong medicine for a corporate culture that lays strong emphasis on the organization's success and whose managers are often organizational entrepreneurs. IBM staff members feel they are no longer part of No. 1, to use the old '70s term. It is a little more than that. They feel they are part of The Winner, a firm that is visibly surpassing its competitors in one market after another.

AT&T, understandly, is not matching this. Poor press, the uncertainty surrounding the company over the last few years as its divestiture ran through the courts and the effects of having outsiders parachuted in to key positions have done much to keep AT&T morale low. Nevertheless, there are clearly good bases for a recovery. A new generation of management, a strong corporate culture and the company's financial, technological and marketing strengths suggest that a sustained show of competitive performance could get AT&T's personnel into the same kind of self-fueling morale that IBM has enjoyed.

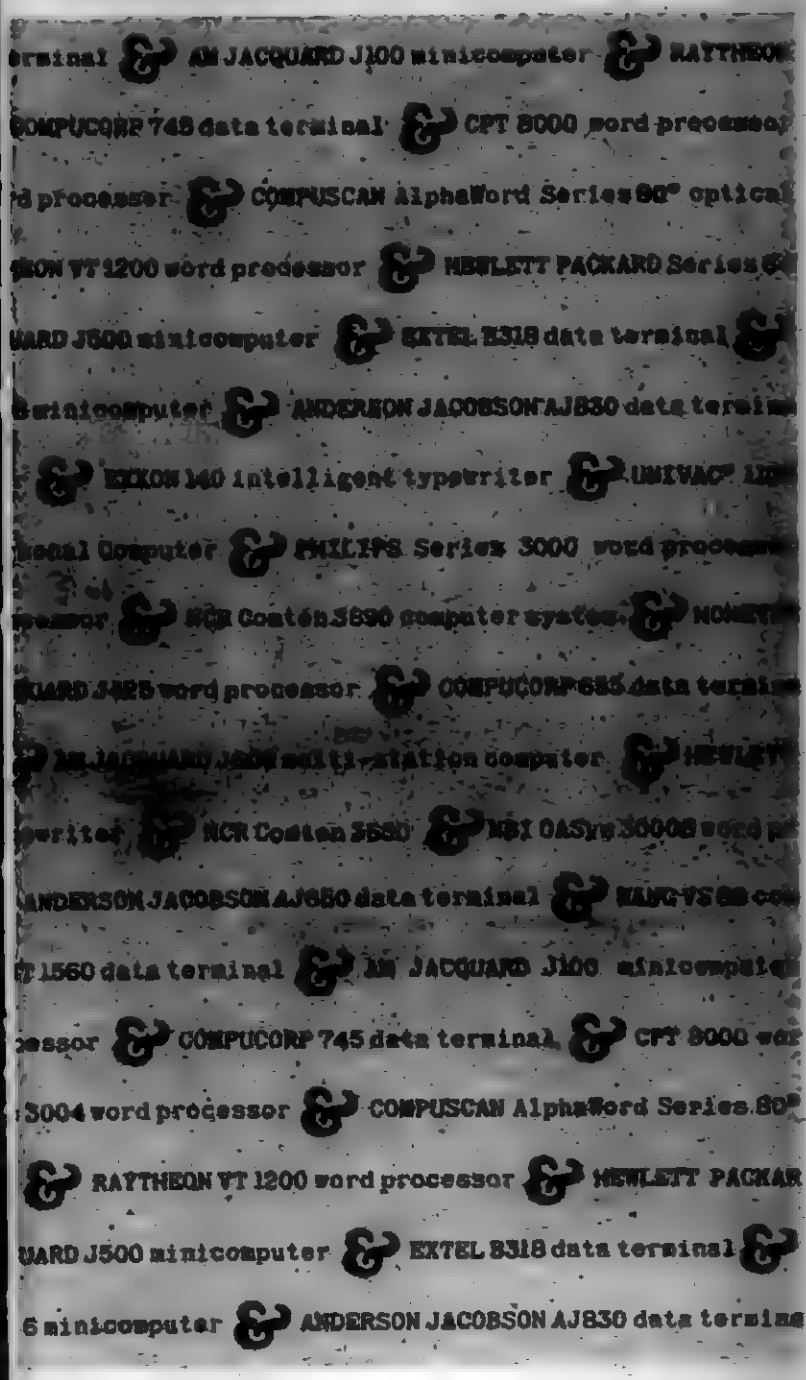
Competitive has a different meaning for IBM and AT&T than it has for most other firms. Both hold the high ground in terms of market presence, and both compete less on products than on values. They sell a kind of security that is attractive to much of the market. The values of quality, reliability and service are deeply embedded in their corporate cultures and maintained by managers and staff who feel motivated to do so.

The concept is simple — good organization, good teamwork, good morale. People.

And for the competitors of IBM and AT&T, it is something to think about for the next strategic planning session. ■

Desrenne is director of European Operations with International Techology Group, Palo Alto, Calif.

matchmaker.



A word processor and a computer aren't a match made in heaven.

Of course, neither are a telex machine and CRT. Or any of the machines listed here.

Rather, they're all matches made by us: ITT World Communications.

You see, until we came along, it wasn't very easy for businesses to send information from a word processor to a computer. Or from a telex to a CRT. Or vice versa.

Now all that (and more) is possible—by sending information through us.

Our network simply eliminates all the usual problems of unlike equipment.

So a company never has to be in the costly position of owning unneeded terminals, just to "talk" to other terminals.

Which means, you'll not only get the communications your company needs, but you could save money as well.

Advanced communications *and* economy?

It sounds like a perfect match to us.

For more information contact your local ITT sales representative or write Marketing Dept. A/PR, ITT World Communications, 100 Plaza Drive, Secaucus, NJ 07096.

ITT

Who says we're the best?

You do.

The facts are in. And we won. Again.

Data Communications' latest Brand Preference Survey, conducted by McGraw-Hill Research, shows GTE Telenet the number one data communications carrier in our category.

(We've won all previous surveys, too, but this time even more people gave us top billing.)

It figures. After all, GTE Telenet pioneered the system that allows your computers and terminals to talk to each other, wherever they are.

We're just a local phone call from hundreds of American cities, in all 50 states, plus 50 foreign countries.

And our network is universal. It handles a wide variety of equipment, speeds and protocols.

It's cost-effective, too. You don't have to incur any capital investment, and you're charged only for the time you use the network. This can amount to only pennies a minute, plus a monthly charge for computer access.

Telenet is reliable. Redundancy is inherent in the network. The system senses if equipment is out of action, and automatically routes data around the fault.

We don't like to brag, but it seems to us that you've just read the reasons why we won the Data Communications survey. Again.

If you'd like to know more about the number one way to send data, just call, toll-free 1-800-TELENET.

GTE Telenet

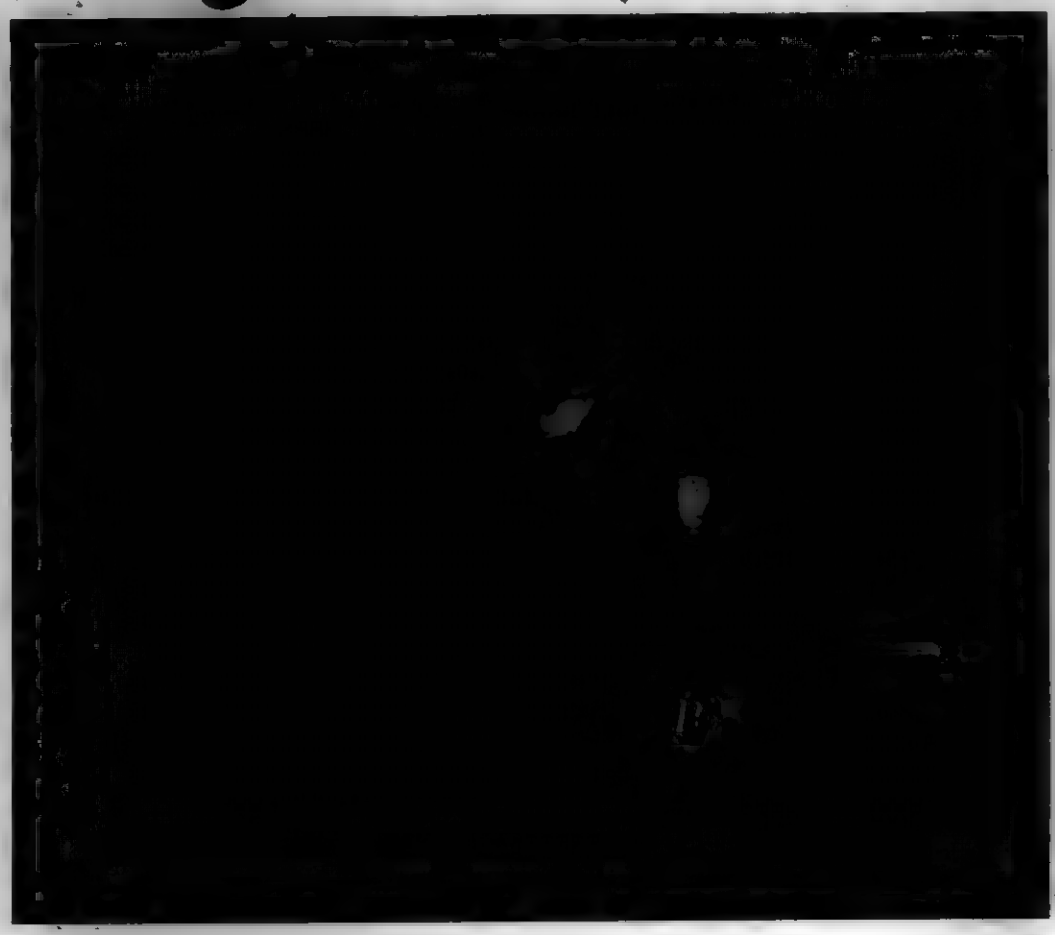
IN THE BALANCE

In November 1981, Michael Killen, president of the San Jose, Calif.-based consulting firm, Strategic, Inc., raised eyebrows and hackles when he boldly predicted that "Xerox [Corp.] is headed for the worst failure in the company's history. When Ethernet fails, everything will go with it."

Of course, Ethernet, Xerox's ground-breaking local-area network, did not fail, but the degree to which it has succeeded is still a matter of debate. At any rate, Killen's dire prediction put him and his company on the map. Since then, he has made many more predictions in the reports Strategic churns out on a variety of information processing subjects.

Computerworld On Communications *Editor Bruce Hoard contacted him recently to see how he views the possibility of future conflict between IBM and AT&T.* ▶

"IBM terminals n
says PCI.



Your IBM CRT can communicate with ASCII hosts, like DEC, as if it was a DEC terminal. With a stroke of the key from your IBM CRT on your desk, you become instantly DEC-compatible. Your IBM terminal is now a DEC VT-100 CRT, thanks to the PCI 74D *de*converter from Protocol Computers, Inc.

You don't have to buy new terminals; you already own them.

Your IBM 3278 is a multi-function performer. Talk to DEC hosts, including those running the Unix and VAX/VMS operating systems. Talk to Dow Jones™ News/Retrieval Service for the latest stock information. Dial-up The Source. Connect to your Local Area Networks. The PCI 74D makes previously inaccessible time-sharing and private ASCII networks instantly available.

With the stroke of the key, you're back talking to IBM.

The PCI 74D switches your IBM 3278 terminal into the ASCII mode when it receives a specific keyboard command sequence. Suddenly the asynch ASCII world is at your fingertips. And just as easily, with another stroke of the key, you're back to IBM.

The PCI 74D resides between the IBM controllers (3274s and 3276s) and the hosts (IBM and ASCII). Connections to the controller or host can be either direct or through a modem. The PCI 74D is transparent to the IBM host.

Full capabilities, both worlds.

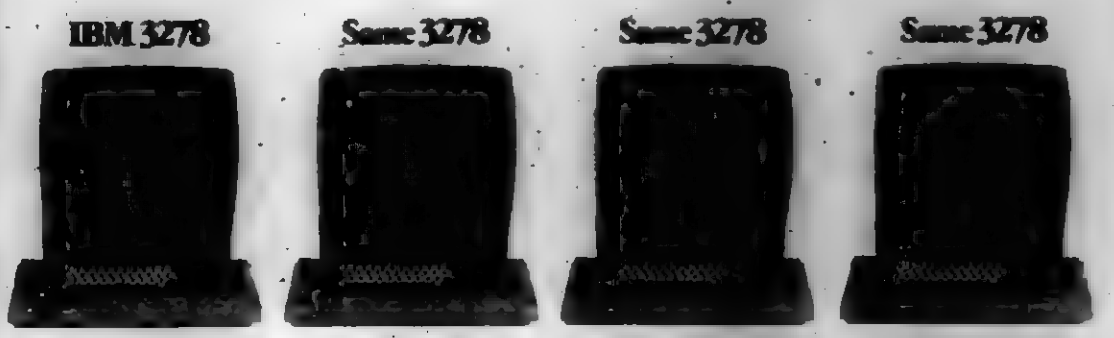
When your 3278 is in the ASCII mode, it can be a DEC VT-100 or TTY-compatible terminal. When your 3278 switches back to IBM, it regains its IBM screen capabilities, its 3278 identity. It's a split personality terminal, with the PCI 74D.

If you'd like to hear more about how to make your IBM world non-IBM compatible, get a dialog going with PCI today. To start your conversation, here's how to speak the language.

Glossary:

ASCII (American Standard Code for Information Interchange). The language spoken by DEC, not by IBM (without PCI).
ASYNCHRONOUS Start-stop communications technique used by low-cost low speed ASCII terminals and Personal Computers.
CoaxFACE™ Exclusive PCI device provides RS232C interface to coax cables for attachment of ASCII terminals to PCI converters.
DEC Digital Equipment Corpora-

ow speak to DEC,"



tion. Used here as synonym for an ASCII host.
DECONVERTER (74D) Makes the IBM 3270 world ASCII-compatible.
FULL SCREEN The ability to modify an entire CRT screen of data without host interruption.
MODEMS Interface to allow digital devices to communicate over phone lines.
PaperCRT™ ASCII hard copy keyboard terminals have all the versatility of 3278 CRTs with this PCI option.
PCI (Protocol Computers, Inc.) We make the non-IBM world IBM compatible. Now we make the IBM world non-IBM compatible, too.
SDLC (Synchronous Data Link Control). Line protocol for data communications between IBM systems and terminals.
SNA (System Network Architecture). IBM's approach to data communications networking.
SNA/SDLC IBM communications; non-compatible with DEC (ASCII) communications (without PCI).
SYNCHRONOUS High speed, high cost data communications technique.
PCI 74D Deconverter makes the IBM 3270 world ASCII compatible.

3274/76 IBM controllers which support 3278s, 3287s in an SNA/SDLC network.
3278/79 IBM's CRT and color CRT.*
3178 IBM low cost CRT.*
3287 IBM's printer.*
*All non-compatible with DEC (ASCII) without PCI.

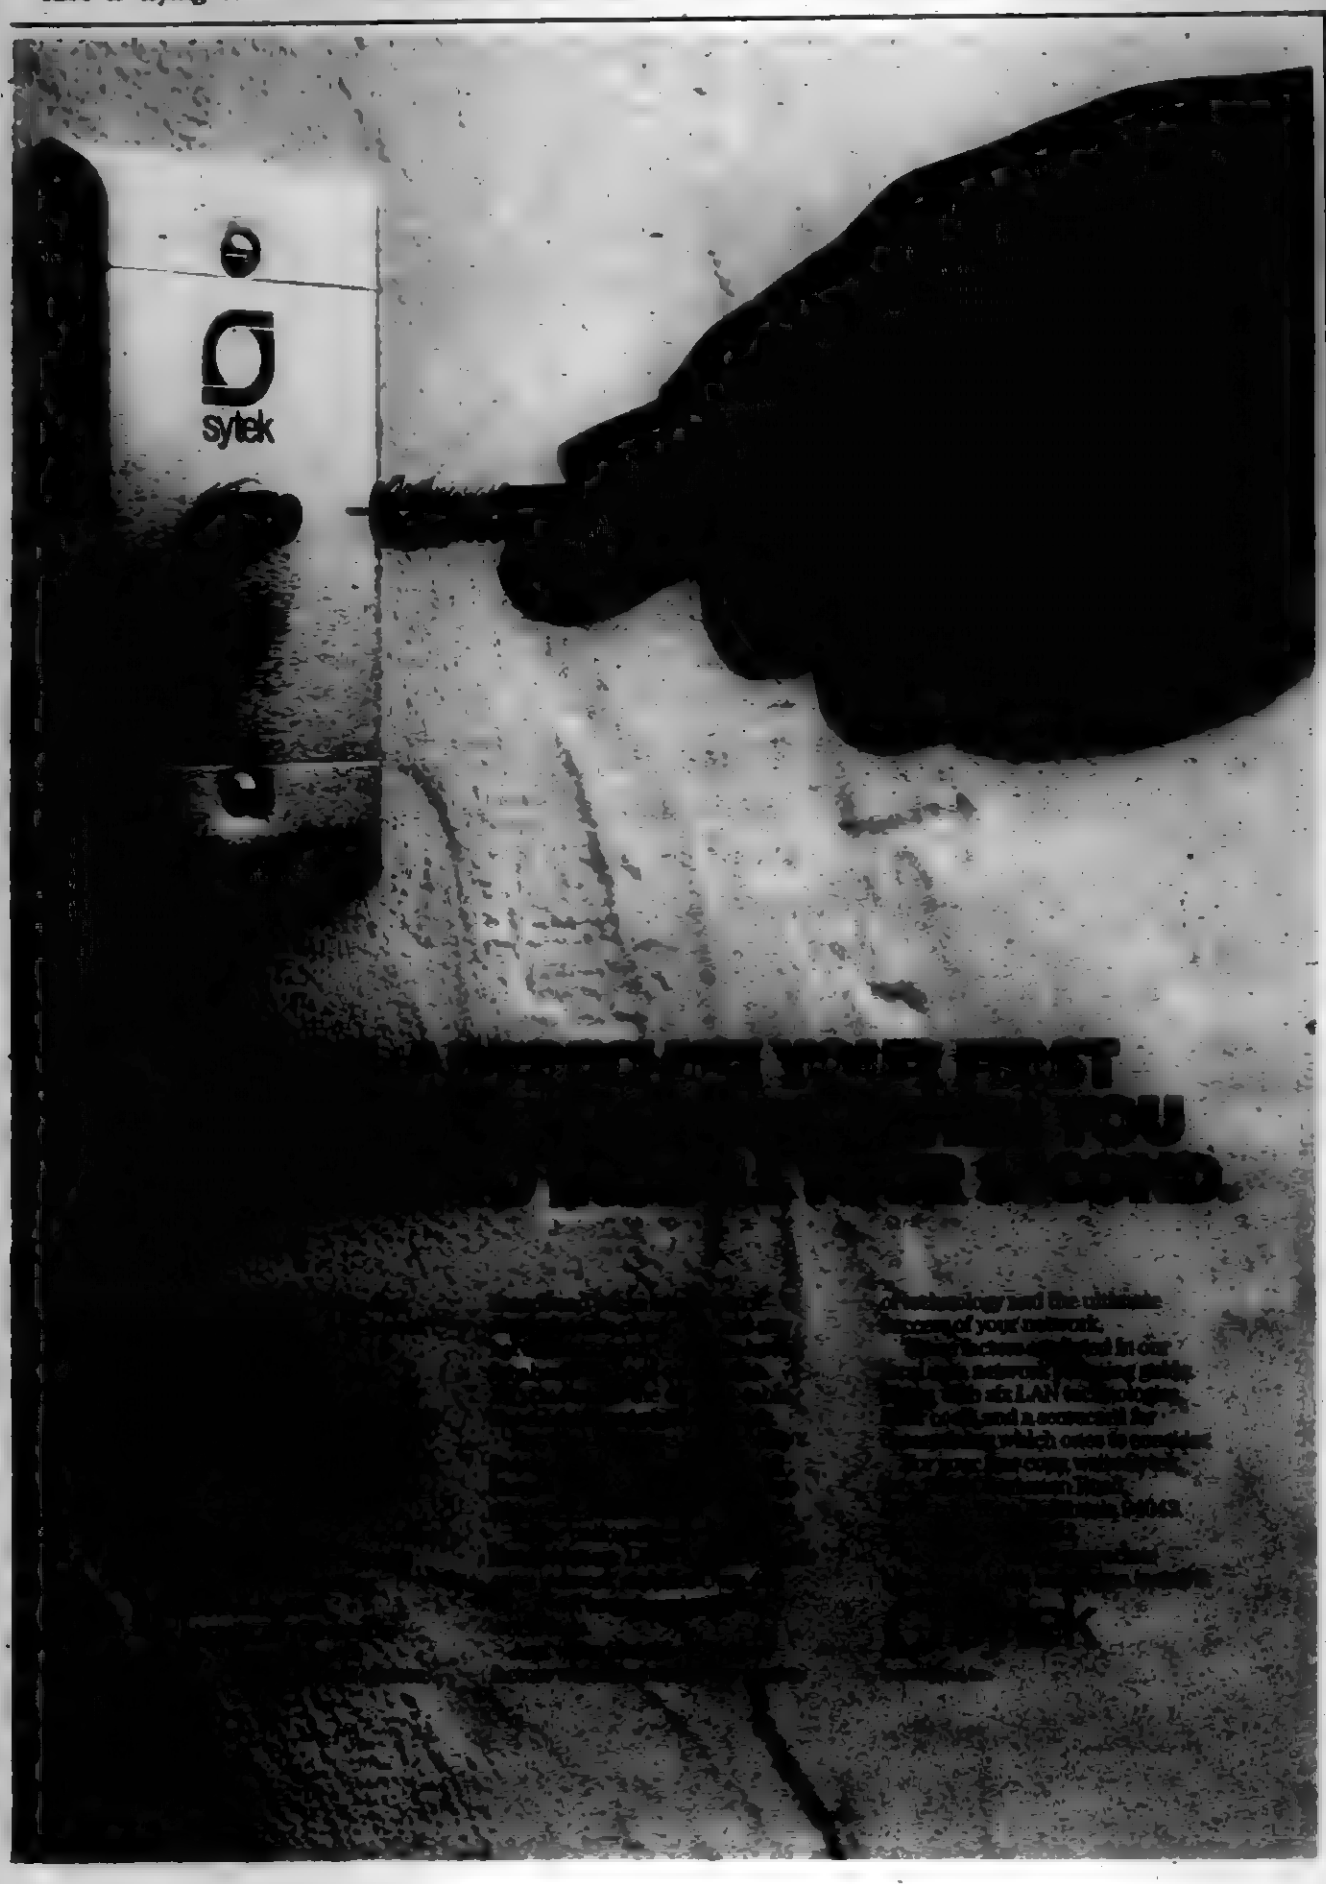
MICHAEL KILLEN

How competitive do you think IBM and AT&T will be over the next five years and in what areas?

AT&T will be as superior as they are right now in all types of communications. IBM will be no match for probably four years. However, within the office — except for its [private branch exchange (PBX)] — AT&T will have a real tough row to hoe.

IBM is trying to work with several of the Bell operating companies to fulfill its needs for local communications, and I think within a year we might hear some announcement where one of the Bell operating companies teams up with IBM in one or another area of communications.

"There is hardly any equipment out compared with what's going to be out in five years. They're both going to clash in office automation, and even though it's a little early to say right now, IBM will blow AT&T away."



To do what?

To complete the local loop-type transmission requirement, mostly within a city, not between cities, but communications within a city. Right now, IBM has nothing in the area of local communications. Take the city of Boston for an example. IBM has an interest in being able to have one company within Boston and another more easily communicate with each other — their data processing equipment, their office automation equipment. It is possible and likely that IBM will work some kind of arrangement with a local company. I've picked up information that Bell operating companies are already talking to IBM.

Refocusing this a little bit, what do you think will be the key areas of their competition? It sounds like you are saying, "One will be here, and one will be there." When they come together, where will they clash? Or will they keep dancing around each other?

I think they're going to clash. In the next three years or so, AT&T's No. 1 priority has to be to solidify its communications business in a competitive and a noncompetitive environment. That is one of its main goals over the next few years. But at the same time, one of its major priorities is to take its PBX line and expand it into office automation.

IBM's goal in the next few years is to move further away from data processing and more into office automation at all levels. That means both companies are moving toward each other. Both know that whoever controls the equipment on your desk or in your home has a lot to say about where you go to get your communications services. Office automation markets are exploding. But there is hardly any equipment out compared with what's going to be out in five years. AT&T wants a big chunk of that. So does IBM. They're both going to clash in office automation, and even though it's a little early to say right now, IBM will blow AT&T away.

Why?

By the late 1980s, the home computer, or the home information system,

should really come into its own. And at that point, IBM's test market for its IBM Personal Computer program should be over, and IBM should be going at the home market with some incredible home information products. At that point, there will be a need for people that have these systems in the home to communicate with companies and other people.

Thus, communications suddenly becomes much more important. Now, AT&T knows that too, so their goal will also be to put a tremendous amount of equipment in the home. The two of them are going to fight to put the equipment in the home, and later they're going to fight for the communications business that will be generated by that equipment.

"Remember, AT&T is going to be out of the local loop. The regional telephone companies and the independent telephone companies have that business. One thing AT&T must do is get back in the loop, especially if the old Bell operating companies get too friendly with the IBMs and MCI [Communications Corp.'s] of the world."

How could IBM control that communications business? By the kind of deals you're talking about with the Bell operating companies?

That's one possibility.

It seems like AT&T would be the odds-on bet to grab that communications portion of the deal.

Remember, AT&T is going to be out of the local loop. The regional telephone companies and the independent telephone companies have that business. One thing AT&T must do is get back in the loop, especially if the old Bell operating companies get too friendly with the IBMs and MCI [Communications Corp.'s] of the world.

AT&T could set up arrangements with cable companies, not necessarily buy them if they didn't want to, but really have long links with the cable TV companies. Then AT&T could bypass the local companies. Everybody can go in a lot of different directions.

How anxious are these two companies to battle each other?

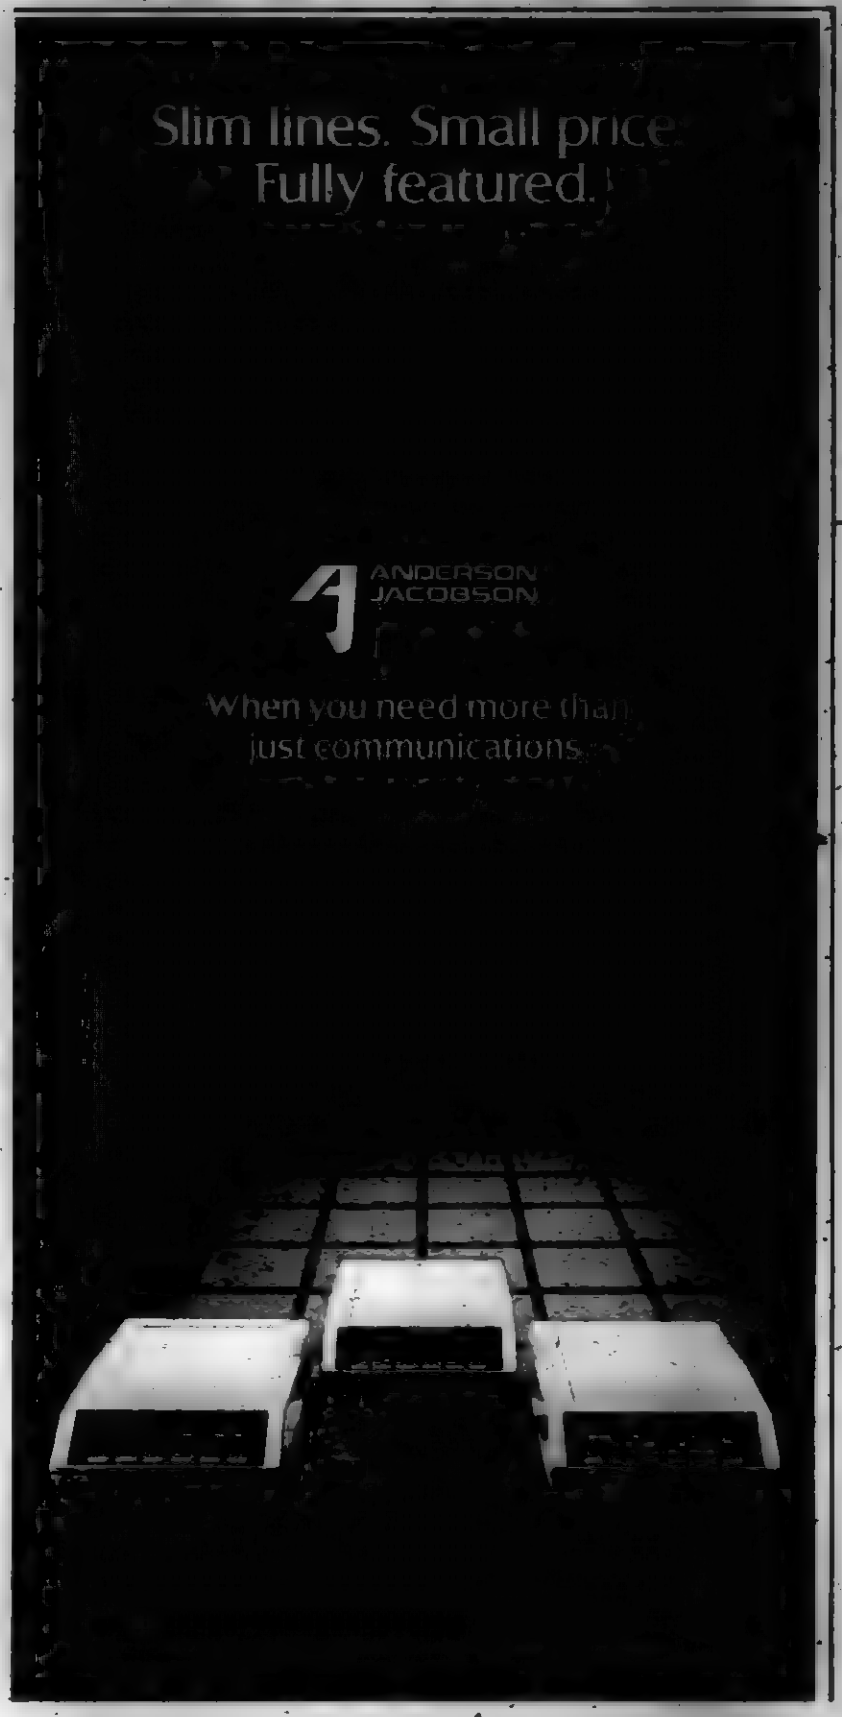
They're both paranoid of each other, I think. They're both thinking about each other. For example, take the Entry Systems Division people at IBM. Their strategy is to consider putting Unix 5 on a multiuser micro. With this rationale, AT&T is the licenser for Unix.

If IBM puts it on a micro and pays AT&T a license, it steals a lot of thunder from AT&T's assets with respect to Unix. AT&T will get a license fee, but IBM will keep its momentum going on selling systems and making money on the hardware.

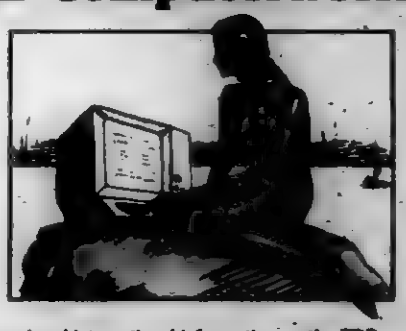
That is something that is constantly being tossed around at IBM as an offensive and, at the same time, a possible defensive move against AT&T.

Is it possible that one company could really hurt the other?

I don't think so. Each of them now has lots of alternative strategies. For example, IBM now has 15% of Rolm [Corp]. I don't think they've even begun to leverage that link. Even though Rolm announced a



Reach the Danish computer market with Computerworld/ Denmark.



The Danish EDP market is growing at an incredible rate of 23% annually. Last year, this market was valued at more than $185 million. And the U.S. is Denmark's major supplier of EDP products accounting for 40% of the country's computer equipment imports.

When Danish computer professionals with purchasing power want the most up-to-date local and international information on the EDP industry, they read *Computerworld/Denmark*, sister publication to *Computerworld*. *Computerworld/Denmark* is a bi-weekly newspaper serving the Danish computer community with the latest developments in hardware, software, terminals and other computer products and services. And, in every issue, the MicroWorld section reports on the special needs of the micro end-user and the status of the market.

So, if you'd like to market your products or services internationally, *Computerworld/Denmark* has a circulation of 20,000 computer professionals who would like to hear from you.

CW International Marketing Services will give you one-stop advertising service in countries around the world. We will translate your ad and bill you in U.S. dollars. For more information on *Computerworld/Denmark* or any of our other foreign publications, just fill out the coupon below.

MICHAEL KILLEN

new PBX recently, it is just the tip of the iceberg when it comes to possible alternatives for IBM.

What about users? How do users stand to gain from competition between IBM and AT&T?

Only the smart and well-informed will really benefit. There are going to be many more alternatives so the uninformed user isn't going to be able to pick out the best approach.

How does one become informed to the point where one can choose intelligently?

Users have to hire the best telecommunications and data communications people they can find. They have to nourish them, send them off to seminars, make sure they read everything. They have to go in and hire people from the old Bell operating companies, from the AT&T companies, from IBM.

"Changing from a noncompetitive business to a competitive business doesn't happen overnight. It is going to take AT&T three, maybe four years before they really have a good sales organization. Right now, they're playing a lot of games. They have assets that companies like IBM and telecommunications firms don't have."

They've got to put bucks in — into people and into educating them.

Conversely, how do users stand to lose?

By not being informed and not making investments properly with respect to data communications and telecommunications.

Much has said about the lack of aggressive, competitive sales experience at AT&T. How much will that hurt them against IBM?

It will hurt a hell of a lot. Changing from a noncompetitive business to a competitive business doesn't happen overnight. It is going to take AT&T three, maybe four years before they really have a good sales organization.

Right now, they're playing a lot of games. They have assets that companies like IBM and telecommunications companies don't have.

They take a look at all the expenditures a company has going toward AT&T companies, what kind of equipment they have on lease, whatever. And then they say, "If you buy new equipment, say in a different area, we will change your lease rate, your rental rate, whatever."

Sounds like the old migration strategy.

That's right. And what they are getting rid of is the stuff they're going to lose anyway. So they have a lot of installed equipment that they are changing to help them move forward into other areas.

How do other companies stand to gain from IBM vs. AT&T?

The little guy that makes computers or telecommunications equipment cannot hope to fight in the main line in the future. He can only pick peripheral markets that the two giants do not want and cannot handle. The two giants are just too big.

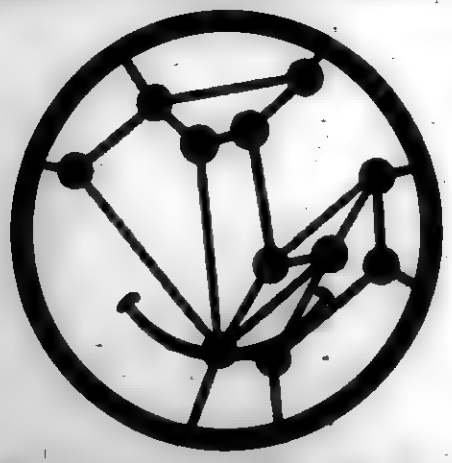
If you were IBM and planning to fight AT&T, where would you try to probe?

Right now, the only thing to worry about with AT&T is communications. Develop real good relationships with all the independent telephone companies. In addition, develop real good relationships with the cable TV companies so the transmission path is secure.

If you were AT&T, what do you want to do? How would you attack IBM?

I'd probably want to acquire channels of distribution, good sales organizations. It would be real nice for AT&T if they acquired Radio Shack. AT&T can build anything today if it really wanted to. The problem is conceiving the product and selling. They could go on an acquisition craze. ■

A Message From The Experienced Intelligent Network People



The "PC-Friendly" Network

TYMNET is the data network that's friendly to personal computers. Our network gives PCs the power to communicate with mainframes. And access 3270 applications. Even format, edit, and highlight like VT100s and 3270s.

We're implementing our X.PC protocol to provide error correction on the local loop and allow PCs to access up to 15 applications over one line—simultaneously.

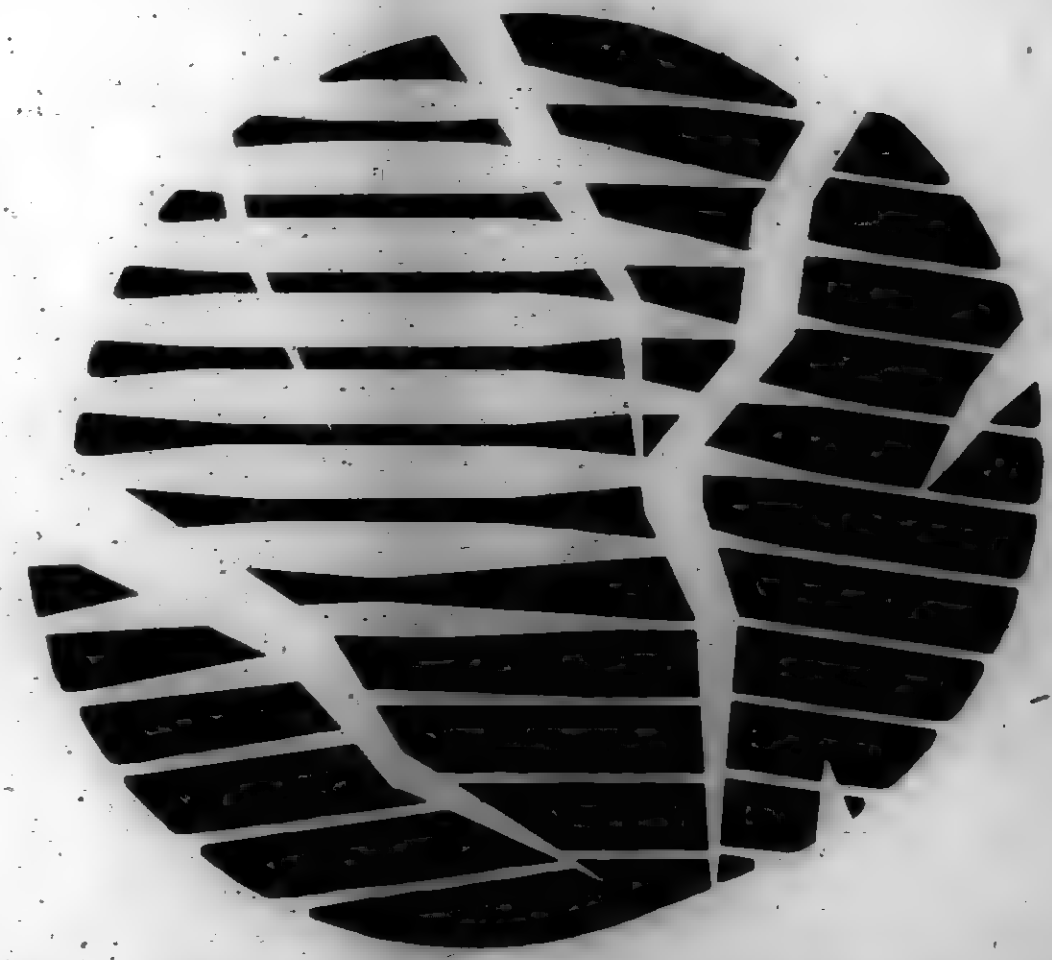
You may be already using PCs to access the latest stock quotes and news items. Why not expand their versatility and create the kind of PC work station that's truly productive?

Want to know more? Call us. We're the PC-friendly network people and the value-added distributor of PCs such as IBM and Digital: (408) 946-4900; TYMNET, Inc., 2710 Orchard Parkway, San Jose, CA 95134.

TYMNET®

Serving more than 7.2 million data calls per month

A Tymshare Company



THE MORE THINGS CHANGE, THE MORE THEY STAY THE SAME

BY ALBERT H. KRAMER

According to conventional wisdom, the telecommunications industry is about to undergo a fundamental revolution, a sea of change spawned by the 1984 divestiture of AT&T and the ongoing deregulation of major industry sectors and players.

The common myth — widely popularized by policymakers and the press — is that divestiture and deregulation are about to bring about a new competitive era.

But this era may not be quite what it has been made out to be.

Certainly, changes have occurred and will continue to occur. Already, the previously unheard-of has become common. AT&T is moving rapidly to sell equipment it once only rented. The soon-to-be-disowned regional operating companies are bypassing Western Electric in favor of multimillion-dollar procurement contracts with competitive independent manufacturers, such as ITT and NEC Information Systems, Inc.

But these changes and the AT&T divestiture might not be the start of something new. Rather, they might lead to the continuation of something old. Pending the resolution of several crucial questions, a new environment that fosters maximum competition in the telecommunications industry may not emerge. Instead, U.S. Federal District Court Judge Harold Greene and Federal Communications Commission (FCC) Chairman Mark Fowler may merely have extended the theory of workable competition.

A brief history is necessary to appreciate the difference between workable competition and maximum competition. In the late '60s and early '70s — when the FCC and the courts were giving their initial blessing to the radical idea of opening the once-monopolized telephone industry to competitive supply — the theory of maximum competition prevailed.

The policies embodied in such landmark rulings as the Carterfone Decision (1968), the MCI Decision (1969), the Mebane Home Telephone Decision (1975) and the Specialized Common Carrier Decision (1971) were designed to let competition flourish. The evolution of full-fledged competition among hundreds of entrepreneurial companies was envisioned. The entrepreneurial firms would vie with each other and with AT&T and the independent telephone companies to provide a host of innovative products and services.

The doctrine of maximum competition probably reached its zenith in 1976 and 1977. The U.S. Supreme Court refused to upset the FCC's establishment of an equipment registration program, replacing AT&T's costly and anticompetitive coupler arrangements. AT&T had required an expensive coupling device before customers were allowed to interconnect their own customer premises equipment to the network, allegedly to protect the telephone network from harm. ▶

After several years of struggle, the FCC adopted a registration program allowing any equipment certified to meet network technical standards to be connected to the network by means of a simple, inexpensive interface device.

In another development, the U.S. Appeals Court reversed a different FCC decision prohibiting MCI to launch its Execunet business service. In addition, Congress rebuffed several attempts by AT&T in the early '70s and thereafter to have so-called "Bell Bills" adopted. These bills would have outlawed competition altogether.

The past several years, however, have seen the full-scale emergence of the new theory of workable competition. In its most basic form, the theory maintains that competition should be allowed, but it is necessary to concentrate on allowing the telephone companies and industry giants to compete with each other. The theory further maintains that new suppliers have been encouraged to enter new markets, and it is time to open the unregulated markets to the regulated carriers. The new doctrine first surfaced in 1971 in the FCC's Computer Inquiry I, which allowed the independent telephone companies to provide data processing services through separate subsidiaries.

Since then, most of the inititiatives in Congress, the courts and the FCC have been designed to allow AT&T to compete in the data field as well. This involves either circumventing or repealing the primary barrier to workable competition. This barrier is the U.S. government's 1956 Consent Decree with AT&T, which prohibited the dominant carrier from entering the unregulated, nontelephone markets, principally data processing. With the adoption of the FCC's Computer Inquiry II Decision and the court's 1982 Modified Final Judgment, AT&T has succeeded in removing the restraints on its entry into the data field and other competitive ventures on an unregulated basis. Computer II simply bypassed the 1956 Consent Decree by interpreting the decree to allow these activities. Judge Greene's acceptance of the revised 1982 antitrust settlement repealed the 1956 agreement altogether.

Thus, the doctrine of workable competition has now reached maturity — blessed not only by the Supreme Court and the FCC, but by the Reagan administration and Congress as well. Instead of creating a brave new world of multifaceted competition, the two landmark policies could hasten the demise of such multiple choices.

In addition, the "level playing field" — which Congressman Tim Wirth (D-Colo.) alluded to in referring to a comprehensive rewrite of the Communications Act of 1934 — could become merely a battleground for Star Wars-type clashes between the industry giants. The revision of the Communications Act would have mandated that the communications giants could compete on an "equal" basis with small, budding entrepreneurs trying to enter the fast-growing field.

Although Computer II and the Modified Final Judgment have provided important clues about the direction of policy in the coming years, there are still several crucial questions pending. The answers, which are expected in the next few months, will clarify the degree to which policymakers are committed to creating a new era of robust, open competition or whether they would merely prefer extending the policies of workable competition. The issues include the disposition of the Bell Systems' in-place telephone systems and wire, the establishment of separate subsidiaries for the regional Bell operating companies' unregulated activities and the operating companies' ability to expand Centrex services.

To what extent will AT&T be allowed to use its multibillion-dollar base of in-place customer premises equipment to manipulate the market through dumping campaigns or new migration strategies? If the FCC permits the immediate, as opposed to phased-in, deregulation of that customer premises equipment at less than net book value or allows certain offsets to net book value, expect a fire sale. This sale will significantly dry up the market for all but the largest competitive suppliers. It will also set the stage for a new migration strategy by locking customers into long-term contracts on old products. Only AT&T can free those customers from those long-term contracts.

Although the FCC was not expected to rule on the question until late 1983, there are two indications that a fire sale is coming. First, Bell acknowledges it has lost $8 million this year on the prederegulation sale of home telephones because state regulators did not set the sales prices at levels high enough to recover the full investment in customer premises equipment. Second, AT&T has announced it will write off $7.2 billion worth of equipment assets, with a net effect against this year's earnings of $3.8 billion. This will permit the equipment to be dumped at bargain-basement prices in 1984.

To appreciate the magnitude of the unprecedented write-off, one

Some of the best names in software are quite attached to our network.

These people know PCs. They also know a good idea when they see one. That's why they're building future networking software around today's networking standard — Ethernet. And why they chose our PC networking system to help them do it. EtherSeries from 3Com.

What EtherSeries is doing for them.

"3 large, growing, and diverse Ethernets are at the heart of our software development activities. Our 3Com hardware has been very reliable — it has never failed us."
— Bill Gates, Chairman, Microsoft (Bellevue, Washington)

"We want to develop our popular dBase II® to a multiuser networked database environment. To meet the demands of our customers we chose the high-performance 3Com EtherSeries.™"
— David Clayton Cole, Chairman, Ashton-Tate (Culver City, California)

"The ease of sharing information and printers led our 1-2-3® advanced development team to choose 3Com's EtherSeries™ over all of the alternatives."
— Mitch Kapor, President, Lotus Development (Cambridge, Massachusetts)

"We wanted network software transparency. Our PFS:® software runs without ANY change on 3Com's EtherSeries™ — it protects our user's software investment."
— Fred Gibbons, President, Software Publishing (Mountain View, California)

"The Ethernet standard and 3Com's EtherSeries™ will be an important part of our in-house networking strategy. It provides the connectivity we require for our growing organization."
— Bob Frankston, President, Software Arts (Wellesley, Massachusetts)

"Our mainframe link software and Peachtree software ran perfectly in the 3Com environment. We dropped

must consider that the entire competitive interconnect industry sold $2.6 billion worth of equipment in 1983, only about one-third of the $7.2 billion pretax write-down of the same type of equipment AT&T took in one swift stroke of a pen.

Will the divested operating companies be allowed to use the same type of anticompetitive leverage with the millions of miles of installed inside wire they retain under the antitrust settlement? If so, expect them to use their bottleneck control of the embedded wire in a deregulated environment in familiar discriminating ways. This includes requiring customers of competitive customer premises equipment suppliers to buy the cable at exorbitant full replacement value, rather than the more equitable net book value. Unfortunately, neither Judge Greene nor the FCC has paid more than passing attention to the issue. However, several states, notably California and Texas, have implemented or are about to implement procompetitive plans that would require telephone companies to allow all customers to use that in-place premises wire for free.

Will the FCC require the operating companies to establish separate subsidiaries for the marketing of unregulated customer premises equipment, data products and enhanced services? A decision was pending at press time, with an appeal all but certain. Unfortunately, such a decision need never have been made if Judge Greene had accepted the original AT&T-Justice Department antitrust proposal, which would have removed the regional operating companies from the customer premises equipment business altogether. But in setting up the regional companies as the most viable competitive counterforce against AT&T Information Systems — the workable competition theory in action — Judge Greene has made it possible for most of the same threats that have plagued the development of full-fledged competition in the past to reemerge in the supposedly new environment.

In the past, such discrimination has taken two principal forms. The local telephone companies have used monopoly profits, derived from the provision of regulated basic local service to captive customers, to subsidize the price of their competitive unregulated customer premises equipment products and services. In addition, they have delayed service to users of competitive customer premises equipment firms.

SEVERAL SALIENT facts get lost in the widespread public empathy for the divested Bell operating companies. Each regional operating company will continue to serve between 70% to 90% of the population in its local franchised area, providing the necessary bottleneck control. Each will continue to operate in large, geographically contiguous areas — ranging from two states for the Pacific Telesis Group and 15 states for U.S. West — and in virtually all major metropolitan areas where most customer premises equipment competition occurs. In addition, alternate means to police anticompetitive behavior by the regional operating companies have proven inadequate.

Of all the unforeseen and unacknowledged consequences of divestiture and deregulation, perhaps none is as threatening to the future development of full competition as the revival of Centrex. In the Bell operating companies' multiple efforts to exploit Centrex service, with the acquiescence of policymakers at both the state and federal levels, the theory of workable competition has been carried to the ultimate. The potential victims are the competitive equipment suppliers and, ironically, the very policies on which the doctrine of workable competition stands — Computer II and the Modified Final Judgment.

Responding to the myth that the Bell operating companies are put-upon, state regulators are allowing the operating companies to freeze or reduce Centrex rates in order to stem the exodus of customers to technologically superior private branch exchange (PBX) and key systems supplied by competitive firms. Curiously, the residential user will be forced to pay to bail out large business and institutional customers of Centrex. But because the subsidies will be spread over such a large base of ratepayers, they are perceived as relatively painless.

The fear — that unless Centrex is protected now, the Bell operating companies will be unable to compete with AT&T and other giants in the new customer premises equipment markets of 1984 — is influential in efforts on Capitol Hill and at the FCC to reduce the new access charges for Centrex users. Centrex lines will be assessed at residential rates, not business rates, and the residential rates will be cheaper until 1989. The Bell operating companies are not satisfied to have their customers pay one-third the monthly rate that PBX customers will pay —

EtherSeries" right into our IBM Information Center and can now share disks and printers."
— Dennis Vohs, Executive Vice President, MSA (Atlanta, Georgia)

"We wanted the expandability of 3Com's Ethernet as a base for our networked products. VisiSeries" for EtherSeries" is the beginning of a family which will include VisiOn.""
— Dan Fylstra, Chairman, VisiCorp (San Jose, California)

What EtherSeries will do for you.

Tying into 3Com EtherSeries was a smart business move for these PC software experts. And it can be for you too. You'll maximize office efficiency, now. Cut operating costs, now. And you'll realize the full potential of your IBM PCs using software that is readily available off-the-shelf, now. All for the low price of $950 per link.

And until January 31, 1984, we'll give you our award-winning EtherMail — a $750 value — with the purchase of EtherSeries and three PC links.

EtherSeries is available at leading computer stores. Call or write Cory Randell at 3Com for more details.

that is, $2 vs. $6 per line. As a result, the Bell operating companies and their user allies are pressuring the FCC to charge Centrex users the same rate they would pay if using a comparably sized PBX.

Such a regulatory sleight of hand ignores reality. Because their lines are bundled at the on-premises switch, PBX users require far fewer trunk line connections to the telephone company's central office than Centrex users require. As a result, customers make far less use of the telephone company's facilities and should pay lower overall rates. If the regional Bell operating companies are successful in creating an artificial rate parity between Centrex and PBX, any notion of cost-based pricing — so essential to the development of maximum competition — will be lost.

Several operating companies' attempts to add new features to basic Centrex service are equally ominous. These features include least-cost routing, call forwarding and storage and automatic call distribution. Some operating companies are contemplating the addition of energy management systems through Centrex. Such proposed expansions strike at the heart of the Computer II plan, which drew a fundamental distinction between basic, regulated service, such as local exchange and Centrex, and unregulated customer premises equipment and enhanced services. Similarly, the expanded Centrex offerings could contradict the Modified Final Judgment as well, because many of the proposed new features could be categorized as information services, which the regional operating companies are prohibited from offering without the explicit permission of Judge Greene.

To date, Judge Greene has not addressed the issue. And the FCC has failed to respond to requests to reaffirm the clear-cut distinctions of Computer II by prohibiting the Bell operating companies from illegally commingling regulated and unregulated services through Centrex. Such commingling, if allowed to occur, will enable the Bell operating companies to enter the competitive information services market through the back door under the rubric of regulated basic exchange service.

The result could be the remonopolization of local markets that the antitrust settlement and FCC deregulation policy were designed to eliminate. The threat would be not only to equipment vendors, but to the many independent data processing and computer-related support industries currently emerging.

The questions raised by Centrex, separate subsidiaries, inside wire and embedded customer premises equipment apply primarily to the telecommunications equipment industry. But the theory of workable carrier competition is being extended to the intercity transmission sector.

For example, consider Judge Greene's refusal to force the operating companies to allow customers to presubscribe to competitive carriers for intra-Local Access and Transport Area toll calls. This decision handed the local telephone companies what amounts to a $5-billion annual in-state market. Or consider Greene's acceptance of the Justice Department's separate consent decree creating a major new long-distance carrier through the merger of GTE Sprint and Southern Pacific's Sprint operation. The FCC, too, has begun a proceeding designed to explore the feasibility of deregulating AT&T's long-distance operation next year, despite the fact that it still has a 95% market share. Taken together, these three actions indicate that in the near future, the competition in the long-distance market could be confined to the giants.

The issues affect not just competitive equipment and transmission firms, but the entire telecommunications industry — users as well as suppliers, data companies as well as telephone companies. At stake is the further development of maximum competition in an industry stifled for too long by the domination of a single company. If AT&T is given carte blanche to dump its embedded customer premises equipment on the market, or if the Bell operating companies are allowed to stifle competition by denying free access to bottleneck premises wire, how much will have changed?

Or if the regional operating companies are given free rein to mix regulated local exchange and Centrex operations with their competitive supply of unregulated customer premises equipment and enhanced data products and services, hasn't the alleged purpose of divestiture and deregulation — to expand competitive markets — been undermined?

Will anything have changed if, instead of an integrated Bell System monopoly, we have a landscape composed of a dozen smaller Goliaths? Or will such an altered environment give new meaning to the old axiom: The more things change the more they stay the same? ■

ISDN: THE COUNTDOWN TO PLUG-IN

BY FRANK GRATZER

Integrated services digital networks (ISDNs) are an important new means for telecommunications carriers to meet future digital voice and data transport needs. If they develop as planned, these futuristic networks will provide universal access to a wide range of business and residential communications devices.

Currently, individual voice and data transport services are offered to customers at specialized interfaces to different individual networks. For example, the circuit-switched telephone network carries voice or voice frequency data. AT&T's Dataphone Digital Service (DDS) provides private-line digital connections.

These and similar services provide valuable features. However, users are faced with different interfaces, protocols, access lines, error rates, reliability, maintenance procedures and a host of other changes when they use different services.

ISDNs are being designed so that a small family of customer/network interfaces can be used to support a wide variety of services. ISDN customer distribution equipment, such as local-area ▶

network gateways and private branch exchanges (PBXs), will integrate individual digital streams into a standard ISDN access stream (see Figure 1). An ISDN network interface would support simultaneous circuit-switched, packet-switched and non-switched services along with the associated signaling up to a maximum total interface speed. For example, proposed standard interface rates will include 192K bit/sec and 1.544M bit/sec. The user-perceived benefits of ISDNs will include stable, multipurpose interfaces; integrated access for a wide variety of services; and improved customer control over maintenance, network management and service provisioning.

The regional Bell operating companies are aggressively pursuing the installation of digital transmission and switching equipment that can provide the technical capability to offer ISDN services. Based on the anticipated Consultative Committee on International Telephone and Telegraph (CCITT) standards, public ISDNs should begin to be available between 1985 and 1986. CCITT study groups are working on those standards and are developing recommendations for approval in 1984. This work includes interface access types, performance, access arrangements, protocols, signaling, common physical interfaces and fundamental service elements. Users, manufacturers, public and private network providers, service vendors and terminal equipment manufacturers will all benefit by fully supporting these standards.

ISDNs are being planned to meet many different types of customer voice and data applications. These applications include meter reading, energy management, security, data base access and communicating word processors. They also include file transfer, facsimile, graphics, slow-scan TV, voice, bulk data transfer and eventually full-motion video.

For example, communications managers at major locations of large companies will want to transport simultaneously voice, inquiry/response data, facsimile and files. They will also want to conduct teleconferences among locations. Similar needs, but with a varying mix of applications, apply for smaller businesses and residences. In addition, to maximize the use of their facilities, users want to allocate their interlocation transport capacity among these different applications on a real-time basis as traffic needs change. ISDNs will allow this real-time capacity allocation.

Since ISDN applications will appear in a standard, digital format, the networks can be designed without knowing what the exact mix of future services will be. The public networks will be major providers of ISDNs. It takes many years to develop these large, ubiquitous networks. However, by having a target architecture that is robust to service forecast uncertainties, public network providers can confidently invest in ISDNs.

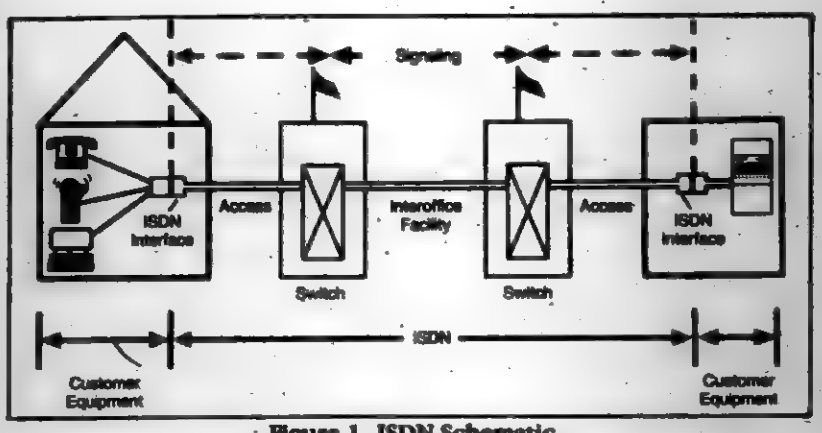

Figure 1. ISDN Schematic

Whatever individual services evolve, the basic ISDN transport capacity will be available to serve them all.

It is necessary to examine the basic architecture and attributes of ISDNs. ISDNs will provide end-to-end digital connectivity, clear channels, digital signaling, standardized interfaces, user control of bandwidth allocation and of some aspects of operation and access and service integration. These attributes are detailed below.

- ***End-to-end digital connectivity.*** Signals enter the network and are transported across it in digital form. They are delivered in this form to the distant user or to another connecting ISDN.
- ***Clear channels.*** Customers have full use of ISDN channels without restriction on bit sequence.
- ***Access and service integration.*** By means of a single access link, the user may access a range of network and vendor services simultaneously. The sharing of network equipment and its operation

across several services results in increased flexibility and reduced cost when compared with today's individual service-dependent equipment and operations.

■ *Small family of standard interfaces.* Only one interface will exist for a range of applications. A standard customer-to-network interface should result in a wide selection of ISDN-compatible terminals. The proposed standard ISDN interfaces allow independent evolutions of the network and of terminal equipment.

■ *Message-oriented digital signaling.* One of the fundamental advantages of ISDNs is message-oriented digital signaling. This will significantly impact existing voice and data applications. Message-oriented digital signaling provides faster call setup times.

■ *Customer control.* This allows a customer to allocate dynamically the capacity of the ISDN access link to different services and to select the network services desired. This is done in real time via customer-to-network signaling.

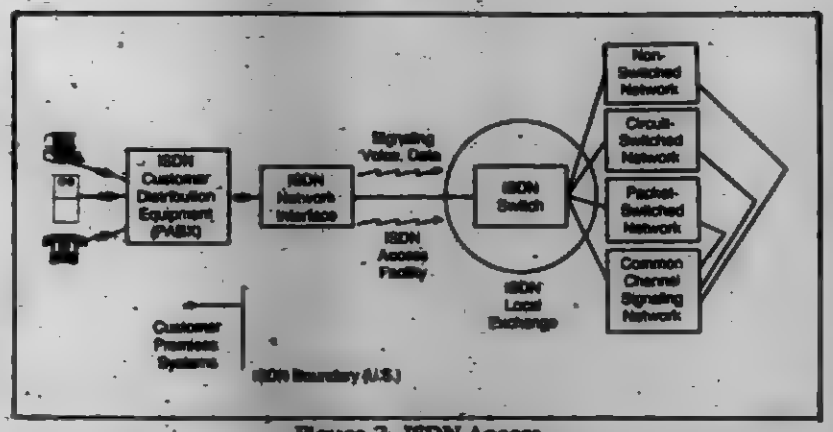

Figure 2. ISDN Access

The architecture shown in Figure 2 represents the first stage of ISDNs; access to the ISDN local exchange (switching office) is integrated, but the connecting transport networks are not. Customers perceive the system as integrated, since their network access is integrated. As technology progresses, the customer may not need to choose in advance between packet-, circuit- or non-switched service; the techniques may merge.

This merger might come through the development of burst switching or through fast packet switching. Both of these techniques take advantage of the characteristic bursts of voice traffic and the development of low bit-rate voice to switch voice and data at speeds of millions of bit/sec.

As part of their evolving communications networks, telecommunications companies and administrations in North America, Europe and Japan have been deploying increasing amounts of digital transmission facilities. They have also used space (analog) and time-division (digital) stored program-controlled switching systems over the past 20 years.

For example, in the regional Bell operating companies, the large majority of the metropolitan area transmission circuit miles are on digital carrier. The U.S., the UK, France, Canada, Japan, Italy and other countries have significant commitments to fiber programs and to exchange modernization through digital switching.

Digital systems have been used for growth and replacement of analog systems on a one-for-one basis in cases where the use of digital technology represented the less expensive alternative. The performance and operational advantages of digital systems have played a major part in economic considerations. The service opportunities offered by digital components and the motivating concept of evolving to an ISDN have only recently become major factors. ISDNs will be built based on this embedded digital technology, modifications of the technology and new technology specifically designed for ISDNs.

An important part of the developing CCITT recommended standards is the specification of ISDN network termination functions carried out in the ISDN line termination, the Network Termination 1 (NT1). NT1 is network-owned equipment on customer premises. It can provide network functions such as line termination, maintenance, testing, multiplexing and power feeding. The termination associated with NT1 is intended to provide a stable physical interface, independent of the transmission media employed. It is a key element in the ability of carriers to offer standard ISDN services.

ISDN standardized interfaces will encourage competition among network providers and among terminal equipment vendors, bringing substantial benefits to users. Competition will increase among terminal equipment vendors of all sizes, since no vendor can dominate the market

While everyone else has been squawking about private networks, one company has been quietly building them.

Today, with dozens of new companies and hundreds of unproven products all promising to perform networking miracles, the noise level has become exceedingly loud.

And the job of finding the right company to build your network has become more confusing than ever.

Meet BBN Communications. In the midst of the noise and confusion, we've been quietly building networks for government agencies and major corporations around the world. In fact, we built the world's first packet-switched computer network back in 1969.

But what sets us apart even more than our experience is the way we work. Instead of the usual short-term "fixes," we're committed to providing long-term solutions. So before we design your network, our communications consultants will analyze your specific needs—present and future. And based on them, establish your optimum network configuration. Then we'll build your network. Of course, even after everything is working to your satisfaction, we'll still be around to help with your future needs.

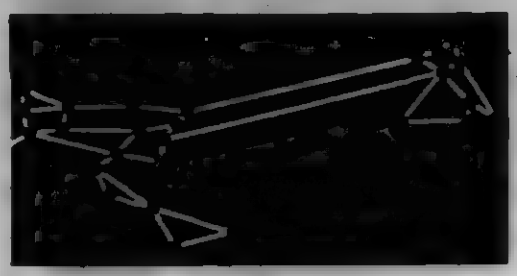
It takes more than computers to make a computer network.

Another thing that makes us different is that we manufacture a full line of our own proven networking hardware and software, not just a few isolated products. Including packet switches, terminal access devices, and electronic mail systems. All of which simply means we can supply everything you need.

Our communications processors are the most advanced available today.

What's more, our entire product line is fully X.25 compatible and easily interfaces with public data networks.

But state-of-the-art technology is just the beginning. We also provide a network operations center so you can monitor your entire network at a glance and control it almost as easily. We'll even run the center for you if you like. And to ensure maximum network reliability—and uptime—we offer round-the-clock field service by the most experienced communications engineers in the business.



Packet-switched networks built by BBN Communications link companies with offices around the world.

Just because we're the networking leader, don't think for a minute that we're resting on our accomplishments. Our R and D effort is one of the largest in the industry, with major programs in protocol development, network control, and future network applications. And, of course, our customers receive the full benefits of every breakthrough we make.

We're the networking leader.

Fifteen years ago, we pioneered packet-switching technology to build the Arpanet, the world's first packet-switched computer network. Today, Arpanet supports 10,000 users and over 300 different computers in the United States and Europe, and the technology we invented for it has become a cornerstone of the data communications industry.

As the networking leader, our customers include major financial, manufacturing, and industrial corporations from all over the world. Recently we've even been selected to build and run the U.S. Defense Department's major new computer network, the Defense Data Network.

So if you're tired of all the squawking, consider BBN Communications. We think it's about time you got your network, and some peace and quiet, too.

For a brochure on our complete networking capabilities, contact BBN Communications Corporation, 33 Moulton Street, Cambridge, MA 02238, (617) 497-2800.

BBN Communications Corporation

through promulgating de facto standards of their own choice.

A recent Federal Communications Commission (FCC) decision concerning DDS ruled that the channel service unit is actually customer premises equipment and not part of the network. The channel service unit is used to terminate the service and provides an access line terminating repeater, maintenance loop-around and signal conditioning. The FCC extended this ruling to include not only DDS, but all digital services. It implies that, in the U.S., digital services must terminate in bare wires or bare fiber rather than in the network channel terminating equipment chosen by the planners of public networks and by industry standards forums.

Unless it is modified, this decision would violate the preliminary international understandings already reached by CCITT on ISDN network interfaces. It would remove the NT1 equipment from the network side of the interface. The absence of this network termination would have serious implications for ISDNs. Rather than purchasing an ISDN standard terminal and being assured that it will work when plugged into an ISDN, a terminal with an integrated NT1 must be selected to match the specific loop transmission system being used.

The automated testing, provisioning and other operational procedures that must be part of feasible, economical ISDNs cannot be accomplished by public networks without some network equipment on customer premises.

Unless carriers are allowed to provide stable, well-specified interfaces without reaching into the domain of the user, the very concept of ISDNs is in jeopardy. Without this interface, carriers cannot guarantee the quality of the signal or the error rate to users under tariff..

But worst of all, the lack of a stable, well-specified ISDN boundary inhibits the ability of both the carrier and the equipment vendor to innovate separately and freely. If the customer's equipment has to be changed or modified to utilize any change in network technology, either substantial customer expense and inconvenience will occur or the carrier will be effectively precluded from utilizing the most economical and efficient technologies.

This discourages free and open competition among equipment vendors of all sizes, since terminals must be specialized to the specific technology used in a given network distribution area. ISDN terminals would lose portability, and small manufacturers would be discouraged from entering the market due to terminal specialization and nonstandard interface requirements. The interface defined for the customer must be independent of the facility and the maintenance procedures used to provide the ISDN service.

It is desirable for carriers, users and other interested parties to inform public policymakers that they want well-defined ISDN services, provided at clean ISDN interfaces. The technical flexibility in network termination equipment and in other aspects of ISDNs that the FCC and other public policymakers allow will be crucial to the success of public network ISDNs in the U.S.

ISDNs will be a driving force in bringing the benefits of the information age to business and residential users. The flexibility and standardized interfaces of ISDNs will allow public network providers to offer ISDN services in an economical, efficient fashion. They will also provide a procompetitive atmosphere for terminal equipment vendors and network providers, since they will have internationally accepted, rather than de facto, standards to meet. Users, vendors and carriers have a mutual interest in joining together to support ISDNs and ISDN standards. ■

Gratzer is technical assistant to the executive vice-president of the Central Services Organization, Basking Ridge, N.J.

Can you print 300 pages of data at your Remote site...In 5 minutes?

Yes, Paradyne's NEW 8360 Remote Page Printer Prints as fast as a Page a Second. Paradyne introduces high speed, non-impact remote printing — from one location to any other — at speeds up to 60 pages a minute, depending on line speed and data density.

No Host Remote Teleprocessing Software is Required. Communications requirements are handled through PIXNET®, Paradyne's communication system, and the page printer will operate without any changes to your existing applications programs.

With the 8360 your remote operators have the same functional capabilities as the data center operator. And the 8360 has the same capabilities as the system printer in your computer room.

Uses Standard 8½" x 11" copy paper.

Compact in Size, Highly Reliable and Easy to Use. The 8360 is easy to install and it runs cool — all day long. You'll have a high quality printer designed to blend into your office environment with an operation that's so quiet your operator may have to check to see if it's finished printing.

A Price Breakthrough. Now, Paradyne offers your remotely located offices and plants the convenience of high quality, high speed printing...at a price that's a breakthrough in the industry. **Call 1-800-482-3333** and we'll tell you why. Plus, we'll give you the location of the Paradyne sales office nearest to you.

Meeting the Communications Challenge of the 80's

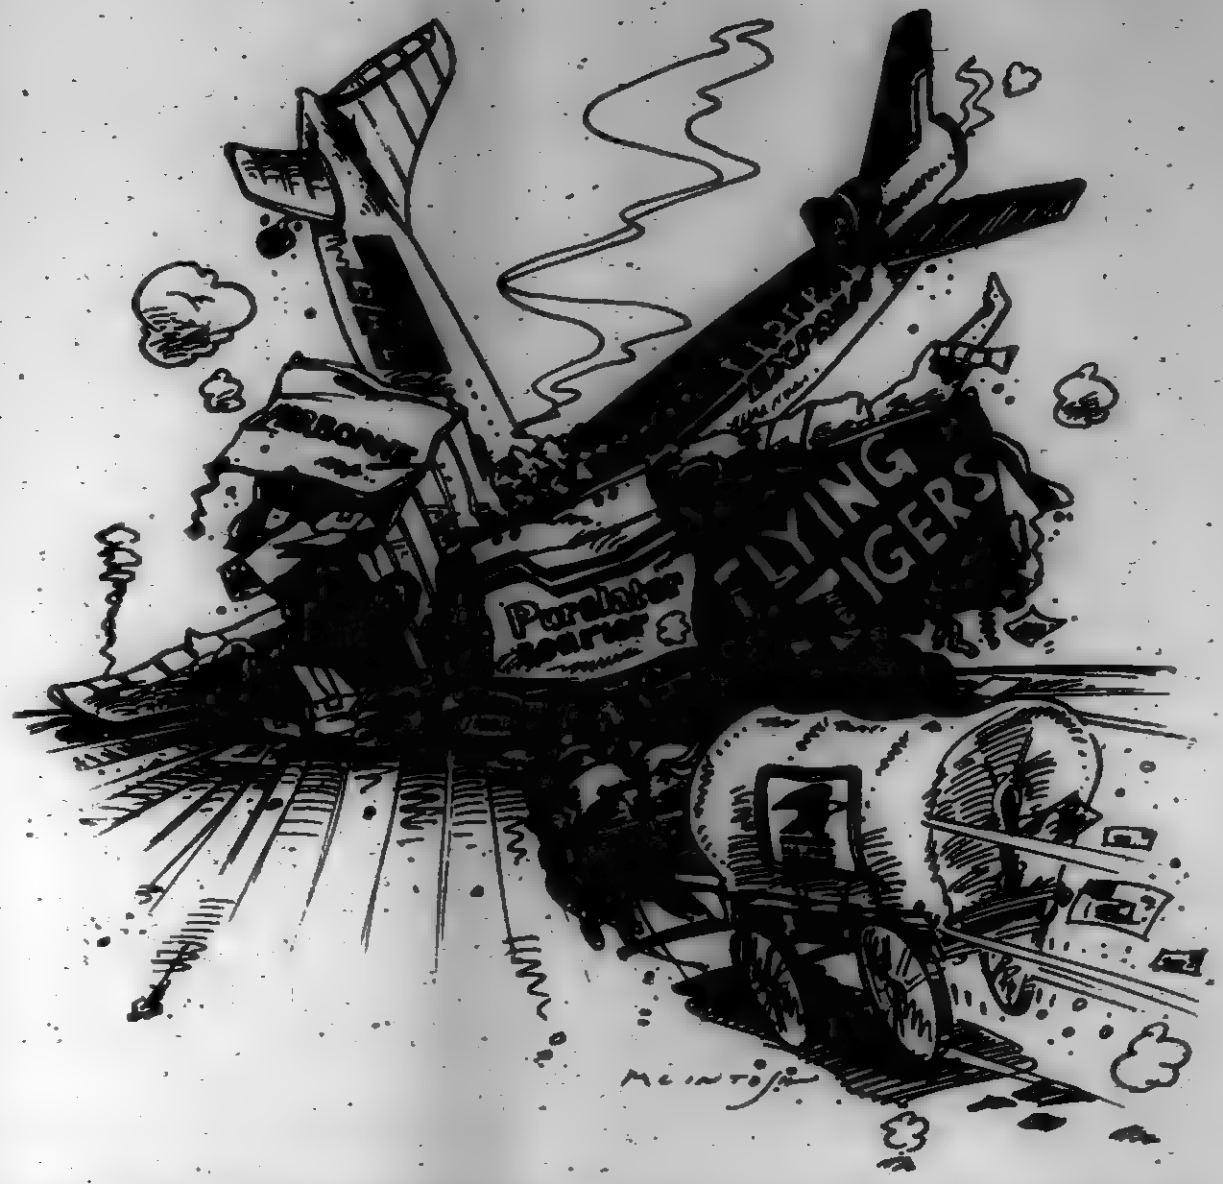
Paradyne Corporation P.O. Box 1347 8550 Ulmerton Road, Largo, FL 33540



OVERNIGHT MAIL SERVICES: HEADING FOR A COLLISION

BY KATHERINE HAFNER

In the dawn of 1984, the overnight mail delivery market never looked stronger. The six major couriers serving domestic and international markets move an estimated 1.2 million documents and packages every night.

Although they deliver only a miniscule amount of mail compared with the 328 million pieces handled by the U.S. Postal Service each day, the express delivery services guarantee what a 20-cent postage stamp cannot: next day delivery.

Once Federal Express Corp. originated overnight mail delivery in the early '70s, other companies followed suit to create a strong marketplace. Increased competition has led to diversification, and electronic delivery is becoming a crucial part of the picture.

Some of the couriers speak of finely tuned plans for introducing electronic delivery into their service line. Others, while acknowledging the increasing importance of electronic transmission and instantaneous messages, speak of no direct strategy for digital delivery. Still others refuse to speak at all.

Federal Express, the acknowledged leader in the domestic overnight delivery market, has spent nearly five years planning for this year's introduction of a facsimile-based, two-hour guaranteed delivery service. Known internally as the Gemini Project, the new service is targeted at the market for graphics-based, time-sensitive material such as architectural and other graphics designs and other legal documents.

The technology behind the bellwether company's electronic delivery service is on the cutting edge of innovation. The service is based around approximately 2,000 NEC America, Inc. Group 4 facsimile machines, which will be scattered throughout Federal Express' vast network of dispatch stations for document transmission via telephone lines and satellites at speeds as high as ▶

56K bit/sec or as low as 2,400 bit/sec, reproducing between 15 and 30 pages per minute. The resolution on the fax machines is very high at 400 line/in., producing a reproduction that resembles a high-quality photocopy.

Though Federal Express has yet to establish firm pricing on the service, industry analysts and others close to the project predict the average price for sending a 10- to 12-page document will be approximately $40.

HIGH-VOLUME Gemini customers will be offered attractive discounts with the option of leasing a machine from Federal Express and bypassing the courier pickup. If a customer is transmitting to someone else leasing a facsimile machine from Federal Express, then pickup and delivery is eliminated completely.

Federal's investment in the Gemini Project is substantial, at an estimated $100 million, and the company is the first to admit the project's high risk. The service is expected to be operational between April and July of next year, and whether or not a firm customer base will develop is anybody's guess.

"I don't want in any way to paint this as risk-free," James Barksdale, chief operating officer and executive vice-president at Federal Express, said. "There are many risks attendant with this move. But we think we've done our homework."

The much-whispered-about Gemini Project will face its share of competition.

DHL Worldwide Courier Express, with a predominantly international customer base, plans to introduce its own image-based electronic delivery service that would serve the U.S., as well as international markets.

DHL started 10 years ago in the San Francisco Bay Area as an international service, introducing its domestic service last year. Although reluctant to offer details on the new service, DHL President Larry Roberts explained his company's decision to address the same market as Federal Express.

"If you can produce high-quality scan documents, then you have a very effective service moving anything," Roberts said. "That's what Federal Express is undertaking with Gemini, and it's what we're working on doing."

Federal's investment in Gemini is an estimated $100 million, and the firm is the first to admit the project's high risk. It is expected to be operational between April and July, but whether a firm customer base will develop is anybody's guess.

Known internally as Electronic Image Transfer (EIT), DHL's service will be ready "sometime in 1984," Roberts said.

"Our service is similar in terms of its being a scan copy of copier quality," Roberts said. "In terms of document reproduction, it's based on the new generation of equipment being built now. We can move digitized pages and either copy it locally or remotely so we can send documents wherever we want."

Although he refused to say who manufactures the

machines DHL will use, Roberts acknowledged that the electronic delivery is based on fax-like technology with extremely high resolution.

And like the Gemini Project, DHL's EIT will be offered in a number of options, giving customers the choice of operating the machines on their own premises or through what Roberts calls "electronically augmented courier service."

[redacted]

"Perhaps in the U.S. it is correct to say it will come down to a matter of advertising," Roberts said. "But the worldwide coverage makes it far more important than saying it all comes down to a matter of advertising."

But the DHL service may have an advantage over Federal Express' offering. While DHL has already built a substantial international network, Federal Express is still in the early stages of branching out across the Atlantic, with electronic or any other kind of delivery. And while Federal Express' machines will compose a dedicated system, making them compatible only among themselves, the DHL machines will be designed to communicate with any other Group 4 machine.

Notorious for its clever commercials, Federal Express is planning a major $5-million publicity drive for Gemini immediately after the service is announced. Despite Federal Express' traditional marketing power, Roberts is optimistic about EIT's chances for success.

"Perhaps in the U.S. it is correct to say it will come down to a matter of advertising," Roberts said. "But the worldwide coverage makes it far more important than saying it all comes down to advertising. They [Federal Express] have some delivery [in Europe], but we cover virtually every country in the world in virtually every city."

The new rack-mounted IBM 3868 Modem saves you space. And money. And effort.

Space, because IBM's new one-inch-wide vertical package allows you to mount up to 12 modems in one enclosure that fits a standard 19-inch rack.

Money, because each enclosure needs only one power supply and cooling system to support all of its modems.

And you manage your network with less effort because the IBM 3868 Modem has the same high availability and rock-steady reliability as other modems in the 386X Series—plus an enhanced Link Problem Determination Aid (LPDA).

Working with software available for many IBM host systems, the LPDA performs greater end-to-end management. Now line conditions are identified further downstream from the host, and in more detail. For example, conditions in any multi-point circuit can be pinpointed to a particular leg, including tailed configurations off multi-plexed links.

In fact, to help you keep your network humming, the LPDA and host software monitor and provide you with a line quality value, a receive signal level, an error-to-traffic ratio and modem self-test results to help you isolate line problems. Now you can more precisely communicate them to your communications carrier.

And because the 3868 Modem is so reliable, it's backed by a full three-year warranty.

Try them for up to four weeks: just select 2400, 4800 or 9600 bps line speeds. If you purchase in quantity, discounts are available.

To get your copy of a free brochure, or to arrange to have an IBM representative contact you, call toll-free, 1 800 IBM-2468, ext. 90. Call your IBM representative or return the coupon. IBM

1-16

AS FEDERAL and DHL spend 1984 fighting it out over the market for image transmission, the other couriers are taking noticeably less risk. Purolator Courier Corp., whose ubiquitous "Overnight, not overpriced" motto takes direct aim at its competitors, recently signed an agreement with MCI Communications Corp. The deal involves MCI's new electronic mail service — MCI Mail — and Purolator will deliver documents transmitted over MCI's electronic mail network overnight.

MCI Mail guarantees delivery of a standard-size letter or other document by noon the next day in most cities. This service costs $6, which is 30% to 50% less expensive than that of most overnight couriers. Purolator's agreement with MCI involves two levels of service: the four-hour delivery by courier within 15 metropolitan areas for $25 and the $6 overnight delivery.

"MCI has teamed up with Purolator because it is a traditional communications company with no physical delivery system of its own," according to Walter Ulrich, president of Walter E. Ulrich Consulting, Inc. of Houston. He consults for several courier companies. "It is an

advantageous arrangement for both of them: MCI can leverage on Purolator's physical delivery service, and Purolator can generate some good volume delivering documents for MCI."

"MCI has the technical background and knowledge; we have the courier network they don't have," Hollis McLoughlin, director of marketing services at Purolator, said. "We see it as an extension of our product lines, giving us greater customer convenience and different products to different customers." In addition, Purolator has announced a merger with DHL calling for DHL to deliver Purolator's international mail. And in turn, Purolator will deliver much of DHL's domestic mail using Purolator's vast domestic network.

With operation of the new scheme beginning this month, the "arm's length agreement" represents part of Purolator's "strategic plan to go worldwide," according to McLoughlin. "We have the most extensive coverage in the U.S., and they have the most extensive coverage outside the U.S. Crossing borders is an extremely difficult thing to do. DHL has, without a doubt, done a great job at it."

Commenting on Gemini, McLoughlin said, "I don't think the courier business is running scared at all. A lot of our business will not be affected. We carry computer parts, pharmaceuticals and machinery. Gemini can't do that."

According to Ulrich, arrangements similar to the MCI-Purolator agreement are likely to be announced between couriers and communications companies, but so far no other overnight courier firm nor communications company has disclosed such plans.

Other couriers in the overnight delivery business, including Airborne Freight Corp., Emery Worldwide and Flying Tigers, have no concrete plans for electronically based delivery of images, text or other documents.

A spokesman for Emery declined to elaborate on the topic. "We have nothing really germaine we can say," Robert Sykes said. "We're looking into facsimile or electronic transmission from an international standpoint, but we don't have any plans in the works right now."

Flying Tigers, a subsidiary of Tiger International, also has no specific plans to enter the electronic delivery market. Principally an air cargo carrier, Flying Tigers plans to remain that way, according to a company spokeswoman.

With annual sales in excess of $300 million, Airborne is also staying clear of entering a market fraught with risk and is investing in its existing shipping network instead.

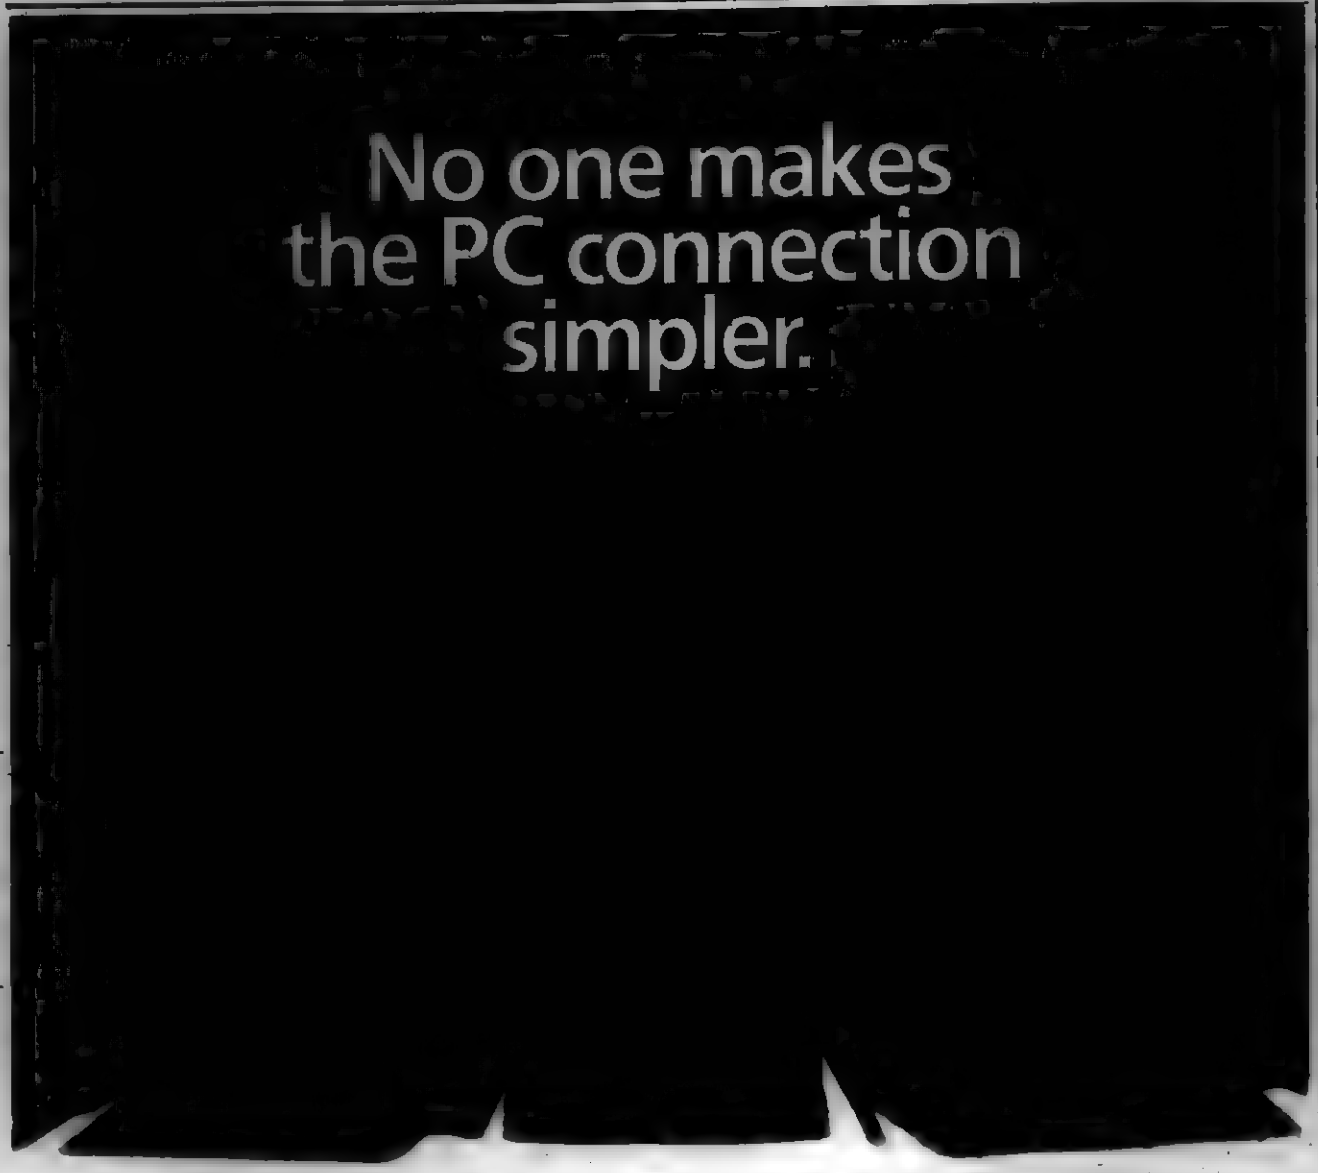
"Gemini is a concern because basically it's a different means of transporting some of the same envelopes and documents we transport today. Obviously, that's a threat," David Billings, vice-president of corporate systems at Airborne, said. "We see ourselves as a proactive force in improving productivity in the company, reducing overall costs and enhancing our position in the marketplace."

Billings pointed to Airborne's on-line air-bill tracking system, a network consisting of over 400 CRT terminals and 200 printers, transmitting over 150 million char./day. "In this business, having an effective on-line tracking system is key to the company's success," he said.

According to Billings, by placing personal computers and terminals at customer sites, Airborne is providing its clientele with the ability to trace shipments, an important aspect of the company's dependability. "There is a very important role for technology in the more traditional air express market," Billings said.

"It is not necessary to look at the more exotic leading-edge offerings like Gemini to make a case for the effectiveness of technology in improving productivity and reducing costs to gain a position in the market," he continued.

"We don't feel that a dedicated type of investment like Gemini is the only way to serve the



If you're looking for an easy, flexible cost-effective way to make the personal computer to mainframe connection, look no further.

ICOT's Virtual Terminal System™ provides you with a convenient and flexible way to connect personal computers to your IBM or IBM-compatible mainframe. It does so by performing line concentration, cluster control and terminal emulation simultaneously. You'll be able to connect a multitude of personal computers into a single front-end port, conserving your mainframe resources. And you won't have to make any hardware modifications to either the personal computers themselves or to your network controllers.

Put ICOT's VTS protocol converter in your existing 3270 network and virtually any personal computer will be compatible with your BISYNC or SNA/SDLC applications software. ICOT's PC connection also gives you the flexibility of dial-up and leased line communications, plus access security.

ICOT Delivers a Turnkey Solution.
And ICOT won't leave you with a stack of black boxes and a screwdriver. We deliver a turnkey solution, installing every VTS ourselves. Then we back each installation with on-site training and a nationwide field service organization that delivers full engineering and maintenance support.

Whatever your current network configuration and protocols, ICOT's Virtual Terminal System can help you make the PC connection. Pure and simple.

For more information about the ICOT Virtual Terminal System call or write:

ICOT ...the data communications company

ICOT Corporation, 830 Maude Avenue, P.O. Box 7248, Mountain View, CA 94039, (415) 964-4635 TWX 910-379-6479

Nearly Nine Million Computer-Involved People Around the World Rely on Our Publications For the News They Need.

We're CW Communications/Inc.; the world's largest publisher of computer-related newspapers and magazines. And wherever you go in the computer world, you'll find computer-involved professionals reading—and relying on—our publications. With highly trained and experienced editorial staffs all over the world, our publications give readers the best and most up-to-date information available in this rapidly changing industry.

Around the world:

We publish, co-publish or provide editorial services to the leading computer publications in the world, including publications in all of the following countries:
Scandinavia—Denmark, Sweden, Finland and Norway.
Western Europe—Germany, United Kingdom, France, Italy, Spain, Greece, the Netherlands.
The Mid-East—Kuwait, Saudi Arabia.
Asia/Africa—People's Republic of China, Korea, Japan, Singapore, Southeast Asia, South Africa.
The Southern Pacific—Australia.
Central and South America—Mexico, Brazil, Argentina, Chile.

In the United States:

In the world's largest computer market, we publish a whole series of publications that cover different aspects of the industry. Our largest publication, with more than half-a-million readers every week, is *Computerworld*, a weekly newspaper aimed primarily at larger computer users. Its companion publications include *Computerworld Office Automation*, *Computerworld On Communications* (each published semi-monthly) and a series of *Buyer's Guides* covering all major segments of the industry.

In addition, we publish *MICRO MARKETWORLD* for dealers, distributors, retailers and others involved in the microcomputer marketplace. For microcomputer users, we publish *InfoWorld*, *Microcomputing*, *PC WORLD*, *80 Micro*, *inCider*, *Run*, and *Hot CoCo*.

No one in the world publishes more computer information for more people in more countries than we do. And we'd be happy to give you more information on any of our publications. Just send a telex to our U.S. offices, attention CW International Marketing Services, (telex #95-1153) or write us at the address below.

major shipper," agreed Paul McNergney, vice-president of strategic planning at Airborne. "We don't have a standard product such as a Gemini design. We are placing the pieces together for a paperless shipping environment."

And then there is the U.S. Postal Service, which carries nearly 300 times the volume of all the other carriers combined, yet cannot make the dramatic moves that are open to the private sector. "We're foregoing some market areas because people are saying we won't have a federal agency in that kind of business," Jim Van Loozen, a Postal Service spokesman, said.

The Postal Service's sole foray into electronic delivery is its Electronic Computer-Originated Mail (Ecom), which the Postal Service implemented in 1981. To date, Ecom has been a dismal failure, falling far short of its anticipated volume. The Postal Service has steadily lowered its initial projections of 50 million pieces of first-class mail generated via Ecom annually. The 1983 volume of 18 million fell about 28% short of projection, and the Postal Service has no plans to expand Ecom.

The Postal Service is studying a second type of electronic delivery called Electronic Message Service System (Emss). It is a long-range, multimedia project. The goal of the plan is to replace Express Mail for next-day delivery with 87 delivery sites by 1995. According to Van Loozen, however, Emss is still in the research and development phase, with no active plans for its implementation.

Whatever soothsayers are projecting as the fate for the physical documents delivered by the Postal Service, that governmental entity remains optimistic, even if seemingly in defiance of reason.

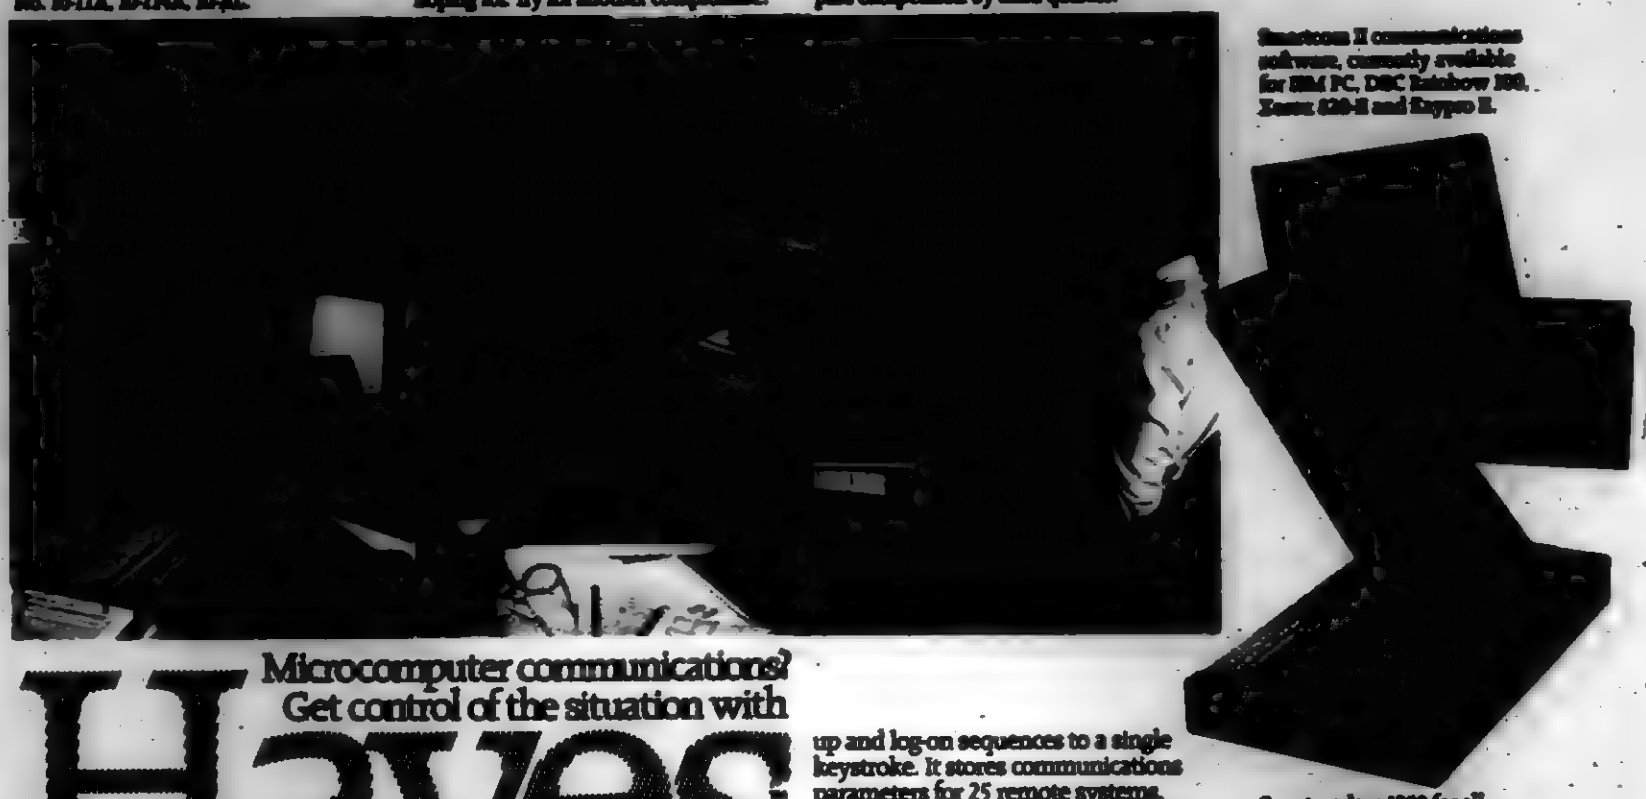
"Our feeling about electronic delivery is that it will indeed be a growing and increasingly important part of the communications marketplace," Van Loozen said. "However, we do feel that the assumption that the electronic age will take all our volume away is a gross overstatement. The same thing was said when the telegraph and telephone were invented." ■

Hafner is a staff writer for Computerworld On Communications.

To all reps: Price changes on following items effective immediately. No. 10-11A, 10-11AA, 10-AL.

Clain: The latest offer looks better, although it's still not what we were hoping for. Try for another compromise.

Just got the word from Gary. Increased our share by 6%. If trend holds, we'll pass competition by third quarter!



Smartcom II communications software, currently available for IBM PC, DEC Rainbow 100, Xerox 820-II and Kaypro II.

Smartmodem 1200 for all computers with an RS-232C interface; Smartmodem 1200B plug-in board for the IBM PC.

Microcomputer communications? Get control of the situation with Hayes.

Microcomputer communications can present the DP/MIS staff with a tangle of mis-matched hardware, user-hostile software, and a situation that can quickly get out of hand.

Hayes can help you avert that chaos, with a telecomputing system designed expressly for microcomputers.

A system so advanced, it's downright simple. Economical. And requires no handholding from you.

Hayes. The computer's telephone. Our Smartmodem 300™ and Smartmodem 1200™ connect to any desktop computer with an RS-232C port. They operate with rotary dial, Touch-Tone® and key-set telephone systems. At full or half duplex. And both feature self-test capabilities, as well as indicator lights and built-in speakers for monitoring calls.

The lower-priced Smartmodem 300 is ideal for local data swaps and communicates at 300 bps. A built-in speed selector on Smartmodem 1200 automatically detects transmission speeds (110, 300 or 1200 bps).

Smartmodem 1200B™ is also available as a plug-in board for IBM® Personal Computers. And Hayes manufactures the Micromodem IIe® for Apple® II, III, IIe and Apple Plus computers, as well. It comes packaged with Smartcom I™ communications software.

Speaking of software, more programs are written for Hayes modems than for any other. And that impressive list includes our own incomparable communications software. Smartcom II.™ Complete, menu-driven software for the IBM PC, DEC Rainbow 100,™ Xerox 820-II™ and Kaypro II.™ Even first-time communicators will find success with Smartcom II. Screen prompts guide users in the simple steps it takes to create, send, receive, list, edit, name and re-name files.

Tasks like simultaneously receiving, printing and storing data—completely unattended—are easily managed with Smartcom II, because it takes full advantage of Smartmodem's capabilities.

The program reduces lengthy dial-up and log-on sequences to a single keystroke. It stores communications parameters for 25 remote systems.

Plus, there's an on-line help feature that explains prompts, messages and parameters.

Our reputation speaks for itself. Hayes has five years of solid leadership in the microcomputer industry. Nationwide availability through retail computer stores. Trouble-free factory service and call-in assistance. A limited two-year warranty on all hardware. And the most efficient telecomputing system available. Anywhere.

If you're involved in linking micros or setting standards for configurations, remember this. Everything your people need to know about communications can be summed up in one word: Hayes.

Hayes®

Hayes Microcomputer Products, Inc., 5923 Peachtree Industrial Blvd., Norcross, GA 30092. 404/441-1617.

Smartmodem Specifications:
Low Speed Data Formats: (Smartmodem 1200 and Smartmodem 300) Serial, binary, asynchronous; 7 or 8 data bits; 1 or 2 stop bits; odd, even or no parity (0-300 bps).
High Speed Data Formats: (Smartmodem 1200) Serial, binary, asynchronous; 7 data bits; 1 or 2 stop bits; odd, even, or fixed parity or 8 data bits; 1 or 2 stop bits; no parity (1200 bps).
Dialing Capability: Touch-Tone® and rotary dial pulse dialing. Command Buffer: 40 characters.
Commands: (unnecessary with Smartcom II software) A: Immediate answer. A/: Repeat last command. C: Transmit Carrier. D: Dial command, including simple dialing, waiting for second dial tone, auto-dialing and other features. E: Local echo. F: Full/half duplex. H: Switch hook. M: Audio monitor. O: On-Line. P: Pulse dialing. Q: Quiet mode. R: Reverse originate/answer mode. S: [? "Set" commands] speed, escape code character, number of rings to answer on, etc. S?: Checks operational parameters above. T: Touch-Tone dialing. V: Verbal result codes.
Result Codes: (can be numeric/verbal) 0/OK: Command line ok. 1/Connect: Carrier detected. 2/Ring: Phone is ringing. 3/No Carrier: Carrier lost or never heard. 4/Error: Error in command line. 5/Connect 1200: Carrier detected at 1200 bps. (Smartmodem 1200 only.)
Audio Monitor: Two-inch speaker with volume control.
Rear Panel: On-off switch, power jack, RS-232C connector, modular phone jack connector, volume control.
Operation: Full or half duplex.
Data Rate: 0-300 bps and 1200 bps for Smartmodem 1200; 0-300 bps for Smartmodem 300.
Interface: RS-232C.
Intelligence: Z80™ microprocessor with 4K byte control program for Smartmodem 1200; Z8 microprocessor with 2K byte control program for Smartmodem 300.
Modem Capability: Bell System 103 or 212A compatible originate or answer mode for Smartmodem 1200; Bell System 103 compatible originate or answer mode for Smartmodem 300.
Receive Sensitivity: –9dBm for Smartmodem 1200; –45dBm for Smartmodem 300.
Transmit Level: –10dBm.
Registration: FCC registered for direct connect to the nationwide phone system. Connects with modular jacks RJ11W, RJ12C, RJ21W, RJ22C, RJ31W, RJ32C.
Power Pack: D.C. Input 120VAC, 60Hz, 15.5VAC output.
Size: 1.5" × 5.5" × 9.6"

BRIDGING THE HUMAN COMMUNICATION GAP

BY PATTI HARTIGAN

If a vital link in your communications system breaks down, do you ignore it, hoping the problem will work itself out? Of course not. You troubleshoot the problem, analyze it and do something to fix it. And afterwards, you take steps to make sure the problem doesn't occur again.

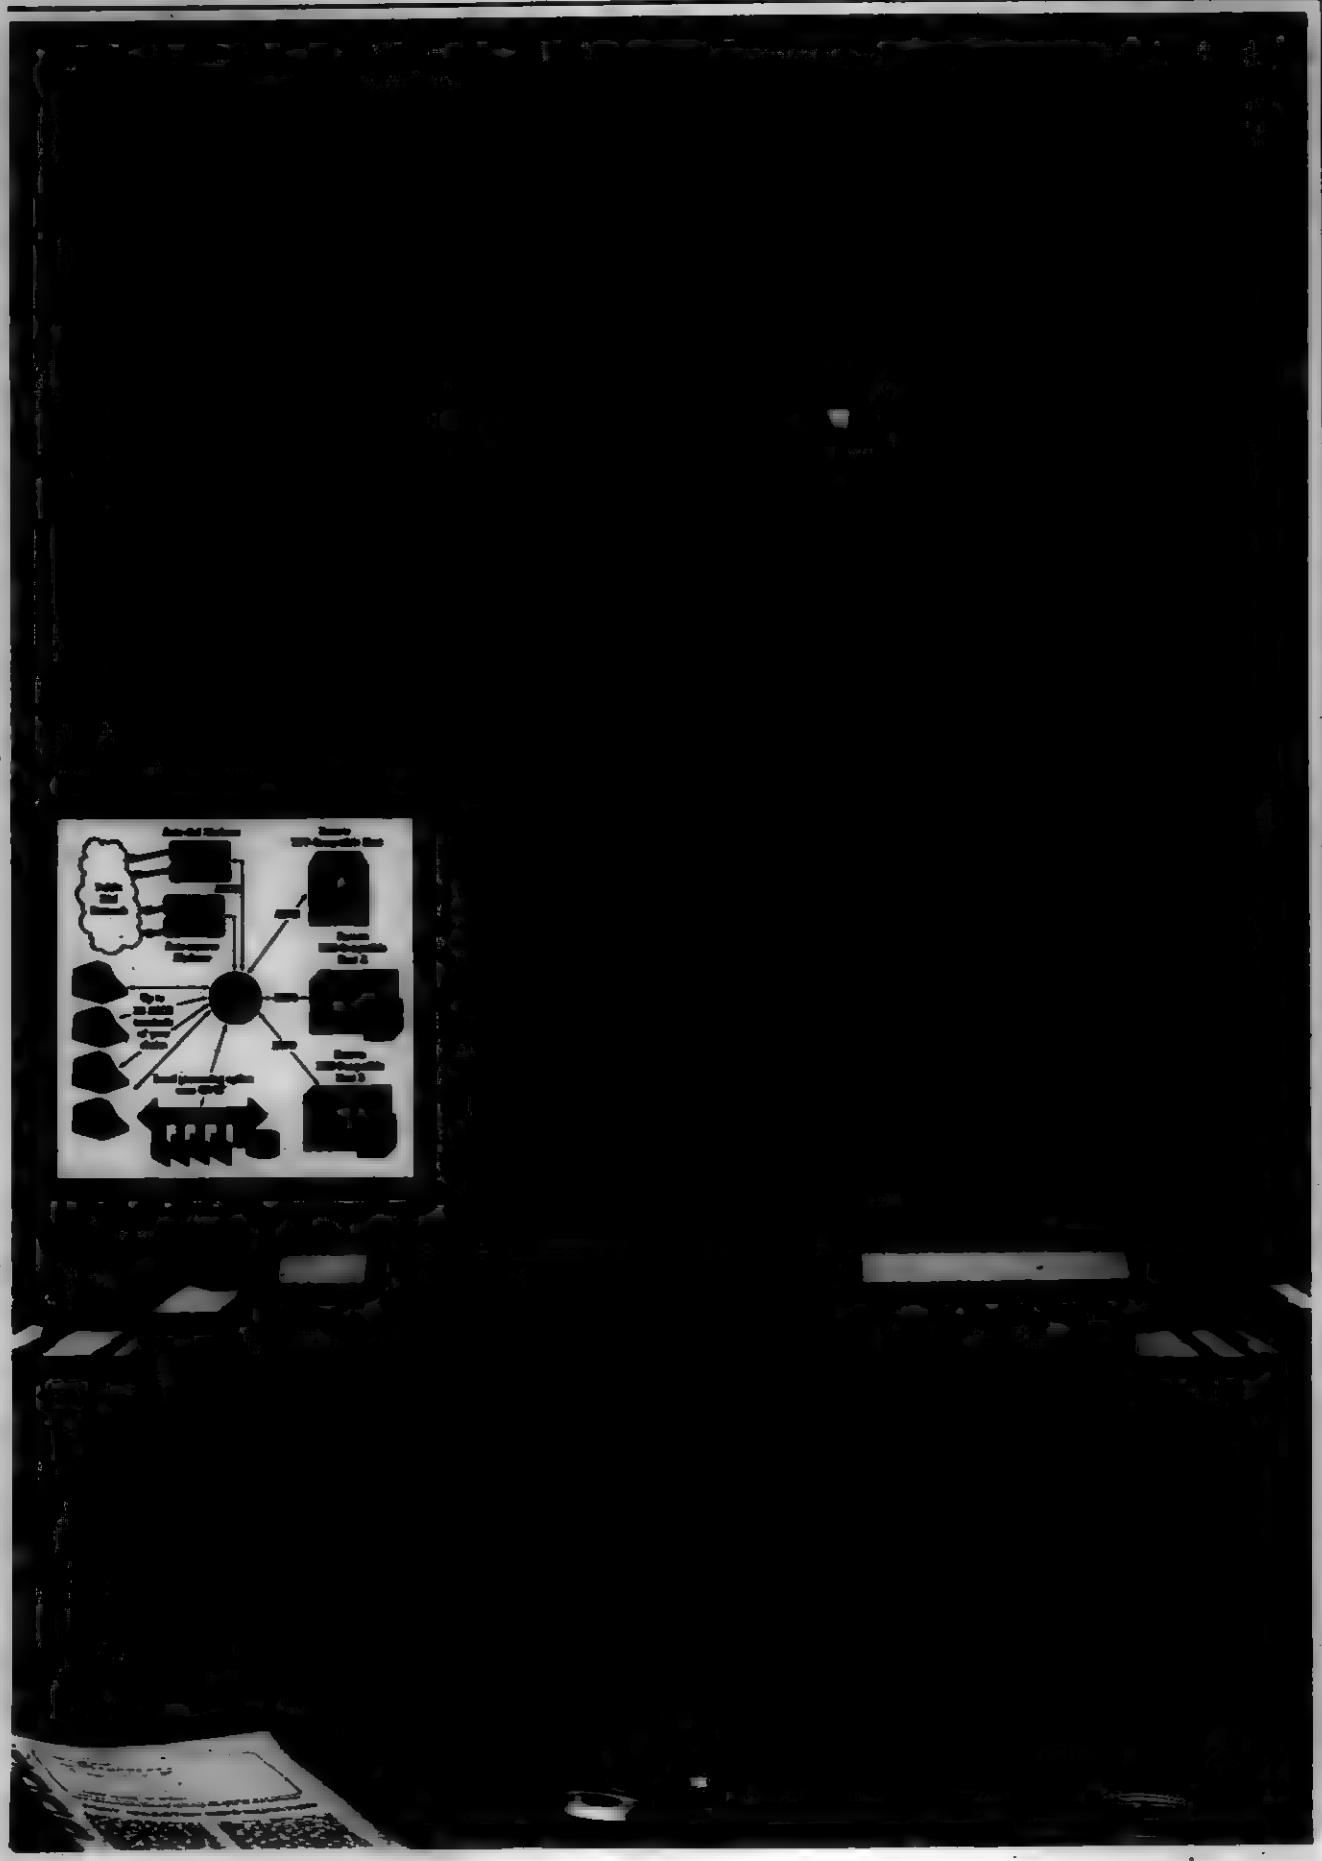
But what if the breakdown occurs in the oldest communication system around — the human communication network, a basic, essential system that is frequently taken for granted? Do you pinpoint the problem immediately or do days pass before you even notice something is wrong? And once the problem is recognized, how often do you say, "It's a personality conflict. There's nothing I can do to help; it will ▶

work itself out."?

The human communication network, like any other system, is composed of intertwining parts that interact to achieve certain goals. It is not immune to bugs, nor is it self-perpetuating. Its components, like the terminal on your desk or the mainframe in your computer room, need to be monitored and maintained.

While most firms devote significant funds and energy to maintain their sophisticated communications machinery, how many make a conscious effort to improve human communication? It is especially important for data processing departments to work on communication, according to Marsha Sinetar, an organizational psychologist who heads Sinetar & Associates, Inc., a human resources consulting firm. "Most DPers went into the field because they like working with things, not people. It is rare to find one who is a natural communicator," she observed.

It is not enough for the company to sponsor an annual pig roast nor to cater an occasional cocktail party. And it requires more than a brand new coffee machine or muzak in the ladies room.



An effort to improve interpersonal communication involves more than simply flooding employees with information. "Management may send out newsletters, have audiovisual presentations and say, 'Aha, we have good communications.' That is communications with an 's,' but it is not communicating," said Peter Bugbee, who is a principal and communication consultant with the Boston office of Towers, Perrin, Forster & Crosby (TPFC), a human resources consulting firm.

It is not enough for the company to sponsor an annual pig roast nor to cater an occasional cocktail party. It requires more than a brand new coffee machine or muzak in the ladies room.

As a general rule, the human communication system is directly related to the firm's management philosophy. If management is tight — that is, employees are closely supervised, mistrusted, given little responsibility — it is likely that the interpersonal communication system will be strained and employee satisfaction will be low. Scott Myers, a management research consultant based in Santa Barbara, Calif., explained, "A company's annual report can say 'People are our most important asset,' but then the firm shows no respect for its employees, has them punch a time clock and so forth. This is not the way to establish open communication."

Myers continued, "A company must provide the opportunity for people to be creative, to get feedback and recognition and to achieve their goals."

This is easier said than done. The first step toward improving the human communication system involves recognizing that it is vital to the organization, that it needs attention in order to flourish. Pleasant working conditions do not exist miraculously — they are the product of time, effort and thought. "Communication is an area that always needs work," explained Judith Larkin, an industrial psychologist and psychology professor

This Consultant Holds Up the Mirror

No question about it — it's always the manager's fault.

That is how Marsha Sinetar, an industrial psychologist, wraps up interpersonal communication problems that arise in organizations. To Sinetar, the source of the problem is clear: "If there is a communication problem, apart from a new company or a company undergoing change, the problem stems from the manager," she said.

"I see the work group as a mirror," she continued. "If the group is resistant, it reflects resistance on the part of the manager. If it withdraws, it reflects a manager that avoids addressing problems. If the group is confused, the manager communicates in a confusing way."

Sinetar is president of Sinetar & Associates, Inc., a consulting firm that specializes in human resources planning, development and mediation. Unlike other consultants, however, she sees a simple solution to communication problems. "I simply hold up the mirror," she explained. "I don't

"I see the work group as a mirror," Sinetar said. "If the group is resistant, it reflects resistance on the part of the manager."

do training. People don't need more information; they just need to recognize that they are responsible for communication. They alone hold the answer."

It is up to the manager, Sinetar claimed, to change his own attitudes and the way he treats others. The manager must be the exemplar for his department. Sinetar, who has been in the consulting business for ten years, has a hard-nosed attitude. "I'm getting less and less sweet," she said. "If I am not hard on the managers, they won't take the responsibilty."

Although she is somewhat draconian in her approach, Sinetar is optimistic about the possibility of creating a work environment where interpersonal relations thrive. "If a person ever worked in a place where things are fun, he never forgets it. It should be expected, but it's rare," she said.

"I worked for someone that cultivated that. Work was fun — like a Camelot." According to Sinetar, there is no reason why every office should not be its own miniature Camelot. The only thing that prevents this is a bad attitude, a selfish approach.

"I ask the team members to examine their own barriers. I don't encourage them to be critical of the manager, nor to damage other people. We don't attack, 'don't make others feel bad. We just simply communicate," she said.

"The point is to recognize one's individual responsibility, to realize that change must come from within. "You cannot change other people, but you can change the way you treat them."

According to Sinetar, it's a matter of deportment. "People say that they want a formula on how to behave at work. What they really want is a formula so they won't have to behave." Sinetar stressed that managers must demand their employees to speak politely and have good manners. But managers must act that way too. They must expect to be treated the same way that they treat others.

Sinetar stressed that both managers and employees must be self-reflective. She listed three questions that every employee must ask himself in order to judge how well he is communicating. Employees must ask:

- How comfortable am I getting or giving a compliment?
- How well do I take criticism from my boss? From my employees? How well do I give criticism?
- How quick am I to give constructive criticism? Do I jump the gun and give it when it is unnecessary? Or do I wait too long, exacerbating the problem?

After the self-reflection has occurred, the rest is easy. "It's simply a matter of getting managers to manage, which is essentially to communicate," Sinetar said. "It sounds like I'm beating a dead horse, but we need only use what we have. It's so simple, if people would only realize that communication is a two-way process and they must contribute their part. If communication breaks down, it's no one's fault but your own."

COMMUNICATION NETWORKS '84 offers you 100 solutions to your post-divestiture telecommunication problems.

Micro Networks

As telecommunications and data processing managers, your success depends on keeping up to date with changing technologies. At COMMUNICATION NETWORKS you can choose from 100 information-packed sessions designed to help you succeed.

You'll learn how to survive the transition into the competitive telecommunications environment resulting from the AT&T divestiture. You'll discover new applications in Local Networks, Satellite, Bypass/DTS, Public and Private Data Networks, Interconnection, Micro Networking and new management technologies.

COMMUNICATION NETWORKS gives you twelve sessions focusing on "Network Technologies." Thursday, February 2, is "Microcomputer Networking Day," a full day devoted to teaching you how to get more from your PC than just stand-alone applications.

You may even choose to develop specific skills in one of the nine full-day "In-Depth" seminars. "In-Depth" seminars will be held on January 30, one day prior to the official opening of COMMUNICATION NETWORKS.

In just five years, COMMUNICATION NETWORKS has become the leading professional communications conference and exhibit in the nation. And COMMUNICATION NETWORKS '84 promises to be even better than ever—more sessions, more speakers, more exhibitors including American Satellite Co., AT&T Information Systems, COMSAT, Digital Equipment Corp., General DataComm Ind., General Electric Co., Integrated Communication Systems, General Electric Co., Microwave Link Operation, GTE Business Communications Systems, GTE Sprint Communications Corp., Harris Corp., DTS Div., Hewlett-Packard, M/A-COM, Mohawk Data Sciences, Northern Telecom, Inc., Scientific-Atlanta, Inc., Siecor Corp., 3M Business Communication Products, Ungermaan-Bass, Inc., Uninet, United Technologies Communications Co. and many more offering the latest in products and services.

The DEC Rainbow 100+ The Rainbow 100+ system will feature Z80A and 8088 microprocessors, a 10 MB Winchester hard disk, a dual floppy diskette with 800 KB capacity and asynchronous communications, built in terminal emulator, printer port and 128 KB of system memory.

As an added plus for CN '84 attendees . . . you'll have a chance to win a DEC Rainbow 100+ Computer System.

COMMUNICATION NETWORKS '84, will take place at the Washington Convention Center in Washington, D.C., the telecomm capitol. It will be held on January 31 - February 2, 1984.

Call toll-free 800-225-4698 (In MA, 617-879-0700) for more information. Or fill out and return the coupon below.

at Canisius College in Buffalo, N.Y. "It's like a marriage. If communication fails, the marriage is more likely not to work. If the marriage fails, it is more likely due to a breakdown in communication than anything else," she said.

Some firms have in-house departments that specialize in handling employee relations. But many firms do not. There are, however, a growing number of human resource planning consultants and industrial psychologists that can help firms recognize, analyze and, in turn, solve their communication problems. The initial step, however, must come from within the firm.

According to Bugbee, "the request for assistance usually comes from the senior management group. Management notes a breakdown; there is always a trigger of some kind."

THAT TRIGGER CAN include symptoms such as low morale, general discontent, misinformation or confusion about one's role in the organization. In addition, symptoms can be as drastic as union organization attempts or massive walkouts. But it is absolutely vital to catch the problem before it gets out of control, and no company is immune to communication bottlenecks.

Breakdowns in data processing organizations occur within the department, but most frequently, between the department and the rest of the organization.

"With each other, DPers have few problems — they are a cohesive group, share their own language," explained Sanford Weinberg, an information systems professor at St. Joseph's College in Philadelphia. "They have a different vocabulary than upper management, however, and the two share a mutual disrespect. They use the vocabulary to hide what's going on." Breakdowns in communication, Weinberg maintained, stem from a difference in perspective. "DP is seen as having different goals than the rest of the organization," he said. "DPers are seen as a bunch of technocrats eager to centralize the system. They are viewed as empire builders."

But how do you bridge this perception gap? Education, Weinberg claimed, is the key. "A successful tactic," the professor explained, "would be to give non-DP managers courses in computer literacy and to give DPers workshops in management techniques. They have to reach a mutual understanding." According to Weinberg, one way to sidestep the problem is to hire people with both business and computer knowledge. Several universities offer a degree in information systems, which focuses on those two different disciplines.

EXPERTS AGREE THAT employee involvement is an essential factor in opening up communication. Management must get everyone involved in the problem solving, be it by teaching simple computer skills to nontechnical employees, holding brainstorming meetings or conducting corporatewide surveys.

Management consultant Myers, who conducted definitive human relations research at Texas Instruments, Inc. in the '50s, gave an example of a firm that failed to involve all its members in a decision-making process. The firm, a client of Myers, planned to change its timekeeping system from a Hollerith punch card procedure to a keypunch time clock procedure. "They asked me what I thought, and my personal reaction was that I didn't like it. It ties employees down, is inconvenient and shows a complete lack of trust in the employees.

"I advised management to consult the employees whose time was being recorded. As a result, the firm ended up with no machine at all, with employees charting their own time on the honor system," Myers said.

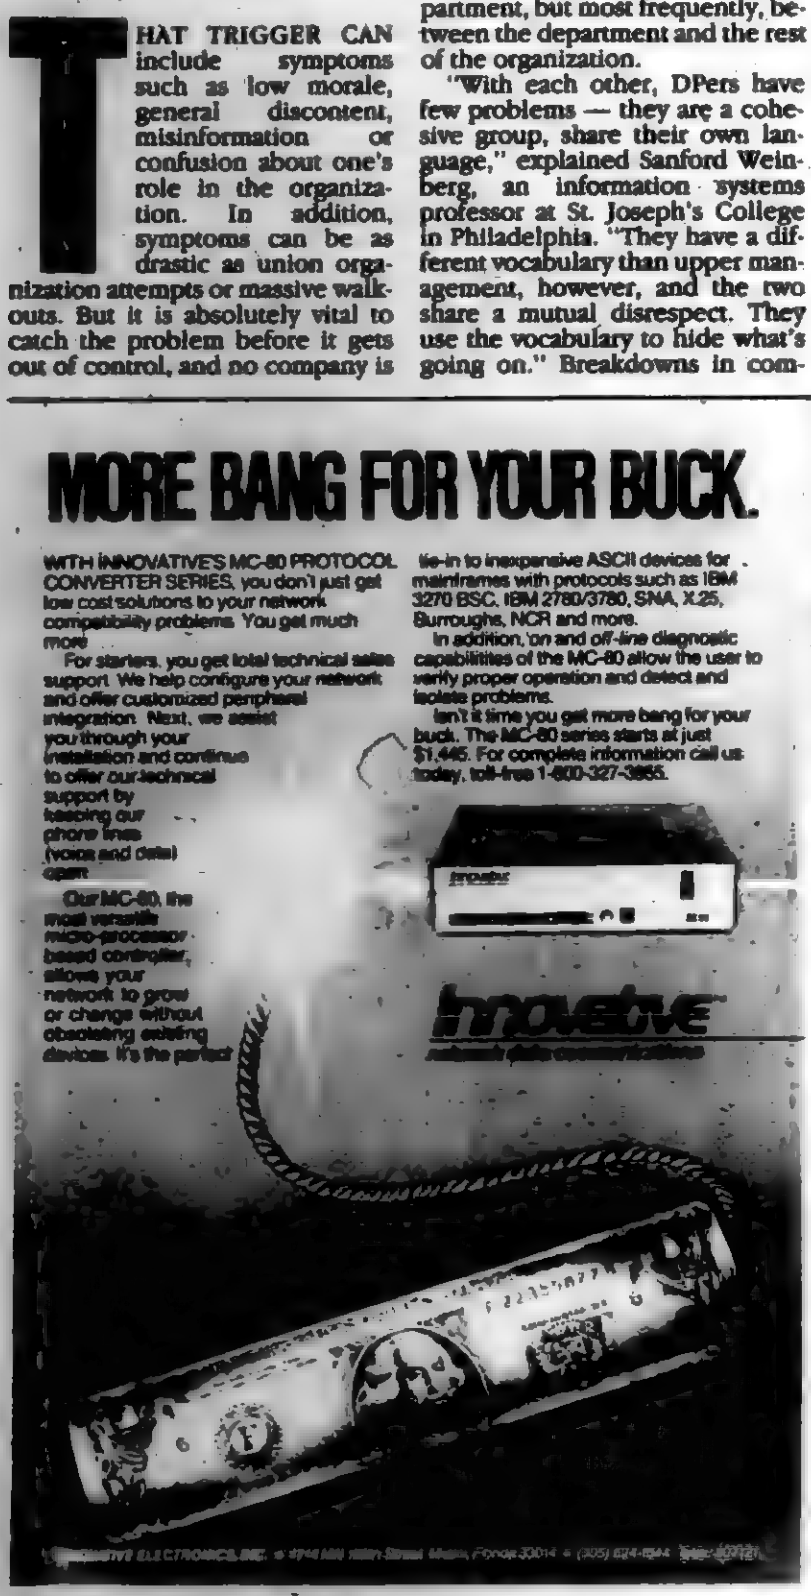
Granted, every case study is different, and there is no single solution to the human communication problem. But there are several things firms can consider when trying to improve their interpersonal communication. These include:

- *Training and education.* This can involve training in the importance of communication and in the development of interpersonal skills. It can involve computer literacy training for non-DP staff and management training for DP-related staff. In addition, employees can be educated on corporate history and policy, thus involving them more in their firm's operations and decisions.
- *Job requirement and performance appraisal.* Interpersonal comunication can be built into a manager's job description. "If improving interpersonal communication is a specific job requirement, there is built-in reinforcement at review time," Bugbee pointed out. "For example, if someone does not work to improve human relations in his department, he doesn't get the same raise as someone who does. That's a strong way to reinforce a message: Dollars speak loudly," he said.
- *Strengthen middle management.* Special attention must be given to improving management's communication skills. Middle management is a vital link in the human communication process. Bugbee explained, "It's like transmitting an electric current. It's strong at the source, but the further it travels, the weaker it gets. Communication is much the same way. The message is strong from the sender, but it gets distorted as it passes through different channels. It's up to middle management to keep it strong thoughout the chain."
- *Listening.* According to Larkin, listening is vital to the communication process but is frequently neglected. "Listening is where trust begins," she said. "If you don't listen, you don't understand problems."
- *Self-analysis.* Firms must identify their strengths and weaknesses and then analyze them and act accordingly. In addition, managers must look at themselves when trying to solve their firm's communication problems.

Organizational psychologist Sinetar stresses the importance of self-analysis. "It is important for people to be self-reflective. The answer to communication problems lies with individuals," she explained (see related sidebar on Page 65).

- *Corporate communication policy.* With the help of a consultant or on its own, a company can develop a communication policy, a manual that spells policy out in black and white and that can be readily referred to if problems arise.
- *Newsletters, audiovisual presentations and other media.* While such media are important, it is necessary to remember that they only part of the solution.

Most consultants agree that a healthy interpersonal communication system is directly related to



success. Both Myers and Bugbee pointed to the firms described in the best-selling book, *In Search of Excellence*, by Thomas J. Peters and Robert H. Waterman Jr. These highly successful firms have one thing in common: They take pains to improve their interpersonal communication system, to create an environment in which employees can work toward their own goals while working toward the goals of the organization. "As a general rule, good communication is a direct correlation to success," Bugbee noted. "If you look at the successful firms, first and foremost, they have a good overall communication process. Communication is nurtured at these firms; it is cultivated."

Myers agreed: "Of course communication is related to success; that's why democracy is inevitable. It is no longer possible for an autocratic manager to run an organization. Any company ruling its people with an iron hand will have trouble surviving."

While it is vital for firms to open up their human communication system, how hard is it to change an organization that has been entrenched in a tight management strategy for years and years? According to Myers, there is one simple condition in which it can be changed: "When the pain of the malady exceeds the pain of going to seek help." It can be done, but it isn't easy.

According to Bart Perkins, a management consultant with Norton, Nolan & Co., a Lexington, Mass.-based consulting firm, it is necessary to "get the organization to unfreeze itself. Something must trigger the change, and once it is made, it must be refrozen."

As a general rule, more and more firms are undergoing this "freezing process" and emphasizing the importance of interpersonal communication. "From my perspective, there is much more emphasis on communication skills — verbal and nonverbal," Bugbee explained. "Employers look closely at those skills, try to find people who can communicate. In the past, lip service was paid to it, but today it is becoming more and more important."

As companies realize the importance of human communication, they also become more aware of outside sources expert in the field. A word of warning, however, is necessary, according to Larkin. "There are a lot of fly-by-night outfits with packaged programs to apply to any situation — for example, time management. They teach you something that doesn't fit. They come in and promise the world, and they're not accountable. Some companies recognize this and are more selective," Larkin said.

According to Myers, there is one simple condition in which a long-entrenched tight management strategy can be changed: "When the pain of the malady exceeds the pain of going to seek help."

Larkin also warned that companies must do more than talk about improving their interpersonal communication. "Most companies want to present themselves as progressive, but it's one thing to talk about it and another to do it. Communication is an area that always needs work. It's an ongoing process. You never get there: You can always do more." ■

"GET IBM 3270, 3780 AND HASP COMMUNICATIONS— ADDING A ONE-BOARD PROCESSOR TO MY PC?"

"YOU CAN WITH PERSYST."

The Persyst DCP/88. The only compatible front end communications processor that can support a range of IBM communications.

It's a Persyst exclusive.

The DCP/88 distributed communications processor. A one-board computer that can be configured by software to handle communications between a PC and another computer system.

In fact, the DCP/88 enables the IBM or TI PC to support a range of sophisticated IBM communications—all with just one processor.

So it gives corporate users unprecedented, low-cost flexibility to incorporate the PC into virtually any environment.

Convert any PC into an IBM 3270 terminal. An IBM 2780/3780 RJE workstation. Or a HASP/RJE workstation—instantly.

Just combine the DCP/88 with Persyst software—and you can connect your PC to any compatible host mainframe or minicomputer.

PC/3270 enables your PC to emulate an IBM 3274 Cluster control unit and 3278 terminal, supporting up to four additional devices. Including a printer and three other PCs functioning as 3278 terminals.

PC/3780 converts your PC into a 2780/3780 remote job entry terminal that can send and receive batch files to and from the host.

And with PC/HASP, your PC instantly becomes a full-function HASP/RJE workstation that can support up to seven input and seven output multi-leaved job streams concurrently.

Capability to support your communications needs now. And in the future.

Because the DCP/88 supports bisync, SDLC, HDLC and async protocols, it is the only communications processor you'll ever have to buy.

Use it to connect your PC to an expanding network of IBM communications. Configure your system to meet virtually any communications need—without adding another piece of hardware. Or expense.

All of which makes the DCP/88 as practical as it is powerful.

The Persyst Coax/3278. Still another way to expand your IBM communications.

Here's another fast way to incorporate the PC into existing SNA or bisync data processing installations.

The Coax/3278. A single-slot expansion board that converts your PC into an IBM 3278 display terminal. And with its high-speed coaxial port, you can connect the PC directly to IBM 3274 or 3276 cluster controllers.

Sophisticated communications products for the corporate user. Insist on Persyst.

Persyst communications products are designed to make corporate information systems more powerful. And more efficient.

Write or call Persyst today for complete information.

THE DCP/88™ BY PERSYST.

At NASA's Ames Research Center, hundreds of scientists share hundreds of programs on one large computer network:

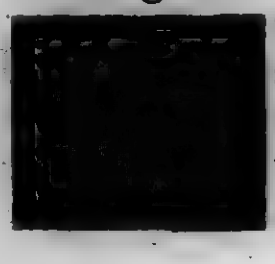
Digital's.

Aircraft design. Space biology. Computational fluid dynamics. Infrared astronomy. Interplanetary exploration. At NASA's Ames Research Center, the technology couldn't get more advanced. That's why Ames scientists share a network of over 50 of Digital's computers and two large mainframes.

Everyone on the Ames network has access to almost every computer on it. Researchers share not only data, but software, utilities, and peripherals as well. A program written anywhere is often useful everywhere on the network, so there is practically no duplication of effort and almost no need to retrain users when new programs are added. The savings, in time and money, are substantial.

The Ames network is an open-ended system. It has grown from one computer to over 50 in just eight years, with minimal disruption of service during its continuous expansion. Thanks to Digital's compatibility, even across generations, it wasn't necessary to replace any of Digital's computers. They simply added to them.

So if you're considering a network,



talk to Digital. We'll show you how you can start as small as you want. And grow as large as you need.

digital™

THE WAY TO SYNCHRONOUS COMMUNICATIONS

BY
PAUL CHARBONNET JR.
AND GLEN SMITH

Minicomputer and microcomputer users now have several new options in data communications software. Packages are available that provide the error-free computer-to-computer data transfer that was previously available only on much larger systems. These packages are inexpensive and require little or no additional hardware. Despite their low cost, some of them rival even mainframe products in their reliability, efficiency and ability to cope with new communications media such as satellite links and local-area networks.

Most of these packages fall into the rapidly growing category of file-transfer utilites — that is, programs that exchange files (binary, text or data) between computers. They even work among computers with previously incompatible operating systems such as IBM Personal Computer to Digital Equipment Corp. VAX, or Apple Computer, Inc. to Data General Corp.

The key factor in the development of these products is that most micros and minis have only asynchronous communications capability. They are equipped with the low-cost interfaces and 300 bit/sec or 1,200 bit/sec modems required for supporting character-at-a-time terminals and printers. They cannot use mainframe data communications protocols such as IBM's Binary Synchronous Communications (BSC), Systems Network Architecture/Synchronous Data Link Control (SNA/SDLC) and X.25 High-Level Data Link Control (HDLC) because these protocols require expensive synchronous interfaces and modems designed specifically for processor-to-processor communications.

Most of the new communications software for small computers is based on protocols that can operate with asynchronous interfaces and modems. Such products allow the small system user to integrate terminal and data communications in a single hardware environment. All of the asynchronous protocols that have emerged use the standard synchronous technique for error detection: The data stream is divided into blocks, and the integrity of each block is monitored by appending a check-sum that is recomputed and compared with the original check-sum when the block is received.

It is in the area of flow control and block acknowledgement that vendors of asynchronous packages have diverged on two distinctly different paths: full-duplex and half-duplex. For this discussion, half-duplex and full-duplex refer to the protocol structure rather than the electrical/hardware interface. Full-duplex protocols send blocks of data in both directions simultaneously, whereas half-duplex can only send blocks in one direction at a time, analagous to a two-lane highway and one-way street with constantly reversing direction.

Half-duplex protocols send a block of data, then wait for the remote system to return an ACK code (BLOCK OK, CONTINUE) or NAK code (BLOCK BAD, PLEASE RETRANSMIT). These are known as ACK/NAK or stop-and-wait protocols; full-duplex protocols are continuous. Communications software packages that ▶

use half-duplex protocols are widely available, since they are easy to design and implement, although inherently inefficient. Most are based on the Ward Christensen protocol, a half-duplex protocol in the public domain.

The inefficiency of stop-and-wait protocols results from the dead time between blocks while waiting for the ACK or NAK code to arrive. Any delay in the communications link adds to this dead time and typically cuts the efficiency of half-duplex protocols by 50% to 80%. Propagation delays are the obstacle both on satellite links and in packet-switching networks and local-area networks, in which the passage of data is momentarily delayed at each node in the network. With the growing use of satellite links and networks, half-duplex protocols are losing favor.

Full-duplex protocols such as Blocked Asynchronous Transmission (Blast) transmit a continuous stream of data blocks while using the other half of the communications channel to receive block acknowledgements simultaneously. This structure is combined with the use of sliding window or pipelining techniques as employed by sophisticated synchronous protocols such as SNA/SDLC and X.25/HDLC. The end result is that full-duplex asynchronous protocols can endure significant propagation delay without losing efficiency. They are suitable for use in a variety of communications environments.

Selective retransmission is a refinement of the sliding window technique that greatly improves performance on noisy lines. With this feature, only the blocks that have errors induced by line noise need to be retransmitted. Without selective retransmission, all blocks that have been transmitted since the bad block must also be retransmitted. This difference can account for as much as an 80% throughput difference on some connections.

Communications Satellite Corp. recently published the results of benchmarks comparing the performance of Blast with the half-duplex Christensen protocol on a satellite link. The tests involved two microcomputers exchanging files via 1,200 bit/sec modems on a dialed telephone call that included a single satellite hop. Blast consistently achieved 50% greater throughput than the Christensen protocol. Furthermore, the throughput of the full-duplex protocol remained high even when line noise was induced by deliberately off-pointing the satellite antenna.

With the AT&T deregulation and the financial problems facing the independent operating companies whose line maintenance costs will no longer by subsidized by Bell, deteriorating lines may continue to produce increasing amounts of noise to plague data transmissions. At higher modem speeds, line noise becomes an even greater problem. As modem technology provides faster and cheaper modems, the necessity of full-duplex selective-retransmission automatic repeat request to handle line noise also increases.

As line noise increases with aging telephone lines, so do the chances of spurious ACK or NAK bytes and telephone line dropouts that cause computers to hang or become locked up waiting for vanished bytes. Many systems have been carefully set up to transmit long files operator-free at 2 a.m., only to hang in the middle of a file due to a lost line and have to be restarted from scratch at 8 a.m. Most full-duplex protocols are immune to line dropouts and spurious data. In addition, the more advanced utilities provide a time-out mechanism that automatically recovers after a line loss and then retransmits from the point of interruption, rather than from the beginning of the file.

Bell's announcement that it will no longer guarantee terrestrial service instead of satellite links after 1984 is significant. The user never knows whether a telephone call will be routed via land lines or satellite. Either way, the data throughput will be higher with a full-duplex selective retransmit protocol.

Features common to the better full-duplex and half-duplex utilities include support on a wide variety of systems; error-free transfer of text and binary data; ease of use, including menu selection of features; and low-cost, software-only implementation not requiring special hardware.

Sophisticated utilities such as Blast also provide these features:

- Very high resistance to noise by using small transmit blocks and bit-oriented protocol.
- Ability to patch existing files without transferring the whole file.
- Record access or the ability to extract data from a remote file without transmitting the entire file.
- Completely implemented use of full-duplex capability so that transmission of different files can occur simultaneously in both directions making optimum use of full-duplex facilities.
- Status reporting while transmission is in progress.
- Ability of either end to initiate file transfer in either direction.
- True unattended operation.

Mom Knows

When it comes to efficient communications-

MOM can fix you up with the hardware and software to turn your IBM PCs,™ DEC Rainbows,™ Apple Lisas,™ and other micros—as well as terminals—into full-function work stations. Instantly.

MOM, which stands for Marketing of Micros to Mainframes, specializes in distributing sophisticated, state-of-the-art interface equipment. You can depend on her to link your micros to host computers quickly. Efficiently. Problem-free.

MOM's old fashioned when it comes to product reliability, service and support. Her advice is sound. Trust her. MOM suggests only those products that will provide you with the solutions you need. Tell her what your needs are, MOM will tell you the best way to increase productivity as well as keeping costs down.

MOM knows the value of a dollar.

Money doesn't grow on trees. So solutions to today's business communication problems need to be

compatible with the next generation of technology. MOM stretches your computer investment dollars by adding processing capabilities to microcomputers and terminals, eliminating the need for additional expensive hardware. Data control is centralized in the mainframe.

Meet a few of MOM's family.

MOM markets a growing number of very impressive hardware and software products. Each one is compatible with a variety of microcomputers.

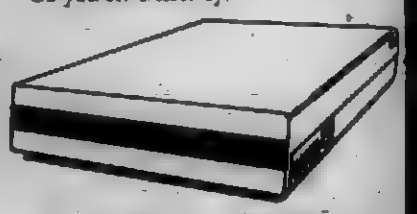
Meet IRMA.™

IRMA goes with CHARLIE, the IBM PC or XT.™ IRMA is a Decision Support Interface™—a printed circuit board

that slips into the PC and provides a direct link to the IBM mainframe computer. IRMA provides full 3278 emulation. She puts you on line with the mainframe—via a coax cable—giving you instant access to the big computer, the prime source of current data.

And then, of course, there's sweet IRMALINE.™

IRMA's sister, IRMALINE, links personal computers—no matter how remote—to IBM 3270 networks. And like her sister, IRMALINE is a Decision Support Interface. She lets you conduct 2-way phone communication with your mainframe via a 3270 terminal, from across town or around the world. IRMALINE connects you direct to your mainframe with a local phone call-rather than having to dial long distance. So you save money!



Team IRMALINE with IRMALETTE™—another member of MOM's family—to get the same data capture functions IRMA provides.

PC/COM.™ The perfect mate for IRMA.

This software system works in conjunction with IRMA to provide high speed transfer of files between the mainframe and the IBM PC or XT. PC/COM's universal file transfer capability is compatible with major IBM operating systems and associated application files. Single function keys provide users with easy-to-use menus to transfer text files, source programs, data and object files between the mainframe and the personal computer.

Users are subject to centralized mainframe control, so security is much tighter. MOM believes in keeping a tight lip.

AVATAR.™ MOM's UNIVERSAL TERMINAL CONVERTER.

AVATAR is MOM's self-contained microprocessor system that converts a terminal into a full-function, stand-alone personal computer. All it takes is a simple cable connection between

The more sophisticated file-transfer utilities also adhere to the International Standards Organization's Open Systems Interconnection reference model. In the interest of future compatibility between various systems, this model requires that communications products be logically and structurally organized on a layered basis. In particular, the software layer that performs the application-specific function — in this case, file transfer — should be distinct from lower layers that implement the error-free protocol. If it is necessary to translate from one protocol to another — for example, SNA to X.25 — the applications layer can remain intact.

A layered structure is also complementary to the hierarchical organization of many large computer systems. For example, in order to access mainframe application software, it may be necessary to go through a front-end processor, a software level that performs user log-on and validation and a software level that performs code conversion — for example, Ascii to Ebodic. Each of these levels can be addressed by a separate layer to the communications product.

Vendors of small computers have not been slow to recognize the emerging asynchronous technologies. Recent announcements by Data General Corp. and Televideo Corp. of their own Blast protocol products have generated substantial interest by other vendors in industry standardization. Packaged, ready-to-use versions of Blast are already running on over 50 models of computers, enabling full communications of any binary data, messages, text or commands. Blast products exist for systems from a variety of vendors, including Data General, Hewlett-Packard Co., Texas Instruments, Inc. and others. They are also out for most CP/M, CP/M-86 and MS-DOS compatible systems and for DEC VAX, Apple units (both DOS 3.3 and CP/M), IBM Personal Computers and for Unix systems. Half-duplex mainframes can accommodate full-duplex protocol in firmware attached to any asynchronous port on the mainframe. Any computer running such a protocol can thus talk to any other computer running that same protocol, despite operating system incompatibilities. The software package itself converts the text file formats to the format of the other system. With utilities such as these, only one program is required to talk to many different systems, as the protocol is the same, thus eliminating the awkwardness and expense of multiple programs for multiple systems.

There are certainly situations in which the small-computer user should opt for synchronous communications. The host configuration is the key factor when relatively few small systems are involved in communication with an existing host.

Host systems that already have multiple asynchronous terminal ports may not also have available synchronous ports. For these systems, asynchronous is the obvious choice. The reverse is also true for some large IBM mainframes that have only synchronous ports or that cannot support the overhead of CMS or TSO required to use the available ports asynchronously. For these systems, the more expensive synchronous additions to the smaller systems may be valid choices.

Data volume is a significant factor. Synchronous modems allow higher speeds on dial-up lines. Therefore, if large amounts of data must be transmitted dial-up, synchronous is preferable to asynchronous. Several manufacturers, however, are now marketing 2,400 bit/sec and 4,800 bit/sec dial-up asynchronous modems, and these are rapidly reducing the gap between the ability of synchronous and asynchronous products to handle large volumes of data.

Cost is also a significant factor. The cost of a utility such as Blast ($250 per CPU) and a 1,200 bit/sec asynchronous modem ($395 and up) is substantially less than the cost of a popular BSC package, 1,200 bit/sec synchronous modem and special synchronous interface for an IBM Personal Computer (approximately $2,750 total). Other micro-to-mainframe connections are available in boards and protocol converters that typically cost around $1,000 per connection, plus modems. When many small systems are involved, the asynchronous alternative is clearly less expensive.

The emerging requirements for communications between low-cost computers can be served effectively without additional hardware by available asynchronous utilities using state-of-the-art protocols to provide sophisticated capabilities. They provide a means to use the common dial-up telephone lines, packet or local-area networks or satellite communications with high efficiency. As some of these protocols become de facto standards, they will provide mixed vendor communications capabilities similar to common synchronous protocols. ■

Charbonnet is director of marketing and Smith is vice-president, research and development, for Communications Research Group, Inc., Baton Rouge, La.

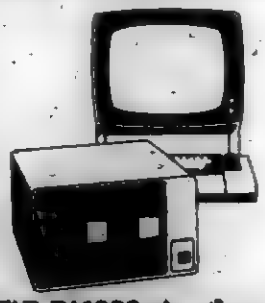
Best.

from micros to mainframe–MOM™ does it all.

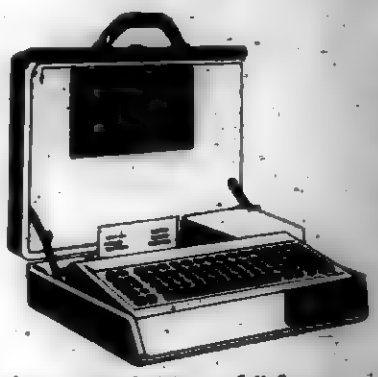
the terminal and the host system. No terminal modification is required. You get PC power on the terminal in addition to your normal terminal capability.

In addition, AVATAR is portable, so it's very easy and efficient to use. Buy AVATAR, and MOM will give you CP/M,® MS-DOS,™ WordStar,™ CalcStar™ and CBASIC™ software. Absolutely free! File transfer software is available as an optional feature.



AVATAR PA1000: Another way to talk to any computer.
The PA1000 protocol converter allows you to connect any asynchronous terminal or PC into an IBM 3270 network and simultaneously into any asynchronous host system. You can do it from either a local or a remote location. The PA1000 has additional ports to which you can attach a printer.

MOM even has a computer.
This small, professional computer in a briefcase caught MOM's eye.

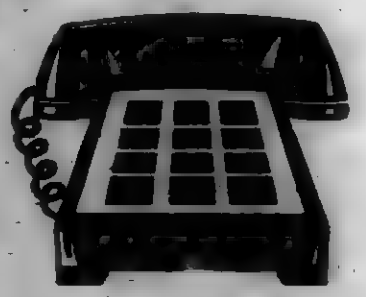


The PC Traveler™ is a full-function IBM-compatible, portable computer. A 28-pound wonder, it comes standard with a gas plasma display for 25 lines/80 characters, 128k RAM memory and an IBM PC-type removable keyboard. The dot matrix impact printer is bi-directional, 132 char-compressed.

The PC Traveler has graphics capability and communication options (300/1200 BPS internal modem). The 8 meg floppy disk is upgradable to 16 megs. The computer uses 16 bit, dual 80186 processors and is 10 times faster than the IBM PC.

Available for delivery, Jan., 1984.

MOM and PATCHES.™
Anything worth preserving is worth protecting, so MOM developed PATCHES. A patented chip protection system insures the integrity of her software. This system allows users to copy MOM's software for their internal use, while a companion chip installed in the PC prevents unauthorized use. PATCHES makes and keeps software and communications private and secure.



Call MOM. 1-800-241-1170.
MOM knows what's best when it comes to micro-to-mainframe access. She's made it her business to know the market. Just ask her about products. Bring your problems to her. Trust her for the best advice. MOM knows how to improve your communications network, and nobody is as cost and quality conscious as she.

IS THE VOICE-DATA MIX MISSING?

BY JAMES N. BUDWEY

Up until about 1979, the development of voice and data communications followed somewhat separate courses. The characteristics of data communications were so different from those of voice communications that different system solutions evolved to satisfy each. For data, it was generally necessary to communicate between a mainframe or minicomputer and other computers or dedicated terminals. For the most part, these systems were used by highly trained technical individuals.

Data use was highly concentrated with long communications holding times. Terminals and communications lines were operated for long periods by users who worked in real time to design software programs at the terminals. User locations were relatively clustered and easily reached with coaxial cable. Therefore, communications transmission was accomplished via coaxial cable, dedicated-loop systems and dedicated point-to-point, point-to-multipoint cabling.

Local-area networks and switches evolved to provide nondedicated or switched data communications for these users. Transmission bandwidths required to support data communications were generally no more than 9.6K bit/sec from each terminal, but reached megabit rates in some special cases. In situations where low data rate remote access was needed, modems were used to couple through the local premises voice network. The systems and applications associated with data communications were tightly managed by a group of technically proficient data processing specialists who had their own organizations, budgets and languages.

In contrast, voice telephone communications was required throughout an organization for use by both technical and nontechnical people. Access was provided by wiring a facility with ▶

PHOTO © 1984 ED BRAVERMAN

inexpensive, twisted copper wire pairs to all personnel locations. The bandwidth requirement for each voice telephone was nominally 4 KHz. This bandwidth was easily accommodated for long distances over the twisted-pair wiring.

Telephone conversations are short — usually about five minutes. Evolving telephone systems capitalized on this by providing only enough circuit paths to ensure that a user has low probability of blocking when phoning another station. As a result, all of the users do not have access to the system simultaneously. For these systems, about 50% to 60% of the users can simultaneously converse with each other at the same time.

In many cases, the organizational responsibility for managing the voice communications facilities became another of the facility manager's many responsibilities. Later, for larger organizations, this function was delegated to a professional telecommunications manager.

The telecommunications organizations were considered as overhead cost centers, and their expenditures and personnel were generally tightly controlled. Most of the people required to administer the system were telephone company employees whose fees were buried as part of the leased cost for telephone service from the telephone company. As private branch exchanges (PBXs) evolved, this scene changed slightly by requiring that more of the telephone administration burden be borne by the telecommunications organizations.

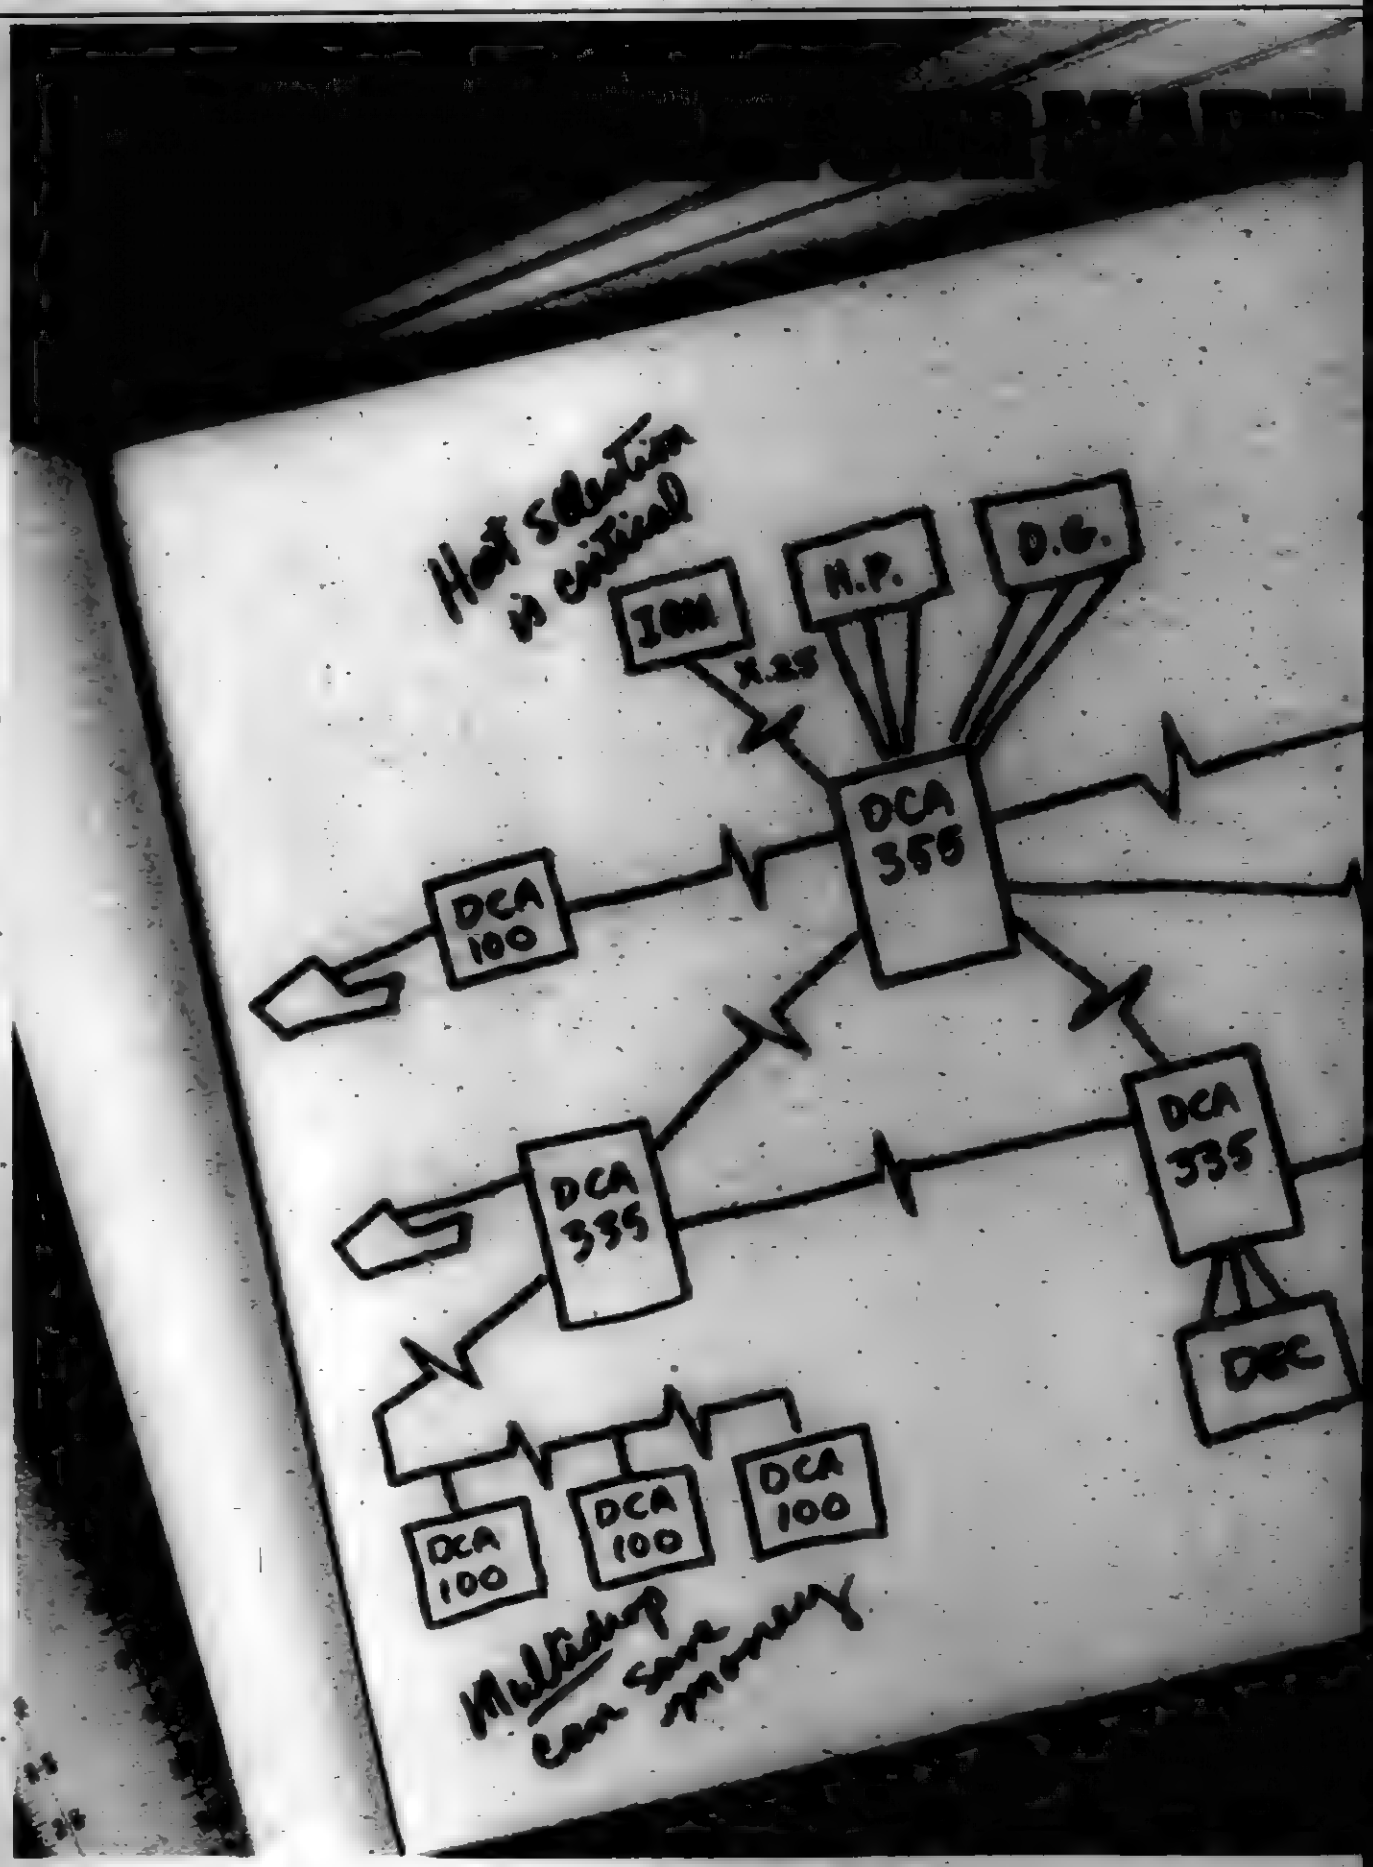
BEFORE 1980, voice and data integration was not a major issue and was accomplished by using modems to couple to the existing voice network. Because of the expense of modems and the limited bandwidth and capacity of the voice network, dedicated cable and loop systems were used. Totally integrated systems were not practical.

In 1980, a few integrated voice and data PBXs became available, and a small niche developed in the telecommunications marketplace. The users of such systems consisted of organizations with heavy data communications requirements, fairly technically oriented personnel and risk-tolerent managers willing to be pioneers in a new concept.

In many cases, the responsibility for managing the voice communications facilities became another of the facility manager's many duties. Later, for larger organizations, this function was delegated to a professional telecommunications manager.

The PBX systems available at that time were considered expensive by the telecommunications managers who compared them with the voice-only systems. This raised serious questions about the viability of the PBX as the office controller. Local-area networks received much attention from the data-oriented groups, and separate communications solutions for voice and data appeared more practical.

Around 1980, the key factor driving the market for integrated systems was



beginning to emerge, namely the proliferation of data equipment and data-based essential services to nontechnical personnel randomly located throughout a facility or campus. These services require that data communications be ubiquitous, as voice communications is. In addition, as people are relocated, their voice and data communications capabilities must follow. Separate systems for voice and data in this environment would sorely tax the resources of the organization and be awkward to administer.

When systems are integrated, a single group of technical administrators can focus on the interface requirements and protocols necessary to provide communications between equipment from different manufacturers.

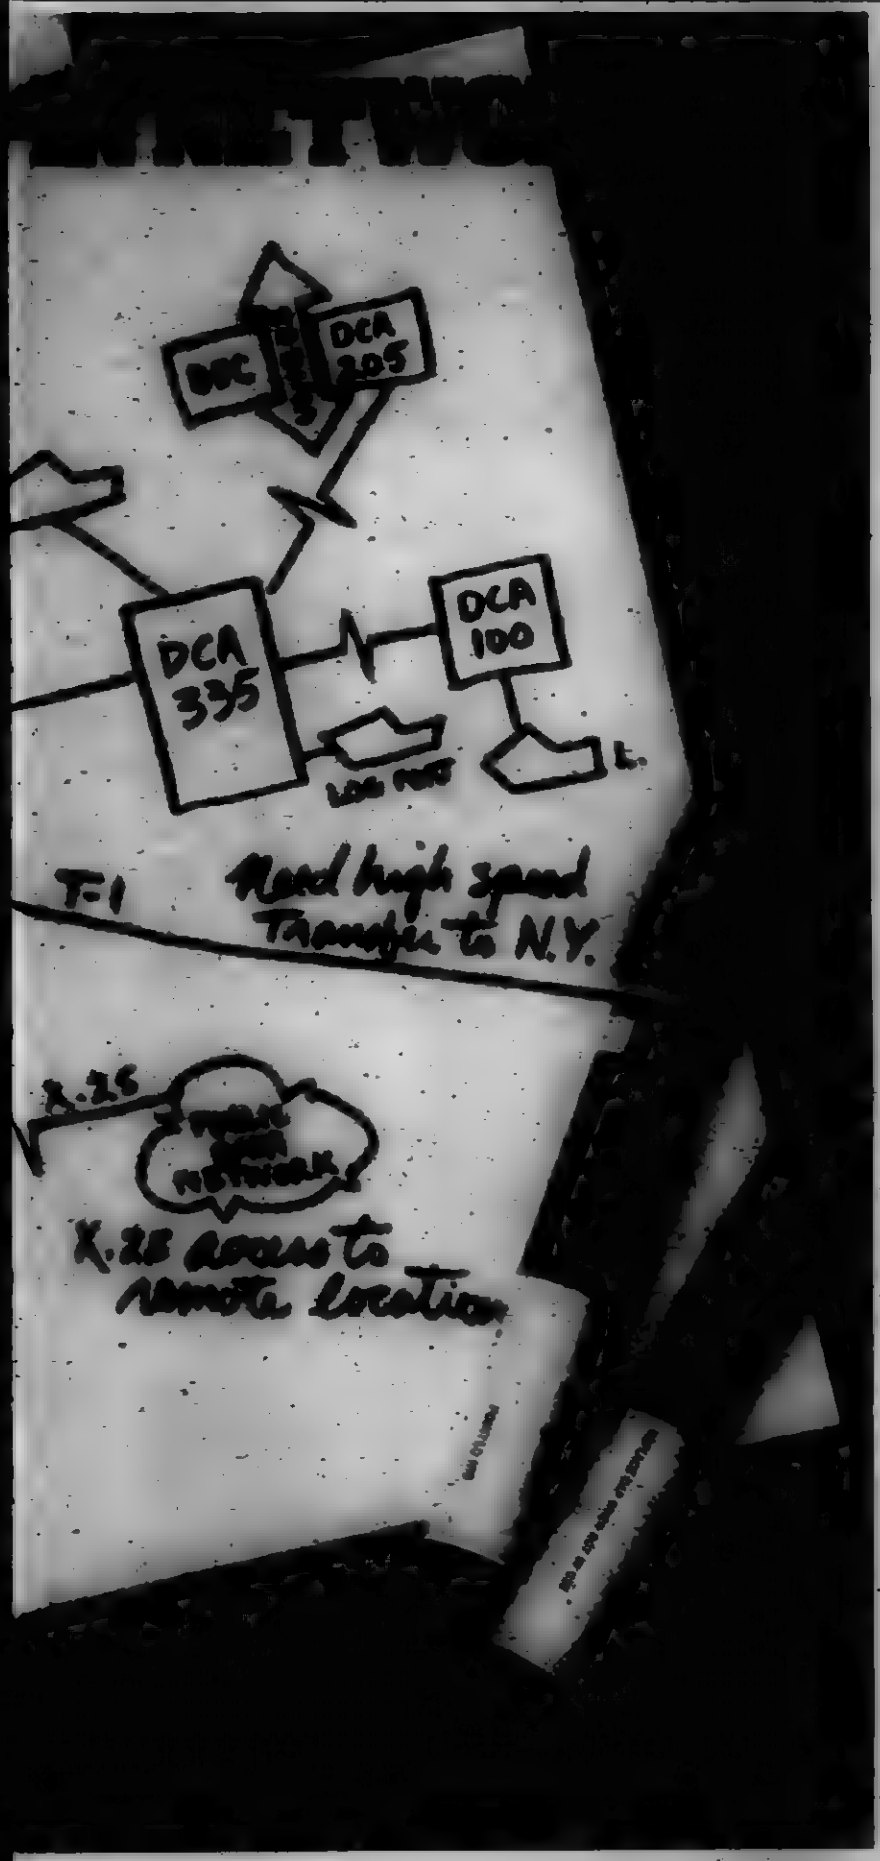
For example, duplicate sets of cabling would have to be strung to each location, one for voice and one for data, and existing conduits and ducts would have to serve many more cable runs from the separate voice and data organizations. Moreover, as moves or changes occurred, multiple groups would have to manage these moves, and multiple sets of cabling would have to be strung. In many cases, old cabling is simply abandoned and new cabling provided. This may seem to be a mundane problem, but many organizations are simply running out of conduit and duct space. It is expensive to add more to an existing facility. In addition, separate organizations and systems are not conducive to end-to-end integrated services.

When systems are integrated, a single group of technical administrators can focus on the interface requirements and protocols necessary to provide communications between equipment from different manufacturers. When properly implemented, the transmission requirements become transparent to the end user, and this stimulates more use.

Equipment and services requiring data communications to nontechnical personnel have begun to proliferate. A communicating word processor is an example of such a system. These word processors are currently penetrating the market at a growth rate of 15% per year. By themselves, however, word processors might not provide adequate justification for integrated voice and data systems, since they are being used for the most part by secretaries, who represent a small percentage of total personnel in an organization.

Other systems, such as electronic mail, personal computers and multifunction workstations extend the requirement for data communications to almost everyone. These systems are growing at annual rates of 25%, 20% and 50%, respectively.

YET THIS IS just the beginning. Off-premises networks that are available today promise access to a plethora of data-based information systems. Without this access, managers and staff members will be handicapped in the late '80s. Networks that provide end-to-end bandwidths of 1.54 MHz and



At DCA, we've developed what many regard as the most efficient, most effective networking design in the industry. We call it Integrated Network Architecture.® And here's what makes it work:

Complete network transparency. We make all our networking hardware to interface with all data processing hardware. So you don't have to modify your hosts or terminals.

Comprehensive network management. You can monitor transmissions, troubleshoot, even reconfigure parameters on-line from one central point. With a DCA network, you have total control.

Virtual circuit switching. For optimum efficiency, our network provides accessibility for any terminal to any host.

Error controlled transmission. Since we have practically erased the probability for undetected error, low-cost terminals can be used more reliably.

Compatible modular hardware. It makes our networks easy to maintain and inexpensive to expand. All you do is add—instead of replace—DCA components.

Integrated Network Architecture. Call us toll-free and we'll lay it all out for you: 1-800-241-5793. Or write: DCA, 303 Research Drive, Norcross, Georgia 30092.

dca

DCA Products Are Available Worldwide.

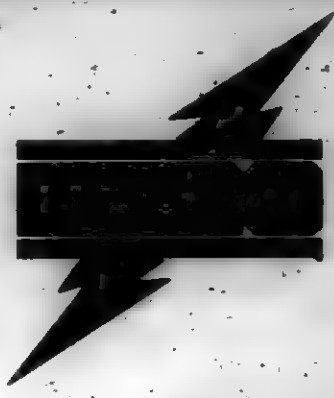
HERO SAVES IBM!

Incredible as it seems, even Big Blue needs to be bailed out now and then. Personal computers are such a runaway success, they're running Information Managers ragged. The problem is personal computers and mainframes don't always work together.

The result is Computer Shock. And nothing short of a HERO™ can cure it.

HEROISM COMES TO PERSONAL COMPUTING.

HERO is the intelligent, desktop Networked Personal Computer from MDS®. It does everything a personal computer can do. And lots that it can't. But HERO's main fame derives from its interaction with the mainframe.



INTELLIGENCE AT EVERY STATION.

Mated with the MDS SUPER 21™ Communications Processor, HERO can converse intelligently in IBM networks. HERO emulates IBM 3270 SNA and the 3776 remote-job-entry systems. Our SUPER SNA™ option gives you both on one communications link. HERO runs software under MS-DOS. Plus its own multitasking operating system.

HEROS UNITE AND CONQUER.

With MDS HERO and SUPER 21, you can access private, departmental and corporate databases. Instead of not working, your entire organization can be networking. Under your control.

And only MDS offers you INTELLIGENT 3270.™ So you can write your own programs and integrate them with data in the mainframe. HERO lets you retrieve information from the database, process it, display it and update it. Then either return it or store it locally.

EVEN HEROS NEED ALLIES.

In addition to HEROS, SUPER 21 is available with non-intelligent workstations within INTELLIGENT 3270 networks. MDS offer the PLUS 80™ family of plug-compatible controllers, printers and displays. They're directly interchangeable with corresponding IBM 3270 units.

MDS HERO MAKES A HERO OUT OF YOU.

With HERO and SUPER 21, your existing data processing investments become part of an ever-expanding fund of available data. All of it coordinated, cost-efficient and controllable.

MDS systems are planned for non-obsolescence. They're modular in design to accommodate future growth. So every MDS system, like a hero, is immortal.

GET THE ADVANTAGES OF BIG WITHOUT BEING BLUE.

MDS is a multidivisional, multinational corporation. We've grown by helping our customers to grow. By focusing our size and scope on responsiveness to their needs. Not just in IBM country, but beyond.

We can do the same for you, wherever you are. MDS offers service and support capability around the world, around the clock.

Ask our customers about us. And give us a call. Dial **800-MDS-HERO.** We'll show you how, when it comes to networking, MDS can help you unite and conquer.

MDS MOHAWK DATA SCIENCES

7 Century) Drive, Parsippany, New Jersey 07054. And over 430 locations, worldwide.

PBX Life Cycle

above, distance-insensitive satellite coverage and wideband fiber-optic networks will transport services, such as those provided by Source Telecomputing Corp., MCI Communications Corp., Compuserve, Inc. and others. In addition, essential proprietary corporate data bases, developed and controlled by management information systems managers and other corporate staff, will also be transmitted over these networks.

As a result of the rapid market penetration of many of these systems and services, the trend toward integrated voice and data systems is beginning to spread to the mass business market. Most corporate telecommunications and teleprocessing managers are aware of these trends and expect the percentage of users of these services to increase dramatically within the next five years. As a result, they are scrutinizing new system procurements to ensure that they are future-proof to the extent that they can modularly accommodate these emerging services.

Since 1980, when the first integrated voice and data PBXs were installed, the manufacturers and the industry have matured, and many major issues and trends in integrated services have come into better focus. Today, suppliers of integrated voice and data PBXs are emerging as strong contenders for the integrated office communications controller role. Systems available today — and many more announced for delivery in 1984 — will provide integrated voice and data communications at relatively low incremental costs for data. In addition, some systems provide transmission rates as great as 1M bit/sec and employ the best elements of PBXs and local-area networks.

THE INSTALLED BASE of PBXs and AT&T's Centrex business telephone lines represents the total potential market for integrated voice and data PBXs. By the end of 1982, this installed base amounted to over 20 million lines, with an overall annual growth rate of about 3.5%. The value of this installed base — assuming total replacement by PBXs in 1983 — is about $20 billion. The annual market resulting from a growth of this base and a replacement of older switches with newer ones was over $2 billion in 1982..

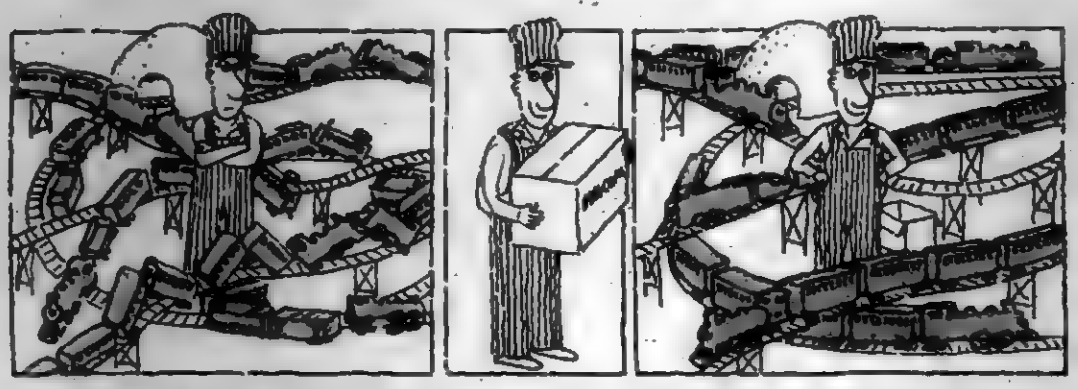
The installed base is currently comprised of several vintages of switching equipment. They include first-generation electromechanical and hard-wired electronic switches; second-generation centralized, computer-controlled, software-programmable, limited-capacity switches; and third-generation distributed processing, nonblocking, integrated voice and data switches with digital transmission capability from station to station.

The second-generation switches first appeared in 1975 when Rolm Corp. and Northern Telecom, Inc. introduced their CBX and SL-1 PBXs, respectively. These switches became popular quickly because they offered many convenient user features, ease of modification and upgrading and rapid payback. Shortly after Rolm and Northern Telecom introduced their switches, several other manufacturers introduced switches with similar characteristics.

All of these second-generation systems were designed mainly to provide voice-only communications, with all systems using analog transmission between the telephone set and the switch. Any switched data communication between stations required expensive

WHEN IT COMES TO CONTROLLING YOUR DATA NETWORK,

THE IDX-3000™ PUTS YOU ON THE RIGHT TRACK.



Control can be a major problem with a large network. That's why our IDX-3000 Local Communication System features the IDX-Net™ network controller. With IDX-Net, you handle configuration management on-line. You can manage major network topology changes, such as disaster recovery, with only a few keystrokes.

IDX-Net lets you access network control commands and diagnostics from any terminal in the network, including dial-up. This means that you, or MA-COM Linkabit's Hotline Service, can diagnose your problem in seconds without having to be in your computer room.

Programmability
IDX-Net's 68000-based network controller software provides you with the capability to interface host-resident application programs to the network. You can build-in your own custom-tailored network management features.

User convenience
In addition to traditional data PABX port contention and resource selection, IDX-Net provides your authorized users with many of the features offered by modern telephone systems. They can connect, disconnect and hold lines to multiple computer resources and execute third-party connects.

For the office of now
With the IDX-3000, you can start with a small system that fits your current needs and budget, then grow to obtain non-blocking, full-duplex asynchronous communication for as many as 3072 lines, all at data rates of up to 19.2 Kbps. The IDX-3000's proven TI-based technology is fault-tolerant, with optional redundancy features throughout its distributed architecture, and automatic, continuous self-testing. The IDX-3000 isn't one of those products of the future. It's here now—proven, in use, and backed by MA-COM, one of the nation's largest communication companies.

If you want to get control of your network, contact Ruth Stoffel at MA-COM Linkabit, 3033 Science Park Road, San Diego, CA 92121, toll-free (800) 626-6640 or (619) 457-2340. We'll put you in control.

THE NETWORK YOU CAN CONTROL

MA-COM

modems and was generally limited to data rates less than 4,800 bit/sec. However, advanced voice-related features, such as least-cost routing, call detail recording, networking and others, further enhanced the benefits of the PBXs and stimulated sales.

Because these systems were designed to handle voice traffic, with relatively short conversations, the long holding times associated with data communications occupy and hold internal circuits normally shared by several voice users. As long as the data stations represented a small percentage of the total, these systems offered adequate capacity. However, as the percentage of data users grew, blockages occurred, preventing additional users from establishing connections.

By 1981, hundreds of station and system features were available on these switches, and the list of manufacturers providing second-generation switches grew to about 20. Rolm and Northern Telecom introduced integrated voice and data upgrades to their second-generation systems, and Intecom, Inc. delivered a new third-generation PBX. The Intecom system, unlike its predecessors, featured a totally nonblocking feature capable of digital transmissions from station to station.

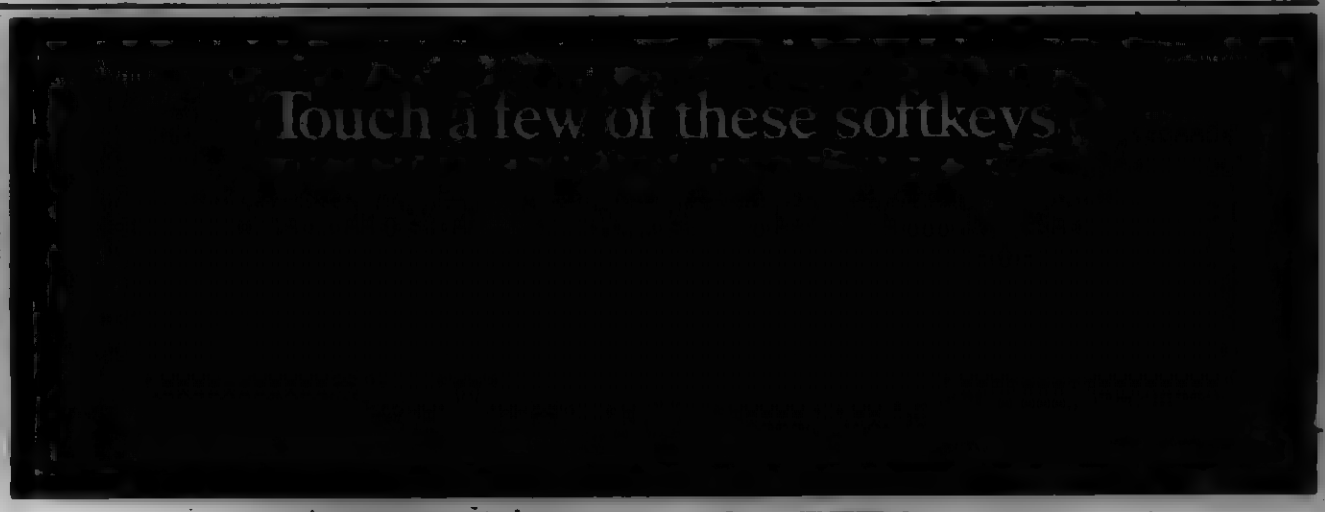
Even the voice signal was converted to digital form at the telephone. The system was also capable of distributing its switching equipment throughout a campus facility without degrading the features. This PBX was designed to accommodate heavy data communications requirements. Shortly after Intecom's product was released, Lexar Corp. introduced its own third-generation PBX, and other second-generation manufacturers began upgrading their systems as well.

In 1983, Ztel, Inc. and CXC Corp. both announced their fourth-generation systems using token-ring and Xerox Corp.'s Ethernet local-area network technology. They are scheduled for delivery this year. When these systems are fully developed, they will provide third-generation features in addition to advanced features such as distributed and layered software with functions that can be reallocated to various processors and station data rates that can be instantaneously increased to more than 10M bit/sec.

Integral local-area network technology is featured, and Ztel is offering a baseband token-ring system said to be compatible with IBM's still unannounced local-area network. CXC offers token-ring and Ethernet compatibility with a combined baseband and broadband system. Both systems promise time division multiplexing/post code modulation circuit switching and packet-switching capability, open system architecture, protocol conversion, high-level software languages, X.25 and T-1 interfaces and excellent modularity.

In addition, Northern Telecom announced its "Open World" development program, which promises compatibility be-

In 1983, Ztel, Inc. and CXC Corp. both announced their fourth-generation systems using token-ring and Xerox Corp.'s Ethernet local-area network technology. They are both scheduled for delivery this year.



and you'll know why HP's new Protocol Analyzer could pay for itself the next time you have a network problem.

Perhaps it's time you took control of your datacomm problems. The minute one of your datacomm interfaces crashes, you're faced with more than inconvenience. A bill for service calls, as you play "vendor roulette" trying to locate the problem, can run into thousands of dollars. If you're faced with a down network, it can cost a hundred times that.

Take control with HP's new 4955A Protocol Analyzer. Its softkey-guided interface lets you troubleshoot your datacomm problems *before* you call in repair personnel. And you can monitor, simulate and trigger from 50 bps to 72 kbps. Avoid vendor fingerpointing by quickly diagnosing DCE/DTE malfunctions and isolating the fault yourself. Nonintrusively monitor network traffic to catch protocol glitches before they turn into full scale problems. Save time bringing new datacomm equipment on-line simulating modems, line, CPU, and/or terminals.

Multiple display formats are dedicated to identifying protocol problems easily at the physical interface, frame, and packet levels. In one format, the 4955A will give you *data transmissions* with *lead transitions* so you can see handshaking faults at once.

The HP 4955A supports the major protocols and standard data codes. But what about your own unique protocols and architectures? Our datacomm-enhanced BASIC lets you program sophisticated test routines and perform higher-level protocol analysis. Create statistical displays (tables, graphs, histograms) and perform detailed message manipulation for your own network needs. Add to that the capability of printer output and you have permanent, long-term records of performance. Your efficiency is improved for network planning and expansion.

Communications debugging and trouble-shooting are done quickly and easily either on-line or in a post-processing mode. The 63 triggers, the most extensive in the industry, enable you to trap real time so you can catch elusive problems. The intelligent 128K-character capture memory saves you time by eliminating idles without sacrificing timing information. And you've just increased your real data storage!

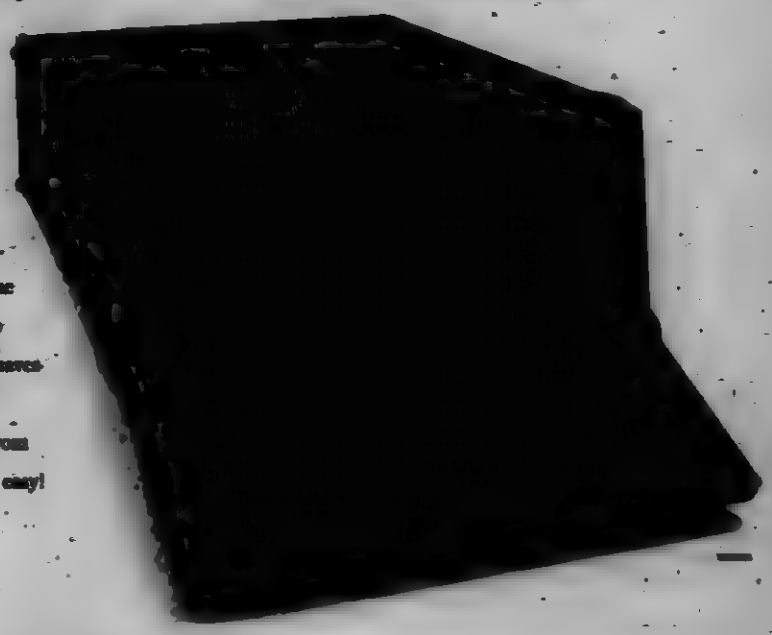
And the softkeys? They're the best feature! From power-on right through complex measurement sequences, they're dedicated to making your job easy!

In fact, so easy you're presented only with valid choices every time you select a menu setup or change. You don't have to memorize cryptic syntax.

The HP 4955A Protocol Analyzer. It speaks your language. It speaks your network's language. It's your key to rapidly solving network problems in the datacommunications marketplace.

For a technical data sheet, write to Hewlett-Packard, Literature Distribution, 1820 Embarcadero Rd., Palo Alto, California 94304 or for more information, call your local HP sales office listed in the telephone directory white pages. Ask for an HP Instruments Field Engineer.

HEWLETT PACKARD



See us at Communications Networks/'84, Washington D.C., Booth U

tween various data processing and office equipment products. AT&T announced its System/85 integrated voice and data PBX. Intecom also announced IBM 3270 protocol converters.

One of the major questions plaguing voice and data integration has been end-user prices. In 1979 and 1980, incremental prices for adding data ports to the voice network exceeded $1,500 per port. This price has dropped significantly. Currently, the incremental, end-user price to add data ports falls between $400 to $600 per port. The price reduction is due to significant equipment redesigns to accommodate data better and due to increased competitive pressures.

The trend is clearly set. The industry will continue to move toward integration of voice and data communications. And the number and usefulness of data-based services from public sources and internal corporate sources will increase.

The trend is clearly set. The industry will continue to move toward integration of voice and data communications both in on-premise and off-premise networks. At the same time, the number and usefulness of data-based services from both public sources and internal corporate sources will increase. More people are expected to depend on electronically delivered information.

Prices for integrated systems will continue to drop, with the incremental price to add a data port to an integrated voice and data PBX expected to reach $200 or less by 1987.

There will be a continual migration from the older generation systems to the newer systems. In the same way that second-generation switches replaced the first-generation switches, third- and fourth-generation switches will eventually dominate the market. The figure on Page 80 shows the life cycles of these systems over the next decade. The shaded areas of the curves represent the estimated extension of product life resulting from the upgrading of older generation switches by adding advanced generation features.

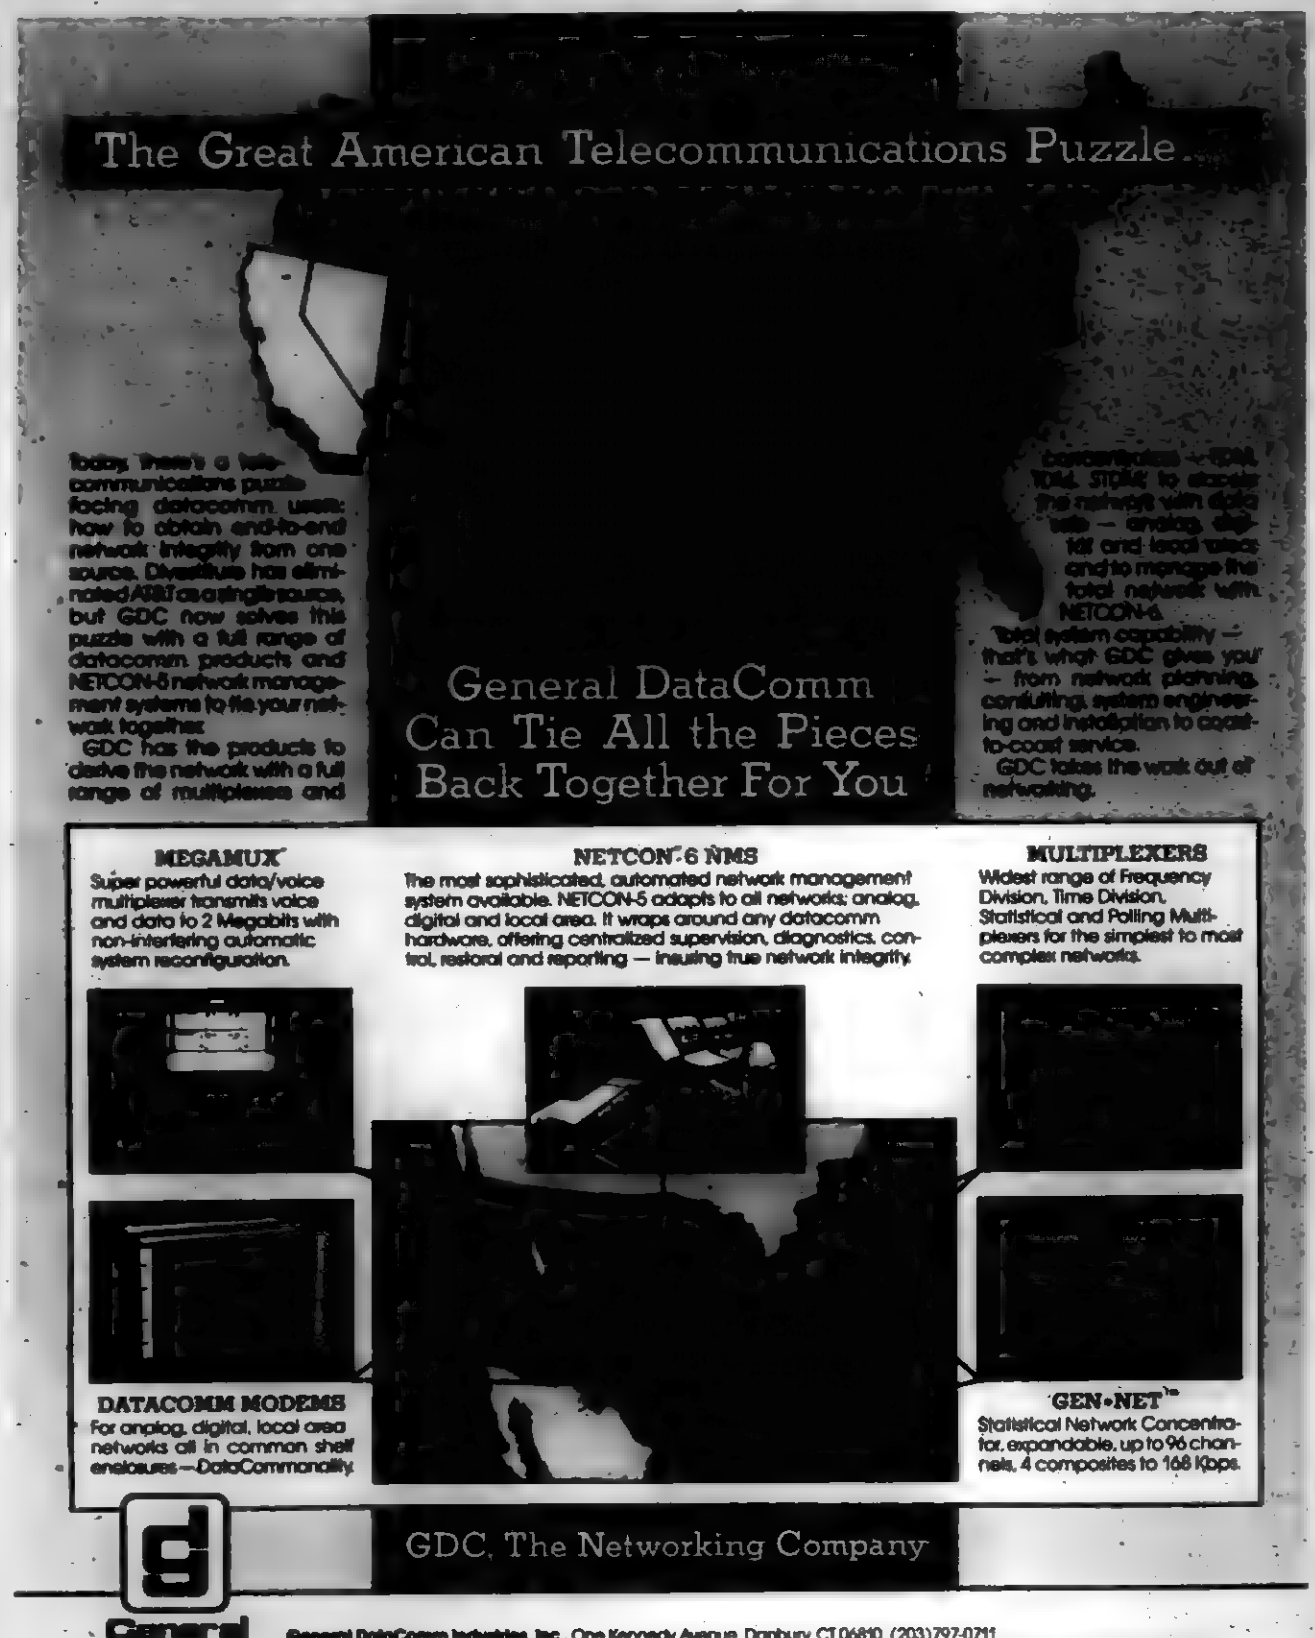
Centralized data processing, telecommunications and office equipment organizations will develop within end-user organizations in most industries. These organizations will assume the responsibility of integrating voice and data requirements, coordinate procurements and administer the system operations.

Suppliers will provide total packages including integrated voice and data communications and specialized application packages. New alignments will occur between distributors and manufacturers of telecommunications, data processing and office equipment.

These will provide end users broad product portfolios and application packages encompassing all of these technologies.

The issue of separate or integrated voice and data systems will dissolve, and new issues will replace it. Issues such as bit-rate capacity, protocol compatibility with other equipment and networks and user friendliness will continue to be important end-user buying criteria. ■

Budwey is a senior consultant with Arthur D. Little, Inc., Cambridge, Mass.



TOM WILLMOTT
& JOE PIERCE SR.

The Emerging Telecom Director

Currently, two impressive information processing trends are emerging. First, microprocessor-based systems now permit the distribution of computing power throughout every large organization, placing new emphasis on the end-user liaison role in the management information systems (MIS) group in general.

Second, the distribution of processing resources implies that these dispersed workstations and computers must communicate for maximum effectiveness. In many large corporations and government agencies, this subtle inference has focused attention on job descriptions relating to communications. Clearly, communications is the hot MIS job responsibility in the country today.

Nevertheless, interviews conducted by International Data Corp. (IDC) indicate that the availability of top-quality candidates for this position, especially in certain geographic locations, is almost more important than the money available to fund the requisition in an MIS budget.

There is a limited pool of communications management talent. Sometimes existing communications personnel have experience in voice, but not data, or in data communications, but not business management. In the area of private branch exchange (PBX) selection, for example, it is possible that a PBX purchased two years ago was acquired by a member of the organization's administration, rather than by MIS. This is simply because the voice communications manager did not report to the MIS group.

Historically, there have been three stages in the development of the communications function. In the first phase, which occurred in the '60s, the computer facility processed batch applications, and the communications function consisted primarily of terminals and peripherals hard-wired to the CPU.

In the second stage, which emerged from the installed base of minicomputers in the '70s, the communications environment was defined by leased telephone lines to remote sites for remote job entry applications and batch data file transfers. The communications function was critically important, but the job description was relatively limited in scope of opportunity.

Now we are entering the third stage — the age of networks. Communications is a value-added application, available on almost every conceivable microprocessor-based device, including word processors, personal computers, printers, copiers and scanning devices.

The problem from a technology management perspective is to define the optimum network for the organization. Perhaps every device does not need to communicate. Assumptions about critical business information and high-volume traffic links must be made in order to develop successful network strategies.

ILLUSTRATION BY BOB DAOU

Because the scope of the technical work has grown so dramatically and because the AT&T divestiture has only recently arrived at a moment of truth, few companies have had the luxury of devoting a full-time staff to long-range communications planning. Recruiting new talent has proven difficult and expensive.

When the perspective of the few local qualified candidates seems too narrow to help the organization draft a plan for sophisticated future systems or when there is simply no one from the outside with a good business management sense, it may be necessary for the information systems planning department to groom young, talented staff members for promotion to the new job descriptions.

IDC has isolated several major areas of responsibility pertaining to this expanding field. In the following sample case, we have structured the department with a director of telecommunications policy. The managers of telecommunications, office communications and network control report to this director.

It should be noted that the model is not a total solution for every organization, but it does offer a simple checklist for comparative purposes. The director's numerous responsibilities are outlined below.

The incumbent director of telecommunications policy will be responsible for the general coordination of communications systems and requirements, both voice and data, within the corporation. This includes the responsibility of managing data processing traffic and all office communications through the corporation's telephone systems.

In addition to the general duties described above, the director of telecommunications policy should be a member of the information resource planning board within the corporation. As such, he will be expected to formulate long-range forecasts of communications needs so that the corporation can better meet future demand. It is expected that the director of telecommunications policy will work with the director of data processing policy. Both report to the vice-president of information systems.

Although a heavy technical background is not mandatory, an ability to select and nurture technical managers is necessary. In addition, a college degree with at least 10 years of increasing supervisory and management experience in the data processing and/or telecommunications field is required.

The position is at the officer level with a salary range of $55,000 to $70,000 per year. In addition, the director of telecommunications policy reports to the vice-president of information resources.

There are several primary areas of concern beyond those specifically outlined for the director of telecommunications policy. First, he is responsible for telecommunications, defined as all voice and data traffic outside the corporate headquarters building. For example, he is responsible for liaison with AT&T Information Systems or bypass carriers, in coordination with PBX suppliers and the corporate office communications group.

He is also responsible for the installation of data lines within the corporation — for example, lines to remote terminals and lines between data centers.

Second, the director is responsible for office communications. His duties here include voice-only and internal-to-corporation communications. He manages office moves and telephone number changes. He is responsible for PBX analysis, least-cost routing and station message detail recording tracking. He is the liaison to finance.

This job might also focus on the key issue of the role of PBX in local-area network and local data traffic strategy. This assumes contact with end users and perhaps analysis of new low-end data and voice terminal products. The director is responsible for modems, coder/decoders and other options.

Third, the director of telecommunications policy plays a role in network control. He is responsible for troubleshooting and maintaining communications software packages, such as Vtam and Btam in IBM environments.

The director's duties include assessment of other issues, including migration from IBM Binary Synchronous Communications to Systems Network Architecture/Synchronous Data Link Control, market trends and network security. Node and link capacity planning also fall under this heading.

In addition, the director of telecommunications is heavily involved with DP strategists. He interacts with them in such areas as selection, installation and maintenance of sophisticated data switches.

From our market research and consulting perspective, these are the areas evolving as major topics of concern. Obviously, it will be difficult to fund or staff all the assignments on our sample chart immediately. However, we do recommend that the technical areas be covered in the electronic data processing planning group. This sample case can be used as a fundamental benchmark for your communications planning. ■

Willmott is director, user research, and Pierce is senior consultant, communications, IDC, Framingham, Mass.

Can you answer these questions on local area networks the way you would have two years ago?

1. Is broad *versus* base band still an important issue?
2. Will local area networks and PBXs co-exist, be mutually exclusive or will one be subservient to the other?
3. What role does VLSI technology play in linking peripheral devices to local area networks?
4. What are the standards?

The March issue of *Computerworld On Communications* will give you answers to all the questions above—and much more. You'll get an overview that takes a close look at LAN products and technology and then examines it in the light of competing PBX technology.

You'll get information on linking mainframe computers and local area networks. You'll get an examination of token ring technology. And there's more! You'll get lots of special feature articles on communications topics from "Who the Bell operating companies are buying from" to a profile of Rolm Corporation. Take a look at what some of our other features will cover for you:

- Communications processors.
- R&D in communications companies.
- Fiber optics.
- The low end of the PBX market.
- International record carriers.
- Workstation telephones.
- The future of Centrex.
- Protocol conversion.

Computerworld On Communications is designed to give you in-depth coverage of the broad spectrum of voice, image and data communications from a systems perspective. As a *Computerworld* subscriber, you'll be getting six issues of *Computerworld On Communications* in 1984—as part of your subscription! And if you need to be on the cutting edge of networking technology, you won't want to miss the March 14th issue.

If you've got communications products our readers should know about, then you need to get your ad reservation in by February 3rd. The materials are due one week later on February 10th. To reserve ad space in the March 14th issue of *Computerworld On Communications*, call one of the sales offices listed below, or call Ed Marecki, National Sales Director at 617-879-0700.

ISI vs. Intelsat: Will ISI Stay Grounded?

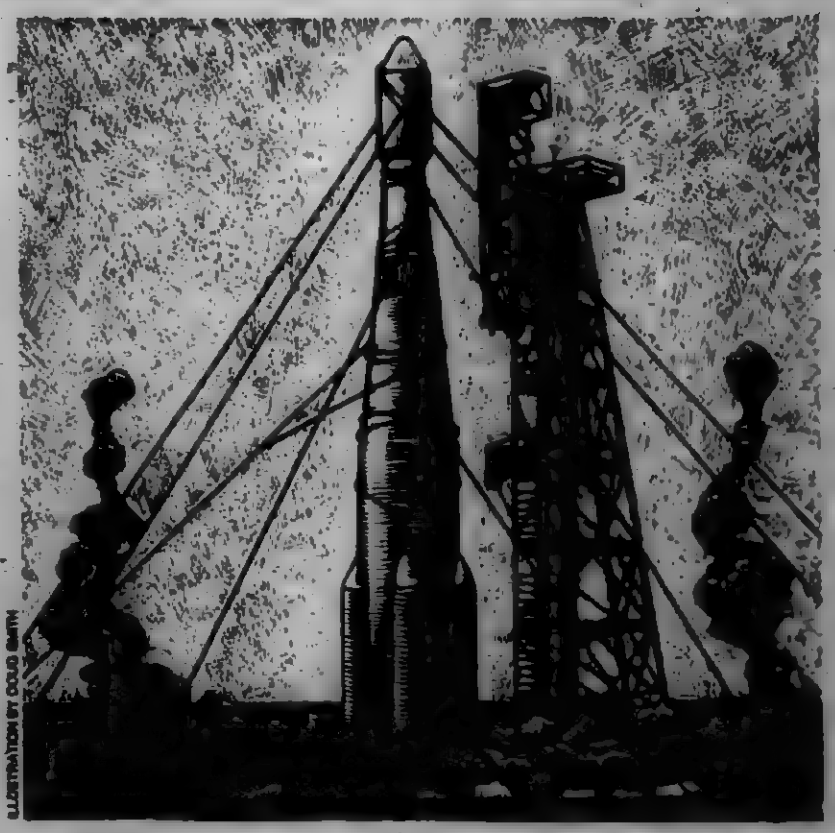

ILLUSTRATION BY DOUG SMITH

The current disagreement between International Satellite, Inc. (ISI) and the International Telecommunications Satellite Organization (Intelsat) stems back to 1962, when the Communications Satellite Act became law. The act called for the establishment of a single global satellite system. In February 1963, Communications Satellite Corp. (Comsat), a publicly owned private corporation that provides international and domestic communications services between the U.S. and foreign points, was formed as an outgrowth of the act. Intelsat, the vehicle for the global satellite system, was spawned on Aug. 20, 1964.

Today, Intelsat is comprised of 108 member countries, with Comsat as the U.S. signatory. Intelsat's global network transmits and receives telephone, teletype, data, facsimile and television communications, touching 172 countries and territories around the world.

On Aug. 12, 1983, ISI filed an application with the Federal Communications Commission, proposing to launch two satellites to provide the North Atlantic region with communications services — primarily in video distribution and data communications. Intelsat objects to the application, claiming it violates the Communications Satellite Act's commitment to Intelsat's "single global communications system."

ISI recognizes Intelsat's achievements, but argues that the 1962 act allowed other systems to be established "if otherwise required in the national interest." ISI claims that it will fill voids in video distribution and high-speed data and that its plans are in the national interest.

Computerworld On Communications *asked Comsat and ISI to recount their arguments for or against the application.*

PRO

International Satellite, Inc. (ISI) was formed to develop new satellite communications markets and services in the North Atlantic region. The principal participants in ISI are TRT Communications, Inc.; Satellite Syndicated Systems; and Kansas City Southern Industries, Inc. ISI has filed an application with the Federal Communications Commission (FCC), in which it proposes to construct, launch and operate two in-orbit Ku-band satellites that will be located at 56 degrees and 58 degrees west longitude.

From these orbital locations, ISI will be able to serve the entire continental U.S. as well as most of western Europe using customer premise, small aperture earth station antennae that will allow customers to transmit and receive signals directly with the satellite. ISI expects to serve primarily the video distribution and data communications markets.

The impetus for the creation of ISI was the conviction that Communications Satellite Corp. (Comsat) and International Telecommunications Satellite Organization (Intelsat), for all their unparalleled achievements, were neither adequately meeting nor even planning to meet the international satellite communications needs of the U.S. private sector in the North Atlantic region. About 85% of Intelsat's traffic and revenues come from the provision of ordinary voice telephone circuits. Despite a recent gradual widening of the scope of Intelsat's services, in ISI's view, there is still a need for more communications services and arrangements in the private sector. These services must extend beyond the traditional leased voice services on which Intelsat has concentrated.

ISI believes there is a substantial need for video program distribution services and, to a lesser degree, high-speed data. Specifically, such services need to be provided in a configuration that offers rooftop-to-rooftop capability — for example, one satellite hop from origin to destination. These services must also offer full continental U.S.-to-Europe coverage, full redundancy of equipment in the event of a facility failure and private user ownership of the facility. ISI plans to sell at least 50% of the spacecraft directly to users, reserving 15% to 30% for common carrier service at tariffed rates.

The ability to provide a direct link by satellite for customer location to customer location will substantially reduce the cost to wideband users: Double hops or lengthy land-line extensions can be eliminated. Moreover, by offering space segment capacity with unique capability at competitive rates and on innovative terms, ISI believes it will stimulate new regional satellite uses that would otherwise not be developed or would be delayed. The ISI proposal also advances important U.S. goals with respect to national security communications and trade in telecommunications services. It helps to assure that an independent regional satellite system in the Atlantic region is of U.S. origin.

ISI believes that its proposal will be beneficial to all concerned. This includes the U.S. private-sector user of telecommunications, the public domain that will invest in ISI and even the existing providers of international satellite services whose best competitive instincts have been allowed to lie dormant for too long.

ISI's proposed system offers

(Continued on Page 86)

CON

When the Communications Satellite Act became law in 1962, the U.S. committed itself to establish a global commercial communications satellite system. The act's goals are far-reaching and ambitious: to provide service to less economically developed countries, to use the electromagnetic frequency spectrum in as efficient and economical a manner as possible and to ensure that the benefits of the new technology are reflected in both quality of service and charges. For close to 20 years, Comsat and Intelsat have been achieving these goals.

Today, Intelsat is an internationally acclaimed political and commercial success composed of 108 member nations. It owns and operates satellites over the Atlantic, Pacific and Indian Ocean regions, carrying two-thirds of the world's international telecommunications traffic and all of its international television transmission.

Some 172 countries and territories around the world use the Intelsat system through 165 earth stations located on tiny Pacific islands, in the tropics of South America, the mountains of Asia and wherever there is a desire to communicate with other nations. In addition, 28 countries have used Intelsat to establish domestic communications networks bringing remote communities into the mainstream of their nation's activities.

The U.S. was the principal sponsor of Intelsat, and through it, the U.S. has assumed and maintained a leadership role in extending the benefits of modern satellite communications to all nations. Over the years, Intelsat has also provided a cooperative commercial mechanism for the development, utilization and management of scarce orbital arc and frequency spectrum resources.

At the same time, Intelsat has enabled the U.S. to obtain reliable and economical global communications services without relying on systems in which it has no representation or control.

Given this background of Intelsat's unequivocal success and benefits to the U.S., it is ironic that the U.S. has become the focal point of efforts to undermine the successful continuation of Intelsat's operation of a global commercial satellite system.

Recently, certain applications have been filed with the Federal Communications Commission proposing systems in competition with Intelsat. These applications contend that the Satellite Act leaves open the possibility of creating additional communications satellite systems. However, the act specifically permits creation of additional communications satellite systems only "if required to meet unique governmental needs or if otherwise required in the national interest." This language unequivocally makes it necessary for the proponents of any other system to prove that overriding national interests exist that require a separate system.

The proponents of these competing systems have adopted a dangerously casual approach to the application of certain articles of the Intelsat Agreement. This agreement requires all members, prior to establishing space segment facilities that are separate from Intelsat, to consult Intelsat to ensure that the separate facilities do not interfere technically with the Intelsat system and do not result in "significant economic harm" to Intelsat.

(Continued on Page 87)

PRO

(Continued from Page 85)

many advantages. It advances U.S. procompetitive policy, creates new markets, introduces new services, expands technological and price competition, offers flexible ownership or lease arrangements, advances U.S. policy on orbital resource allocation and provides diversity and emergency communications capability for the U.S.

ISI fully understands that its proposal raises important public policy issues. These issues turn on the meaning and intent of the Communications Satellite Act of 1962 and the provisions of the Intelsat Agreement. Both have crucial foreign policy dimensions.

Opposition to ISI has arisen from Comsat and Intelsat. Their opposition is based on the contention that approval of ISI would be a radical departure from the U.S.' historic commitment to the single global system.

The U.S. commitment to Intelsat must be properly understood. It is not unconditional; it is not exclusive; it is not inflexible. The telecommunications environment has changed dramatically since the international community adopted the Intelsat concept. More than half of Intelsat's member countries are participants in — or are actively studying participation in — regional communications satellite systems.

It is critical that U.S. policy adapt itself to the new environment in which Intelsat has emerged as a strong, successful institution. This certainly does not mean Intelsat's global mission is at an end, nor that it no longer has a vital role. It simply means that Intelsat must take a more flexible stance in which its institutional purposes and needs are complemented by those of other organizations.

The Communications Satellite Act of 1962 provided Comsat with a unique mandate to represent the U.S. in a "single global satellite system." At the same time, the act also provided that other systems could be established, if required, in the national interest. Intelsat, through its executive organ, has argued that U.S. approval of ISI would be inconsistent with the U.S. commitment to Intelsat because such approval would destroy or seriously wound Intelsat. The nonbinding standard to which the U.S. agreed is the avoidance of "significant economic harm" to Intelsat.

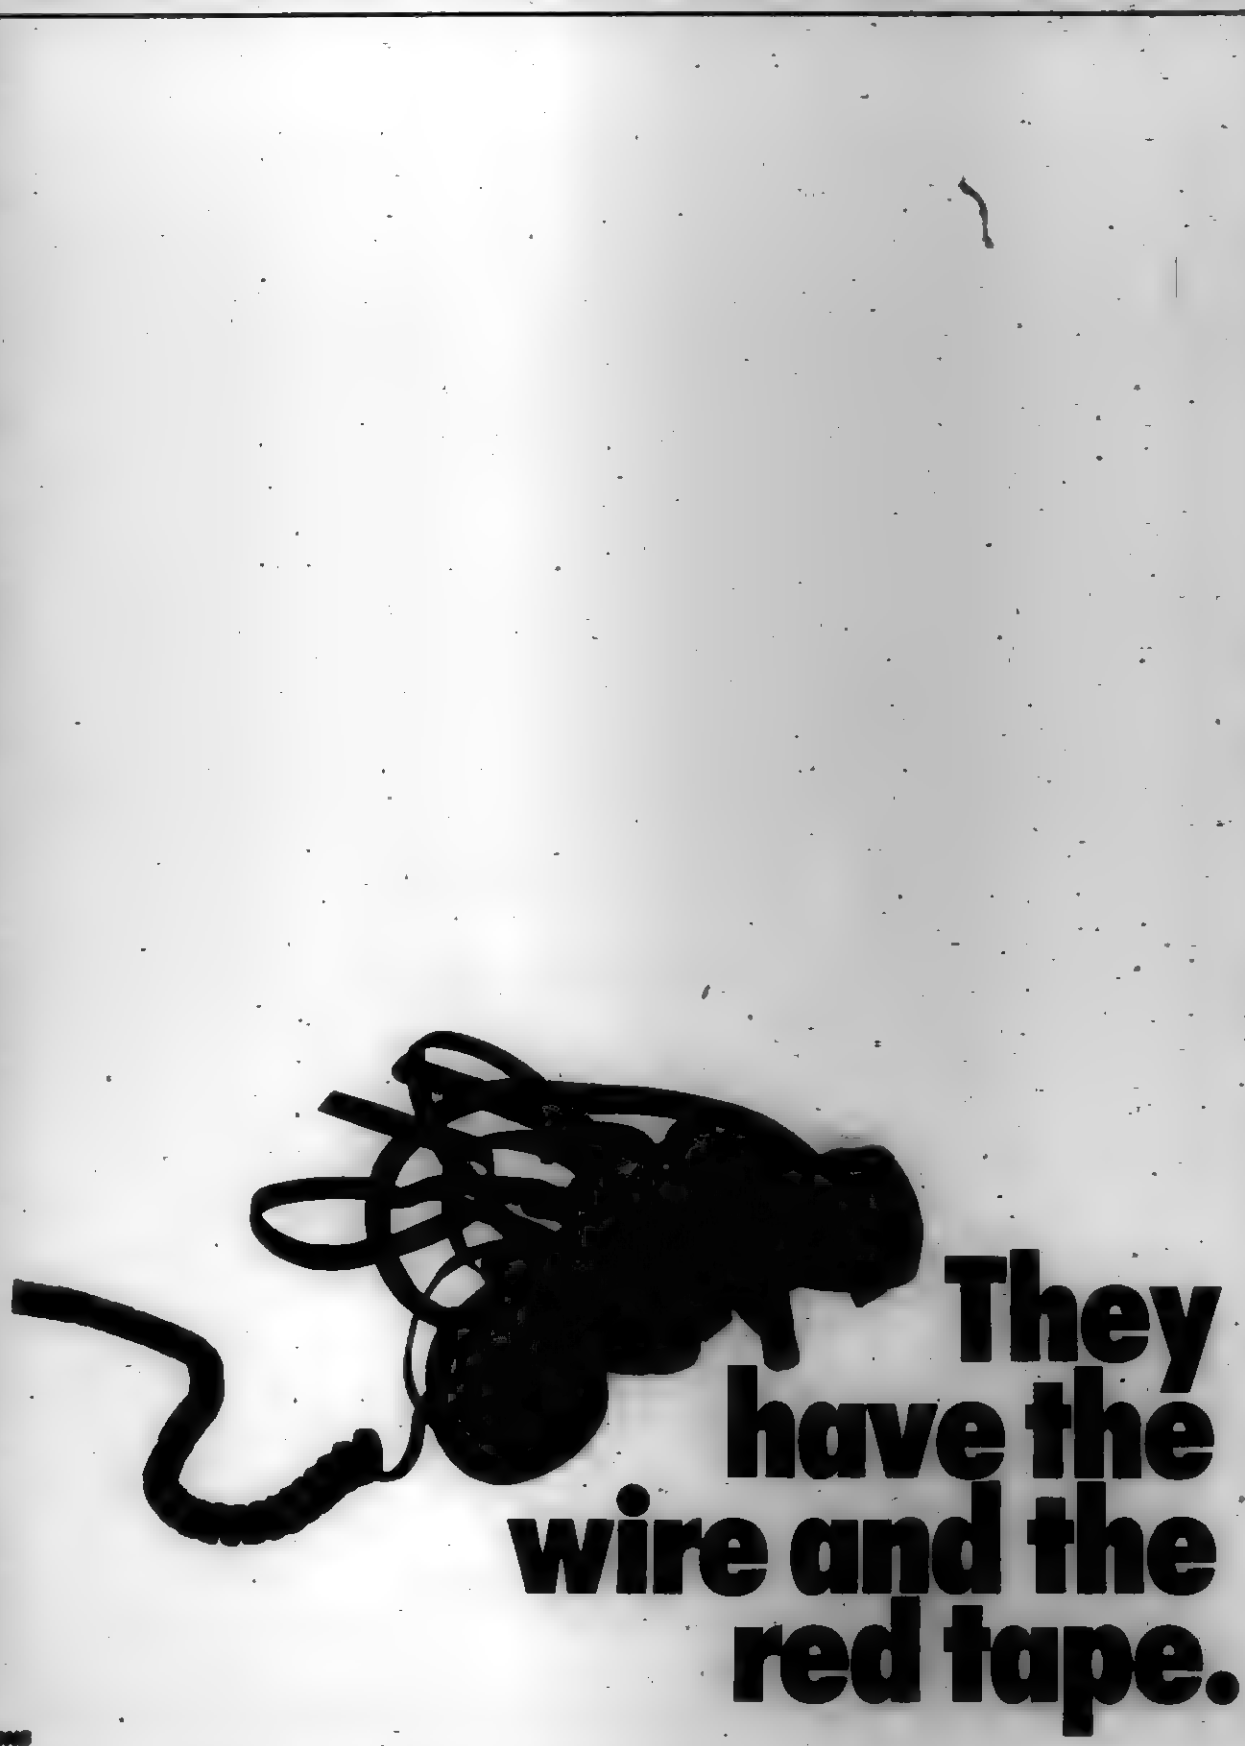
Keeping these coordination procedures in mind, ISI's application showed that ISI would not cause significant economic harm to Intelsat. In fact, ISI showed that over a period of seven years of operation, it would have a cumulative revenue impact of 3.18% on Intelsat, or a little over .5% a year. ISI noted that Intelsat has been growing at the rate of 15% to 20% a year, so a .5% annual impact would account for about two weeks' growth. Neither Comsat nor Intelsat has even attempted to refute ISI's economic assertion.

Intelsat claims that ISI will yield the benefits of the heavy North Atlantic route, weakening Intelsat so that it will have to raise rates or reduce service for the thin route countries in other regions of the world. There are many logical difficulties with this argument. Intelsat has not shown that the North Atlantic routes subsidize their thin ones. The only serious attempt to study the matter reached the opposite conclusion. The study was conducted in the summer of 1983 by Dale N. Hatfield Associates, a private consulting group, in support of the Orion Group application to the FCC.

It has been suggested that if ISI is allowed to proceed, precedent would be established and many other systems would be proposed. It is argued that Intelsat's future would be threatened by the large number of regional systems proposed. ISI has no way of predicting whether such a cascading effect would occur. ISI sees no reason why this speculative result should pose substantial dangers for the U.S. If the international community wishes to proceed in that fashion, the U.S. could not prevent it and might be better off on balance for the reevaluation.

The Intelsat system currently in place has served the U.S. and the rest of the free world well. ISI does not wish to undercut Intelsat. Approval of ISI does not signal any change in the U.S. commitment to Intelsat. It is, in fact, well within the clear parameter of the U.S. commitment. Certainly, the U.S. has not agreed to disregard its own national interest. No U.S. foreign policy objective would be impaired if Intelsat were to evolve gracefully away from the role of monopoly satellite communications supplier in the North Atlantic to a role that is complementary with that of other systems serving various regions.

A reassessment of the international satellite arrangement is healthy; the introduction of competition will lead to sharper, more innovative and creative planning and marketing within Intelsat and in the various regional systems. ■



CON

(Continued from Page 85)

Moreover, the contention that these other systems would offer services not currently available from Intelsat — specifically identified as switched message service, telex, video and digital communications — is simply incorrect. These services are either presently available or they are in the process of being implemented as standard Intelsat offerings.

With the initiation of its new International Business Services, Intelsat will be able to provide a flexible, totally digital, globally interconnected service. This service is expected to be designed to accommodate a full range of user applications. These will include such applications as telex, voice facsimile, data and teleconferencing.

Some 172 countries and territories around the world use the Intelsat system through 165 earth stations located on tiny Pacific islands, in the tropics of South America, the mountains of Asia and wherever there is a desire to communicate with other nations.

Most importantly, however, the establishment of separate systems would amount to a total reversal of U.S. policy towards Intelsat and would seriously harm U.S. foreign policy interests. The director general of Intelsat has expressed grave concern regarding the diversion of transatlantic traffic by a separate international system. In addition, the two highest governing bodies of Intelsat, the Meeting of Signatories and Assembly of Parties, have expressed similar concern.

This concern was expressed in a resolution, which was endorsed without dissent by 70 countries at the Intelsat Meeting of Signatories last April.

This same concern was also voiced at last October's meeting of the Intelsat Assembly of Parties. This meeting was attended by senior government officials from 80 nations.

Approval of these proposals would be perceived around the world as a U.S. effort to use the limited resources of the orbital arc and the radio frequency spectrum inefficiently. It would greatly exacerbate existing international tension over claims to access these resources.

Such a course would likely compromise important U.S. efforts to stave off proposals for planned assignments of these resources at the 1985 and 1988 Space World Administrative Radio Conference.

The field of international satellite communications has been remarkably free of the tension that has marked other areas of international trade. The principal reason for this is the prescience shown by the U.S. in deciding to sponsor and support a single global system — Intelsat.

THE U.S. HAS BEEN A primary beneficiary of that decision, gaining both cost-effective, high-quality communications as well as the positive trade benefits arising from the establishment and operation of the system. Favorable actions on the part of the U.S. government to permit competing international satellite systems would be seen around the world as casual disregard by the U.S.

Such an action would weaken its historic commitment to Intelsat and the objective for which the organization stands. This objective is to guarantee the provision of high-quality satellite communications to all the various areas of the world.

Actual establishment of one or more competitive satellite systems diverting traffic from Intelsat's high-volume routes would have a fundamental impact on the viability of the single global system. It would entail serious financial consequences to all Intelsat users.

Since the U.S. is by far the largest user of the Intelsat system, U.S. ratepayers would be among those adversely affected by these separate systems, whose proponents claim to be acting in their interests. ■

We have fast service.

That's the Telecom Plus Difference!

And one of the reasons we're one of the largest private telecommunications companies in the country.

We know that when your telephones aren't working, you're out of business. That's why we scrap the red tape and go all out. We'll have a local service team at your office in less than an hour in an emergency. That's a promise!

Telecom Plus is a national corporation built on a network of local operating companies. You get all the advantages of our corporate technical and financial resources.

Plus local service and accountability. For 10 telephone installations up to totally-integrated office telecommunications systems.

Call for a free survey of your telecommunications needs. Toll free 800-TEL-PLUS. Or send us your business card.

EXIT

Peter Crowley, above, is a hospital software writer from Salem, Mass. He submitted this brief anecdote about his early days in communications.

I was filled with a mixture of exhilaration and dread, facing the biggest challenge of my nascent programming career. A raw DP recruit, I faced 60 hours manning the last line of defense protecting 100 hospitals from the menace of computer chaos.

It was my first weekend on call.

Around my living room/command post, I deployed my weaponry: manuals, beeper, a telephone directory, CRT terminal and an unfamiliar meatloaf-shaped object with two padded black orifices — the modem. This was the magic box that would grant me access to faraway computers, allowing me to salvage ruined data files in distant lands with a few masterful keystrokes.

It was 2:30 a.m. when I was roused from dreams of DP derring-do by a call from Metropolis General Hospital. Critical nightly reports had inexplicably stopped printing, and all efforts to restart them had failed. I whipped into action, powering up the CRT and modem with one hand while punching the dial-up number into my telephone with the other.

I deftly swung the handset into the modem, only to discover that no amount of jiggling would persuade my high-tech wall telephone to fit into the modem's receptacle. Undeterred, I swiftly exchanged extension cords, moved the CRT into the dining room and stretched the kitchen telephone line to the modem.

I again hammered in the dial-up number and waited expectantly for the comforting whistle of the hospital's computer. Instead, I heard a languidly erotic female voice whisper, "Hello baby, how's my big sweet hunk?" I diplomatically explained that this dedicated line was not dedicated to the one she loved, and I tried the number again, at last successfully.

I will not detail my brilliantly calculated attack on the problem, whizzing through files, port assignments and job allocations, all in vain. When I called totally frustrated an hour later, the hospital had the explanation.

"The chaplain thought he could print out a patient list for nearby parishes by pushing the Local button," I was told. "We switched the printer back to On Line 45 minutes ago and tried to call you, but your line was busy."

THE DAY THE IBM PERSONAL COMPUTER BECAME OBSOLETE.

NET/PLUS

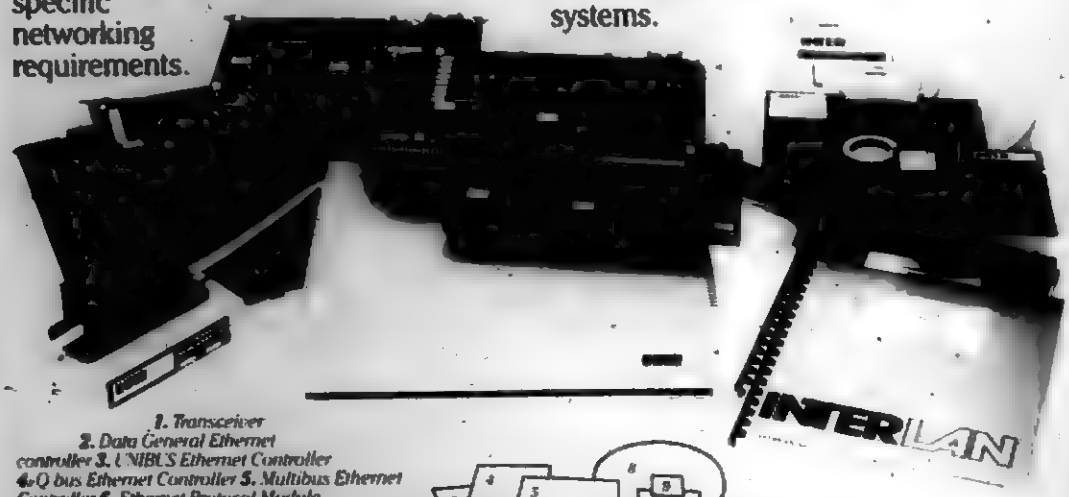
A True Multi-Vendor Local Area Network

NET/PLUS™ is a comprehensive Ethernet/IEEE-802.3 Local Area Network product line. It provides host-to-host, terminal-to-host, and device-to-device communications. And, in contrast to proprietary networks, NET/PLUS lets you tie together products built by different manufacturers, running under different operating systems.

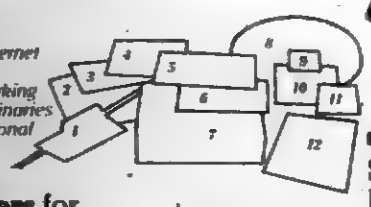
With NET/PLUS, different computers, from mainframes to personal computers, built by different manufacturers, running different software, are all tied together in a single resource-sharing network.

Plus Proven Network Building Blocks

Over twenty free-standing networking products together make up the NET/PLUS product line. You can buy a complete NET/PLUS solution, or choose individual products to meet specific networking requirements.



1. Transceiver 2. Data General Ethernet controller 3. UNIBUS Ethernet Controller 4. Q bus Ethernet Controller 5. Multibus Ethernet Controller 6. Ethernet Protocol Module 7. Network Terminal Server (NTS) 8. Networking Software Sources 9. Networking Software Binaries 10. Ethernet Controller Diagnostics 11. Personal Computer Networking Software 12. Comprehensive User Documentation



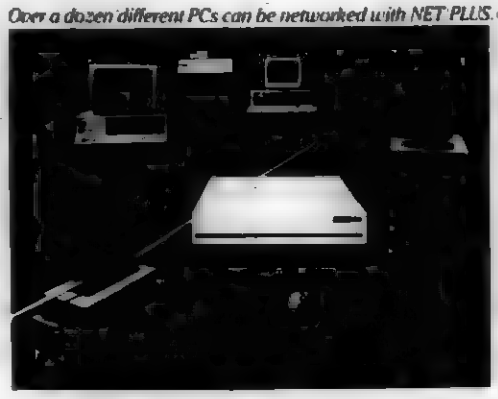
■ **ETHERNODE™ packages** incorporate controllers, networking software, transceivers, and cabling—all the hardware and software needed for host-to-host Ethernet communication among VAX/VMS, PDP-11/UNIX, RSX-11, and Multibus/UNIX systems.

■ **Communications controllers** for VAX, PDP-11, LSI-11, Nova, Eclipse, and MV Series, plus Multibus/68000, 8086, and Z8000 computers. Each DMA controller implements the entire Ethernet Specification and provides high-performance data transfers, extensive receive-data buffering for back-to-back frame reception, and a rich set of on-board diagnostics and network management statistics.

■ **Networking software packages** provide network-level and transport-level services for reliable, high-performance data communication. Written in portable C language, these packages implement the Xerox Network Systems (XNS) architecture and are optimized for Ethernet use. Packages are available for UNIX, VAX/VMS, and RSX-11 operating systems.

■ **Network Terminal Server (NTS),** the newest NET/PLUS product, provides virtual circuit interconnection between any two RS-232-C devices on the Ethernet. Available in four or eight ports, NTS electronically establishes, maintains, and disconnects virtual circuits between computer ports, terminals, personal computers, modems, and printers.

Over a dozen different PCs can be networked with NET/PLUS.



Typical applications include:
- port contention
- port switching
- resource sharing
- personal computer networking
- simplified RS-232-C wiring

■ **Multi-Vendor Personal Computer Networking Software** is available for over a dozen widely-used personal computers (including IBM, Apple, and DEC), microcomputer software development systems, and popular minicomputers. Terminal Emulation and File Transfer allow PC users to log on to other computers and freely access and transfer files throughout the network.

Networking Solutions

At Interlan, we have been delivering Local Area Network solutions since 1981, and today we have hundreds of customer installations. If you use or are considering Ethernet for reliable, high-speed communications in a multi-vendor environment, call or write for more information on NET/PLUS and the networking products that make NET/PLUS a reality.

UNIX: *The operating system of the '80s? Major developments at Capitol meeting*

DEC unwraps Ultrix-32

WASHINGTON, D.C. — Digital Equipment Corp. last week became the second major firm to introduce a Unix-based operating system when it announced Ultrix-32 for mid-range and high-end VAX-11 superminis. DEC's announcement at the Uniforum International Conference of Unix Users here came just one week after IBM unveiled its Unix version for the Personal Computer and Personal Computer XT.

Ultrix-32 joins VMS as the second operating system for the VAX-11 line. Based on technology from the University of California at Berkeley's Fourth Berkeley Software Distribution, Ultrix-32 is targeted principally at laboratories, universities and technical and commercial OEMs for value-added system development, computer-aided design and robotics.

The software is an interactive, virtual memory, time-sharing system that supports up to 16 users on a VAX-11/730, more than 32 users on a VAX-11/750 and 64 or more users on a VAX-11/780. It reportedly features a hierarchical file system with demountable volumes for improved performance, sharing of I/O resources among processes and asynchronous process execution.

Users who order the Ultrix-32 system will receive a Unix binary license directly from DEC, a spokesman said. An Ultrix-32 license can also be ordered as part of a VAX-11 System Building Block for new system purchasers or as an add-on product for either VAX/VMS users or VAX-11 customers with a third-party Unix license.

Deliveries of the Ultrix-32 operating system are planned for late spring. System Building Block kernels, including a VAX-11 processor, 2M bytes of memory and Ultrix-32 software, are priced at $23,500 for the VAX-11/730, $52,500 for the VAX-11/750 and $150,500 for the VAX-11/780 from DEC, Maynard, Mass. 01754.

AT&T, Digital Research tied

By John Gallant
CW Staff

WASHINGTON, D.C. — AT&T Technologies, Inc. and Digital Research, Inc. last week jointly announced a "cooperative relationship to expand the number of Unix System V applications software offerings."

Speaking at a press session at the Uniforum International Conference of Unix Users here, Jack Scanlon, vice-president of computer systems for AT&T, and Digital Research President John Rowley highlighted plans to develop jointly a Unix System V applications library for microcomputers. The applications library will include a line of applications and systems software designed to operate on several different microprocessors that run Unix System V.

For Digital Research, the agreement represents another major step into the Unix marketplace since it comes hot on the heels of the company's recently announced agreement with Motorola, Inc. (see story page 6). That agreement calls for Digital

See UNIX page 4

Other Unix-related developments:

■ *System V was not the only standard promoted for the Unix operating system (Page 4).*

■ *Digital Research, Inc. said it will implement its Concurrent DOS operating system on Motorola, Inc.'s VME/10, a 68000-based microcomputer that runs under Unix System V (Page 6).*

■ *IBM's announcement of a Unix-based operating system for its Personal Computer was heralded as a powerful endorsement of the multiuser microcomputer and programmer workstation concepts (Page 4).*

System V enhanced

By John Gallant
CW Staff

WASHINGTON, D.C. — AT&T Technologies, Inc. last week announced an enhanced version of Unix System V and three software packages for text processing, application programming and software development. The introductions were made here at the Uniforum International Conference of Unix Users.

Dubbed Release 2, AT&T Technologies' enhanced version of Unix System V will run programs about 5% to 10% faster than the present operating system in a typical program development environment, according to an AT&T spokesman. In addition, the user-to-operating-system interface functions have been improved, resulting in "significant efficiency improvements."

The enhanced Unix also offers greater job control, which will permit the user to shift between processing tasks, the spokesman noted. The release also provides electronic mail capabilities and includes reorganized and expanded documentation.

The first of the three packages announced last week, Documenters' Workbench text processing, allows a user to format text for display and typesetting. It reportedly supports a full range of output devices from printing terminals to typesetting equipment.

The Unix System Basic Language package is said to accommodate programming of simple applications for business and scientific environments. It reportedly includes several debugging features and is compatible with most microcomputer Basic software.

The third package, the Motorola Software Generation System, is for users developing software on Motorola, Inc.'s

Burroughs replaces B6900

By Patricia Keefe
CW Staff

NEW YORK — Burroughs Corp. last week replaced its B6900 line of mid-range processors with the A 9, a three-model series said to compete with IBM's recently announced 4361 and 4381 processors.

The A series, which Burroughs' Chairman of the Board and Chief Executive Officer W. Michael Blumenthal said will be enhanced to replace the entire B series of processors eventually, represents a departure from the internal architecture used in earlier systems.

Burroughs A 9

The most notable architectural change is the addition of three logical processors to the A 9's CPU. The logical processors allow the system to execute up to three internal operations at one time. They also allow the system to balance up to 10 tasks within the master control program. This gives the A 9 what amounts to a pipelined architecture, noted Leonard M. Bertagnolli, product manager of systems program management for Burroughs' Systems Products Group.

Overview of three models

The A 9 line consists of three models — B, D and F. The low-end A 9 Model B is roughly equivalent to IBM's 4361 processor. The top-of-the-line A 9 Model F is roughly equivalent to the IBM 4381. The Model B is field upgradable to the Model F or to the mid-range Model D processors, Burroughs said.

Each of the A 9 models can be equipped with a minimum of 6M bytes of main memory. The mid-range Model D can accommodate up to 12M bytes of main memory, and the Model F can use a maximum of 24M bytes of main memory, Burroughs said.

The A 9 systems use basically the same software and communications devices used on Burroughs' earlier B5000 and B6000 series processors. These include: Network Control, Message Control, Data Management, Work Management, Report Management, File Management, Text Editing, System Information Management and Network Management (Burroughs Network Architecture); Burroughs said.

According to Bertagnolli, the A 9 can run existing 5000 and 6000 series applications without modification. He added, however, that users may want to recompile 5000 and 6000 series programs eventually to make the most efficient use of the multiple task functionality offered by the logical processors.

Fred R. Meier, vice-president of program management of the Systems Products Group, noted that the A 9 requires half to three-fourths less power, air conditioning and floor space than the B6900. He added that the A 9 can accommodate up to 24M bytes of main memory, four times that of the B6900.

He also pointed out that the A 9 can support a data transfer rate of 6M byte/sec in a burst mode and 4.5M byte/sec in a sustained mode. Meier added that the A 9 offers roughly two times the internal throughput of the B6900 in sustained mode.

The vendor's Master Control Program provides the resource management for all three models of the A 9 family, Burroughs said.

Remote diagnostic capabilities, board-level replacements and customer support centers are also offered with the A 9, the vendor noted.

A basic configuration of the A 9 Model B processor with 6M bytes of main memory costs $351,100. The unit costs $14,631/mo on a five-year lease. The A 9 Model D with 6M bytes of main memory costs $433,900 or $17,973/mo on a five-year lease. The top-of-the-line Model F with 6M bytes of main memory costs $613,900 or $24,962 on a five-year lease plan, Burroughs said.

Burroughs is headquartered at Burroughs Place, Detroit, Mich. 48232.

Tough competitor or appeasement?

By Tom Henshel
CW Staff

NEW YORK — Burroughs Corp. executives bill the company's newly announced A 9 processor as a new technology replacement for the firm's B6900 line of machines. Two industry analysts contacted last week had a different assessment. They were convinced the new processor was designed more as an appeasement to Burroughs' user base than as a tough competitor of the upper end of IBM's 4300 line.

Burroughs appears to be playing the same basic marketing game as IBM in that it is steering away from adopting a new mainframe architecture strategy in favor of short-term performance enhancements to existing architectures, noted Tom Wilmott, an analyst with the Framingham, Mass., market research firm, International Data Corp.

Pointing out that all mainframe manufacturers will eventually be forced to depart from their current system architectures in order to achieve significant price/performance breakthroughs, Wilmott maintained that one of the best ways Burroughs could gain ground on IBM is to announce a series of processors that are so technologically superior to the IBM line that IBM users would have to take notice. The A 9 does not appear to offer that potential, he said.

Frank Gens, director of information systems research for The Yankee Group, a Boston-based market research firm, agreed with Wilmott's assessment. He added that the A 9 appears to deal with only one of Burroughs' two most pressing problems, that of preserving its current user base. Burroughs, Gens said, must not only preserve its current users, but also start to steal some business away from IBM if it plans to remain a competitor in the mainframe business.

The A 9 announcement appears to be a significant enhancement for current Burroughs users, but it will probably fail to turn the heads of current IBM users, Gens said.

Both Wilmott and Gens agreed that other mainframe vendors, such as NCR Corp. and Sperry Corp., have decided to market systems to specialized market niches rather than repeatedly go head to head with IBM.

"There seems to be a sense that Burroughs is not clear what its next step is going to be," Gens said, adding that a clear indication of what its large systems strategy will be over the next 10 years could significantly boost Burroughs' standing in the mainframe market.

Cincom enters decision support system market

By Paul Gillin
CW Staff

CINCINNATI — Cincom Systems, Inc. last week entered the decision support system market with a set of integrated mainframe-based applications designed around its Mantis fourth-generation language and application development system.

Cincom also announced a micro-mainframe link that provides real-time upload and download facilities between an IBM Personal Computer and a mainframe running Mantis. In addition, the company announced plans to make Mantis available on IBM's Personal Computer XT/370 when that system becomes available late this summer.

The decision support applications, called the Manage User Series, include separate mainframe software for text processing (Mantext), graphics (Mangraf) and a three-dimensional spreadsheet (Mancalc). Written in Mantis, the programs can move data, text and graphics freely between the applications and can call Mantis routines or be called by Mantis programs, a spokesman said.

Mantext performs most standard word processing activities and can combine data from existing files with newly created text, Cincom said. The software is oriented primarily toward creating large, structured documents and developing Mantis applications that require mixing text and data.

Mancalc is a three-dimensional spreadsheet with a maximum size of 999 rows by 999 columns by 999 pages.

Using Mantis, Mancalc can access data stored in Cincom Total and TIS files or IBM DL/1 and Vsam files and load it directly into the spreadsheet. When integrated with Mantis, a Mantis program can call Mancalc to perform a calculation during program execution and return to the program.

Mangraf produces graphics as direct output from an on-line application, Cincom said. It can access any data file in the corporate data base, perform statistical analysis and present the results in predefined graphs. Multiple graphs can be mixed on a screen and may incorporate data from multiple data bases. The product runs under IBM's CICS and requires IBM's Graphic Data Display Manager.

Mantis is a prerequisite for Mangraf and Mancalc. Mantext can be purchased separately. Both Mantext and Mancalc are compatible with Cincom's Environ/1, CICS or CMS operating environments. Mantext licenses for $40,000 in a large IBM DOS environment, $33,000 in a small DOS environment, $50,000 in an IBM OS environment and $60,000 under IBM's IMS/DC. Mangraf licenses for $16,500 and Mancalc licenses for $19,500, the vendor said.

PC Contact allows real-time downloading and uploading between IBM mainframes and IBM Personal Computers using Mantis. The software does not require intermediate files to pass data between the micro and the mainframe.

PC Contact gives the user the ability to perform interactive application development on the Personal Computer by making it appear that Mantis is running locally, the spokesman said.

PC Contact will be available in April at a price of $60,000 for the mainframe version and $1,000 per Personal Computer.

Cincom also said it plans to make a version of Mantis, called Cricket, available on the IBM XT/370 in September. Pricing and detailed technical specifications were not available.

Cincom is located at 2300 Montana Ave., Cincinnati, Ohio 45211.

MIS Directors, DP Managers, Data Administrators, Software Consultants

- Why you should be considering a relational data base system for your company.
- How a relational data base delivers the high performance your company needs.
- Why the relational data base is the only way you can increase productivity across the board.
- How a relational data base management system can effectively handle both production and information centers.
- Why the data processing community agrees data dictionary is not a luxury—it is an absolute requirement.
- Why you should not accept conventional definitions of "active" and "integrated" data dictionaries.
- How you can have all of the benefits of running your current system in a relational data base environment without any reprogramming work.
- How you can develop a "blueprint" or software strategy that can accommodate future technological advancement without becoming obsolete.
- How you can develop an effective corporate strategy that maintains control over personal computers and also complements the mainframe.
- How you can avoid selecting a fourth generation technology that is already outdated.
- Why your company must not only have fourth generation languages, but also high level extensions to COBOL for purchased applications and existing systems.

You are invited to attend an ADR® Seminar on these critical issues.

Because the companies that master the critical software issues of the 80's are the companies that will lead the 90's.

And the people who master these issues will help lead their companies.

PACKAGES from page 1

68000 microprocessor. The package is said to ease software development by allowing developers to program in either the C language or in assembly language.

The enhanced version of System V is priced at $43,000 for the initial CPU. For a single CPU, the Documenters' Workbench costs $4,000; the Basic System, $5,000; and the Motorola Software Generation System, $7,500. AT&T Technologies can be reached through P.O. Box 25000, Guilford Center, Greensboro, N.C. 27420.

Other announcements

Other major Unix-related announcements made at last week's Uniforum Conference included the following:

■ **Data General Corp.** unveiled a series of enhancements for its UNIX/VS operating system, which is integrated with its 32-bit AOS/VS for its Eclipse MV family of minicomputers.

According to DG, the UNIX/VS enhancements were derived from AT&T's Unix System V operating system and include features compatible with the University of California at Berkeley's 4.1 Berkeley Software Distribution. The enhancements also include a screen editor, support for a variety of terminals and a C language C-Shell user interface. The system's visual editors reportedly enable users to display a portion of their data as a window into the file so information can be reviewed or changed when necessary.

The enhanced UNIX/VS is said to offer a choice of user interfaces, including the Berkeley C-Shell or the AT&T Bourne Shell. DG said it expects shipment of the enhancements in 90 days.

Initial license for UNIX/VS will range in price from $9,845 for 16 users to $27,845 for more than 64 users. DG is based at 4400 Computer Drive, Westboro, Mass. 01580.

■ **Oracle Corp.** added Unix System V to the family of operating systems supporting its Oracle relational data base management system (DBMS). In the Unix environment, disk space is allocated to the Oracle DBMS, and within this file system, Oracle allocates its own system tables, data dictionary and user tables. Oracle I/O requests bypass the Unix file system and disk buffer pool to go directly to the disk drivers, the vendor said, guaranteeing transaction integrity within the data base.

The System V version of Oracle operates in multiuser, Unix-based minicomputer and microcomputer systems.

The microcomputer version is priced at $600 for a single user and at $2,000 for up to eight users. For use on a Digital Equipment Corp. VAX-11/730 superminicomputer under the Unix System V, the Oracle DBMS is priced at $24,000, a vendor spokesman said. Oracle is located at 2710 Sand Hill Road, Menlo Park, Calif. 94025.

■ **Absolut Software, Inc.** introduced a line of business software modules for a wide range of processors running under Unix operating systems. As a group, the software packages are said to provide a sophisticated system of order entry, sales reporting, inventory and stock control, back-order and reorder data and billing detail.

The seven modules include manufacturers distribution, wholesale distribution, multistore retail distribution, mail order sales, accounts payable and receivable and a general ledger package.

Priced from $12,000 to $100,000 depending on the user's system and the modules chosen, they run on most 16- and 32-bit microcomputers with at least 20M bytes of hard disk storage, as well as on minicomputers and mainframes capable of operating in the Unix environment.

Absolut Software is based at 2001 Beacon St., Boston, Mass. 02146.

Firms back Isis as Unix standard

WASHINGTON, D.C. — Though it was not obvious from the posture of AT&T and others at the Uniforum Conference here last week, System V is not the only standard being promoted for the Unix operating system.

Four vendors of third-party software for the increasingly popular Unix system held a press conference to announce the formation of a standards consortium "dedicated to the promotion of interchanges of information between Unix applications." The four firms — Access Technology, Inc.; Quadraton, Inc.; Software Express, Inc.; and Unify Corp. — are backing the Independent Software Information Standard (Isis), a new Unix standard that, they said in prepared remarks, provides Unix users with "a superior level of integration, especially in the office automation area."

Representatives of the four vendors said that the consortium will be open to all third-party Unix software producers who agree to maintain compatibility with the standard interface as it evolves.

In a joint statement at the conference, spokesmen from the Isis consortium said they believe Unix's power and portability will make it a major operating system in business environments during the current decade. Jeff Hulton, vice-president of Access Technology, was selected chairman of the group, which also includes Karl Kleenig, president of Quadraton; William Adams, vice-president of marketing for Software Express; and Nico Nierenberg, president of Unify.

UNIX from page 1

Research to implement its Concurrent DOS operating system on Motorola's VME/10 microcomputer.

According to Rowley, the applications library will focus on three areas: software development and programmer productivity tools, commercial application packages and science and engineering applications. Scanlon said the library will initially target Intel Corp.'s 286 and Motorola's 68000 microprocessors.

Scanlon said also that AT&T viewed the applications library as "a critical step in the growth of Unix System V as an industry standard." AT&T began licensing Unix System V last year, and Scanlon said the Digital Research agreement, and possible similar future pacts, will enable the multitasking operating system to operate on "everything but the kitchen sink." Both Digital Research and AT&T will market applications library products, the first of which will be out in the last quarter of 1984.

According to Rowley, the two firms will jointly select "high-quality application packages" developed by independent software vendors and targeted toward System V. He said that AT&T and Digital Research will then "package and merchandise those products in a consistent manner." Rowley said the selection process is currently under way.

"We're convinced that within the desktop marketplace, Unix will be a high-dollar volume player. We expect to take a large chunk of that Unix market," Scanlon said. The AT&T executive also said that the divested giant plans to develop its own packages for inclusion in the library.

Both Rowley and Scanlon said the joint agreement bodes well for independent software vendors, who will soon be able, in Scanlon's words, "to port their Unix System V products across a wide range of hardware." He added that the move opens up the "entire marketplace" to the third-party developers.

Rowley said the merchandising aspects of the deal would be a positive force for development firms that lack "their own marketing strength." Scanlon would not divulge which microcomputers the applications library will operate on, but he said the models to be chosen will be based on the "number of boxes sold, focusing on the high-volume markets."

Neither Rowley nor Scanlon would expand on the specific details of the joint Digital Research and AT&T arrangement or on the procedures through which the selection and marketing of the products will take place. "Our primary focus at this time is microcomputers," Scanlon said. "But we fully intend to utilize the portability of Unix. We intend to make these same applications available across the entire price and performance range."

Scanlon added that the move would greatly increase the commercial value of Unix System V, which AT&T has chosen to support as the industrywide standard for the Bell Laboratories-developed operating system. When asked what effect the recently penned deal would have on the marketability of his firm's existing CP/M operating system, Rowley replied that Digital Research viewed the move as an opportunity to expand into another high-volume operating system environment.

IBM's '83 profits up $1 billion

ARMONK, N.Y. — IBM's 1983 profits jumped by more than $1 billion over 1982's earnings of $4.4 billion, the company reported last week.

Chairman John R. Opel, in releasing preliminary year-end financial results, said the $5.48 billion in earnings could be credited to "trends established in 1982" and the "strength of the IBM product line."

Revenues totaled $40.1 billion, up 16.9% from 1982.

Although the company's income from rentals was down 17%, sales jumped 28.4% and services rose 19.4%.

Per share earnings totaled $9.04 for 606.8 million outstanding shares, compared to $7.39 per share on 596.7 million shares the previous year. Earnings before income taxes were $9.94 billion in 1983, an increase of 24.7%.

For the fourth quarter of 1983, the company earned $1.86 billion or $3.06 per share on revenues of $12.89 billion. The 1982 fourth quarter profits were $1.5 billion on revenues of $11 billion for earnings of $2.50 per share.

Thoroughbred

Meet the newest champion in the world's greatest sorting stable!

(SyncSort OS 2.5)

Call (201) 568-9700.

Find out why it takes a SyncSort to beat a SyncSort.

SyncSort OS 2.5

Performance Improvements

EXCPs: 35%
TCB CPU Time: 15%
SRB CPU Time: 25%

syncsort INC.

Here we go again—Improving the Sorting Breed!

That sleek young thoroughbred out in our main paddock is SyncSort OS, Release 2.5. It's by SyncSort 2.4 out of that celebrated brood mare, High Technology. And it's destined to win a lot of prizes on OS/VS and MVS/XA tracks.

IMPROVING THE UNIMPROVABLE: Until now, SyncSort 2.4 was the best OS/VS sort program ever bred. It was far faster than any IBM sort. And it was easier to use, too— thanks to a tack-room full of advanced features.

SyncSort 2.4 probably could have continued to win prizes for years. There was only one catch—it wasn't good enough for us.

PICKING TOMORROW'S WINNERS: We knew that new hardware and software systems would create opportunities for evolution of advanced sort programs. Speed would still be essential. But productivity would continue to skyrocket in importance. So that's the way we bred 2.5.

FASTER SORT PERFORMANCE: We've added new sorting techniques to SyncSort 2.5 to make it the only sort that outperforms 2.4. You can expect savings in critical resources up to those shown at lower left. And that can add up to a big increase in total systems throughput.

NEW PROGRAMMER PRODUCTIVITY FEATURES: As any seasoned sort-watcher knows, there's a lot more to data handling than sorting. SyncSort 2.5 introduces a Data Utility set that applies its proven techniques to a wide range of processing and reporting jobs.

For example, with a single execution, 2.5 can sort, format and present data in virtually any form you want:

- **SortWriter**—a powerful tool that can produce extensive reports as a by-product of your normal sorting—without user exits and the associated programmer investment. Headers, trailers, total and sub-total capabilities provide flexible formatting.
- **Record Formatting**—To existing features like INCLUDE/OMIT, INREC/OUTREC, SUM and others—all of which have been expanded—2.5 adds new and useful capabilities like data conversion, editing, insertion of literals.
- **Multiple Output**—From a single sorted file, you can create multiple files and reports. Each can include the same or different data as determined by INCLUDE, OMIT, OUTFIL or OUTREC parameters.

If you're tired of betting on sort programs that empty your pockets of resources and are tough to handle, give us a call. We'll arrange to have SyncSort OS 2.5 run a few furlongs on your own turf.

Syncsort Incorporated 560 Sylvan Ave., Englewood Cliffs, N.J. 07632

Digital Research, Motorola ink Unix-centered pact

By John Gallant
CW Staff

WASHINGTON, D.C. — Motorola, Inc. and Digital Research, Inc. announced a joint agreement here last week that calls for Digital Research to implement its Concurrent DOS operating system on Motorola's VME/10 microcomputer. Both companies hailed the agreement as a major move toward standardization of operating system software.

A Motorola spokesman said the move will enable full portability of application software between Unix System V, which already operates on the VME/10, and Digital Research's Concurrent DOS and its CP/M operating systems for 68000 microprocessor-based systems.

Concurrent DOS, which is written in C and is said to be a multitasking system, also provides support for IBM's PC-DOS, allowing application software developed for that system in a high-level language to be ported to the VME/10 as well.

The agreement, announced at the Uniforum International Conference of Unix Users here, also calls for Motorola and Digital Research to develop 19 software packages for the VME/10 under CP/M and Concurrent DOS. Concurrent DOS reportedly also includes windowing capabilities, local-area net and graphics support.

According to the spokesman, seven of the packages to be developed will support the VME/10 Unix System V operating system and will include Digital Research's programming languages.

The Digital Research programming languages reportedly provide application portability from CP/M and Concurrent DOS to Unix System V on the VME/10. The packages, CP/M, Concurrent DOS and a library of languages will be maintained and supported by Digital Research and will be marketed by both it and Motorola. When the development project is completed, it will be possible to transport source code from Concurrent DOS to Unix System V with little or no code conversion required, according to both firms.

During the first quarter of 1984, a number of CP/M products will be introduced, including a Digital Research C package, Pascal MT+ and C Basic compiler. The Concurrent DOS and Unix System V/68 products, which will be available at the end of 1984, will be source-code-compatible with CP/M-68000 languages.

The packages will be priced between $350 and $600 from Digital Research, P.O. Box 579, 160 Central Ave., Pacific Grove, Calif. 93950, and Motorola, P.O. Box 20912, Phoenix, Ariz. 85036.

Buy, lease or rent the new Lear Siegler ADM 11, ADM 12 and ADM 24E from MTI.

We are authorized distributors for all Lear Siegler terminals and printers.

These American-made beauties are easy on the eyes in more ways than one. They feature a non-glare phosphor display in a tilt-and-swivel console, a low profile DIN-standard keyboard with adjustable tilt, Selectric® layout, and a lot of other features designed for operator comfort.

The ADM 11 features separate cursor control keys logically arranged in a cross. The ADM 12 and ADM 24E are editing terminals. They both have programmable function keys, and for the OEM, the 24E has program space on the logic board which can be configured with ROM and RAM parts.

Whether you buy, lease or rent, you'll find MTI is the one source for all the terminals, peripherals, systems, applications expertise and service you'll ever need. And our prices are very competitive. Call us.

IBM crosses AT&T border

By John Gallant
CW Staff

RYE BROOK, N.Y. — IBM made the first foray into a segment of the microcomputer marketplace where it seems certain to lock horns with AT&T when it announced a Unix-based operating system for its Personal Computer and Personal Computer XT [CW, Jan. 16]. The IBM operating system reportedly includes facilities for program development, text processing and operation of a wide variety of existing application programs.

Dubbed the Personal Computer Interactive Executive (PC/IX), the operating system offers a full screen editor in addition to standard Unix system features. Personal Computer users will reportedly be able to process several tasks simultaneously with PC/IX.

PC/IX can reside with other operating systems on fixed disk so that more than one operating system is available to the user. Moreover, it is said to provide programs for file transfer to and from IBM's PC-DOS 2.0 operating system.

Comprehensive program

The Unix-based operating system, developed for IBM by Interactive Systems Corp. of Santa Monica, Calif., is said to be a comprehensive program product featuring a command language that interprets a user's commands for the system; the high-level C language, designed for structured programming; a file monitoring system; word processing; a hierarchical file system for file organization; and program development tools.

According to IBM, PC/IX is a recompiled set of Unix system source statements with a redesign of essential portions of code to improve performance and reliability. The full screen editor reportedly features multiple windows, which display one or more files and permit cursor positioning and window movement on the display screen.

IBM also said that keyboard functions can be used to reduce typing commands and that, by moving the cursor to the appropriate position, text can be moved to different positions within a file or to different files through "cut and paste" operations.

The 19 PC/IX diskettes are grouped into major functions such as basic system programming, communications and text processing, according to IBM.

The system runs on the Personal Computer with fixed disk expansion and the Personal Computer XT. All configurations require at least 256K bytes of memory, one dual-sided diskette drive and one 10M-byte fixed disk drive.

With a one-time license charge of $900, PC/IX is expected to be available beginning in April through IBM's National Accounts and National Marketing divisions. The National Accounts Division is located at 1133 Westchester Ave., White Plains, N.Y. 10604.

Signs of Unix support seen coming from IBM

By John Gallant
and Paul Gillin
CW Staff

IBM's announcement of a Unix-based operating system for its Personal Computer was a powerful endorsement of the multiuser microcomputer and programmer workstation concepts. The debut of the Personal Computer Interactive Executive (PC/IX) also signaled IBM's corporate strategy to compete in a Unix world, according to analysts contacted last week by *Computerworld*.

IBM's introduction of PC/IX [CW, Jan. 16], along with the release of the PCjr and the XT/370 late last year, was another step in the industry giant's strategy to blanket the low-end computer market, according to Richard McMahon, president of Acton, Mass.-based AMT Computer Consultants, Inc. "This is also a good forerunner of a larger strategy," McMahon explained. "It could very well be part of an overall game plan to support Unix across the entire line."

"We're all waiting for the other shoe to drop," agreed David Fiedler, editor of "Unique," a newsletter for Unix users. "When IBM says it will support Unix through its entire product line, that will be the really important announcement."

In fact, one observer was puzzled by IBM's decision to release PC/IX before making its anticipated announcement of Unix on a 4300 series superminicomputer. "I was hoping IBM would put its cards on the table and just announce its Unix policy," said Robert Marsh, president of Plexus Computer, Inc. and a director of USR/Group, a Unix users group.

Observers agreed that IBM's PC/IX announcement will bring order to an operating system that until now has lacked a strong vendor endorsement. "The move certainly legitimizes Unix," McMahon said. "It is now available for business applications, where before it was mostly geared to the scientific community. It means there will be wider acceptance of Unix, especially if it is also offered on mainframes and minicomputers in the future."

Fiedler said the PC/IX announcement gained additional importance because it came just before AT&T is expected to introduce its own Unix-based micro. "This will certainly take the wind out of any AT&T announcement," he said.

However, Marsh said the IBM announcement is more of a Big Blue effort to establish a market presence than to throw down the gauntlet in front of AT&T. "There are a whole slew of companies with versions of Unix ready to jump, and IBM is trying to establish position early before there's a lot of momentum in the other direction," he said.

McMahon said PC/IX makes the concept of a programmer workstation "quite a bit more viable."

Apple comes out with 32-bit microcomputer

By Jeffry Beeler
CW West Coast Bureau

CUPERTINO, Calif. — Apple Computer, Inc. today radically restructured the high end of its personal computer line with the introduction of a transportable 32-bit micro that reportedly couples Lisa-like technology with a wide selection of personal productivity software packages.

Apple's long-awaited Macintosh machine serves as the entry-level member of a family of 32-bit personal computers that also include three replacements for the company's existing Lisa micro, introduced only about a year ago.

Announced alongside the Macintosh, one day before Apple's Jan. 24 annual security analysts meeting, the three Lisa newcomers include:

■ Lisa 2, which supports a microfloppy diskette unit, but no hard disk capability.

■ Lisa 2/5, which comes with a 5M-byte external storage module.

■ Lisa 2/10, which boasts a built-in 10M-byte disk system.

Built around an 8 MHz Motorola, Inc. 68000 microprocessor, Macintosh is reportedly aimed primarily at computer-illiterate knowledge workers in business offices, schools, scientific settings and homes. Roughly 70% of the products, which Apple hopes to produce and sell in the millions, will find their way into the commercial world, a spokesman for Apple predicted.

Although it will be distributed mainly through retailers, Macintosh will also be sold heavily through Apple's national account executives to Fortune 500 corporations.

Peripherals and software

The debut of Apple's 32-bit micro line coincided with the introduction of a host of Macintosh-compatible peripherals and communications aids, including an external microfloppy diskette system, numeric key pad and Apple Bus, a local networking facility.

Complementing the product family is a raft of previously unavailable software packages for applications such as business graphics, word processing, spreadsheet creation, micro-to-mainframe communications and project scheduling.

All three Lisa additions, as well as their Macintosh sister system, provide the same user interface, run the same software and use the same data interchange medium — an integrated 3½-in. floppy diskette, according to an Apple spokesman.

Apple credits the Lisa 2 machine with loading applications two to three times faster than the original Lisa, which the company has reportedly ceased manufacturing and selling. In addition, the trio costs thousands of dollars less than its year-old predecessor, which incorporated a 5¼-in. diskette unit.

Like all the Lisa models, Macintosh is configured with a mouse, uses icons extensively in its user interface, provides pull-down menus and displays multiple windows simultaneously. The entry-level personal computer also supports a "cut-and-paste" feature that allows data from one display window to be electronically transferred to another, the spokesman said.

Single-tasking product

But unlike Lisa, which can process several applications concurrently, Macintosh is only a single-tasking product. So although it can move data among different windows of the same application, the micro is unable to cut and paste among different applications without forcing users to swap diskettes, the spokesman said.

Macintosh's user programs will come primarily from the more than 100 independent vendors with which Apple is now said to be engaged in software development. Heading the list of outside application suppliers are companies like Lotus Development Corp., Microsoft, Inc. and Software Publishing Corp., the spokesman said.

A few of Macintosh's application packages, however, will originate directly from Apple itself, which will supply programs like Mac Paint, an extensive graphics facility, and Mac Write, a word processing aid.

Apple will also provide a family of software packages that will allow Macintosh to communicate with central host processors. Apple Line, for example, will turn the personal computer into an IBM 3278 look-alike,

Customs sting nets 1,000 Apple II look-alikes

By John Gallant
CW Staff

CUPERTINO, Calif. — U.S. Customs officials said they anticipate criminal indictments will be brought against three alleged importers of counterfeit Apple Computer, Inc. microcomputers, following what investigators termed a private sting operation that recently netted as many as 1,000 Apple II look-alikes.

Armed with search warrants obtained on the basis of information provided by Apple investigators, Customs officers in mid-December raided three California companies and seized between 370 and 420 counterfeit Apple II computers. The raids took place at Super Computer, Inc. in Santa Ana, Extra Computer Corp. in San Francisco and A-Tek, Inc. in Cupertino, according to Customs Special Agent Rollin Klink.

At the same time, Apple authorities obtained a temporary restraining order against Extra Computer, enjoining the firm from selling approximately 645 additional Apple II counterfeits, a spokeswoman said.

Civil action

Jeffrey Blatt, a Beverly Hills, Calif., attorney who has represented Apple in copyright violation cases, said Apple then filed a civil action for a permanent injunction against Extra Computer. Blatt said Extra Computer subsequently agreed to a settlement whereby the firm paid Apple an unnamed sum and handed over components of the systems, including 645 motherboards and 1,400 erasable programmable read-only memories containing pirated Apple programs.

The raids, which were undertaken as part of Customs' Operation Tripwire, may result in the first U.S. criminal prosecution of counterfeit Apple computer importers. Joseph Russoniello, U.S. Attorney for the northern district of California, said his department has not yet decided whether to bring criminal charges against the firms involved. Those criminal charges could include smuggling, conspiracy, piracy and counterfeiting. He said similar charges are also under consideration by acting U.S. Attorney Alex Williams of California's central district.

Blatt said Apple will have to decide whether to file civil copyright infringement suits against the firms if federal authorities decide not to seek indictments. The attorney said Apple has filed some 35 copyright and patent infringement suits worldwide, and eight foreign cases have resulted in criminal prosecutions. Customs authorities estimated that more than 2,000 ersatz Apples were seized in the U.S. alone last year.

The December raids were the result of a private sting operation initiated by the Barrick Security Group, Inc., a San Mateo, Calif.-based investigation firm hired by Apple [CW, Sept. 26]. Barrick President Barry Bergman said the firm maintains data on "hundreds of individuals who deal in counterfeit goods." He said Barrick targeted importers who said they could provide "substantial numbers" of Apple II imitations. Using money provided by Customs officials, Bergman's investigators placed orders for the systems, which were then seized upon delivery.

Investigators would not divulge the manufacturers of the systems, but both Bergman and Klink said the computers, or their components, probably originated in Taiwan. Attorney Blatt said the Apple II computer has become a target for counterfeiters because it is easily built with off-the-shelf components and it enjoys broad software popularity. "We know the system is easily assembled in the Orient," Blatt explained. "Our estimates show that in the Far East phony Apples outsell the real thing by about 10 to one."

Customs officials estimated that each of the counterfeit systems was worth approximately $400. The department, Klink said, is continuing its investigations in conjunction with the U.S. Attorney's office. Blatt said Apple expects a decision on criminal indictments within the month.

Apple seen betting the farm on Macintosh

By Robert Batt
CW West Coast Bureau

CUPERTINO, Calif. — Apple Computer, Inc.'s new generation of 32-bit personal computers, spearheaded by the long-awaited Macintosh, is seen by company executives and industry pundits alike as the firm's most important product announcement since the Apple II.

Apple has reportedly spent millions of dollars on product development and is expected to pour an additional $50 million into advertising the Macintosh in 1984 alone, prompting many observers to view the next two years as make or break time for the company's young, ambitious management team.

"This is clearly a bet-the-company product strategy, and if it doesn't work, by the time Apple regroups, it will have missed the whole next generation of personal computers and will be in serious trouble," asserted Mike Murphy, partner in a San Francisco-based investment analysis firm, Venture Capital Management, Inc.

For their part, Apple executives make no secret of the critical importance the new products have for the company's long-term viability.

'Current tech not sufficient'

Speaking at a press briefing prior to this week's launching of the Macintosh, a forthright Steve Jobs, chairman of Apple, declared:

"Our whole premise for the Macintosh is based on the fact that current technology is not sufficient to reach the tens of millions of people who need personal computers. If the people in this industry do not require radical technological innovation, then this company will not be here in two years' time."

However, few if any industry observers expect the Macintosh to be anything but an outstanding success.

"This is easily the best price/performance machine ever made. I think it will become the Apple II of the 1980s, and I see a very long life cycle for it, at least five years," said Ken Lim, personal computer industry analyst at the San Jose, Calif.-based market research firm, Dataquest, Inc.

Microsoft, Inc., one of more than 100 independent software vendors supporting the Macintosh, has committed a sizable portion of its new product development to the latest Apple line, and the company expects half of all its application program revenues in 1984 and 1985 to come from sales of Macintosh applications.

"To create a new standard takes something that's not just a little bit different. It takes something that's really new and captures people's imaginations. Macintosh meets that standard," commented Bill Gates, chief executive officer for Microsoft.

Apple's Jobs expressed the hope that what he called Macintosh's leapfrog technology will enable the computer to make huge inroads into small and medium-size businesses as well as the Fortune 500 corporations.

"Since IBM is going to be the service leader in the personal computer industry, we want to be the technology leader, producing low-cost personal computers. Our aim is to remove the need for massive service and support to the end user," he explained.

This is not to say that Apple's strategy for its new product line is without dangers. The most obvious potential pitfall is that the machines are not IBM-compatible. However, this does not seem to worry most industry analysts. A typical appraisal was offered by Greg Kelsey, investment analyst at the San Francisco firm, Hambrecht & Quist.

"There are good cost reasons for not making the Macintosh an IBM-compatible machine. In addition, with the Lisa models [Lisa 2, Lisa 2/5 and Lisa 2/10] having the capability to run both Macintosh software and IBM programs, there is a pretty good argument for saying that Macintosh does not need to be IBM-compatible, given the market it is chasing," he said.

According to Lim of Dataquest, the absence of MS-DOS compatibility is a positive virtue. "It is far too early in the life of the personal computer industry to standardize on one particular operating system. In addition, MS-DOS machines are becoming a dime a dozen, so manufacturing another Personal Computer look-alike is just as dangerous a strategy as putting out a non-MS-DOS device," he said.

Another possible danger is that, as Venture Capital Management's Murphy put it, "people just plain don't like the Macintosh" with its pull-down menus and a form factor that doesn't look like other computers.

Another potential pitfall, Murphy pointed out, is that in an attempt to save up to $50 million a year on inventory costs, Apple is adopting the Japanese method of depending on two weeks of inventory. "Apple is working with suppliers who have never performed such 'just-in-time-delivery' service before. It's a new thing for the U.S. electronics industry, and if it backfires it could cost Apple a lot of money and lost orders," he proclaimed.

2 Trillion

Last night we backed up two trillion (yes, that's 12 zeroes) characters of data, and checked our work.

VMBACKUP

We bring files back alive, the way they should be—readable, usable—which some "cut-rate" backup systems *don't* do. We verify the data before moving it to tape. That's why 75% of the Fortune 100 companies trust their vital data to VMBACKUP.

How do we do this?

- Start with a solid design.
- Take the best systems people in the VM community.
- Have them build it right.
- Add competent, helpful support people.
- Stay close to our customers.

And we create a winning situation for our users.

Wafer woes plague Trilogy

CPU delays expected

By Peter Bochnik
CW Staff

CUPERTINO, Calif. — Trilogy, Ltd. said last week it had experienced problems with the manufacture of a prototype wafer-scale semiconductor device and as a result will experience a slight delay in the scheduled 1985 shipment of IBM-compatible, large-scale, high-performance computers.

Trilogy released a brief press release last Tuesday indicating that an added metal coating to the prototype wafer produced unsatisfactory results and that a revised procedure is expected to produce a completed wafer prior to the end of March.

Trilogy Vice-President Russell Drew told *Computerworld* the company has identified the problem and expects to complete the revised process "as early as February or as late as March." Drew said the original schedule had planned for completion at the end of this past December.

"It is not a monumental problem by any stretch of the imagination." The firm issued the announcement because it made a public stock offering in the last quarter of 1983 [CW, Sept. 12] and "wanted to alert everyone" about the delay, he said.

The company, founded in 1980 by Amdahl Corp. founder Gene Amdahl, had originally planned to ship its first IBM-compatible supercomputers in the third quarter of 1985, but now believes those shipments will not occur until the fourth quarter of 1985. The new computers are predicted to attain a performance rate of 32 million instructions per second.

The new technology purportedly will see "40 wafers replace 4,000 integrated circuit chips" [CW, Aug. 8]. Sperry Corp. previously invested $42 million to obtain a 15% interest in Trilogy [CW, June 13], and Digital Equipment Corp. invested $26 million for a 9% interest [CW, Aug. 8], with both companies obtaining the rights to use the new technology in future products.

A DEC spokesman said the problem as explained by Trilogy is not unusual in early stages of production. "Delays in new product development are to be expected in this industry," he said. A Sperry spokesman said his company did not wish to comment on Trilogy's announcement.

Drew said the additional metal layer would have completed the wafer module. That module, he said, is said to include the actual wafer configuration, which packs the capacity of 100 integrated circuits onto a 2½-in. wafer and the actual packaging, which encloses the wafer and contains the cooling portion of the module.

APPLE from page 6

while Mac Terminal will enable the machine to emulate teletypewriter-type terminals or Digital Equipment Corp. VT100s or VT52s, the spokesman said.

At Macintosh's heart is one printed-circuit board that contains all the product's digital electronics, including its 32-bit microprocessor, random-access memory (RAM), speech synthesis capability, 1M bit/sec serial port and mouse interface. The same 100-sq-in. board also houses the machine's Apple Bus hardware, which reportedly allows up to 16 Macintoshes, Lisas or other devices — including file servers and laser printers — to be interconnected in a local network.

With Apple Bus, each node in the 230.4K bit/sec network can be situated up to 1,000 ft away from any other hardware module, with a connection cost of $25 per device, the spokesman said.

Digital processing board

In addition to its other components, Macintosh's digital processing board incorporates 64K bytes of read-only memory, the vehicle for implementing all the personal computer's Lisa-like technology.

With its keyboard, 12-in. display screen and integrated 400K-byte microfloppy diskette unit, Macintosh weighs about 20 lb and occupies less than 110 sq in. of desk space, the spokesman said. The system also accommodates a second, optional microfloppy storage module that has to be added externally.

Though currently limited to 128K bytes of RAM, Macintosh will be upgraded to 512K bytes before year's end, when Apple replaces the machine's existing 64K-bit memory chips with 256K-bit components, the spokesman said.

For users of its original Lisa, Apple will furnish an upgrade kit that will allow customers to migrate to any of the machine's three additional models.

An upgrade to the Lisa 2/10 will cost $2,495, while a similar switch to the Lisa 2 or Lisa 2/5 will be free of charge, the source said.

Equipped with a minimum of 512K bytes of main memory and expandable to 1M byte, the Lisa 2, 2/5 and 2/10 cost $3,495, $4,495 and $5,495, respectively. Macintosh, by contrast, retails for $2,495.

Like Apple's existing Imagewriter laser printer, the 400K-byte add-on microfloppy storage unit sells for $495, compared with $129 for the numeric key pad. For the first 100 days after Macintosh's introduction, the Mac Paint and Mac Write software packages will be available at no charge. Thereafter, the programs will retail for $195, the spokesman said.

All four members of Apple's 32-bit personal computer family — as well as most of their hardware and software accessories — are available for sale immediately. First customer shipments of the external 3½-in. microfloppy module will begin March 31 from Apple at 20525 Mariani Ave., Cupertino, Calif. 95014.

WHAT TO LOOK FOR IN ON-SITE TRAINING

With all the technical training options around today, it's hard to figure out which company will offer the most professional, reliable on-site training. Here's Sys-Ed's checklist of key benefits that will make your training investment really pay off.

ARE THESE BENEFITS INCLUDED?	SYS-ED	OTHERS
• Qualified training consultant for needs analysis and skills inventory?	YES	NO
• Comprehensive, coordinated curricula of CICS, IMS, VSAM, TSO ISPF or MVS JCL training?	YES	NO
• Complete range of training for the IBM environment, including IDMS, DATACOM, ADABAS and FOCUS?	YES	NO
• Ongoing technical support?	YES	NO
• Satisfaction guarantee?	YES	NO
• Additional charge for customized training?	NO	YES
• Thousands of solid references?	YOU BET	?

If you ask other training companies the answers to these tough questions, you'll probably make the decision thousands of decision-makers like yourself made: to get your training from The Computer Education Professionals at Sys-Ed.

Write Sys-Ed or call 212-889-3386 for more information about the range of on-site course options. By the way, we also offer public, regional and consortium courses.

_____ Tell me about your on-site training.
_____ I'd like a schedule of your public courses in my area.
✓ Be sure to let me know about the Sys-Ed Multi-Course Discount and your Satisfaction Guarantee!

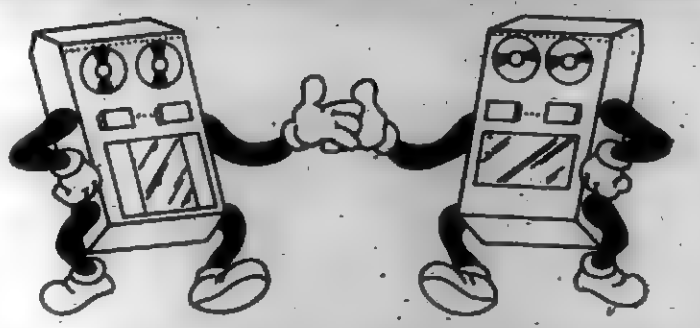
OUR SWITCHES MAKE YOUR IBM SYSTEMS WORK LIKE A TEAM!



If you have more than one IBM or plug compatible processor, Digital can help you get the most for your hardware investment. Our switches allow you to achieve backup and peripheral configuration flexibility at a fraction of the cost you're probably thinking.

Whether you have two processors or more, Digital has a switch to suit your requirements.

- Model 4101 The lowest priced matrix switch on the market.
- Model 3421 The only manually operated channel switch in the industry.
- Model 3405 A remote controlled channel switch designed for underfloor installation.

Raytheon enters OA arena with 16-bit system

By David Myers
CW New York Bureau

NEW YORK — Raytheon Data Systems Co. made a late and limited entry into the crowded office automation arena here last week with a 16-bit Convergent Technologies, Inc. system aimed principally at the airline industry where the Norwood, Mass.-based division of the Raytheon Co. holds 85% of a $100 million installed base.

Although Raytheon Data officials at a press gathering at the World Trade Center disputed the term "value-added OEM," they admitted the RDS Signature 8300 office system unveiled here was almost wholly made by Convergent — except for an airline communications link written by Raytheon engineers and "housings" manufactured by Raytheon Data.

The system, able to host up to eight terminals, runs the Convergent operating system software, rechristened RDSOS, for the Raytheon Data product offering.

Jane Ellis, product marketing manager for interactive and distributed data processing systems, said Raytheon Data decided to stick with the Convergent operating system because "it's been on the market for the last two years. It's field-tested and debugged. It won't go through the birthing pains a lot of new operating systems go through. We thought it was important to have a stable operating system."

At the same time, Raytheon Data officials disclosed plans to bring a Unix-driven office system to market later this year, perhaps as early as spring. Jon O. Hooper, senior vice-president for marketing and field operations, said the Convergent-driven system was brought out first in order to get a jump on competitors.

"There have been a lot of announced signings with Convergent, but this is the first system to be brought to market," Hooper claimed. It is also the first complete system to be marketed by the long-time maker of terminals.

"That's where the market is going," Ellis declared. "Customers have these terminals; they want to do something more with them. They look at all this gear and ask, 'How can I marry it all together?' "

A local-area network connection to Xerox Corp.'s Ethernet will be available for the office system by April, according to Ellis.

The office computer, which can also run Digital Research, Inc.'s CP/M 86 and Microsoft, Inc.'s MS-DOS as "concurrent guest operating systems," is aimed at financial institutions and state and federal government agencies as well as airlines, Raytheon Data officials said.

Hooper said his company was not making a late break into office automation because "we already have the customer base in place." In addition to holding 85% of the airline-terminal market, Raytheon Data has installed terminals at 60% of U.S. insurance carriers, Hooper claimed.

The RDS Signature 8300 introduced here last week can operate as a one-terminal computer or as a clustered system with a master terminal and up to seven slaves sharing hard and floppy disks, according to Ellis.

Programming languages available for the system include Cobol, Basic, Fortran, Pascal and assembler. Other program tools include a text file editor, a debugger, a linker/librarian for code segment management and a queue manager for controlling spooled and batch processes.

Available with 15-in. eight-color or 12-in. one-color display monitors, the system is powered by an Intel Corp. IAPX 80186 microprocessor.

Raytheon Data said a typical word processing configuration, with one display terminal hooked up to dual floppy drives and a letter-quality printer, will cost $9,060. A four-terminal data processing cluster, made up of one floppy drive, a 20M-byte hard disk, one letter-quality printer, one high-speed dot matrix printer and one 80-col. dot matrix printer, is listed at $32,502.

Raytheon Data Systems is located at 1415 Boston-Providence Tnpk., Norwood, Mass. 02062.

Graphics meet set for Feb. 15

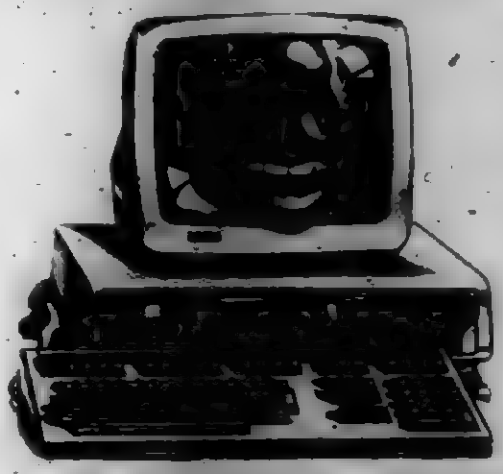
SAN FRANCISCO — Printing Industries of America, Inc. (PIA) will sponsor a conference here Feb. 15-17 on "Computer Graphic Networks 1984 to 1990."

The conference will be devoted to integrated systems and services that link graphics and visual media with computer and networking technologies.

Registration deadline for the conference is Jan. 27; fees are $495 for PIA members and $595 for nonmembers.

Information is available from Printing Industries of America, 1730 N. Lynn St., Arlington, Va. 22209.

Computer Communications?



Whether it's office to office, office to corporate computer or office to data base service, Polygon software delivers reliable data transfer.

We've been developing communications software for micros, minis and mainframes for over five years. Experience that has paid off with comprehensive programs, documentation and effective menus for optimum user performance.

It's simple. Whether you use a modem, direct cabling or local area networks, our software talks directly from computer to computer. One more good reason why Digital Equipment Corporation and Interlan, Inc. sell and support our communications software with their products.

So, if you want to communicate, and you want to do it economically, reliably and easily, communicate with us...we're Polygon Associates.

We have the software...

poly-TRM™ Asynchronous Terminal Emulation Software: For communication as a terminal to virtually any computer system including the Source[1], Dow Jones[2] and other commercial information services.

poly-BSC/RJE™ Bisynchronous Terminal Emulation: For Remote Job Entry (IBM 3780/2780) to IBM mainframes and compatible machines.

poly-BSC/3270™ Bisynchronous Terminal Emulation: For emulation of the IBM 3270 family of Information Display Systems, including file transfer.

poly-XFR™ File Transfer Software: For error-free ASCII and Binary file transfers among personal and minicomputers.

For all types of hardware...

Minicomputers using VMS, RSTS/E, RT-11 and RSX-11M Operating Systems[3]; Intel and Motorola development systems. Systems using CP/M[4] in a user tailorable version.

Plus we support personal computers from the following manufacturers: Apple Computers, Inc., Digital Equipment Corporation, International Business Machines Corporation, Jonos, Osborne Computer Corporation, Radio Shack/Tandy Corporation, Televideo Systems, Inc., Victor Technologies, Inc. and Xerox Corporation.

1 The Source is a service mark of Source Telecomputing Corporation, a subsidiary of the Reader's Digest Association, Inc.
2 Dow Jones is a trademark of Dow Jones, Inc.
3 VMS, RSTS/E, RT-11 and RSX-11M are trademarks of Digital Equipment Corporation.
4 CP/M is registered to Digital Research, Inc.

Hybrid access channels hot topic

CW AT ICA

By Phil Hirsch
CW Washington Bureau

FORT LAUDERDALE, Fla. — Integration of voice and data and enhancements to popular existing services were clearly on the minds of executives from three regional telephone holding companies who discussed their new offerings with managers of the nation's major corporate communications networks during the annual International Communications Association (ICA) conference here last week.

The speakers devoted much of their attention to discussing hybrid access channels capable of transmitting voice and data simultaneously or alternately over existing analog local loops; integrated access channels for those needing higher bit rates and greater capacity; and enhanced Centrex-CO facilities.

The regional holding companies represented at the meeting were Bell South (comprised of Southern Bell Telephone and South Central Bell Telephone Co.), Nynex (formerly the New York and New England Telephone companies) and the Pacific Telesis Group (formerly Pacific and Nevada Bell Telephone companies). All three plan to offer Local Area Data Transport (LADT) service and Circuit Switched Digital Channels (CSDC) by the end of this year.

Using existing loop

The LADT and CSDC technologies utilize existing analog local loops. In the former case, the loop carries voice in analog form and data at speeds up to 4,800 bit/sec in digital form. In the latter case, the data is transmitted digitally at speeds up to 56K bit/sec alternately with analog voice.

All three regional holding companies, meanwhile, are expanding their fiber-optic circuitry and greatly increasing their ability to provide high bit-rate services end to end. At the ICA seminar, Pacific Telesis Marketing Vice-President A. F. Boschulte indicated two ways his company plans to move present customers to these new offerings: those using private lines for low-speed data transmission are good prospects for LADT, he explained, while those using Datephone Digital Service will be offered CSDC.

Last week's discussions at ICA made it clear that the divested Bell operating companies are relying on their in-place Centrex-CO equipment to give them an advantage over competitors who market directly to the end user; it also is clear that Centrex is being enhanced as quickly as possible to maximize the advantage.

Pacific Telesis, for example, plans to offer its Cenpac within the next few months.

Cenpac, according to Boschulte, will enable users of the IBM Personal Computer XT and compatible personal computers to order Centrex feature changes on-line.

Nets called vital marketing weapon

By Phil Hirsch
CW Washington Bureau

FORT LAUDERDALE, Fla. — Telecommunications networks are becoming a valuable marketing weapon, consultant Howard Anderson said here last week.

By providing on-line access to specialized data bases, free or reduced-price terminals and similar assistance, Anderson told the International Communications Association (ICA) that banks, insurance companies and firms in several other industries are stealing a march on their competitors. One likely result is that the front office will pay more attention to the telecommunications area — a possibility that could result in a bigger budget for the telecommunications department, he said.

Anderson expects 80% of all managers and high-level executives to be accessible through workstations by the 1990s. However, those devices will undergo major changes, with the personal computer emerging as the most popular type of workstation, he predicted at the ICA meeting.

Telephone carriers and computer companies will be the major suppliers of workstation equipment, according to Anderson. "Telephones soon will be computers, while computers are rapidly evolving into computer telephones."

Northern Telephone Co.'s Displayphone and similar devices are the forerunners of this new terminal, Anderson said. Besides transmitting and receiving voice and text messages, the Displayphone will have local computing ability, compatibility with the IBM 3270 and possibly other DP terminals, touch-sensitive file access, voice as well as text message storage/retrieval capability, an attached printer and other peripherals.

Anderson also predicted that the mainframe processing load will increase rather than diminish because the growing workstation population means more internal and external communications.

AT&T offers hints of coming ISDN

FORT LAUDERDALE, Fla. — Possibly the most significant comment at the International Communications Association (ICA) seminar on upcoming carrier offerings came from Dennis White, a services planning manager for AT&T Communications, the company's long-distance services provider.

Describing the integrated access channels that AT&T expects to begin offering shortly, White said they will consist basically of 24-channel, 1.5M bit/sec transmission facilities leased from regional telephone holding companies and resold to users as part of a long-haul circuit capable of transmitting voice, data, video and facsimile signals on an integrated basis.

What the company is planning to offer, in other words, is the first commercial, end-to-end integrated services digital network (ISDN) service.

The service will appeal to only a small group of users — those with a lot of traffic — but it nevertheless will become available, if AT&T's plans materialize, well before any ISDN was generally expected to enter the market and well before similar technology goes into regular service in other countries.

Subdividable 1.5M bit/sec channels capable of carrying voice/data/image signals have been available for some time. What distinguishes the new offering is its ability to reallocate this bandwidth on a dynamic, customer-specified basis.

The 24 subchannels each operate at 64K bit/sec and can be used, according to White, for individual voice and data services (Wats, Message Toll Service, packet-switched and/or circuit-switched data) according to instructions from the user. The instructions reside within the network in an on-line data base that the customer can access directly via one of the 24 channels. If the user's needs change unexpectedly, he can change the instructions immediately.

Integrated access channels will reportedly save the user money because they will enable him to buy bulk transmission facilities costing less per channel than the same facilities procured separately. The savings, White said, could be as high as 40%.

Court upholds Litton award

WASHINGTON, D.C. — The U.S. Supreme Court last week upheld a $276 million award to Litton Systems, Inc. from AT&T, which had sought to overturn an antitrust damages suit won by Litton last February.

The court did not change the 2nd U.S. Circuit Court of Appeals ruling that AT&T excluded Litton from competing in the telephone terminal equipment mart. Litton, based in Beverly Hills, Calif., claimed that it was impeded when AT&T dragged its feet during Federal Communications Commission proceedings.

Here are a few good reasons why you should make Local Data your protocol converter company.

Local Data's comprehensive line of local and remote protocol converters have been used around the world to make async-to-IBM communications simple and economical.

DATALYNX™/3274.
DataLynx™/3274 remote async ASCII protocol converter supports SNA/SDLC or BSC protocols. 80 types of ASCII async terminals can emulate IBM 3278 display stations. RS-232C ASCII async printers can emulate IBM 328X printers.

DATALYNX™/3780.
DataLynx™/3780 async ASCII-to-IBM 5780, 2780, 2770 and 3741 protocol converter supports EBCDIC BSC protocol on one channel and async ASCII devices on the other two channels. Features include transparency, mini/micro support and free file transfer program.

INTERLYNX™/3278.
InterLynx™/3278 allows the attachment of low-cost ASCII CRT terminals or p.c.'s to 3274/3276/4701 and 43XX integrated adaptor Type "A" coax ports. InterLynx/3278 enables the user to use async CRT's on IBM systems and switch to async applications under terminal control.

FILELYNX™/3278.
For micro-mainframe file transfers.

INTERLYNX™/3287.
InterLynx™/3287 allows attachment of ASCII printers to IBM Type "A" coax ports or 3274/3276/4701 controller and 4321/4331 CPU's.

SNA LU1 SCS and LU3 capability are standard with the InterLynx/3287. Features include parallel and serial ports and front panel set-up.

For more information call today.

"Your Lynx to IBM."

Senators propose access charge modification

By Phil Hirsch
CW Washington Bureau

WASHINGTON, D.C. — Resolution of the bitter battle over pending telecommunications legislation became more likely last week when it was learned that a coalition of Republican senators, led by Robert Dole of Kansas, will oppose the legislation if the Federal Communications Commission modifies its pending plan to charge for access to the dial-up telephone network.

Terms of the proposed modification were stated in a letter sent by Dole to Mark Fowler, chairman of the FCC. Dole proposed in his letter that:

■ The surcharge that the FCC wants to impose on each residential and single-line business local loop — initially amounting to $2/line per month — be deferred for a year.

■ The surcharge be capped at $4/line per month, at least through 1990.

■ Smaller independent telephone companies be free to continue collecting all long-distance network access fees from long-distance carriers (in other words, they would not have to be reimbursed partly for surcharges imposed directly on their local-exchange customers).

■ The differential between what other common carriers and AT&T Communications (formerly AT&T Long Lines) pay for local access under the FCC plan be adjusted in favor of the other common carriers.

Specialized carriers

Specialized carriers, who insist that the FCC's proposed differential would increase their costs to prohibitive levels, have strongly opposed the FCC plan, along with consumer groups and key members of the U.S. Congress.

Business communications users, along with most telephone carriers, approve the FCC plan.

The House last year passed a bill (H.R. 4102) that permanently bars imposition of surcharges on residential and single-line business users.

The U.S. Senate's companion bill (S. 1660), which is now awaiting a final floor vote, defers these charges for two years.

Support at ICA

Support for the "Dole compromise" was indicated last week in Fort Lauderdale, Fla., at a meeting of the International Communications Association (ICA), a users group of communications managers who work for the nation's largest companies.

Bob Bennis, director of communications for Westinghouse Electric Corp. and chairman of ICA's telecommunications policy committee, said that although the ICA much prefers the access charge plan that is proposed by the FCC, the ICA membership is aware that this is an election year, and any scheme that increases costs for large numbers of voters is unlikely to be popular on Capitol Hill.

AT&T Vice-President Larry Garfinkel, one of the company's chief legislative policymakers, was also present at the ICA meeting.

Garfinkel indicated a willingness to modify AT&T's position, but it was unclear whether the modification would be enough to get AT&T behind the Dole compromise.

According to Garfinkel, AT&T continues to oppose any delay in implementation of the residential/single-line business access surcharge, but it is willing to accept a smaller initial charge and, possibly, a more gradual build-up to the full amount than it had previously indicated.

Business users to gain from break up: AT&T

CW AT ICA

By Phil Hirsch
CW Washington Bureau

FORT LAUDERDALE, Fla. — Deregulation of AT&T's long-distance services will benefit business users as well as the company, AT&T Vice-President Larry Garfinkel said here last week.

Garfinkel asked communications managers from the nation's largest companies to help AT&T sell this idea in Washington, D.C., when he spoke before the International Communications Association (ICA).

Cost-based rates for business users will be one benefit of deregulation, said Garfinkel, who is the new chief services planner for AT&T Communications.

Garfinkel pointed out that under present tariffs, which are based on the separations-settlements process, companies that use interstate long-distance circuits pay more for these services than it costs the carrier to provide them.

The Federal Communications Commission's controversial access charge plan, now scheduled to go into effect next April, is intended to correct this alleged imbalance, Garfinkel indicated, and AT&T is working hard to get the access charge implemented.

However, he suggested that additional rate reductions would be forthcoming from deregulation — discounts for volume purchases of long-distance transmission facilities would be one example. Such discounts are commonplace in competitive industries, Garfinkel said.

More innovative services

More innovative services also would result from deregulation, Garfinkel argued. AT&T would no longer be required to announce its plans in advance to the FCC and, thus, to its competitors; and charges could be based on incremental costs that are much lower than the fully distributed costs now required.

Garfinkel pointed to several services AT&T has proposed in the last several months — audiographic teleconferencing, international videoconferencing, optional calling and new time-of-day pricing plans — that had to be abandoned or drastically changed because of FCC objections.

The FCC is now looking at whether and to what extent deregulation of AT&T Communications is necessary, Garfinkel said. He expects this proceeding to encourage significant relaxation of present restraints, probably on a service-by-service basis, in two to three years.

The FCC proceeding is known officially as Docket 83-1147.

Interested parties have been asked to submit their initial comments to the commission by Feb. 1; reply comments are due March 19.

During a question-and-answer session following his presentation, Garfinkel was asked whether AT&T's existing service to remote areas would suffer if its long-distance offerings were deregulated.

Garfinkel responded by asserting that the company is willing to guarantee "ubiquitous service" at rates pegged to the consumer price index or a similar inflation indicator.

Asked to comment on a major argument against deregulating AT&T Communications — that it presently has at least a 90% market share — Garfinkel responded that AT&T's share is 75% in the "competitive markets" which, he said, are confined to interurban communication among residential customers spending $25 or more per month and business customers spending $50 or more per month on interstate services. Other common carriers have the remainder.

Corporate customers

Garfinkel stressed that a large percentage of AT&T's revenue comes from a small number of corporate customers.

For example, 79% of the company's earnings from interstate business services are contributed by 2% of the customers; only about one half of 1% of those customers contribute nearly 20% of the company's business toll telephone revenue.

His underlying point was that because of this concentration, a deregulated AT&T would not neglect its corporate customers.

DEC TO IBM SNA

Now available...full SNA capability for your DEC computer! Comboard/SNA gives your terminals access to IBM interactive applications. Data can be transfered between systems transparently, all in the complete fully supported package from Software Results.

Comboard/SNA is a proven and reliable, single-board, 256KB communications computer that plugs into your DEC Unibus. Teamed with Comboard software, the system is a cost-effective solution to troublesome SNA communications problems.

Comboard/SNA allows your DEC to emulate an IBM PU Type 2 communications node. You have a full gateway into your SNA without the trouble of passing through a secondary network.

For further information, fill in the coupon below or call Software Results... the leader in DEC to IBM communications.

Job-matching firms ride boom

By John Gallant
CW Staff

Touted by developers as the wave of the future in job hunting, most computer-based employment matching services are reaping the benefits of an improving U.S. economy through increased usage and an influx of investment capital.

"The upswing in the economy has had an incredibly positive impact," said Joseph Stacey, president of Bedford, Mass.-based Jobnet, Inc., in a recent interview. "Prospective customers are coming to us with pent-up demand. Now they're looking to hire sooner rather than later. We've seen a phenomenal growth in new customers and in interest in the service."

Jobnet provides employers with a data base of resumes submitted by job-hunting applicants. Among its present customers, Stacey estimated, usage of the data base has increased by several hundred percent.

"The [economic] situation is clearly improving, and our information says that trend will continue for the next couple of years at least," he added. "Our service will also continue to expand because we provide a steady flow of qualified applicants."

Stacey was not alone in his optimism. Base Network Corp. President Fred Robertson, whose firm offers the Contacts computerized recruitment service, said the outlook for the industry is excellent. "Our system usage is easily twice what it was three months ago. Things are really moving. It's like day and night compared to two years ago. We offer employers a chance to contain their hiring costs and reduce their employee search time, and both of those factors are very important today."

The brightening economy has given Chicago-based Contacts an additional boost. Robertson's firm recently concluded a million-dollar funding deal that will provide the capital necessary to expand Contacts' base of operations. "Due to the changing economy," Robertson said, "this has become a more viable option for venture capitalists."

Though it has yet to offer its services to the public, Careersystem, Inc. has also reaped the financial benefits resulting from the mending economy. The Palm Beach, Fla., firm is poised to enter the market for on-line employment services following a three-year data base development and test marketing project and a public stock offering that raised needed investment funds. "The solid response we had from our public offering showed that the interest in our type of service is out there," said President William Berry.

But the industry has had its casualties, too. One of the most promising of the on-line employment services — the Cambridge, Mass.-based Connexions Interactive Recruiting agency — recently suspended operations after less than a year on the market.

According to former President Robert Kvaal, the problem was a "matter of access to capital. The institutional investors just didn't materialize." Kvaal declined to expand further on the difficulties Connexions encountered, but hinted that the firm may resume operations in the future.

Connexions represented the sole sour note in a chorus of optimism sung by industry experts. "We have seen a marked increase in the amount of activity on our system," said Michael O'Connell, co-founder of Computer Search International, Inc.'s Employ on-line data base, which is offered through The Source information service. "The economy has opened up a lot more jobs. People were holding tight to their positions before; they were reluctant to move. But now they're really starting to get up and go."

Programmers top wanted list in '84

PHILADELPHIA — Programmers will be the employees most in demand during 1984, a year in which six out of 10 new jobs will be computer-related in some parts of the U.S., according to a survey by Fox-Morris Personnel Consultants, Inc.

The 10th annual survey of Fox-Morris recruitment and search offices throughout the nation showed that demand for programmers will increase by 18.7% over 1983 levels.

The company also predicted that corporate data processing and management information systems directors can expect median salaries of $65,400 or top salaries of $71,500, placing them eighth from the top in a list of projected salaries for management-level personnel.

On the list of high-demand job titles, electrical and electronics engineers are projected to see 18.5% more openings in their field than in 1983, software/systems engineers 15.1% more, systems analysts 13.8% more and MIS directors 8.9% more.

Fox-Morris President Sanford L. Fox said the proliferation of both business and personal computers will continue to stimulate the demand for data processing professionals at all levels. He said that six of 10 new jobs in the Midwest will be computer-related.

Among workers with two to six years of experience, median and top average salaries are expected to be $33,380 and $39,500 for electrical and electronics engineers; $31,570 and $33,800 for systems analysts; and $29,150 and $31,800 for programmers.

At the entry level, computer science graduates can expect median average salaries of $23,500 and top average earnings of $24,550, the company said. The report is available free from Fox-Morris, 1500 Chestnut St., Philadelphia, Pa. 19102.

TO ALL MSI AND TELXON USERS:

50% OFF ALL AZURDATA SCOREPAK™ TERMINALS.

While MSI and Telxon are discontinuing certain model terminals and offering close-out specials, the Azurdata Scorepak continues to be a top seller. The reputation of excellence and reliability established by the Scorepak makes it a consistent leader among portable data entry terminals.

In celebration of our Scorepak success, Azurdata is offering 50% off on all Scorepak terminals. If you were doing business with our competitors

and now find they will no longer support your needs—or maybe you're ready to trade-up to a winner—we want to hear about it at Azurdata! Call now, this is a limited time offer. But you can be sure it isn't "limited to stock on hand" because Azurdata recognizes a winner and the Scorepak is here to stay.

Azurdata

Azurdata, Incorporated
4102 - 148th Avenue N.E.
Redmond, WA 98052-5182

Seattle 800-426-8082 toll free
St. Louis 800-325-6121 toll free
Atlanta 404-482-8020

Azurdata is also a manufacturer of programmable terminals and a leader in application programs such as Shelf Price Audit, Direct Store Delivery, and Route Accounting.

Offer good on orders of 50 or more terminals. Orders must be received by February 29 and shipped prior to March 31. Offer does not include the Scorepak IV and is valid only in the continental United States.

Survey asks: What makes a good DPer?

By James Connolly
CW Staff

PALM BEACH, Fla. — When data processing managers hire data processors, they want the candidates with the greatest work experience, technical know-how and educational background.

But once on board, the "good data processor" should rely more on personality — logic, receptiveness and communication skills — than on technical ability to advance in a corporation.

Those were some of the conclusions of the "Professional EDP Hiring Study" conducted in November for Robert Half International, Inc., a recruiting firm specializing in data processing and financial personnel, by Burke Marketing Research of Cincinnati. The telephone survey, whose results were released to *Computerworld* last week, polled 50 DP managers and 50 top executives of Fortune 1,000 firms about their DP hiring practices, career growth for DP personnel and the relationship of DP personnel to the rest of their companies.

In listing the traits they look for when hiring experienced personnel, DP managers cited experience 62% of the time. Technical knowledge was mentioned 58% of the time, education 32%, personality 22% and job stability 20%.

Sixty-eight percent of the DP managers said they were responsible for hiring entry-level employees and 74% for experienced workers.

When asked what attributes a "good data processor" exhibits, the DP managers and corporate vice-presidents in 52% of the survey calls cited "personal attributes" such as logic (23%), interaction (15%) and communication (8%). In 46% of the calls, they cited "skills" such as technical expertise (16%), problem solving (10%) and training on equipment (9%).

Ninety-six percent of the 100 managers said DP personnel must communicate well to "get ahead," while "lack of motivation" was cited as the main reason for nonadvancement. Seventy-one percent of those polled said that data processors are "too DP-language-oriented."

'Scared of technology'

Robert Half, president of the recruiting firm, which is headquartered here, said in an interview last week that corporate leaders still tend to be "scared as hell of technology" and that they may be more impressed by a data processor's technical skills. "DP managers, on the other hand, assume the person has the skills. If the employee has had four years of Cobol, he should know Cobol. That may be why they are looking more at personal traits," Half said.

The survey also showed that 52% of the DP managers expect data pro-

See [illegible] page 16

DP managers, VPs part ways on question

PALM BEACH, Fla. — Data processing managers and company vice-presidents don't always agree when they're asked what makes a "good data processor."

The 50 Fortune 1,000 vice-presidents polled in a recent survey conducted for Robert Half International, Inc. here tended to define a "good data processor" according to skills, while data processing managers favored personal attributes such as logic and communications.

Lack of motivation

More data processing managers (40%) than top managers (18%) cited lack of motivation as the reason data processors fail to get ahead in companies, while top managers leaned toward personality deficiencies (30%) as the reason for failure to get ahead in companies.

Top managers felt strongly (48%) that data processing is an excellent field in which women can advance; this belief is held strongly by only 28% of the data processing managers polled.

The top managers also felt strongly (76%) that they and their peers should have a "working knowledge" of data processing procedures. Only 60% of the data processing managers agreed with that suggestion.

Meanwhile, the data processing managers (72%) disagreed more strongly than the top executives (54%) with the suggestion that data processors lack imagination.

DOS/VSE and CICS/VS Frustration?

BIM gets it out of your system.

BIM presents a line of proven programs that maximize your system's capabilities, saving you time, labor and expense. These program products help get the most out of your system and people.

BIM-EDIT — the editor with more than 25 significant features that ICCF can't match.
BIMSPOOL — Prints output in POWER/VSE spooling queue on local or remote 3270 terminal printers. (Received ICP Million Dollar Award 1982).
BIMSPOON — On-Line to Batch Print Spooling. Prints data passed from CICS application programs into the POWER spooling queue.
BIM-PDQ — POWER Dynamic Queuing performance enhancement. Eliminates 95% of the I/O to heavily used POWER queue.
BIM-CDMS — Comprehensive problem analysis and display of operational CICS system.
BIMTEXT — Word processing, document composition system. Create formatted documents from free-form input.
BIMSWAP — Switch local 3270 BTAM terminals between multiple CICS partitions without special hardware or additional ports.
BIMCMPRS — CICS 3270 data compression system. Reduces response time for remote terminals significantly. Available for OS/VS1 and MVS also.
BIMP3270 — Comprehensive CRT screen image print facility. Copy to terminal printers or spool queue for system printer.
BIMSERV — On-line display of library directories and entries, VSAM Catalog entries, disk VTOC's, etc.
BIMDSLOG — Console Message File display. Used by computer operations and programmers.
BIMMONTR — DOS/VSE System Status, Performance Measurement, and POWER Queue display.
BIMDEVC — Displays Logical Unit assignments for physical devices, to resolve operational problems.
BIMSUBMT — On-line Job Edit and Submission facility.

BIM programs are cost-efficient, many less than $800. You can save even more with our group package offerings. Products are available on permanent, annual, or monthly leases, and shipped on a 30-day free trial basis. Product documentation is available on request.

BIM also performs systems programming consulting, with consultants based in Minneapolis and Washington, D.C. Computer time services are also available on our 4331-2 system, on-site or remote.

HIRING from page 15

cessing personnel to show more loyalty to their companies in the coming year and that the same percentage see DP departments as traditionally having higher turnover rates than other departments.

Half observed, "Computer people are more conscious of their profession — the hardware and software. Financial people are more conscious of the company. For the DP person to advance, he has to change that outlook, because the company, not the profession, writes the check. Somewhere along the line you have to say, 'This is where I am. I like it here. I'm going to stay.' "

The poll also showed that DP personnel usually are hired through help-wanted ads and recruiters. However, most managers said they have responded, not necessarily in the positive, to unsolicited letters.

Other findings included the following:

■ Seventy-five percent of the DP managers polled oppose the licensing of data processors.

■ Fifty-eight percent said computer science graduates should have more business or practical experience.

■ Only 7% said it is "likely" or "very likely" a head of data processing will become its company's chief executive officer within 10 years.

Those surveyed also were asked what advice they would give to a person entering data processing.

They responded with "communicate" (26%), "learn as much as you can" (16%), "business background" (14%) and "learn technical skills" (12%).

'Allow me to introduce my mother'

PALM BEACH, Fla. — Asked for the most unusual approaches that job applicants pulled out of their sleeves, some of the DP managers recently surveyed for recruiting firm Robert Half International, Inc. cited the predictable "inflated experience or resume."

But other managers, impressed for better or worse, had seen more original attempts to obtain interviews.

They included applicants using a sympathy approach — with crutches and wheelchairs, walking in unannounced and claiming a job, calling the managers at home, claiming to be programmers on the basis of having used a computer and saying they were writing a book on data processing.

One applicant told the interviewer she had won a contest for a free lunch, while another claimed to be more interested in the corporation's welfare than in his own.

Finally, a manager cited the old reliable ploy: An applicant brought his mother on an interview.

DG chief sees revenue growth of 20% to 25%

By Peter Bartolik
CW Staff

BOSTON — Data General Corp. should experience revenue growth of 20% to 25% annually over the next two years, but shortages of components, particularly semiconductors, could affect shipments and costs during 1984, company President Edson de Castro told shareholders at DG's annual meeting here last Tuesday.

Expressing optimism for continued growth in orders as reported for the past two quarters ending in September and December, de Castro said the firm's management team is concerned "about our ability to increase shipments as rapidly as orders come in [during] the months ahead. . . . Shortages of components, especially some types of semiconductors, are beginning to appear. If such shortages become significant, they may affect shipments or costs or both."

De Castro told shareholders that the board of directors intends to elect as a company vice-president Hisashi Tomino, president of DG's Japanese subsidiary, Nippon Data General Corp. He also announced the appointment of a board of scientific advisers comprised of professors from MIT, Stanford University, Carnegie-Mellon University's Robotics Institute and the University of California at Berkeley, including two specializing in robotics and artificial intelligence.

CW photo by P. Gerwitz

Edson de Castro

The company did not experience any problems during the quarter ended in December, but "it is a risk that may continue for much of 1984." Expanding later, he said problems are developing industrywide in the supply of random-access and read-only memories, gate arrays and also some components used in mass storage.

While sales and profits increased in the past two quarters, ending a three-year slump that saw annual profits dip from a high of $54.6 million in 1980 to $23.1 million last year, the profit margin for the first quarter ended in September was only 6.2% because of start-up costs for the Desktop Generation microcomputers and added expenses. By the end of 1984, that margin may increase to the low or mid-teens, de Castro said.

"We're saving $50,000 a year by eliminating SYSOUT printouts and installing JCLWTR."

That's the word from one user of AID's new JCLWTR system.

Instead of printing every production SYSOUT listing, JCLWTR stores them on disk where they're instantly accessible through special SPF screens or hard copy printouts.

The savings in paper, printing, handling, and storage costs add up so quickly that even medium and small shops can recover the system's minimal cost in just months.

JCLWTR installs on medium and large IBM systems operating under MVS and supports on-line interfaces to COM.

Find out how much you can save with AID's JCLWTR system. Send in the coupon, or call Lew Kabza at 312/654-3030.

Comp-U-Card plys high-tech merchandising

comp/store

By John Gallant
CW Staff

STAMFORD, Conn. — With more than 60,000 items in its data base of brand-name consumer products, Comp-U-Card International, Inc. (CUC) here is bringing the techniques of merchandising into the computer age.

Touted by founder Walter A. Forbes as the leading national electronic merchandising service, CUC offers its more than one million subscribers the opportunity to obtain price and product information from the data base by telephone or through their own home computers. The firm is also carrying the technology a step further by installing in various retail outlets interactive videodisk terminals that enable customers to browse through the customized data base and place orders directly into the system.

CUC carries no inventory; instead, customer orders input into the system are transmitted to the selected vendor's warehouse or outlet to be shipped directly to the customer.

Forbes began building the network of retailers, distributors, wholesalers and manufacturers that offer products through the CUC data base in 1974. The service was originally offered only to telephone subscribers who called a toll-free 800 number to obtain price and product information. In 1979, CUC began Databucks, which Senior Vice-President E. Kirk Shelton said was the first interactive home computer shopping service.

Databucks, which was later to be expanded into the Comp-U-Store service, was initially offered through The Source network. Comp-U-Store is currently available through The Source, Dow Jones and the Compuserve information services and directly to members with a modem-equipped microcomputer.

CUC continues to expand the Comp-U-Store service into what Shelton described as an "electronic mall" by adding an extensive line of pharmaceutical and health care products and specialty items such as the Nieman-Marcus line of gourmet foods.

Until the Databucks service was instituted in 1979, all CUC's product information was maintained through an extensive manual system. The company then installed a Digital Equipment Corp. Decsystem-2060 mainframe with 2G bytes of memory and began the arduous task of building the 60,000-item data base and writing the proprietary operating system and data base management system software that drive the system.

"The initial phase of the project was to design a computer system that would parallel the manual system," Shelton explained. "The process of writing the code took more than two years. It had to be developed one piece at a time, and through each step we would maintain the manual system until we were certain the electronic system was up and running satisfactorily.

"The development process involved a ton of work, but the hardest thing was getting the right suppliers for the system."

CUC currently has a staff of some 30 programmers who maintain the software and data base, a task that Shelton said involves close to 100,000 monthly updates to keep product and price information timely. Aside from the users who access the data base through their own micros, CUC has a staff of some 100 people who operate a bank of microcomputer nodes which remotely access the mainframe from the company's headquarters here. The terminal operators man the telephones for CUC's still rapidly growing Comp-U-Card phone-in retail service.

The CUC system is equipped with a "least cost optimization" feature that chooses the best price among the vendors offering the same product through the system. Thus, vendors have to be price competitive in order to be selected, a situation that often leads to savings of up to 40% for CUC customers, Shelton said.

Comp-U-Mall marks next step in electronic shopping

STAMFORD, Conn. — Comp-U-Card International, Inc.'s (CUC) revenues increased nearly 140% in fiscal 1982 to reach $4.2 million. In the first three quarters of the firm's latest fiscal year, that figure has already grown to more than $5.5 million.

The bulk of CUC's revenues come from the $25 annual membership fee levied on subscribers. In addition, the company earns a percentage of each sale transacted through the network. The Comp-U-Card telephone retail service continues to account for a large portion of CUC's sales, and management expects that sales through Comp-U-Card will double every year for the next three years as a result of the firm's "aggressive direct marketing" techniques.

With Comp-U-Card, subscribers check on price and product information using a toll-free telephone number — (800) 843-7777. Utilizing the system's least-cost optimization feature, a CUC terminal operator provides a customer with the lowest cost listed among vendors for a particular item. The customer can then place an order, which CUC automatically transmits to the vendor's shipping center for fulfillment.

Comp-U-Card does not allow users to browse the data base; they must have a particular product in mind. But that limitation is overcome through Comp-U-Store, another CUC service, which allows customers with microcomputers to access the CUC data base through either an information service or their own modems. After the user enters some broad product characteristics, the system continues to prompt him to obtain more data. The user then receives on his micro a list of products that meet his criteria.

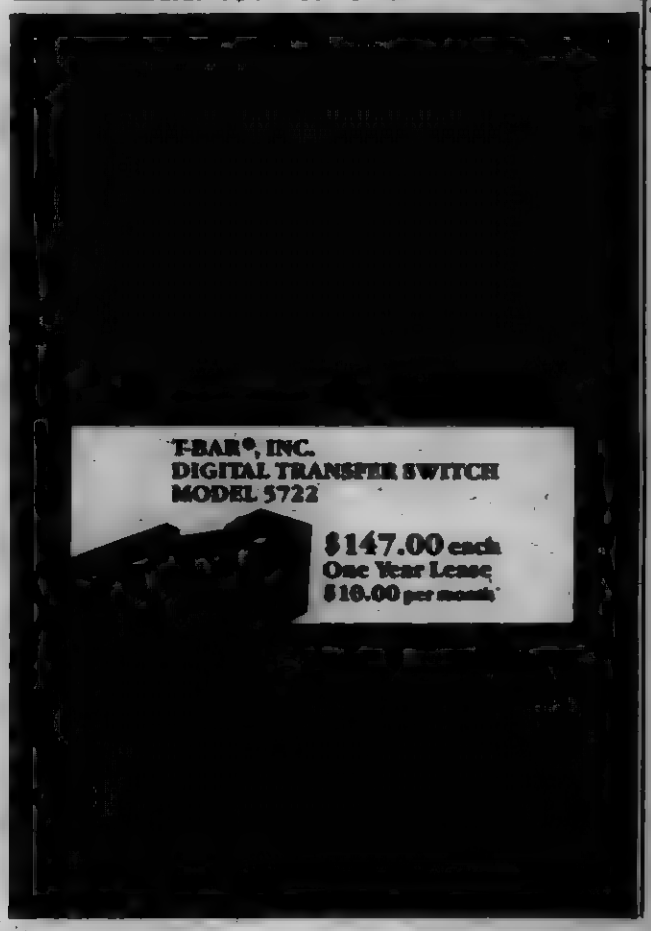
Along with the products, the CUC system chooses the best price among the vendors offering the products. The customer then enters his order directly into the system.

CUC Senior Vice-President E. Kirk Shelton expects use of the Comp-U-Store service to triple each year for the next three years. Comp-U-Store is currently being expanded into the Comp-U-Mall, a concept that will allow microcomputer users to shop from a variety of "stores" housed in an electronic mall.

In addition to the current offerings of 60,000 brand-name products, Comp-U-Mall will offer a discount drug store line, flowers and specialty items from selected catalogs such as Nieman-Marcus. Subscribers will shop in the electronic mall in the same manner as in the Comp-U-Store.

CUC is also making an extensive effort to market its recently announced Video Comp-U-Store. Unlike its other services, the Video Comp-U-Store is a point-of-sale service that makes use of a videodisk terminal to enable customers to browse the CUC offerings or a data base custom-designed for a particular vendor. At kiosks in selected retail stores, customers can call up product information and enter orders, which are transmitted directly to a delivery center.

Video Comp-U-Store is currently being tested in seven department store locations owned by Woodward & Lothrop, Inc. in Washington, D.C., Filene's in Boston and Dillard Department Stores, Inc. in Dallas.



BUILDING A COMPUTER CENTER?

If you're planning a new expanded or remodeled DP facility, you need Datasphere's help.

Since 1968 Datasphere's unique combination of products and services has saved dollars, frustration and time for large and small firms around the world.

From turnkey—design/build computer rooms to the smallest support equipment, we'll do all or part—on schedule, within budget! Datasphere is unique—we're engineers, contractors and suppliers specializing in computer facilities.

Supplying a full line of support equipment, including:

- *Uninterruptible Power Systems*
- *Computer Power Centers*
- *Computer Fire Protection Systems*
- *Computer Type Air Conditioning*
- *Gas Turbine/Diesel Generators*
- *Operation Command Centers*
- *Elevated Flooring*
- *Frequency Converters*
- *Line Filters*
- *Security Systems*
- *Systems Monitors*
- *Voltage Regulators*

NEWS

INTERNATIONAL REPORT

CW INTERNATIONAL NEWS NETWORK

AUSTRALIA

SYDNEY — Apple Computer Australia Pty. Ltd. has appealed Justice Beaumont's rejection of its suit charging Computer Edge Pty. Ltd. with breaching Apple's copyright on Applesoft and Autostart ROM. The appeal against Computer Edge and its managing director, Michael Suss, will be heard again by a full bench next month.

DENMARK

COPENHAGEN — NCR Corp. is continuing its quest to dominate the DP market in Scandinavia. Plans call for the vendor to open an Advanced Technology Center in Oslo, Norway, devoted to seminars and workshops in the application of state-of-the-art technology, Chief Executive Officer Bent Larsen said. Further, terms are being finalized for a joint venture with a leading Norwegian vendor, the Elektrisk Bureau, that sources here said will result in a Scandinavian organization larger than IBM.

FINLAND

HELSINKI — Finland's largest computer maker, Nokia, became Scandinavia's second biggest computer company by purchasing 70% of the holdings of the Swedish firm, Luxor. The acquisition was valued at around $20 million. Luxor, the Swedish state-owned electronics company, created the ABC Series of micros, which tops the list of best-selling microcomputers in Sweden.

FRANCE

PARIS — Olivetti and its French subsidiary, Logabax, are expected to introduce a microcomputer compatible with the IBM Personal Computer. The look-alike, jointly developed by Docutel/Olivetti and Logabax in Cupertino, Calif., is said to be a remake of the 1600 system from Eagle Computer, Inc. In France, the product reportedly will be called the LX 1600, handle two 360K-byte diskettes and feature a 10M-byte disk and be available by the summer in order to compete with the IBM Personal Computer and Personal Computer XT, sources said. The entry-level version is expected to cost $2,500.

Meanwhile, Olivetti will unveil the LX 1600 under its own label this quarter. It has been rumored that AT&T has already ordered 120,000 units of this product for its Italian subsidiary.

JAPAN

TOKYO — Japan's Information Industry Committee of the Industrial Structure Council called for legislation to protect software here and to help the growth of the indigenous software industry.

TOKYO — Fujitsu Ltd. has reached a six-year joint development agreement with Texas Instruments, Inc. The agreement allows TI to use Fujitsu's four types of bipolar transistor-to-transistor logic gate array technology and Cmos gate array technology in a variety of large-scale integration circuits.

TOKYO — Mitsubishi Electric Corp. has introduced a 16-bit small business system. Carrying a $12,723 price tag, Mitsubishi's Melcom 80 Model 8 is a low-end machine that runs under the Digital Research, Inc. MP/M 86 operating system and features data/job control, Japanese word processing and graphics.

NORWAY

OSLO — For the second time in its 20-year history, Norway's prestigious Industry Achievement Award went to a computer company when Norsk Data claimed the prize here on Jan. 9. Gisele Rutman, president of the institute that bestows the award, said Norsk was selected for its "stamina and staying power in exporting its product line to markets that are otherwise dominated by the Americans."

OSLO — John Sterns, president of Sterns Europe, met with his future European distributors here on Jan. 14 to discuss support for Sterns' various product lines. Sterns has reportedly introduced a personal computer that is based on Microsoft, Inc.'s MS-DOS operating system. It has a full-page screen option and is said to operate twice as fast as the IBM Personal Computer.

WEST GERMANY

FRANKFURT — Sales of the IBM Personal Computer here have not lived up to the vendor's expectations. Since the product's introduction one year ago, just 7,000 have been installed in the Federal Republic of West Germany, sources said. IBM reportedly plans to remedy this situation by restructuring its product sales and marketing arm here — an announcement that allegedly triggered the resignation of IBM's Frankfurt-based sales and marketing manager, Romin Neumeister, on Jan. 1.

CUT YOUR COBOL TEST & DEBUG TIME

Our XPF/COBOL™ can slash COBOL test & debug time. XPF/COBOL is a full screen, interactive SPF-like test & debug facility, that can pay for itself in months.

Full screen debugging enables IBM MVS programmers to watch the program execute, find and change COBOL data in COBOL format, run multiple tests, and even watch the program run in reverse.

Call your nearest sales office today, or send in the coupon below, for complete information.

Send me information on XPF/COBOL.

Nicaraguan DP managers face special ills

By Barbara Schaffer
Special to CW

MANAGUA, Nicaragua — "Computerization is not a credential for acquiring privileges, it's a social duty." So reads a slogan on a classroom wall here at the Central Bank of Nicaragua's employee training center. Next to it hangs a Fidel Castro quote: "Sacrifices are fleeting. The only thing that stays with us is the satisfaction of having served the people."

In war-torn Nicaragua, many special problems plague DP directors. Government pressure to fight for the country's Marxist regime, an upside-down economy and a general lack of state-of-the-art technology combine to make Nicaragua one of the world's least desirable places for computer professionals.

An area of major concern for Central Bank's DP Director Eric Brenes is the lack of political commitment among DP people — thus the Marxist signs and slogans. Brenes claimed that "programmers tend to relate more to their computers than to how their work benefits the larger society . . . they tend to program without knowing or caring what the purpose of their work is."

Participation in the volunteer militias is unusually low among computer people, a fact that has not escaped notice in government circles, Brenes said. On the other hand, most computer professionals are not prodded into leaving their jobs to become active in Nicaragua's war efforts because their work is of such economic importance. For example, one of Brenes' computer operators was not allowed to volunteer for a coffee-picking brigade because there was no one to replace him at work.

Tough to keep trained staff

Nevertheless, Brenes maintained that holding onto computer operators, programmers and analysts in Nicaragua is one of his biggest problems. The Bank coordinates the activities of the country's seven nationalized banks and financial institutions. These banks would like very much to be able to double or triple their respective staffs (they currently employ about 250 computer professionals), but the country is suffering from an acute shortage of trained computer personnel, Brenes said.

Salaries in the state DP sector are not very attractive, Brenes admitted. Analysts pull in about 8,500 Cordobas a month ($850 at the official rate of exchange, but closer to $85 at the black market rate because American dollars are scarce). While DPers can make more money in Nicaragua's private sector, many experienced analysts and programmers leave the country for more lucrative jobs elsewhere, Brenes noted.

The ongoing shortage of qualified computer people has forced some of the banks to raid other banks' DP departments, tempting the more experienced staffers away with promises of more interesting assignments and slightly higher pay, Brenes said. Most of the banks' programmers are recent college or technical school graduates in their early twenties. Brenes himself is only 26.

Another obstacle Brenes must contend with — shared by both state and private enterprise here — is the lack of foreign reserves and credit needed for buying new equipment. (IBM is presently the only computer vendor operating in Nicaragua.) Brenes reported that the banks are now in the process of replacing their IBM System/34 minicomputers with IBM System/36 machines.

Brenes is also planning to have micros installed in all bank branches to record daily transactions. There are no plans for linking the micros to a central processor, however, because the telephone lines are not adequate to handle the job, he lamented.

Despite his inability to tie the smaller machines together, Brenes thinks microcomputer technology is particularly well-suited for Nicaragua because "it is less vulnerable to economic and political pressure than mainframe technology, especially in terms of maintenance."

Schaffer is a bilingual journalist and technical writer based in Berkeley, Calif., who recently visited Nicaragua. She acted as interpreter during training sessions on structured Cobol at the Central Bank of Nicaragua.

The things we hear about General Electric service.

"YOU'RE SAVING US MONEY."

If time is money, downtime is disaster.

That's why GE computer and communication service people put such a high priority on fast response. And fixing your computer system and communication equipment right the *first* time.

Our service engineers and technicians know your system from modems to micros—over a wide variety of makes and models.

We get to you fast—through a nationwide service network. Plus, we have depot service that can save you time and money.

To keep costs down, you need your system up. You need GE.

For the service center nearest you, call 800-528-6050, Ext. 406. (In Arizona, call 800-352-0458, Ext. 406.) Or write: General Electric Company, Instrumentation and Computer Service, Dept. DC-7, 705 Corporation Park, Scotia, NY 12302.

GE. Because your system is only as good as its service.

GENERAL ELECTRIC

"First Chicago is launching a whole world of new banking services with ***Tandem NonStop Computer Systems.***"

Donald H. Hollis, Senior Vice President
Head – Systems and MIS
First Chicago Corporation
The First National Bank of Chicago

At The First National Bank of Chicago, providing responsive, on-line financial services for our customers is a major corporate priority. An important part of that commitment is the global implementation of core applications on Tandem NonStop Computer Systems.

Utilizing a common database structure on systems distributed throughout the world provides immediately useable information, uniquely suited to internal reporting and accounting. Included are such time sensitive items as foreign exchange and money market transactions, loan contracts and SWIFT transfers. We call this system F.I.R.S.T. (First Chicago International Real-time System for Transactions).

Tandem systems also support our installed and expanding consumer and commercial funds transfer, balance reporting, and cash management systems, which move billions of dollars for our customers daily. Our Cash Station ATM switch is an excellent example. The modular nature of the Tandem solution enables us to sustain and improve quality by adding such capabilities incrementally, where and when they're needed.

The Tandem systems are on-line in sixteen financial capitals around the world. And they are very reliable. We continue to be impressed with the systems, the support and with our employees' enthusiastic acceptance. They are helping us improve customer service.

The NonStop System. The only computer on the market today that can provide an integrated network of up to 255 16-processor systems, supporting thousands of terminals in an on-line, transaction-based environment.

Tandem. Fully supported by a worldwide sales, training, service and manufacturing organization.

For more information on the Tandem application at First Chicago and a copy of our brochure, "Solutions in Banking," contact your local sales office or Tandem Computers Incorporated, 19333 Vallco Parkway, Cupertino, California 95014, U.S.A. Toll Free 800-482-6336.

Sinclair's Quantum Leap

Sinclair micro makes UK debut

By Rex Malik
Special to CW

LONDON — Americans will be able to mail-order a $499, 3-lb, 32-bit system with an 8-bit communications bus from Sinclair Research Ltd.'s U.S. factory this fall, Sir Clive Sinclair, chairman, said at a press conference here to introduce the machine to the UK market.

Slated for delivery to UK users late next month, the Quantum Leap (QL) machine features 128K bytes of random-access memory (RAM) (expandable to 640K bytes) and twin microdrives with 100K bytes each.

The system's communications bus is based on Motorola, Inc.'s 68008 microprocessor, which Sinclair said will soon become an industry standard.

The microcomputer runs on Sinclair's proprietary Qdos operating system and an enhanced version of the company's Basic software called Superbasic. Qdos is said to allow single users to perform concurrent multitasking.

London demonstration

At the London press conference, demonstrations of the machine showed a split CRT screen running six parts of a program each in different windows.

Sinclair claimed the system could handle concurrent processing up to 20 programs.

The 3-lb system also comes with a full-size keyboard and four basic software packages: a word processor, a spreadsheet, a data base management system with relational properties and screen editor and a graphics package.

According to the vendor, the QL can be compared to Apple Computer, Inc.'s Apple IIe, priced five times higher, and IBM's Personal Computer, priced seven times higher.

If Sinclair delivers, sources here believe the QL will redefine the microcomputer industry's price/performance parameters, making it very difficult for anyone else to compete in the short term.

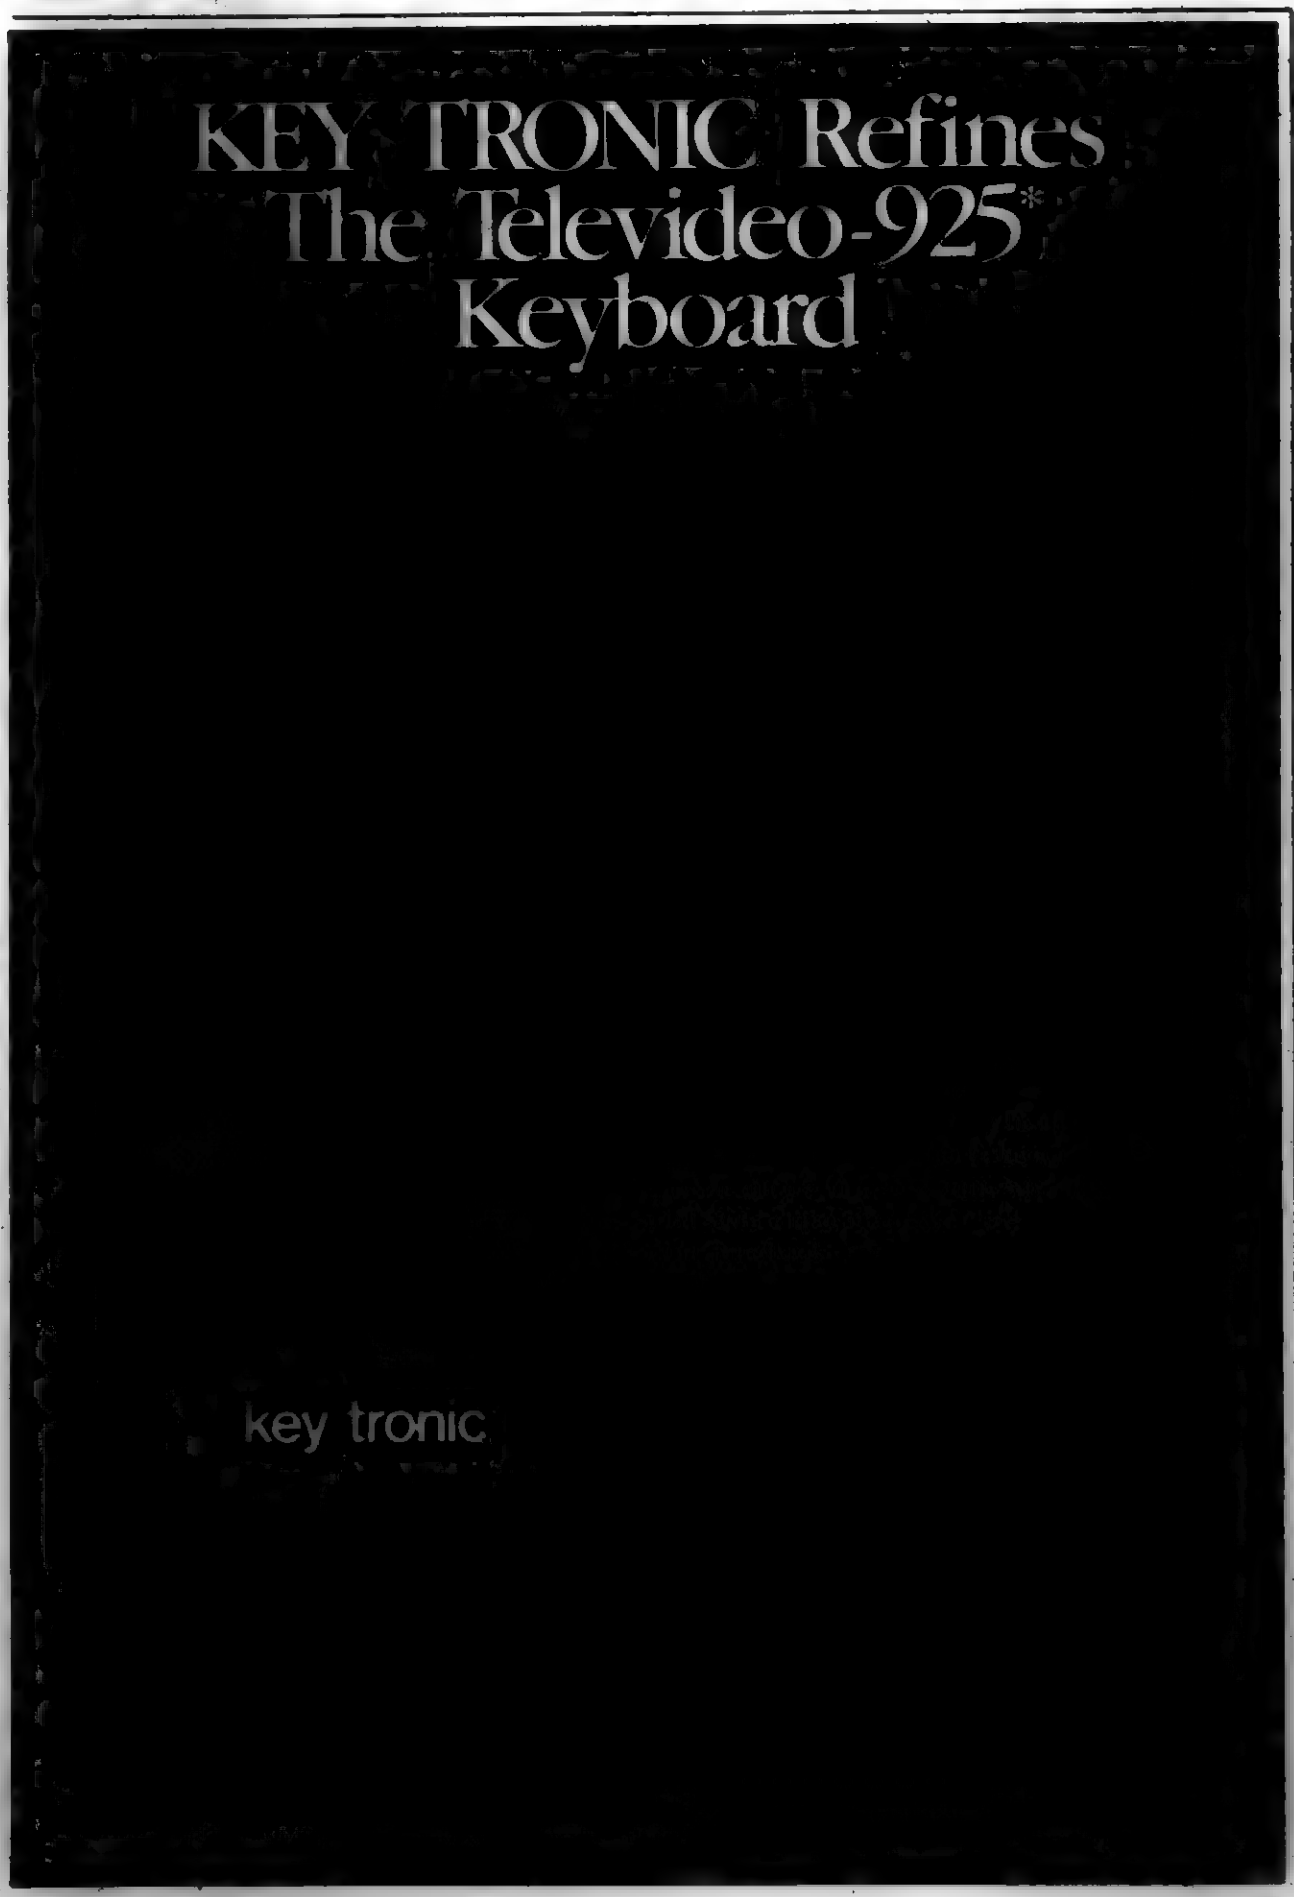
Sinclair gamble

On the other hand, Sinclair is taking a huge gamble: The QL is aimed at the home/professional/educational/business marketplace, while Sinclair had formerly confined its strategies to the low end of this arena.

Moreover, the QL is not compatible with previous Sinclair products, even though the vendor said the local-area network facility will allow Sinclair Spectrums and QLs to be configured on the same network.

Therefore, many industry watchers feel that the QL must be introduced with all the essentials already existing or shortly on the way in order for this product to fly. In keeping with this, Sinclair announced that the following QL peripherals and enhancements are now under development: a 512K-byte memory board extension, a Pascal compiler, a 68000 assembler, a terminal emulator, an analog digital interface, a Winchester disk interface, a modem, a parallel printer interface with multichannel sound generator and a 488 interface.

Malik is a freelance computer journalist based in London.



TURNAROUND TIME

LARRY E. LONG

Q For seven years I've been with a consulting firm where each promotion is an up-or-out decision. My last two promotions have been on time, and my supervisors have indicated that I'm doing what is necessary to be considered eventually for partnership.

A few recent events have caused me to rethink my career. Two very competent colleagues were denied partnership. This came as a surprise to everybody.

In addition, I've been offered an MIS management position with a client company that offers excellent advancement opportunities.

Given the inconsistency of evaluation criteria at my present firm, would you suggest that I resign and take the position at the client company?

A You're confronted with resolving the age-old question of risk vs. security.

If you enjoy consulting and aspire to partnership and feel comfortable with your progress toward that goal, pursue it.

If you feel ambiguous performance evaluation criteria preclude you from shaping your career destiny with good performance, perhaps you should leave the firm.

Q You came out against the use of logic aptitude tests as a means of determining a person's ability to become a programmer. I disagree.

Based on my experience, I agree that, as you stated, "people who fail the tests may make excellent programmers," but the other statement that "high scorers may never be able to program" is misleading. I have never known a trainee who scored high on an aptitude test who could not perform well in programmer training.

In fact, I feel confident to predict that a candidate who scores well on an aptitude test and has a strong interest in the work will invariably perform satisfactorily as a production/maintenance programmer.

We went through intervals of using or not using aptitude tests, along with normal interviewing and examination of prior work or schooling. The change in the failure rate was well correlated with the use of the aptitude test.

So, a standard programming aptitude test should be used to screen out the unsuitable applicants.

A During the 1960s and, to some extent, the 1970s, DP staffs were created from scratch with available people, most of whom knew little or nothing about computers. With virtually nothing to go on but past performance in an unrelated field, managers turned to aptitude tests as a means of determining an employee's potential to do programming.

This was fine for that era, but today the overwhelming majority of the people being employed in computer-related jobs have some work experience or education in the field. I contend that the proper evaluation of background information is a more effective predictor of success than an aptitude test.

I liken use of aptitude tests for screening to the use of grade point averages in the screening of students for on-campus interviews. Grade point averages do not reflect personality traits, ambition and enthusiasm. Likewise, neither do aptitude tests.

Q I recently received a degree in computer programming from a community college. Now I am attempting to find employment, but am finding three common responses: We are not hiring right now; send us your resume; and we don't hire entry-level people.

The third point, in particular, frustrates me and, I believe, many other would-be programmers. How can you get experience if you can't get a job?

How does a would-be programmer find that first job if he must have X number of years paid experience to work there?

A During the past year, I've received more mail on the issue of the hiring of entry-level people than on any other issue. The mail from MIS managers has been both pro and con, but as you might expect, the mail from professors and students has stressed the quality of the product and the economics of hiring recent graduates.

This may be of little solace to your immediate need, but the feedback I received from recent discussions with about 100 MIS managers is that they are beginning to view the hiring of entry-level people more favorably. Perhaps their change in attitude is a reflection of the change in the economy. Or it may be that MIS managers can't find experienced personnel or they are recognizing the potential contribution of graduates of good programs.

For whatever reason, I look for employers to return to college campuses in the spring with authorizations to fill plenty of entry-level positions.

Long is a professor at Lehigh University, a DP consultant and author. If you have a question you'd like him to address, send it to Larry Long, Editorial Department, Computerworld, P.O. Box 880, Framingham, Mass. 01701.

In a world of dumb printers, Memorex has a Remote Printing System that thinks for itself.

In theory, remote computer output printing is a dynamite concept.

Reports get out to the right people, right away. Turnaround time goes down, costs go down. Your central printer gets a break instead of a breakdown.

In theory.

Perhaps your own experience has been less than ideal. Because most remote printing systems aren't designed with enough control to manage a really heavy workload; there's no flexibility. No security measures, either.

But consider DPS by Memorex. The first Distributed Printing System with complete flexibility for the remote user, and complete control for the central site.

Why it's better.

For starters, installation is a matter of minutes, integrating perfectly into your MVS or VTAM System without modification and without an IPL.

Second, DPS will accept data from batch output, from a TSO data-set print command, or directly from user-written programs.

And the data stays confidential. You can assign specific or master passwords, and DPS will ignore any command that doesn't include your assigned code.

You can also specify that reports be printed on special forms (labels, checks, invoices, etc.).

Network control.

No matter how big the load, DPS keeps your system *manageable*. From either the central console or from remote terminals, you can enter commands such as start/stop, display, cancel, re-route, change copy count, priority, names or other attributes.

Data with a life of its own.

DPS keeps your reports safe from accidental erasure. You can print them or purge them, but DPS won't lose them, ever. Even after system error or failure.

Free 30-Day Trial.

We'll give you free installation and a 30-Day free trial to see how our system and your hardware can give you incredible printing performance.

Just call now (408) 987-9604, collect, or fill out the coupon below and send it *today!*

Remember—just because your current system falls short, doesn't mean you don't have a second chance. It just means you don't have DPS.

Memorex Corporation
San Tomas at Central Expressway, Santa Clara, CA 95052
ATTN: Software Marketing Manager, MS 1216

If DPS can think for itself, I'm interested in giving it some thought.

ACM seeks papers

NEW YORK — The Association for Computing Machinery (ACM) is calling for papers for its 1984 Annual Conference which will explore the advanced integrated systems and new techniques of the 1990s. The theme of the conference, which will be held Oct. 8-10 at the San Francisco Hilton, is "The Fifth-Generation Challenge."

All papers and proposals for panels must be received by Feb. 15. Notifications of acceptance will be sent to authors by April 30.

Proposals should be sent to Program Chairman, ACM '84, Suite 303, 9900 Main St., Fairfax, Va. 22031.

Managers save data from fire

By James Connolly
CW Staff

HIGHLANDS, Texas — Officials of a local petroleum plant recently dashed across fire lines and into their smoked-filled offices to save computer disk packs and paper records seconds before the office burst into flames.

Sue Franta, data processing manager for Hi-Port Industries, Inc., led the charge when she, two other managers and her husband rescued a dozen 10M-byte disks and armloads of books while a Dec. 5 fire was leveling much of the sprawling petroleum products firm.

"We watched from across the street for about 40 minutes and didn't think the office was going to burn. When we saw the firemen couldn't contain it, we just ran into the building.

"There were no lights, but I knew where the packs were. We started grabbing them and handing them to people," Franta said. "Then the back door burst into flame. It didn't take minutes, just a second or two.

"All I remember after that is hauling it out the door. We were bumping into each other and everything. It must have looked like a Three Stooges movie."

The rescuers saved packs of the company's Data General Corp. CS-40, and, within days, were running their payroll, accounting and other programs on another company's computer in Houston, 25 miles away.

Most Hi-Port records were duplicated off premises, but the data for the two weeks prior to the fire and the data on paper could have been lost in the $20 million blaze. "We did lose some data, but nothing that we can't recoup through our backup," Franta said.

The fire struck at a time when the company was planning to upgrade its system and to develop a disaster plan.

"Let this be a lesson to everyone," Franta said.

Franta said she expected to be without an in-house system for several months as the company rebuilds. The firm resumed production days after the fire.

The blaze, of undetermined origin, was fueled by the oils, antifreeze and cleaning solvents that Hi-Port blends and packages. It leveled the building housing the computer.

"My brother is a volunteer firefighter and saved me a piece of the computer. It just crumbled in my hand," Franta said.

NETWORK HEALTHCARE

DATA COMMUNICATION NETWORKS AREN'T LIKE PEOPLE BUT...

One thing's for certain. Poor advice early in the design stage, the wrong equipment, or inadequate product support could make your network very sick.

We can help prevent that.

Meet ComDesign's data comm "doctors". They are a group of dedicated, service oriented data communication specialists. Talented, qualified, and helpful, they dispense the application engineering answers that will keep your network in the pink. For large networks or small. And you don't have to be a ComDesign customer to take advantage of this service. As a matter of fact, you'll never even need an appointment. Just use the toll-free number below. The doctor's always in.

For the first time ever, you can get the most advanced Xerox manufacturing software, plus an IBM mainframe computer, in one complete, affordable system.

It's a new concept in computing. The Xerox Turnkey Manufacturing System includes everything you need for dependable, comprehensive information management. It's the very first system to bundle an IBM mainframe with efficient, industry-tested manufacturing, financial, and distribution software.

And because it's an off-the-shelf system, it can be acquired and fully installed at a price you never thought possible.

But price isn't the only thing that's remarkable. You get everything you need to run the system. You don't have to buy various components from different vendors and then build interfaces yourself. It's all been done for you. So there's no data processing staff to hire.

The Xerox Computer Services turnkey system has an advanced architecture that completely integrates business applications software, personal computing, information center software, decision support systems, a database manager, and fourth-generation languages. Each with user-friendly screens and "help" functions. Your current personnel can develop their own applications and handle their own information needs without assistance.

That means you get fast, economical installation, plus immediate payback in improved productivity and management control. All with minimum overhead.

And what about support? Xerox technical experts understand the manufacturing business and will help you with your system, from initial site planning to telephone hotline support after you're up and running. Of course, full documentation, training, and software maintenance are part of the package.

Best of all, this may be the last software decision you'll ever have to make. As your business expands and it's time to move to a larger computer, you can run the same software on any IBM mainframe, starting with the smallest 4300 series system up through the powerful 3084 model.

Have the best of both worlds in your world. If you need better control over your operations, but are concerned about finding a system that really fits your requirements and budget, let us tell you about our simple solution...the Xerox Turnkey Manufacturing System. Just fill in the coupon and we'll send you complete information and pricing by return mail. Or call Ron Rich at (213) 306-4000.

MANAGERS ON THE MOVE

Angelica Uniform Group of St. Louis has named KENNETH S. AULL manager of management information training for the MIS department. Aull will evaluate existing equipment and computer operating system programs for the manufacturer of uniforms in light of current and future processing requirements. He will also plan, guide and coordinate immediate and long-range conversion plans.

Aull holds a bachelor's degree in economics from Iona College in New Rochelle, New York and has over 14 years' experience in his field.

■

Carter Hawley Hale Stores, Inc. in Los Angeles, has announced that R. VINCENT COHANT has been named president and chief executive officer of the Information Services Division; WILLIAM F. JONES has been named senior vice-president of development; ROBERT M. HENAR has been named senior vice-president of computing and communications; and JOEL R. MONTGOMERY has been named vice-president of human resources for information services.

Carter Hawley Hale operates 125 stores through its department store division. The company also operates 37 high-fashion specialty stores through Bergdorf Goodman, Holt Renfrew and Neiman-Marcus.

JOHN ABERNATHY has been appointed director of information and data processing services for Pen-Well Publishing Company's Advanced Technology Group in Littleton, Mass.

Abernathy

Abernathy previously spent eight years with Hewlett-Packard and was responsible for technical support of the business computers at the Andover, Mass., manufacturing division and most recently for programming support of the inventory system at the Chelmsford distribution center.

He has also been systems manager for Travelers Insurance and programmer/analyst with DuPont Chemical.

Abernathy is a graduate of Gettysburg College with a bachelor's degree in mathematics. He received a master's degree in computer science from Rensselaer Polytechnic Institute.

■

RICHARD E. KRIEG has been named vice-president of computer systems development for Associates Bancorp, Inc., a subsidiary of The Associates Corp. Krieg is responsible for the management of application development, office information systems and data resource management.

Krieg joins The Associates with 20 years of experience in financial and systems experience, working most recently for Lincoln National Corp. as vice-president of data processing development.

Previous positions were with Consumer Systems Services Group and MSA, Inc.

■

JOHN W. MERRELL has been appointed an assistant vice-president in the electronic installations department of Metropolitan Life Insurance Co. in New York. Merrell is head of the software and operating systems services unit, which provides the systems software that runs at Metropolitan's several computer centers.

Merrell joined Metropolitan in 1973 as a planning consultant in electronic installations. He became a planning manager three years later, and in 1980, he was appointed a manager. Before joining Metropolitan, he held several positions with the Royal Insurance Co. in New York.

He received his B.A. degree in economics from Richmond College in 1972.

■

TERRY LEE SOCALL has been appointed as director of information services of Visual Services, Inc. in Bloomfield Hills, Mich. Formerly the manager of systems and programming at Detroit Metal Extruding Co., Socall is responsible for computer operations, systems and programming at VSI's corporate headquarters.

Socall earned he associate's degree at the University of Florida, Gainesville and his bachelor's in business management at Wayne State University in Detroit.

Visual Services, Inc. offers integrated merchandising services, such as contests, sweepstakes and coupons; industrial communications, direct marketing, motivation and incentive programs; and telemarketing packages, including rebates.

■

NBD Bancorp, Inc. has appointed JAMES R. BARLETT as senior vice-president of the Information and Operation Services Division of National Bank of Detroit, the corporation's principal subsidiary. NBD Bancorp is the parent company of 17 banks, as well as trust, mortgage finance, insurance and venture capital subsidiaries.

Barlett is responsible for the general direction of the operations area, such as computer services and trust operations, which provides support for the products and services offered by NBD Bancorp subsidiaries. He remains senior vice-president.

Barlett joined the bank in 1979 after serving as a consultant/partner with Touche Ross and Co. He was named senior vice-president in 1981.

He holds a B.S. degree in industrial management and an MBA from the University of Akron.

Videotex eyed as traffic stopper

By Paul Nussbaum
CW Staff

HONOLULU — Instead of building a highway or a public rail system to alleviate traffic congestion, city and state officials here are considering a videotex system.

Honolulu traffic is so congested that $20 million was spent by the Hawaii Department of Transportation to study possible solutions to the problem. City officials are considering rationing automobile travel and implementing road pricing, which would charge people for using certain roads, to alleviate congestion.

But "there is a limit to what rerouting and traffic control accomplish," said Carl Takamura, an aide to Hawaii's governor, George Ariyoshi. "What Honolulu needs is a revolutionary method to ease congestion."

One method, proposed by Aegis Systems Corp. in Tigard, Ore., is the purchase of a personal computer for every Honolulu home, business and office, along with the development of Autoride, an on-line transportation application. "Autoride will be a 24-hour, on-line system matching riders and drivers, arranging special transportation for elderly or handicapped people and possessing security features," explained Malcolm McLeod, a Department of Transportation economist.

The system so sparked the interest of Gov. Ariyoshi that he has scheduled a governor's conference for Jan. 31-Feb. 1 so opponents and proponents of the system can debate its merits. "There is at least a 50% chance that the system will be implemented," McLeod said.

Aegis estimated that $200 million would be required to implement the system. "It requires 320,000 personal computers, one or two mainframes and communications equipment," noted Robert Benke, president of Aegis.

But the price is less than that of comparable rail and bus system solutions. "Autoride's implementation cost is less than 20% of the cost for building a highway or transit system," Benke said. The cost of proposed public rail transportation system for Honolulu is estimated at $1 billion.

Autoride would match riders to taxis or private automobiles traveling to nearby areas.

"The system will use a more intelligent card than a magnetic-strip reader," Benke claimed. "The card would have a microprocessor. When a person enters a password, it will be written on the card rather than on a central data file."

In the proposed system, riders enter pickup points, destinations and times when rides are needed. Drivers enter routes, destinations, times of departures and vehicle registrations. Drivers may be either professional taxi drivers or residents.

A mainframe would check driver registration to ensure that the driver has no criminal record and that the car is insured, then match riders to drivers. "The key is providing door-to-door service," Benke said.

Drivers and riders will not exchange money. "The system would be cashless," Benke noted. "At the end of the month, riders would be billed and drivers would be paid."

Drivers will either be paid cash or receive credit slips for gasoline. Credit slips will be used if Honolulu implements gasoline rationing as a means of curbing congestion.

Number of Automobiles on Oahu

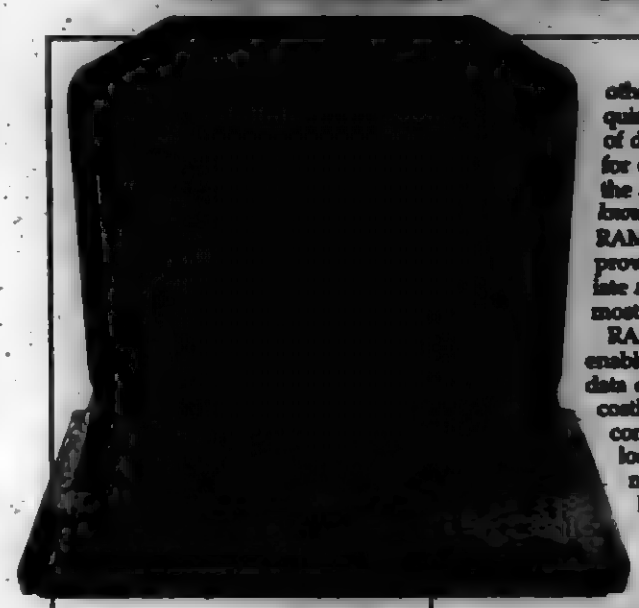
WITH RAMIS II ENGLISH, THE COMPUTER HAS FINALLY LEARNED YOUR LANGUAGE.



Now, you can talk to your computer the way you talk to a colleague: in plain English.

Even if you've never been on speaking terms with a computer, RAMIS II's advanced knowledge-based technology lets you ask questions, obtain answers, even create reports in only a few minutes. As a result, you can work more effectively and productively—without having to learn a specialized computer language. You just use English.

RAMIS II: ARTIFICIAL INTELLIGENCE THAT DELIVERS REAL PRODUCTIVITY.

RAMIS II English combines years of research by Mathematica in linguistics and artificial intelligence with proven expertise in developing practical, easy-to-use software products. The result is maximum fluency with minimum demands on support staff. In fact, while other systems require days or weeks of dictionary setup for each application, the *extensive built-in knowledge base* of RAMIS II English provides immediate access to most data.

RAMIS II English enables you to access data directly, without costly and time-consuming downloading or reformatting, so the latest information is always available.

Wherever your data is stored—in RAMIS II databases; in ADABAS, IMS, TOTAL, or IDMS databases; or in VSAM or sequential files—there's only one language you need to know: English. And, because English comprehension is an integral part of RAMIS II, you have full access to all of its fourth-generation capabilities, from powerful reporting and analysis to full color business graphics.

THE BENEFITS OF RAMIS II ENGLISH SPEAK FOR THEMSELVES.

Teaching the computer to speak your language is the best way to put the vast power of today's computer systems directly into the hands of *every* user from *every* department. RAMIS II English is one more powerful demonstration by Mathematica of the increased productivity available through RAMIS II—the *real* leader in complete software for business.

RAMIS II ENGLISH MAKES IT EASY TO UNDERSTAND WHY WE'RE THE REAL LEADER IN COMPLETE SOFTWARE FOR BUSINESS.

Let RAMIS II English speak for itself. See it in action at one of our regional Product Demonstration Centers. For more information, contact your local Mathematica office, call toll free (800) 257-5171, or return the coupon below.

HP's IUG meet to address varied DP topics on Feb. 26

ANAHEIM, Calif. — A wide range of topics — data communications to application design — will be featured at the Hewlett-Packard Co. International Users Group (IUG) annual conference Feb. 26 to March 2 here at the Disneyland Hotel.

Hosting the event for IUG, a nonprofit association of HP computer users, will be the Southern Regional Users Group, a 700-member affiliate of the IUG. Delegates from HP will present lectures on HP software, support and future strategy. Software contributions will be distributed in the form of a swap tape.

More than 120 exhibits of HP 3000-related products will be featured at a vendor show.

About 1,800 participants are expected. The conference registration fee is $400.

Conference Manager, HP 3000 IUG, 2570 W. El Camino, Mountain View, Calif. 94040.

HP users groups to merge

MOUNTAIN VIEW, Calif. — By a nine-to-one margin, the 5,000-member Hewlett-Packard Co. HP 1000 International Users Group and the 2,000-member Hewlett-Packard HP 3000 International Users Group voted to consolidate their boards of directors.

Approximately 3,200 members voted before the Dec. 14 deadline. The officer staffs and many of the administrative functions for the two users groups have been merged for 2½ years.

"With the support of the members, the users group can now swing the doors open to users of other HP models, such as the HP 150," according to Bill Crow, association manager for both groups.

More effective unified

"HP computer users benefit from a unified users group. The more comprehensive we are, the more effective we are as an influential voice to HP and a resource for members," Crow said.

Membership in either group is priced at $400 for an institution, which includes a set of public-domain software, or $60 for an individual.

International Users Group, Inc., 2570 El Camino Real W., Mountain View, Calif. 94040.

Pick Spectrum set for Reno Feb. 22-24

RENO, Nev. — Pick Spectrum '84, sponsored by the International Data Base Management Association (IDBMA), will be held Feb. 22-24 at the MGM Grand Hotel here and will focus on computer education for the business professional. The conference is geared toward the Pick & Associates, Inc. Pick operating system.

Highlights of the computer conference include a series of sessions for business professionals, beginning with what a computer is and ending with an understanding of a total computer solution.

Among the 14 education sessions are ones concerning the difference between hardware, software and firmware; the definition of application software; word processing; computer communications; videotex; peripherals; and how to shop for a total computer solution.

Fifty exhibitors are contributing to the education sessions.

The full conference registration cost is $300. One-day registration costs $100, and the cost of attending the exhibits is $15, according to IDBMA.

IDBMA, Suite 210, 9470 Appaloosa Road, San Diego, Calif. 92131.

SIM extends paper deadline

WASHINGTON, D.C. — The Society for Information Management (SIM) has extended until Feb. 15 the deadline for paper submissions to its 1984 Society Awards Competition.

Papers must describe an MIS, an approach to developing information systems or a technique for improving or managing an MIS activity. They should also deal with completed systems, be less than 1,000 words and include a short description of the system.

The first-place winner will receive $5,000, and the paper will be printed in *MIS Quarterly*, published by the University of Minnesota. Awards of $3,000 will be made to runners-up; all finalists' papers will be reviewed for publication in *MIS Quarterly*.

R. Nancy Marble, Vice-President of Information Services, Federal National Mortgage Association, 3900 Wisconsin Ave. N.W., Washington, D.C. 20016.

Ergonomics seen key to better productivity

By Lynn Weber
CW Staff

Office automation and the new information technologies are today's lifelines to business productivity, profit and survival. But it's not enough just to put a personal computer or a terminal on a desk.

Mechanical engineering must go hand-in-hand with human engineering — ergonomics — if the automated office is to be effective, office designers and consultants told *Computerworld* recently.

From a public health and safety perspective, as many as 12 states are considering legislating ergonomic requirements for all work places that use modern technological devices such as CRT terminals.

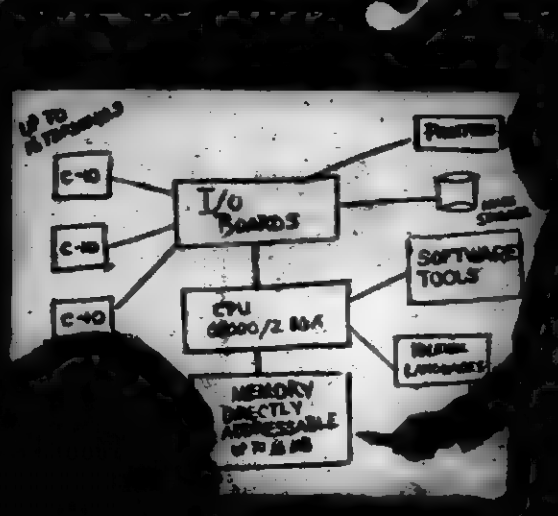
According to Carl Ross, a spokesman for Herman Miller, Inc., a New York-based manufacturer of office furniture and leader in the development of ergonomic furniture, there are studies that strongly suggest "with improved ergonomic workstations, there is increased worker productivity."

And Jeffery Simon, partner and senior vice-president in charge of technical services for SCR Design Organization, Inc., also of New York, noted that a major thrust at the recent International Facilities Managers Association conference in Denver was that companies are becoming much more aware of people and recognizing that people are their greatest resource. "When you look at the amount of money you spend yearly on facilities and equipment, etc., it still revolves around the person and quite often the person's salary," Simon noted. "Companies realize that absenteeism and productivity are going to make or break a business. They are tuning in on the worker — and ergonomics is one way of doing this."

"The central problem confronting all organizations is that existing facilities are built to mature standards — many 30 years old or more — that effectively support a mature, paper-based work process," according to a report, titled "Office Automation and the Work Place Standards in the '80s," written by Jon B. Ryburg, senior associate for the Facility Management Institute, a division of Herman Miller Research Corp. in Ann Arbor, Mich. "Everything in today's corporate environment, including furniture, lighting, windows, space standards and building utility systems, is geared to whatever technology and/or activities are ultimate

See OA page 30

systems.
what you need.



Ohio VDT bill called typical of state efforts

Legislation that attempts to regulate the use of video display terminals in the office environment is being prepared in many states across the country. Typical of this type of legislation, according to Janice Blood, a Boston spokeswoman for 9 to 5, an organization for working women, is Ohio's House bill 552, authored by Rep. Barbara Pringle.

The stated purpose of the bill is to require minimum occupational health and safety standards for operation of VDTs in places of employment. The bill specifies certain equipment requirements: that the terminals be placed on adjustable chairs and tables; that they be equipped with tilt screens or be placed on movable platforms and have detachable keyboards; that they be equipped with individual brightness and contrast controls; and that they come with noise reduction covers, have metal shielding on the transformer of the VDT to block radiation and be in an area where there is indirect lighting.

There is also a provision mandating rest breaks for workers and setting maximum exposure limits, a provision that employers give free eye exams at least once a year and a pregnancy consideration clause requiring employers to offer alternative duties at the same work site to pregnant VDT operators. The bill also

ly required to do paperwork."

The report noted that "the new technology of office automation is based on a new way of working. Slowly at first, but gradually, it involves more and more the use of computer support via terminals (and other devices) until the work activity has changed dramatically and the facility environmental support requirements are different."

Some of the factors for the basic automated office which should be considered for a safe and productive ergonomic environment include floor space, lighting, electrical service, room temperature, noise level, floor coverings and furniture requirements, such as desks, chairs and file cabinets.

Simon, an architect with SCR, a company which for its 5½ years in the business has specialized in corporate office interiors, observed that "quite often what we've seen in touring numerous office facilities is that people will have the CRTs on file cabinets next to them, with their knees pressed up against the side of the cabinet to get close and their backs arching away from the back of the seat. It shows that with the advent of automation in the office, the furniture which is generally existing or even if it is new, may not be properly designed for use with that equipment."

Broader approach

While the technology industry flourishes with more varied equipment offered by a greater number of vendors, standards for the industry remain in a state of flux. And according to Ryburg's report, "if mis-matches are to be corrected, a broader approach to new facility standards to support office automation is required."

A solution to the need for a new facility standard to support office automation in the 1980s must, the report stated, "include both comfort and productivity, or it will not be effective. And to be effective, the performance requirements for facilities must include the integration of people, process and place factors, not just one or two."

From a design perspective, one of the things Simon sees being stressed in interiors is flexibility, "so that the furniture you buy, the space you build, you're not painting yourself into a corner. You want the space and the furniture to be able to change to meet the needs of the equipment which may be coming in a year or that's not even known right now.

"There's so much talk about ergonomics going on today that most of the corporations know or have a sense of the importance of the situation," Simon said. "When we do an analysis of a setting, we bring the company up to speed if we see that they're really thinking in the dark ages — and we're going through this with a number of our clients."

Construction cost

In terms of cost, according to Simon, a fairly automated office should be planning $35 to $40 per square foot for construction costs, with some of that cost, potentially as much as $15 to $20, supplemented by the landlord.

In terms of furniture, filling in pieces including chairs and files, another $10 is often budgeted.

"I think that by giving people a good environment, one that is going to make their day, since people spend a large portion of their day at their place of work, you're in essence giving them a nice environment that makes their work easier, their attitudes better and their image for the company and respect for the company enhanced," Simon concluded.

NETWORKING VS. NOTWORKING:

ANNOUNCING THE NET RESULTS.

Linking micros to mainframes is one of the most pressing problems facing DP managers today. How do you bring all the computers in your company together so they can share information, resources, programs, and access the corporate data base without any loss of security?

SyFAnet

Networking is a nice concept but it won't work unless you have a system that works.

SyFAnet™ (System For Access network) is the network that works. The only complete solution on the market, ready to meet all your networking needs now.

SyFAnet gives you everything you ever wanted in a network: the ability to link PCs together, multi-function workstations, industry-standard software, global information access and unlimited expansion capabilities. All fully-integrated, and built upon a foundation of proven hardware and software.

Picture a powerful processor for every purpose—one for applications, another for sharing resources. This special architecture makes SyFAnet a more reliable network, with no single point of failure. Every time you add a terminal, you gain more power instead of losing it.

Our broadband bus offers more flexibility. So you can add more users whenever and wherever you want.

By adding microprocessor-based workstations and CP/M-86, SyFAnet gives you more functionality, too. You can upgrade easily without costly conversion, because our software remains the same at all levels.

And while *you* might get confused by the flurry of message traffic in the office, SyFAnet never does. Its unique version of collision avoidance means data doesn't get lost in the shuffle.

Because business doesn't stop at borders anymore, SyFAnet was designed with the whole world in mind. SNA and X.25 capabilities connect you to mainframes and networks around the world.

SyFAnet. Ready to solve your networking problems today and tomorrow. It's the network that works.

For more information, write or call today.

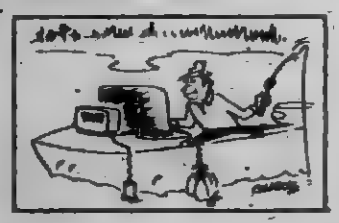
BILL from page 29

calls for semiannual inspections of the equipment and open documentation, making available the inspection records for review by VDT operators and/or their representatives.

The bill asks for penalties to be imposed on an employer for violations of the provisions amounting to $1,000 per day of violation.



FIXED PRICE COMPUTING SERVICE

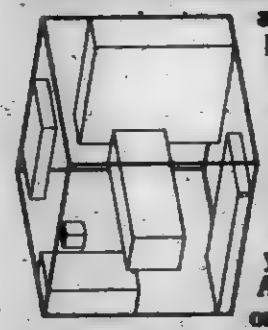
INTRODUCING SUBSCRIPTION SERVICE:

A Cost-Effective Alternative to Traditional Remote Computing Services or In-House Processing.

Now you can couple the benefits of a professionally managed remote computing service with the predictable cost associated with in-house processing. It's called Subscription Service, and it's available today from Martin Marietta Data Systems.

PREDICTABLE COST

Subscription Service is designed to keep your DP operation within budget. It curbs cost overruns by delivering a block of resources at an affordable *fixed price*—almost like the in-house machine.



But, unlike the in-house machine, your service doesn't degrade at peak-use periods, just when you need it most. And, when you're out of gas, you can upgrade easily. No lease payout. No hardware moves.

NO MYSTERY PRICING

Subscription Service unbundles the remote computing service offering to take the guesswork out of prices. Resource capacity and support levels are clearly defined and easy to understand. You buy what you need. Nothing more—nothing less.

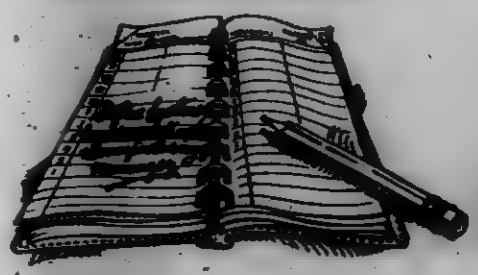
MORE TIME FOR YOUR USERS

It's a fact, a professionally managed computing service offers you *freedom* from day-to-day operational problems, giving you more time to focus on solutions to user problems. And, with an inventory of packaged solutions and productivity tools at your fingertips, the time and resource requirements to create a solution are greatly reduced.

COUPLE FREEDOM WITH AFFORDABILITY

Subscription Service is proof that you can get the best for less. All subscribers are linked to Martin Marietta's powerful host computers, providing the most up-to-date computing resources. You can depend on:

- ☐ Solid, stable, thoroughly-tested hardware, software and personnel
- ☐ Response time and throughput associated with IBM's fastest processors
- ☐ Access to hundreds of productivity tools and application systems
- ☐ Responsive technical consultants available around the clock



DISCOVER HOW SUBSCRIPTION SERVICE CAN WORK FOR YOU

If your budget for computer operations exceeds $20,000 per month for either remote computing service or in-house processing, then find out how much Subscription Service can save you. Or how much more service you can get for what you are currently spending. Or both! Simply return the attached coupon or call toll-free (800) 638-7080. In Maryland: (800) 492-7170.

Don't be underaid. Or sold a bundle. Get the precise level of resources you need with Martin Marietta's Subscription Service.

- ☐ Please send me your Remote Computing Services brochure.
- ☐ I'd like to have my subscription requirements sized. Have your representative call me.

EDITORIAL

We need both

When daily newspapers started reporting last summer that computer hackers' footprints were showing up with increasing regularity in private data bases around the country, it didn't surprise anyone in the computer industry; unauthorized access has been a problem for years. Most of our lawmakers, however, were thrown into a tizzy. Many respond to the term "computer" with glazed eyes; throw in the term "hacker" and you can see them wondering how taxi drivers got involved in high-technology crime.

In short, the U.S. Congress is not prepared to consider issues relating to the introduction of high technology, issues that are fast taking center stage in public debate. Besides computer crime, these issues include VDT safety, privacy, copyrights and patents, manpower development, worker retraining and scientific education.

Congress' Office of Technology Assessment does good work on many of these issues, but the OTA is too reliant on the wishes of Congress for its work agenda and too deliberate to produce reports in a hurry. Militantly nonpartisan, the OTA never recommends courses of action and, in its efforts to represent all sides of a debate, too often produces only tepid, middle-of-the-road overviews of important, controversial issues. Its work is valuable, but it isn't enough.

Congress needs help, and it needs it right away. The proposal by the Association of Data Processing Service Organizations, Inc. that Congress set up a blue-ribbon panel of industry, academia and government representatives to study high-technology issues and their impact on society (CW, Jan. 16) is a good idea. A panel commissioned by Congress to report back in a short time with recommendations on these kinds of issues could be instrumental in shaping the information era in this country.

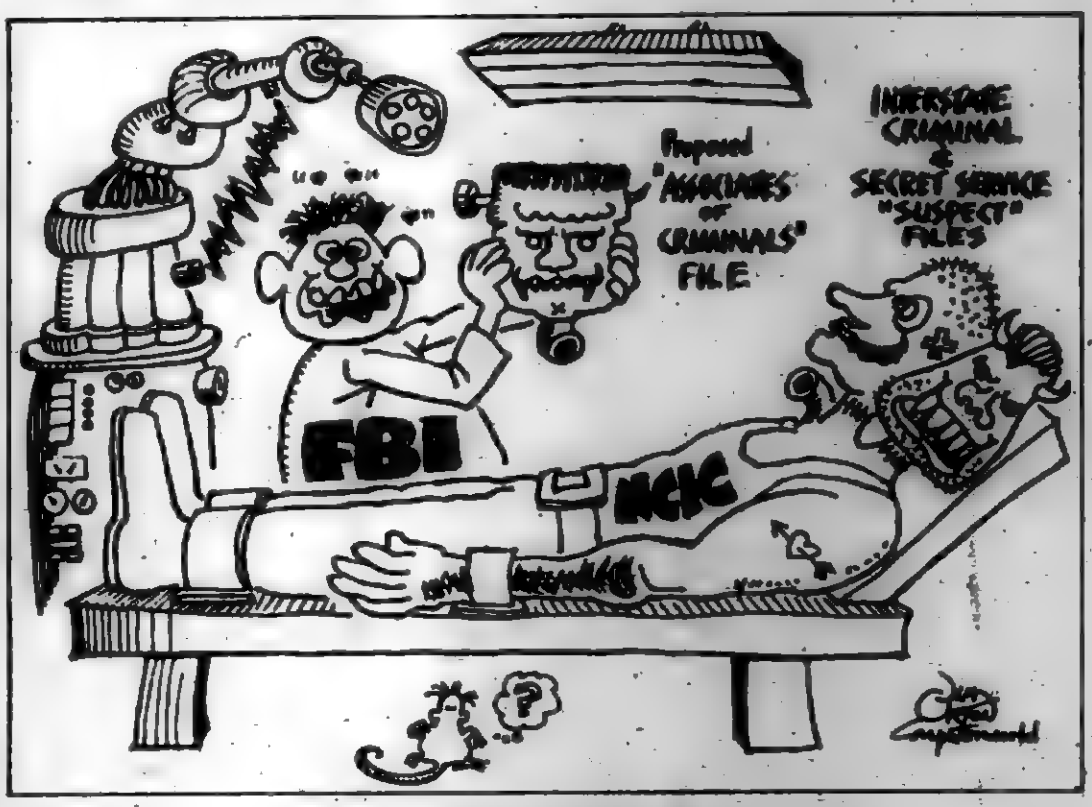
Of course, many in the computer industry will disagree with the findings and recommendations of this panel. There is nothing strange about that, and it does not invalidate the need for a rational approach to high-technology issues. Congress is going to consider these issues and pass laws on them no matter what. It is important that it have a firm, considered base of information when it does.

At first glance, it would seem the Information Age Institute planned by the Computer and Business Equipment Manufacturers Association may needlessly duplicate the work of the panel recommended by Adapso. But the two efforts are actually very complementary.

No one has a greater stake in the development of these issues than the information industry and its users. Various segments of these groups have begun lobbying Congress with their points of view. If they can formulate a unified approach to any of these issues, it will make whatever congressional action is needed that much easier and sensible.

If the Adapso- and Cbema-recommended panels differ on issues, it makes sense to have the opposing viewpoints quickly brought to light and clearly defined. And if the private sector and government-supported organization should happen to agree on approaches to various issues, the consensus will be overwhelmingly persuasive in whatever legislative action may be needed in the future.

The information era is hard upon us and will arrive with or without a rational, problem-solving effort, with or without congressional awareness and participation. The spread of high technology is a major societal development; things will go a lot more smoothly if all those affected, especially Congress, do some advance planning for it.



'Eat your heart out, Frankenstein'

LETTERS TO THE EDITOR

Policy should exploit man-machine work transfer

The excellent summation of industrial policy in the article "Industrial policies in an election year" (CW, Dec. 26-Jan. 2) alludes to a fact that raises serious doubts about the wisdom of that policy.

In its Republican and Democratic manifestations, it embodies the principle that labor is one of the primary factors of production.

Technology is providing cost-effective substitutes for a growing percentage of the labor applied to routine tasks

Advances in prospect indicate that the possibilities for the transfer of work from men to machines are virtually limitless.

Any policy that fails to exploit this potential in a rational manner could cause us to lag in productivity, innovation and cost-effectiveness. We would then lose markets and run the risk of domestic upheavals.

In my opinion, we would be better served by an approach that enhances individual freedom by giving positive effect to the seminal change that is taking place.

We should adopt an agenda that makes the most of the opportunity to transfer work to machines in a way that minimizes adverse consequences for people.

Brian Le Bart-Francis

VIEWPOINT

To see a world in a grain of sand

LIGHT ON SCIENCE

CHARLES P. LECHT

The impressive history of integrated circuits, or chips, has been beautifully documented in a book by Stan Augarten, a Silicon Valley writer for the *Peninsula Times Tribune*. Titled *State of the Art*, Augarten's book presents us with a neatly organized photographic history of the chip. He takes us from 1947 through 1983 in two-page couplets, one for text, the other a full-page photograph of contemporary chip technology.

The book's awe-inspiring photographs, presented in this way, give us a temporal perspective on chip development that is singularly rewarding in its unfolding pulchritude. The regularity of patterns achieved, be it found in the simplest "image sensor charge-coupled device" or the most complex "gallium arsenide superprocessor," would make a Navaho weaver green with envy and cause a nervous breakdown in the most competent Persian loomist. The beauty encountered in the contemplation of chip designs makes us wonder whether we are seeing the magnified handiwork of Lilliputian artisans. Like Gulliver unbound, we are amazed witnesses to science's architectural accomplishments in a much littler world.

Integrated circuit "architectronics" include just about every design ever made by man — and then some. That a single chip is usually far less than a quarter of an inch on a side and results from the collaborative effort of hundreds of technical specialists is truly astounding. Orchestration of their collective efforts rivals in complexity any that is needed to produce the objects of our macroscopic world. These multilayered mandalas etched in the realm of microscopy permit us an almost mystical vision that reaffirms what human beings can achieve through cooperation.

Fairchild flattening

Although research leading to today's chips includes work like that done at Bell Laboratories in the 1940s (for example, the Point-Contact Transistor), it was not until 1959 that Fairchild Camera and Instrument Corp. engineers invented a process that could literally level a transistor to operate in a wafer-thin plane and be one-sixteenth of an inch in diameter to boot. As Augarten says, and we can only agree, the transistor is "the wheel, the steam engine, the wellspring of electronics." We must then conclude that in the importance of things in our technological revolution, the Fairchild flattening stands out as monumental. It overcame a major obstacle to chip creation.

After 1959, the leveling process continued at an ever-accelerating rate. And as photolithographic methods, chemistry and engraving techniques improved, so did the potential for increasing the number of gates (that is, transistors) per logic chip while shrinking its planar dimension. The proximity of chip constituents and the laws of physics determined how close chip elements — transistors, circuits and all — could be brought together before the system broke down due to heat, magnetic interference, wandering particles or what have you. The microspace race was on.

The overriding motive in the competition to make the chip as small as possible was — and is — our need to conserve energy in a universe running out of it. Flattening, thus, made sense not only in logic processors, but also in those of memory. The power needed to drive memories on ferromagnetic cores was incredibly expensive compared with what is needed for even larger modern random-access memories (RAM) on chips. Thus, the impetus to produce maximum computing power with the least possible energy led to the microminiaturization of both logic and memory. This was done by further reducing their circuits — astoundingly, not necessarily in length, but in cross section — and reducing their components to pinpoint size and thin as chemistry would allow. That, in turn, resulted in more powerful computers, which (when applied to the process of generating even flatter, denser packaging) allowed us to create systems of even greater potency. And with these, increasingly beautiful and intricate designs emerged.

These I hold to be masterpieces of visual art. Today's artistic community might not catalog these as belonging to its aesthetic world; tomorrow's will. So, for the benefit of the future's chip aficionados, I offer a sampling of some recent classics.

American Micro Devices' Bit-Slice microprocessor of 1975, Model 2901, elaborates a landscaped layout of high-density tract housing suitable for sites on the moon or Mars.

The 1976 version of Zilog, Inc.'s Z80 processor, one of the most popular 8-bit processors ever made, suggests an undeniable resemblance to a modern Earth-city, complete with roads, gardens, apartment houses and parking lots.

The 1977 release of IBM's 64K-byte dynamic RAM is a symmetrical, gleaming beauty. Under a microscope and against a black background, it resembles nothing so much as a space colony in the luminescence of a golden sunset.

The 1979 version of the Motorola, Inc. 68000 and its successors appear as a huge governmental complex that would put Pentagon planners to shame.

And the chips kept getting better — and more beautiful. Xerox Corp.'s Optical Mouse, circa 1980, displays a checkered electronic labyrinth that would baffle the Minotaur. Texas Instrument, Inc.'s 1980 64K-byte dynamic RAM presents a textured column of Byzantine intricacy. The 1981 Hewlett-Packard Co. 32-bit microprocessor appears a keyboard music box containing all the works of Bach.

Possible interpretations of these morphistic mappings are limited only by our imaginations. It doesn't take much, however, to conclude that these patterns encapsulate and recapitulate our mid-cosmic reality in superdense format. The world of the microchip emerges as if it were a planetary surface seen from a satellite in the stratosphere. Yet each view seems to summarize our civilization's endeavors in art and science as though they were at arm's length in a gallery.

Marvel in form

The chip is truly a marvel in form as well as function. Concentrations of power enthroned in beautiful palaces of silver and sapphire, its chambers columned with gold and platinum, its corridors lined with niobium and other precious metals. And yet its chief constituent is the second most abundant substance on the surface of the earth: silicon.

Augarten points out that "in combination with oxygen, [silicon becomes] the chief ingredient of sand — which makes [William] Blake's lovely verse a fitting ode to the [integrated circuit]:

To see a world in a grain of sand
And a Heaven in a wild flower,
Hold infinity in your hand
And eternity in an hour."

Through continued chip evolution, we may yet fulfill Blake's yearning.

Lecht is chairman of Lecht Sciences, Inc., a New York-based think tank specializing in computer and communications technologies.

Confiscatability key to transporting micros overseas

HUMAN CONNECTION

JACK STONE

Isaac Newton I'm not, but I have recently discovered a new measure of systems quality — "figure of merit" we aging electrical engineers call it — which, though not expected to plunge the industry into technological turmoil, will surely enhance systems performance in one specialized set of circumstances, namely, when transporting one's beloved micro into the lesser civilized regions of the world.

To such conventional systems factors of maintainability, reliability, operability, survivability and shareability, I am adding the notion of confiscatability — the capability of a system to remain in its owner's possession while traveling overseas as opposed to being physically removed from same by members of the local constabulary, generally for an unfathomable reason.

Last winter, I met up with some difficulties in trying to motor my faithful Processor Technology Sol 20 across the Mexican border. It, a companion, my eldest son, Charlie, and I were bounced out of the country quite unceremoniously then because we were attempting to enter with the personal computer, in spite of the polished verbiage in Mexico's travel brochures and the assuaging statements of Mexico's tourism officials that "extend the hands of friendship to all visitors."

As near as we can figure, the customs officers were saying that they were protecting us from potential bandits or unscrupulous police personnel who might eye the machine during a "stakeout," place a high price on it (even though the market value of a six-year-old micro is something approaching that of a Timex 1000), intercept us on a lonely highway and take away the personal computer on some pretext or other, for example, smuggling.

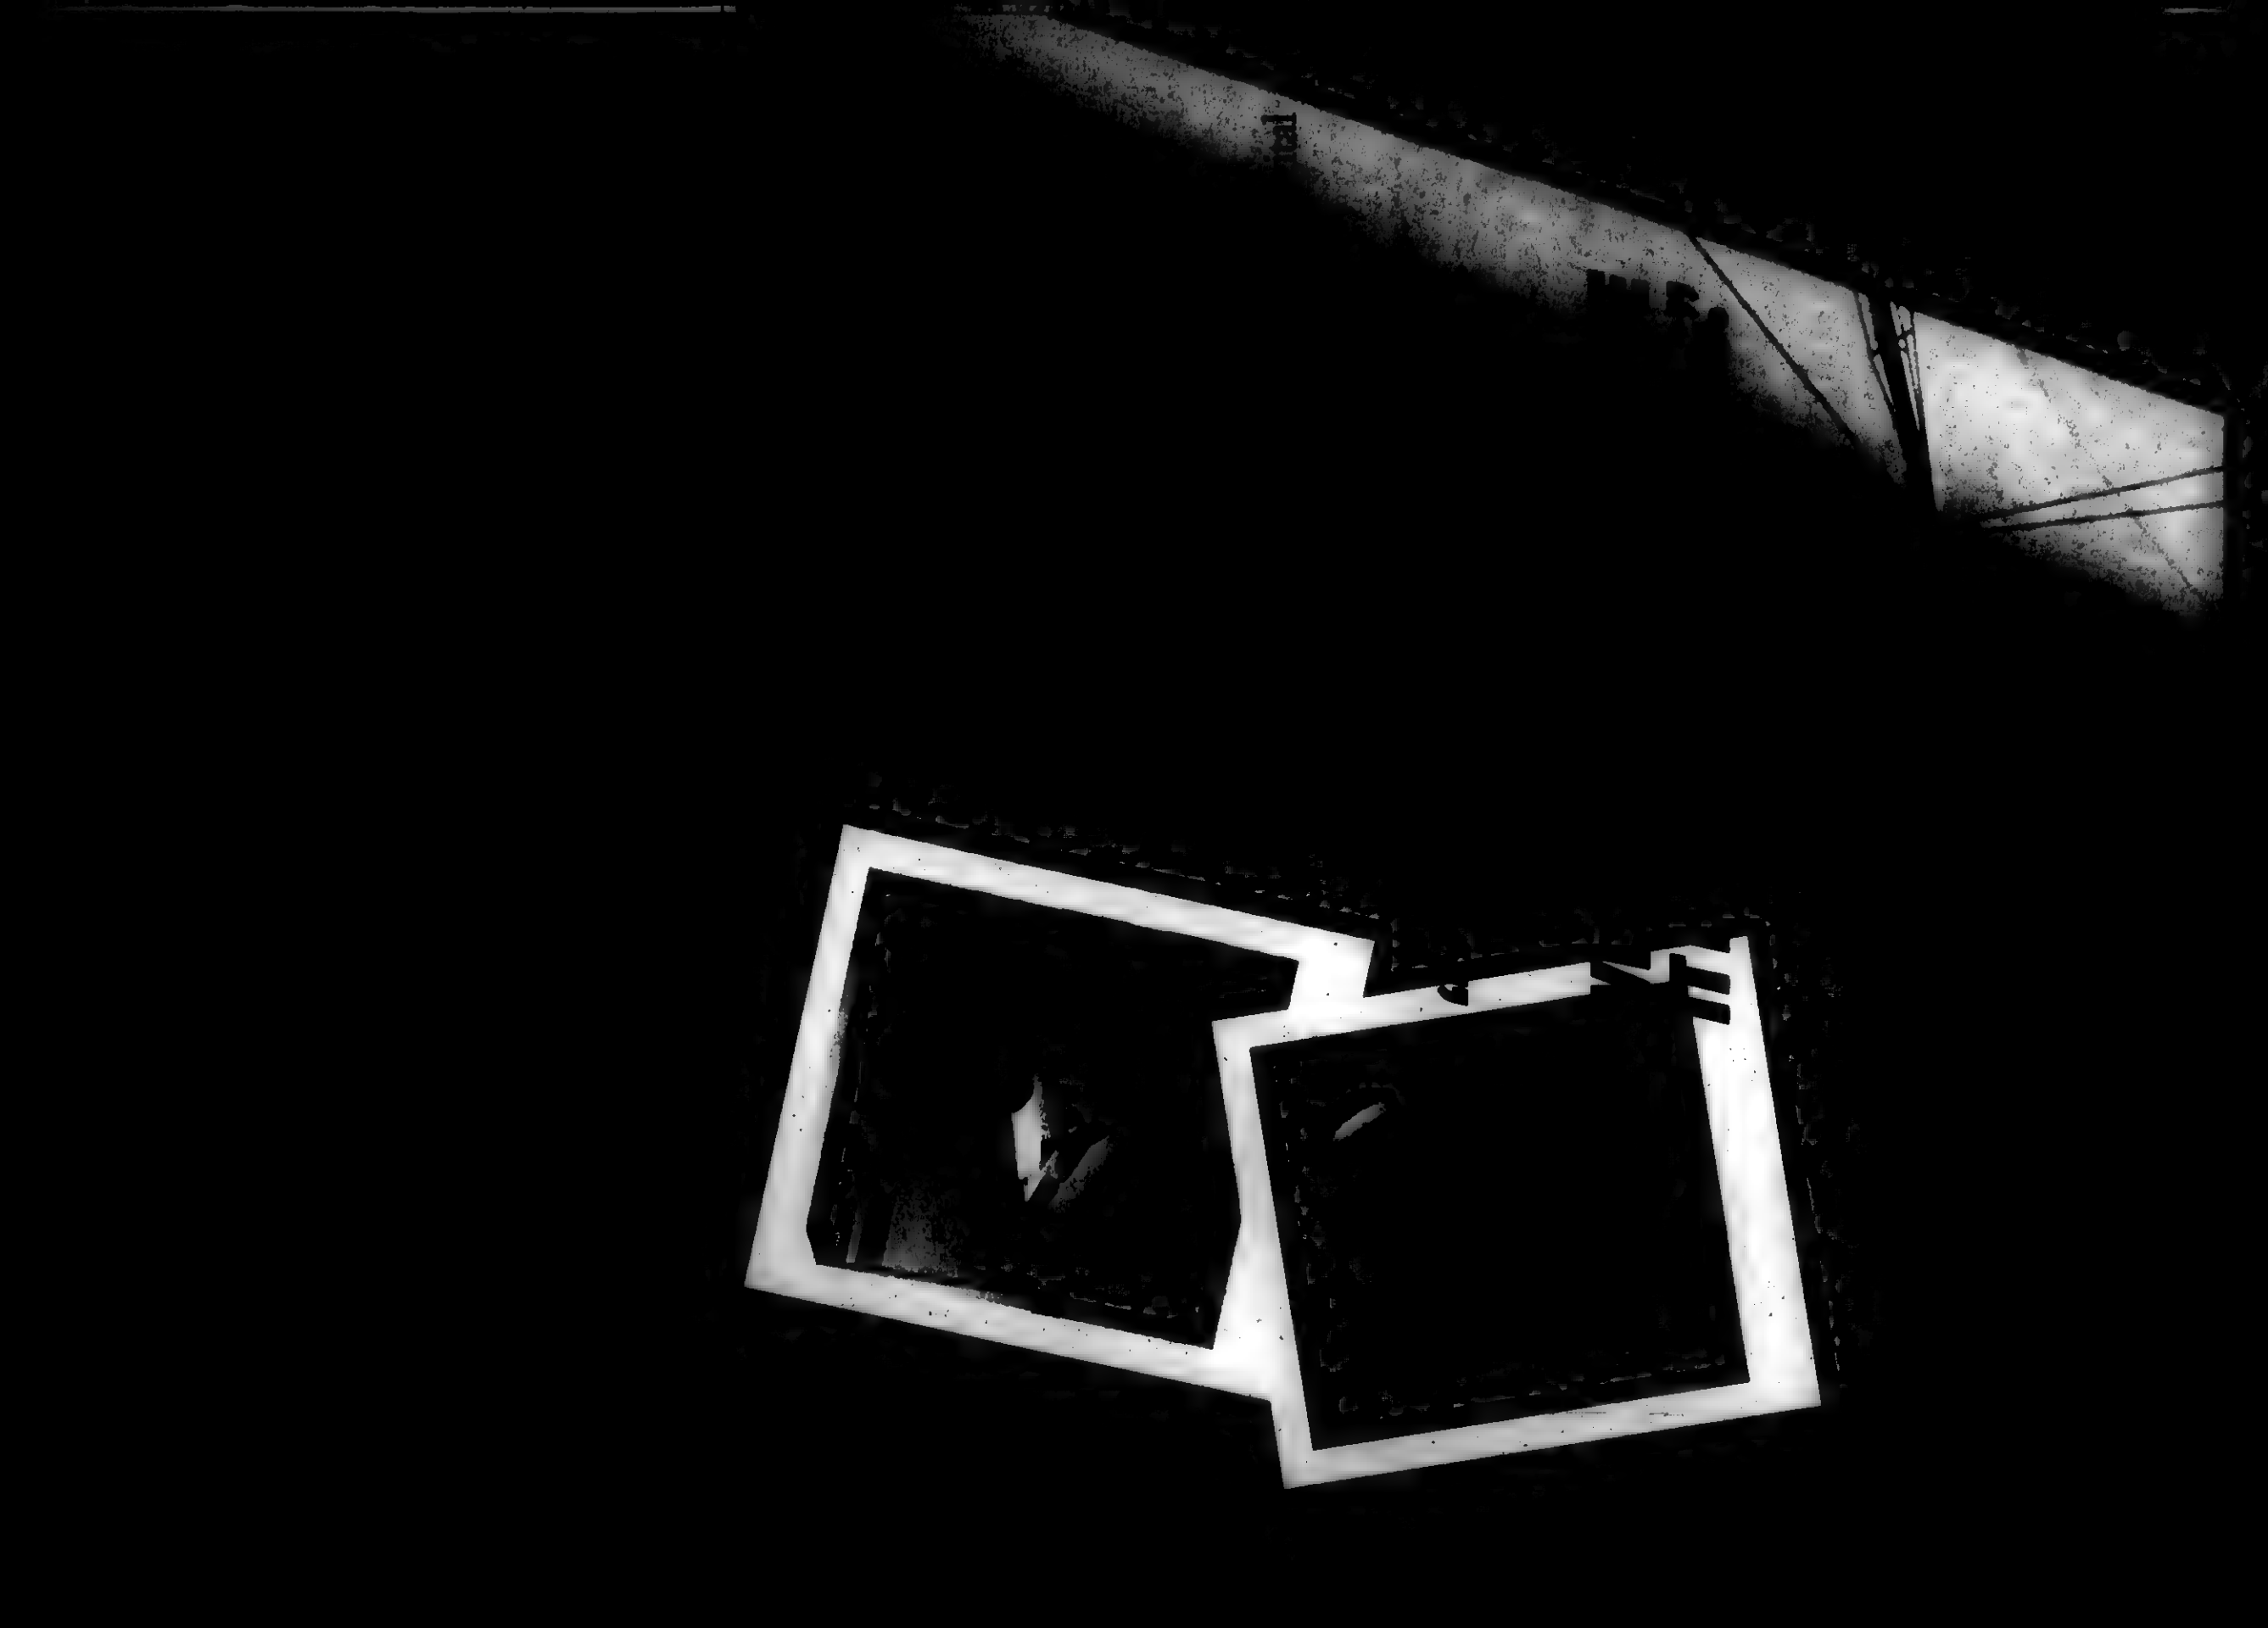
Well, it didn't take too much discussion to decide to make the trek again this year, what with all the bad weather lately, but it was not at all clear as to what computer facility we were going to take along. No way the Sol was going again, because it was proven that its "body print," that is, volume profile, was terribly obvious to the Mexican federales.

Osborne transportable

I returned again to the possibility of an Osborne Computer Corp. transportable that seemed initially appealing because of its packaging and its price (now a glorious bargain for only $600 from a K St. vendor for a used system, including Micropro International Corp.'s Wordstar, in spite of its ridiculous 5-in. amber screen.)

The body print was certainly better than the Sol's, but my interest began to wane after I attempted to pick up the machine, and I found that its 28 pounds seemed more like 128 pounds. Then I perked up when the salesman directed me to a special word processing package for the Osborne, called "Word-something-or-other," to be confused with all the other "Word"-oriented WP software titles. Then the salesman went on to advise me that he had no sample documentation. He wasn't sure what was provided, but he knew the programs were very "powerful" and "exactly what I needed," and "because I was such a good customer" (I'd never made a purchase there), he was going to give me 5% off.

I rejected the Osborne, not so much for its confiscatability, but for considerations of viability. Somehow, the idea of an archaic machine with unknown software supplied by an off-the-wall retailer seemed to fall just a bit short of my personal computer goals in spite of its highly favorable pricing.



VIEWPOINT

Moving into the world of technology

READER'S PLATFORM

ROBERT A. KING

Nine years ago it all began. The purpose was to supply the much-needed nutrition of fruit to the multitudes. The idea was to package the fruit economically and compactly and distribute it on schedule each quarter of the year. The idea emerged to dehydrate the fruit for distribution and sell hydrating machines to the consumers. A fruit indexing system was incorporated to access quickly the necessary items.

Basically, the system works like this. The consumer owns a cardboard-and-vinyl fruit storage unit in which he stores the current quarter's fruit shipment. As the need arises, he uses the fruit index to locate the correct fruit to be consumed. The consumer then removes the fruit and places it in the hydrating machine.

For years, business was adequate, but the number of consumers increased. As technology advanced, it was decided to develop and market a new system of fruit distribution; why should the consumer go to so much trouble to receive the necessary fruit nutrition?

One idea that is being considered is the "on-line" system. This is where all the consumers' fruit in a certain area is stored in one large main storage unit. The dehydrated fruit is shipped to this storage unit and then is made available to the consumers who use what are called "microdraters" and/or "minidraters." The consumer makes a connection to the main storage by pushing buttons that put him on-line.

He then uses the storage units' indexing system to locate the needed fruit. As it is located, it then is shipped to the individual through a pipeline for consumption.

Problem with systems

A problem with this system is that sometimes it is not possible to make an immediate connection to the main storage unit or is slow in doing so. Another difficulty is that sometimes the connection is broken at a critical time, and the fruit is dematerialized as it passes through the pipeline and is lost to the consumer.

Upper management chose the microdrater as the integral component for the new system and utilized existing employees' talents to finalize the system. The technological advantage of the microdrater is that it not only provides on-site storage, hydrates and spoon-feeds the fruit to the consumers, but it has a built-in indexing system that is energy efficient. This has been termed a "stand-alone" system.

This seems to be the system of the future, only there are a few bugs to be worked out. Being that the multitudes require so much fruit, technology has yet to produce an adequate storage bin for the microdrater. But time will take of this.

Also, whereas in the old system the fruit was loaded into storage by a human, the microdrater requires that the fruit be loaded mechanically from microdrater cartridges. In the past, the fruit was dehydrated and distributed for us by another company with the facility to do this. What has to happen now is to find a microdrater cartridge processor to perform a similar service for us. It will be at that time that the microdrater "stand-alone" system of fruit distribution will be in use by the multitudes.

A minor question arises when discussing this type of system: "Will the consumers be willing to pay the substantial monetary increase in the price of the microdrater over the manual hydrating machine that they now use?" Time will tell us that.

This concludes this business report. Thank you. ‡

Fill in your IBM micro/mainframe communications picture.

AST Research, the leader in IBM PC enhancement products, brightens your micro/mainframe communications picture with a full palette of economical, integrated hardware/software masterpieces. With AST Products, you can emulate IBM terminals or create PC-based Local Area Networks.

AST improves your office operating cost picture.

AST communications products give your IBM PC the flexibility to act as a terminal for your host system or as a stand-alone computer for smaller tasks. Your PC won't bog down the mainframe with unnecessary small jobs and local computing on the PC eliminates phone line charges too. Get the power of a mainframe when you need it and personal computer convenience right at your fingertips.

Applications solutions that are shadows of genius.

AST keeps pace with your ever-changing applications requirements with reliable, high quality, cost effective communications products. AST products provide support for Binsync and SNA/SDLC communications protocols as well as networking multiple PCs for sharing resources.

Choose AST products — by the numbers.

These AST communications packages are currently available:

1. AST-SNA™ emulates a 3274/3276 controller and 3278 or 3279 display terminal using SDLC protocol.
2. AST-BSC™ emulates 2770 batch RJE and remote 3270 display terminals using 3270 Binsync protocol.
3. AST-PORT™ allows your PC to connect to an IBM 3274/3276 cluster controller via coax cable and emulates a 3278 or 3279 display terminal.
4. AST-8700™ emulates 2770, 2780, 3741, and 3780 RJE workstations using Binsync protocol.
5. AST-5251™ emulates a 5251 Model 12 remote workstation connected to an IBM System 34, 36 or 38.
6. PCnet™ is the first Local Area Network designed specifically for the IBM PC or XT and the PC-DOS 1.1 or 2.0 operating system.
7. PC-232™ is a user-programmable dual-port card capable of communicating in Async, Binsync, SDLC or HDLC protocols.

Discover how well AST can fit in your micro/mainframe communications picture. For descriptive data sheets, write or call: AST Research Inc., 2121 Alton Ave., Irvine, CA 92714. (714) 863-1333. TWX: 910-595-1765

The evolution of the meddlers

SOFTLINE

FRANK SWEET

"Why does the data base administrator keep meddling in my business? Worse yet, his goals are not the same as mine!" This often-voiced accusation is completely accurate. Data base administration does cross turf boundaries with distressing regularity. And its goals really don't seem to match those of the people whose business is meddled with. To see why this is inevitable, consider the data base administrator's evolution as an organizational unit.

The concept arose in 1971-72. Data base administration emerged when it appeared that shared master files were practical at last. Packages were being sold which seemed to solve the problems of different applications sharing the same set of files. A committee from IBM's Guide users group was formed to study the organizational implications, and the first data base administrator job description was published on Nov. 3, 1972. Later publications have not changed that description significantly.

But every one of the data base administrator's job functions was already in place in the traditional DP organization. File design, data security, file integrity, master backups, I/O software maintenance and training, data naming standards, record layout documentation and so forth were all being performed. In most shops, the tasks were being performed well. Since the job was getting done, why was the system changed?

The functions were dispersed throughout the organization. In the old DP shop, different people were responsible for different aspects of master file integrity:

- Users designed individual fields. For example, "marital status code" was defined to be 1-single, 2-married.
- Systems analysts designed records and files. They determined, for instance, that each purchase order record contained the field "vendor number" and

See MEDDLE page 40

CICS gets Executrieve

Eases on-line query for novices

FORT LEE, N.J. — On-Line Software International has announced a free-format, on-line IBM CICS query system that is said to use a simple English syntax.

ON-LINE SOFTWARE INTERNATIONAL

Called Executrieve, the product is designed for users with no programming experience. The software allows users to query the data base and develop reports that include graphics. It operates under CICS in IBM OS and DOS environments without modification or reformatting, a spokesman said.

Users access the mainframe through "views" or groups of data fields matched for various user groups. User groups only have access to fields defined by data processing. Executrieve's Content Addressed Method technology lets users locate information based upon content rather than pre-established keys or indexes, the spokesman said. It is said to use less overhead than standard accessing techniques.

A nine-tier system of security is provided, and record count limitations can be imposed. The system can be installed in a few hours, the company claimed.

Introductory pricing is $15,000 for DOS and $20,000 for OS until March 1, after which prices will rise to $18,000 for DOS and $24,000 for OS, according to the vendor.

On-Line Software International, Two Executive Drive, Fort Lee, N.J. 07024.

IBM hikes DSLO, license fees

IBM has increased its monthly license fees and Distributed System License Option (DSLO) prices on six program products.

IBM

The monthly license fee on the Professional Office System program product was increased from $600 to $700. Likewise, the DSLO for that package was increased from $450 to $525, IBM said.

The Cross System Product/Applications Development package now costs $135 for a monthly license and $140 for the DSLO. The product used to cost $160 for the monthly license and $120 under the DSLO, IBM said.

Applications execution

The Cross System Product/Applications Execution now costs $140 for a monthly license and $105 under the DSLO. The program used to cost $120/mo and $90 under the DSLO.

The Cross System Product is an applications generation package for use with IBM CICS, DOS/VS, VM/SP/CMS, MVS/TSO, SSX/VSE and DPPX/SP operating environments, a spokeswoman said.

Also increased were prices for three program products for IBM's 8100 distributed processing system.

The basic license fee for the 8100 message-handling facility, DPPX/Presentation Services 3640-Execution Manager, was increased from $71 to $75 for a basic license, and the DSLO has been increased from $52 to $64/mo.

Likewise, the DPPX/3640-Interactive Transaction Generator has been increased from $297 to $312/mo for a basic license, and the DSLO has been increased from $222 to $265/mo, the spokeswoman said.

Finally, the Distributed Office Support System/8100/Distributed Office Support Facility was increased from $178 to $187/mo for a basic license, according to the spokeswoman.

The DSLO has been increased from $133 to $159/mo, IBM said.

All price increases take effect in March 1984, the spokeswoman said.

EDP Auditors... Being Pigeon-Holed Seldom Leaves Room For Advancement.

Pigeon-Holing.

It happens all the time to EDP Auditors. Especially at major corporations and accounting firms. Just as soon as auditors build competency in one dimension, that's all they get to work on from that point on. Day in. And day out.

Not so at Blue Cross and Blue Shield of Greater New York.

We equate project diversity with professional development. Our auditing professionals get to do it all, across the full spectrum of dimensions. Auditing existing systems as well as those under development. Participating in Data Center reviews and technical audits. And utilizing computerized audit techniques to insure the adequacy of internal integrity controls. And they do it all under one roof...THERE IS NO TRAVEL REQUIRED. And because there isn't, there is plenty of time for continuing education, both internal and external...and it's on "company time," as well.

Our Data Processing environment is State-of-the-Art and includes IBM 3033 and 3081 mainframes operating under OS/MVS, PDP and Varian minicomputers, CICS on-line systems, TOTAL data base and much more.

If you're an EDP Auditor with the appropriate academic credentials, top communications skills, and at least 2-3 solid years' of experience, who, feels that being "pigeon-holed" is "for the birds," we invite you to pursue your career goals with us. You'll find compensation in excess of industry standards, benefits outstanding and an environment that's as professional as you are. For prompt and confidential consideration, please send your resume complete with salary history and requirements to: EDP Audit Recruitment, Department 631

SOFTWARE & SERVICES

MEDDLE from page 39

that the vendor master file was to be updated once each month.

■ Technical support selected and maintained nonapplication system software. System programmers were traditionally responsible for reorganizing loam files, defragmenting packages and training systems and peripherals personnel in Vsam use.

■ DP operations answered for the physical well-being of the files. Operations supervisors saw to it that backup copies were sent off-site and that vendor master files and vendor transaction files were kept on two different spindles.

File sharing demanded that the functions be consolidated. Something happened when file sharing among different users' applications became a realistic goal. It became evident that the central data pool could be achieved only if the responsibility for file integrity was centralized. To be shareable, files had to become orders of magnitude more reliable than ever before.

But consolidating the functions didn't eliminate them, hence the inevitable overlaps. Centralizing file reliability/integrity functions did not eliminate the concerns that older organizational units had toward master files. Indeed, such concerns cannot and should not be eliminated since, ultimately, computerized business data is the responsibility of the entire DP team.

Overlapping functions don't always match perfectly. The key concept is shared master files. The data base administrator's primary goal is to make master files shareable by all users and among all applications. Hence, the administrator is compelled to become involved in all aspects of file design and use in order to ensure that this goal is met:

■ Users — If three users have adopted a common set of marital status codes, but a new user wants to invent his own, the data base administrator reacts by encouraging the maverick to join the others.

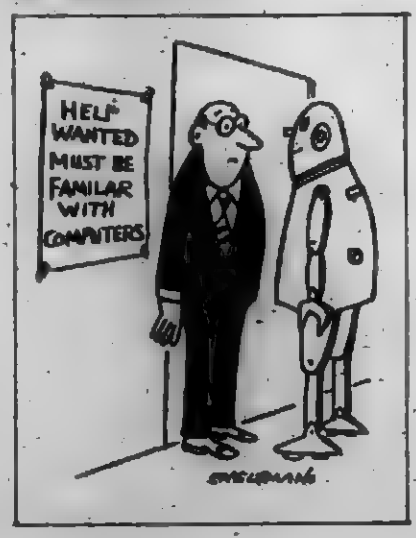
■ Systems and programming — If our vendor master file contains the "vendor address" data, but a designer wants to replicate this field on each purchase order record, the data base administrator will point out the ease of vendor master file access when printing or displaying a purchase order and the risk of inconsistency if the field is replicated.

■ Technical support — If disk access software is proposed which is more machine-efficient than the data base package but does not roll back abended transactions and batch jobs without intervention, the data base administrator becomes involved by arguing against its adoption. Without automatic rollback, the files could be used only one system at a time.

■ DP operations — If DP operations neglects to make periodic tape backup copies of the files or forgets to store the backups off-site, the data base administrator should detect the lack and inform appropriate management of the jeopardy to the firm's business data.

In sum, don't be embarrassed to accuse data base administrators of meddling in your business. You're right. They do. It's their job.

Sweet is corporate manager of data administration for the Charter Co. in Jacksonville, Fla., and a regular contributor to Computerworld's *Softline column.*



'Changer II' supports OS

HOUSTON — Software Dynamics Corp. has announced the Changer II IBM DOS to OS conversion system.

A spokesman said the Changer II system organizes and manages the conversion effort and speeds it up so that application system changes are frozen for a shorter period of time. The package is said to force conformance to OS standards and conventions, and it can be modified to satisfy standardization requirements.

The spokesman said that Changer II is not an emulator, but actually converts source program code. Changer II is said to simplify the development of OS JCL by calculating efficient disk space allocations, block sizes, number of sort work files and sort work space allocations. It also formats JCL according to predefined standards, the spokesman said. Changer II is also said to ensure adherence to uniform naming conventions throughout the system, and it produces reports that monitor and organize the conversion effort.

Various DOS to OS conversion options are available, including a one-year lease of the Changer II conversion system for $59,000.

Software Dynamics, Suite 1000, One Allen Center, Houston, Texas 77002.

Mantis enhanced

CINCINNATI — Cincom Systems, Inc. has announced an IBM CMS version of its Mantis fourth-generation application development system.

Mantis is described as an on-line, interactive application development system which, the vendor said, allows for the implementation of entire applications without the need for batch processing. In the CMS environment, according to a spokesman, Mantis eliminates the majority of operating system and teleprocessing monitor overhead associated with other environments.

With Mantis, programmers reportedly can create screens, test and debug applications, document systems, put systems on security menus and release applications for production. The fourth-generation language is said to combine the flexibility of procedural languages and the efficiency of interpretive languages to enable users to implement top-down design, structured coding, step-level refinement and prototyping of systems.

Reportedly, applications developed under CMS Mantis are transferable to IBM's CICS Environ/1 or Cincom's TIS environments without change. In the CMS environment, Mantis is said to run without isolating each user, and security is maintained for individual or department files without affecting other system users. The CMS version is said to work with a variety of file-access methods, including Vsam, Cincom's Total data base management system (DBMS), TIS DBMS and standard Mantis files. All output printing is automatically routed to the system printer.

The single-user charge for the CMS version of Mantis is $35,000 for IBM Models 4321, 4331, 4361, 370/125, 370/135 and 370/138; $45,000 for Models 4341, 4381 and 370/145 and up; and $64,000 for IBM's 30 series mainframes.

Cincom Systems, 2300 Montana Ave., Cincinnati, Ohio 45211.

Upgrades fit CMF, IMF

SUNNYVALE, Calif. — Boole & Babbage, Inc. has announced two information resource planning and control products, the CMF/Workload Planner and the IMF/System Manager.

The CMF/Workload Planner is a recent enhancement to the firm's Capacity Management Facility (CMF) architecture. It helps to provide future work load demand projections based on analysis of an organization's business activities.

According to the vendor, the Workload Planner analyzes historical work load activity data, condenses that data into a planning data base, determines transaction rate trends and constructs work load forecasts that are passed directly to CMF/Model, which produces projections of future service levels and resource requirements.

The IMF/System Manager, an enhancement to the IMS Management Facility, was designed to improve the quality of IBM IMS service. It replaces with menus the discrete commands and responses required by IMS and permits review and control of the IMS resource status via available panel displays, the vendor said.

The System Manager also automates routine procedures such as restarting transactions, programs or message regions following an abend; starting or restarting IBM integrated storage controller links; and notifying the appropriate personnel of significant occurrences within the system.

The Workload Planner is priced at $16,000 for the first CPU; the System Manager perpetual license fee is $28,500 for the first CPU.

Boole & Babbage, 510 Oakmead Pkwy., Sunnyvale, Calif. 94086.

The system that lets you forget to remember.

All you do is tell the NCR 5300 Computer Output Microfiche (COM) recorder how many duplicates you want. Then forget it. The recorder tells the new in-line duplicator what's needed. And that's what you get, completely collated.

NCR COM

All that without operator intervention. And at the fastest speeds you'll find in any COM system.

The system is flexible, too. You can choose between wet or dry-silver recorders. And duplicators that produce vesicular or diazo copies.

However, don't take that string off your finger yet.

Wait until you've talked to your local NCR Micrographic representative. For more information call or write NCR Micrographic Systems Division, Box 606, Dayton, Ohio 45401. 1-800-543-8130 (in Ohio, 1-800-762-6517).

SOFTWARE & SERVICES

Tool targets VM users

ROCKVILLE, Md. — STSC, Inc. has announced Dataport, said to be an information center tool that operates on IBM processors under IBM's VM/CMS and VM/SP operating systems and provides full screen data entry, display and analysis functions that interface with a variety of microcomputer and mainframe software products.

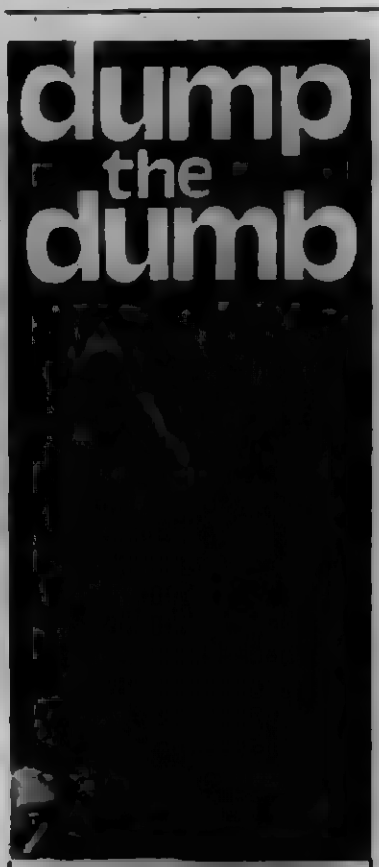
According to the vendor, Dataport's interfacing capabilities allow users to pull data from and send data to packages, including Information Builders, Inc.'s Focus; SAS Institute, Inc.'s SAS; Execucom, Inc.'s IFPS; IBM's ADES-II; Visicorp's Visicalc; and Lotus Development Corp.'s Lotus 1-2-3.

Dataport reportedly can also be interfaced with any mainframe or micro product that utilizes Software Arts, Inc.'s Data Interchange Format.

The vendor said Dataport uses spreadsheet-like windowing technology to handle full screen data entry and display, and it extends the two-dimensional spreadsheet format to as many as six dimensions. The package reportedly performs complex analysis through sophisticated computational logic and can perform calculations on entire rows or columns or on a single element.

Dataport is available for a one-time license fee of $19,000, with an additional charge between $2,000 and $4,000 for each interface.

STSC, 2115 E. Jefferson St., Rockville, Md. 20852.



REPLACE YOUR DUMB 5251'S OR 3278'S WITH SMART PC'S, XT'S, & BLUE LYNX™

Turn your PC or XT into a full functioning 5251 or 3276 terminal. With BLUE LYNX there is virtually no difference in operating a PC running under emulation from the terminal you're currently using. In addition to getting both online and offline capabilities BLUE LYNX gives you:

- PC printer and color monitor support
- Bidirectional file transfer capability

Insert the BLUE LYNX synchronous communications board into any slot in your IBM, PC or XT, load the BLUE LYNX program diskette, give your PC a station address and establish connection. No special host configuration is necessary.

BLUE LYNX 5251 Version 2—$690
ETU/34—$500* ETU/36—$500*
ETU/38—$500* *One time CPU charge
BLUE LYNX 3276 for SDLC or BSC—$690
BLUE LYNX 5251/3276 Combo—$1230
VTERM Asynchronous Communications and DEC VT emulation.—$160
(requires IBM Asynchronous Adapter)

Warner adds to data bank

NEW YORK, N.Y. — Warner Computer Systems, Inc. has announced the addition of the Disclosure II data base to its Financial Services Division data bank.

Disclosure II is said to be an enhanced data base that contains facts and figures on approximately 8,500 companies required to file annual and periodic reports with the Securities and Exchange Commission (SEC).

According to the vendor, more than 90 categories of information are available for each company, and standard reports include balance sheet information, income statements and financial ratios.

The fee structure, which is based on the type of reports accessed and the level of usage, ranges from $2 to $30 per connect hour.

Warner's Financial Services Division, 605 Third Ave., New York, N.Y. 10158.

Firm widens maintenance

OAK BROOK, Ill. — Sentinel Computer Services, Inc. has announced the expansion of its maintenance services to include the IBM System/34 and System/38 within its network maintenance agreement.

Effective immediately, Sentinel will provide maintenance, installation, discontinuance and relocation services in its recently established industrial and communications network maintenance program. Under the program, Sentinel will provide complete maintenance management services for organizations with complex teleprocessing networks.

A spokesman said the typical monthly maintenance fee for a System/34 user is approximately $207 and $395 for a System/38 user.

Sentinel Computer Services, Suite 360, 1010 Jorie Blvd., Oak Brook, Ill. 60521.

SYSTEMS SOFTWARE

KOORTRONICS, INC.
Hierarch — The Secure OIS System

Koortronics, Inc. has announced Hierarch — The Secure OIS System, which is said to secure printouts and access to all system resources for the Wang Laboratories, Inc. Office Information System (OIS) small business computer.

According to the vendor, the security system was designed to secure printouts and access to system resources according to the user's hierarchical authority, the particular device and the concerned library. The package includes user password logon and automatic logoff procedure, document antiaccess lock, library security and control over individualized local menus.

The vendor said the system is compatible with all Wang OIS software Releases 5.0 and higher and is supplied on two OIS salable diskettes. The package is said to occupy less than 1,200 sectors of the OIS system resident volume. The system is priced at approximately $10,000.

Koortronics, Two Park Ave., New York, N.Y. 10016.

HELP/38 SYSTEMS
Robot38 Version 3

Help/38 Systems, a division of Advance Circuits, Inc., has announced Version 3 of its Robot38, an automatic computer operator for the IBM System/38 mainframe.

According to the vendor, Version 3 contains 19 enhancements to the package, including Help text display, command prompting and syntax checking. Said to require four seconds of CPU time/hour, Robot38 reportedly improves response time for data entry operators by allowing the System/38 to be used up to 24 hours/day and by automating a number of maintenance tasks.

The productivity software is said to execute programs and commands without operator intervention or attendance, and it automatically schedules, runs and documents jobs during off hours.

The user can preschedule jobs to run at any time or on any selected date, with recurring jobs run on evenings or weekends, the vendor said. Robot38 will monitor and correct data communications line status, opening lines to receive transactions during night or day while maintaining system security.

Version 3 of Robot38 is leased for $30/mo per CPU or for a one-time cost of $1,100 per CPU.

Help/38 Systems, 15102 Minnetonka Industrial Road, Minnetonka, Minn. 55343.

D.B. SYSTEMS, INC.
Release 2.0 of Network Messenger

D.B. Systems, Inc. has announced Release 2.0 of its Network Messenger electronic mail system, which offers enhancements emphasizing office productivity and operational flexibility.

The enhanced version allows users to create various reusable letter, report and other formats to be stored permanently in a common or individual electronic filing cabinet. Message formats may be modified on-line and sent to various recipients as required, the vendor said.

Enhancements of the electronic mail system also provide for storage and on-line access to various system and office procedures that may be updated on-line by a central department, according to the vendor.

The DL/1 data base system operates under IBM's IMS/DC or CICS access methods.

The price is $7,900.

D.B. Systems, 3 S. Patton Ave., Arlington Heights, Ill. 60005.

TECHNETRONIC, INC.
Copernicus Model Release 2

Technetronic, Inc. has introduced its CPU-capacity management software for use in answering data center growth questions in IBM MVS and VM environments.

The Copernicus Model Release 2 predicts the effects on data center performance of hardware upgrades, work load increases and new applications.

According to the vendor, the software interprets column-of-numbers output, providing the user with a graphics display of its predictions. Results can be presented in any of the eight-color graphics formats included with Copernicus.

The product is available as an option for Technetronic's Copernicus 320 system for a one-time license fee of $7,000.

Technetronic, Suite 400, 7927 Jones Branch Drive, McLean, Va. 22102.

COMPUTER INFORMATION SYSTEMS OF MASSACHUSETTS, INC.
VMS/Actsys; Prolog

Computer Information Systems of Massachusetts, Inc. has announced a resource accounting package and utility designed for use with Digital Equipment Corp. VAX-11 computers running DEC's VMS operating system.

VMS/Actsys reportedly is a menu-driven resource accounting package that monitors and bills system resources and software usage.

Prolog, said to be an optional extension of VMS/Actsys, is a project resource accounting utility that lets the user switch projects without logging out and in repeatedly.

VMS/Actsys' billable resources are said to include connect time, CPU time, page faults, buffered I/O, direct I/O, volumes mounted, pages printed, disk storage and software license fees at prime and off-prime rates.

Resource usage information reportedly can be extracted interactively or set to run automatically at a user-specified time.

The products operate on single VAX-11 systems, VAX networks connected with DEC's Decnet and VAX clusters. They will be available in April.

VMS/Actsys is priced at $3,800 and Prolog at $900.

Computer Information Systems, 165 Bay State Drive, Braintree, Mass. 02184.

PRODUCTIVITY AIDS

PACER SOFTWARE, INC.
C68; A68; L68; Lib68; X68; S68

Pacer Software, Inc. has announced an integrated cross-development environment for the Motorola, Inc. 68000 family that runs on Prime Computer, Inc. Prime 50 series computers.

The new products that make up the environment are designed for companies that develop microprocessor-based hardware and are said to be suitable for educational settings that plan to teach microprocessor architecture.

The C68 is a C cross-compiler for the Motorola 68000 and is source-level-compatible with the Prime native-mode C compiler. Applications can be developed and debugged in the mini-based environment and later ported to the micro without losing compatibility, the vendor said.

The A68 is a Motorola Exormacs-compatible M68000 cross-assembler and includes support for long symbol names, multiple code sections and an extensive macro capability, the vendor said.

The L68 is a 68000 cross-linker with library support. The Lib68 is a 68000 object-module librarian.

The X68 is a cross-reference utility that can be utilized in conjunction with either L68 or A68. The S68, a 68000 simulator, is designed so that the content of the memory and registers can be examined and changed from within the simulator.

The C68, L68, Lib68 and X68 package costs $5,000. The A68, an add-on to the package, costs $2,000.

The A68, L68, Lib68 and X68 package sells for $3,000, while the S68 costs $1,500.

Pacer Software, 1297 Pearl St., La Jolla, Calif. 92037.

APPLICATION PACKAGES

META SOFTWARE, INC.
Charms

Meta Software, Inc. has announced the Chart Abstracting and Review Management System (Charms), which is said to be an on-line hospital-records software system.

According to the vendor, Charms is an interactive system that can be adapted to most hospital environments. The extensive clinical data collected by the system is integrated with a Diagnosis Related Grouping module, which generates the information on-line.

The system consists of three optional modules: The Medical Records Abstracting System (Mras) captures and provides clinical patient information and allows the user to enter, modify or make queries on all patient data, according to a spokesman for the company. The Missing Information Charts (MIC) module captures detailed information regarding the status of each patient chart. It reveals missing information, validates data and communicates that information to both doctors and management. The Utilization Review (UR) portion is a quality assurance system, which assists in the tracking of a patient's stay in the hospital, the spokesman said.

The Charms system was designed for use with IBM 370, 4300 and 303 series processors in IBM OS and DOS environments. The Mras module is priced at $50,000, the MIC module at $25,000 and the UR module at $25,000.

Meta Software, 1860 Broadway, New York, N.Y. 10023.

TEXPRINT, INC.
EZ Chart

Texprint, Inc. has announced EZ Chart, a graphics package for Digital Equipment Corp. PDP-11, LSI-11, VAX-11, PDP-10 and PDP-20 computers.

EZ Chart, which runs on either black-and-white or color terminals, produces four types of charts: line,

The Data Center is under your command.

But is it under your control?

Value Computing's systems management software automates the critical tasks of production forecasting and scheduling, capacity planning, and resource allocation and accounting, and brings those tasks under centralized control. Your control.

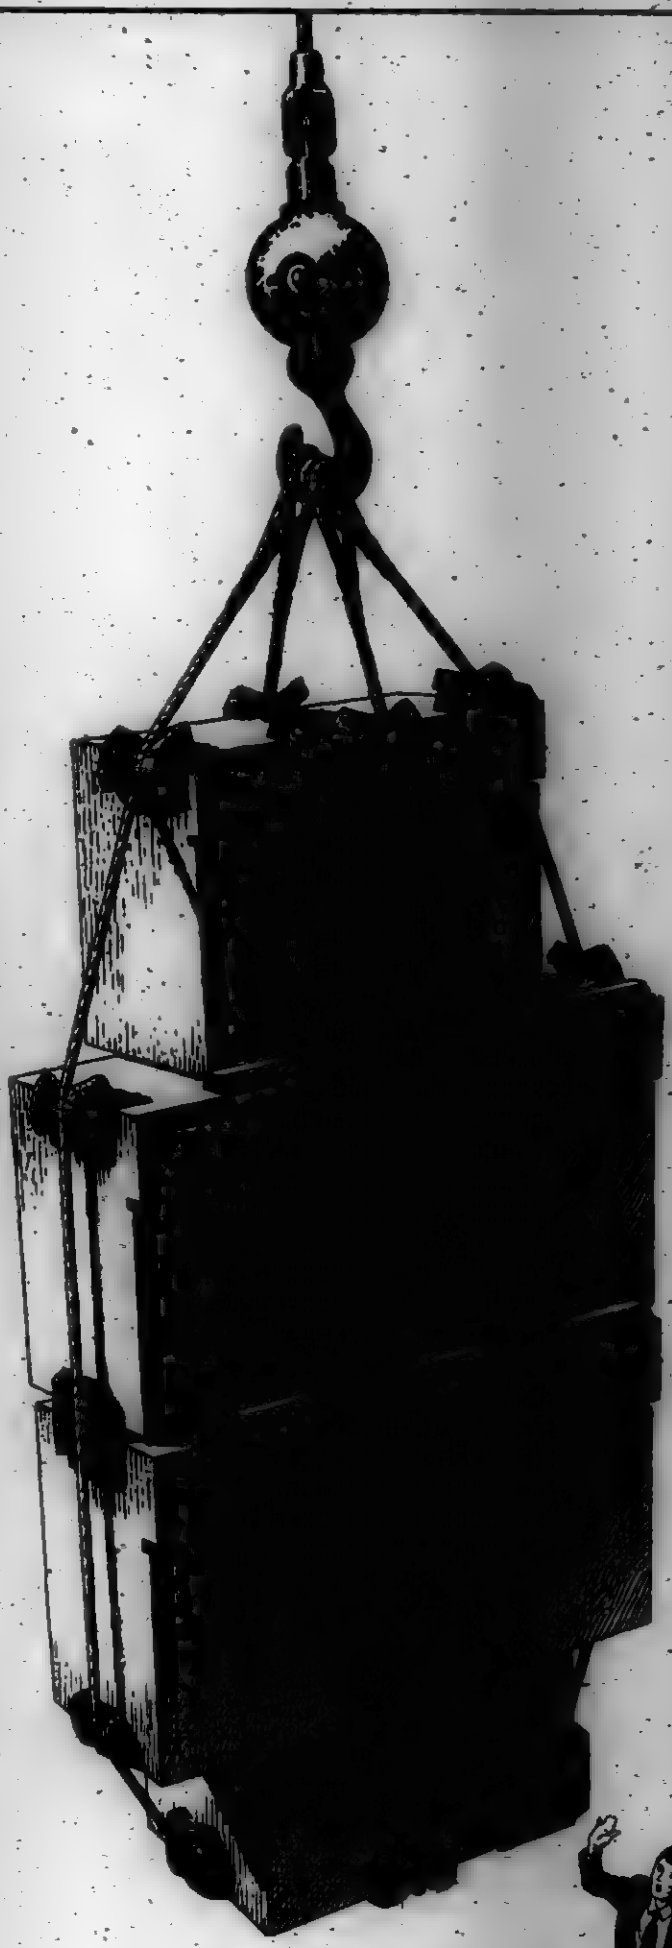
The effects on data center operations are immediate: a more stable production environment ... faster turnaround ... fewer manual procedures ... shorter night processing times ... fewer mistakes, misunderstandings, re-runs ... less management dependency on operations personnel.

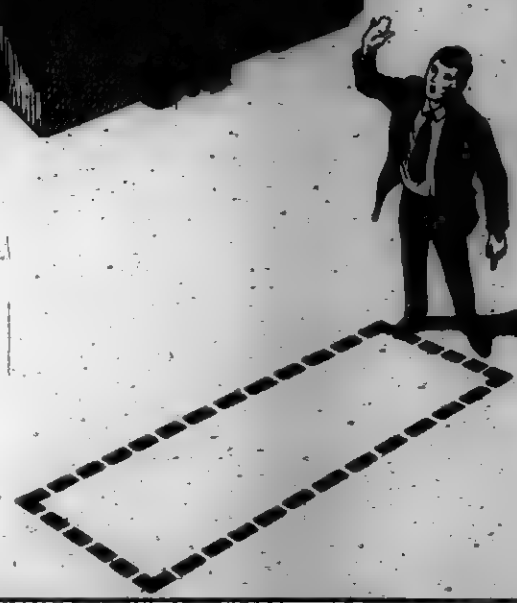
In short, a smoother running, better performing data center; a center where managers get the most intensive use of all resources. Without making a major capital investment in additional CPUs or peripherals.

We don't believe there's a more cost-effective way to improve the performance of your data center or the value of its position in your company. Call us and find out why more than 1500 users agree.

Value Computing Software Systems:
DCMS—The most powerful and comprehensive production scheduling and control system available.
Charge-A-Charge—The industry standard in job accounting and computer billing.
VALU-LIB—An entirely new tape management system designed for today's VS environments.
SMF Express—A unique package for the management of important SMF data.

VALUE COMPUTING
THE OPTIMUM SOFTWARE FOR DATA CENTER MANAGEMENT
Value Computing, Inc., 499 N. Kings Highway, Cherry Hill, NJ 08034 (800) 257-8242. In New Jersey (609) 482-2500





How to put 640 square feet of computer disk storage in a 7'x3' space.

There's no way to store that much data in that little space if you're using disk drives. Even 3380 class. But Masstor Systems' M860 Mass Storage System—a different kind of data storage technology—can solve the problem.

The entry-level M860 stores 55 billion bytes of data on-line and can be expanded to 440 billion bytes. At one-quarter the cost of disk. And less than 4% of the floor space. It also automates tape operations, making processing much faster and more economical.

The M860 is a third storage alternative for your IBM and other plug compatible mainframes. One that offers more on-line storage capacity for your new applications and requires no conversion of your existing programs. Masstor has an M860 solution for Sperry, Honeywell, DEC/VAX and CDC mainframes, too. As well as a way to hook them together in a network: MASSNET.

The M860 and MASSNET are two of a family of Masstor Systems' strategic products that allow you to move, store and share data efficiently and economically.

To find out more, contact Dave Ball at Masstor Systems Corporation, 5200 Great America Parkway, Santa Clara, California 95050. (408) 988-1008. And cut your data storage problems down to size.

MASSTOR SYSTEMS

Strategic solutions to moving, storing and sharing data.

SOFTWARE & SERVICES

Continued from page 44

bar, pie and scattergram, according to the company. The package runs interactively and includes a command-file feature for quick recall of often-used formats.

EZ Chart costs $995 for the RT-11 operating system and is priced at $1,750 for RSX-11M, RSTS/E, VMS, and Tops-20 operating systems.

Tenprint, 5 Blanchard Road, Burlington, Mass. 01803.

COMPUTECH CORP.
Group Rating and Sales Proposal System

Computech Corp. has announced its on-line, interactive Group Rating and Sales Proposal System (GRASP) for IBM 4300, 370 and 30 series processors.

Modular in design, GRASP is said to feature on-line entry of census and coverage data with automatic policy rating and proposal page generation. The system reportedly leads the user through a logical progression of data entry screens to enable input of employee census information and selection of appropriate levels of coverage for each line of insurance selected. Error messages alert terminal operators to omissions or invalid entries.

The system also is said to support production of multiple versions of a proposal from a single input of employee census data, and pending proposals are maintained on a separate GRASP data base for a user-specified time period. Built-in text editing facilities permit additions, deletions and changes to standard text paragraphs that the system creates based on the specific rating situation.

An integrated table management system is said to provide for on-line maintenance of multidimensional rate tables.

A permanent license for GRASP is priced at $220,000.

Computech, 2534 Main St., Glastonbury, Conn. 06033.

SOLUTIONS THROUGH ADVANCED TECHNOLOGY SYSTEMS, INC.
Claimsaver

Solutions Through Advanced Technology Systems, Inc. (Stats) has introduced Claimsaver, a health care claims processing system for Honeywell, Inc. computers.

The system processes different types of health care claims, accommodates a wide range of insurance coverage and produces various management reports, according to the vendor. The package is designed for businesses that process health care claims internally.

The software requires Honeywell's Gcos 3.0 operating system. The package's price ranges from $120,000 to $400,000, depending on the installation. Yearly maintenance fees consist of 10% of the software purchase price.

Stats, 244 Perimeter Center Pkwy. N.E., Atlanta, Ga. 30346.

MCBA, INC.
Fingraph-MCBA Connection

MCBA, Inc. has announced Fingraph-MCBA Connection (FMX), said to be a package that transforms MCBA's general ledger data into graphics input for the Fingraph visual management support system.

FMX compresses data from the General Ledger package and generates graphics reports that correspond to a user's tabular general ledger reports, the vendor said.

The package, written in Dibol, runs on Digital Equipment Corp. VAX-11 minicomputers. Single-CPU source code license is available for $1,000.

MCBA, 3441 Honolulu Ave., Montrose, Calif. 91020.

SHARED FINANCIAL SYSTEMS, INC.
ON/2

Shared Financial Systems, Inc. has announced ON/2, an on-line financial software system designed to run on the Stratus/32 continuous processing system from Stratus Computer, Inc.

ON/2 supports a range of banking services within a variety of operating systems. It offers transaction support for demand deposit, time deposit, certificate of deposit, credit card and access card applications through automated teller machines and manned and point-of-sale terminals. Multiple-host, multiple-device and switch-type configurations are also maintained.

Seven major subsystems are combined to process transaction requests from a local network, a switch or host communication system environment, an information service, a batch system interface or a network/system control service environment, a spokesman said. Other features include distributed processing capabilities, device independence, network settlement and reconciliation and multitasking system architecture.

The system will be available in May. It will be priced at $150,000 for a permanent license.

Shared Financial Systems, Suite 650, 15201 Dallas Pkwy., Dallas, Texas 75248.

COMPUTER DATA CORP.
Distribution Resource Planning

Computer Data Corp. has announced a resource planning system for the wholesale distribution industry.

The Distribution Resource Planning (DRP) system is designed to work with Computer Data's sales order processing, inventory control and purchase management systems.

It reportedly allows distributors to anticipate lumpy demand with increased visibility into the future. It is said to handle seasonal and other

NOW CCA'S MODEL 204 DBMS CAN DO SOMETHING EVERY EXECUTIVE CAN APPRECIATE.

SOFTWARE & SERVICES

changing customer ordering patterns, fluctuating transportation lead times and other variables.

The DRP is said to use various simulations for forecasting, making comparisons against actual historical performance and automatically selecting the strategy that most closely approximates actual performance.

The system runs on Hewlett-Packard Co. HP 3000 and Digital Equipment Corp. VAX-11 superminicomputers. It requires the sales order processing, inventory control and purchase management systems to operate.

The DRP will be available during the second quarter of 1984. The prerequisite systems are priced at $15,000 each, and the DRP costs $5,000.

Computer Data, Eighth Floor, 5757 W. Century Blvd., Los Angeles, Calif., 90045.

DATA BASE MANAGEMENT SERVICES

MICHAELS, ROSS & COLE LTD.
Mrc-Reporter Release 2.0

Michaels, Ross & Cole Ltd. has enhanced its Mrc-Reporter module for the IBM System/38, which allows users to create reports.

Release 2.0 of the report-writing module features shared-access path logic and free format-field entries that can be based on calculations from other fields. Other features include on-line Help, multilevel security, relational file joining, Boolean selection criteria and output device control, the vendor said.

Mrc-Reporter runs on the IBM System/38. A one-CPU license costs $1,140, and the maintenance fee is priced at 10% per year.

Michaels, Ross & Cole, Suite 501, 1301 W. 22nd St., Oak Brook, Ill. 60521.

BEDFORD RESEARCH ASSOCIATES, INC.
Interactive Signal Processing

Bedford Research Associates, Inc. has announced the Interactive Signal Processing package (ISP) for Digital Equipment Corp.'s VAX-11 series of processors.

In a single, integrated system, according to the vendor, ISP combines signal processing functions, data management, two- and three-dimensional graphics capabilities and an interactive programming language. The vendor said the unified analysis approach incorporated with the package will establish a controlled environment for research and development.

ISP is said to reduce signal processing research and development time. The package allows a user to interactively apply one or more of the 42 available signal processing functions to an array of sampled data. The sampled data, processing parameters and other associated information can be accessed through ISP's file-management capabilities. Signal data and processing parameters can be displayed in various two- and three-dimensional formats utilizing one of ISP's 15 graphics functions, according to a spokesman for Bedford Research Associates.

ISP is also programmable, allowing a user to develop more complex applications with loops, conditional branching and embedded arithmetic expressions.

The package licenses for $9,500, the spokesman said.

Bedford Research Associates, 4 DeAngelo Drive, Bedford, Mass. 01730.

MUMPS USERS GROUP
ANS Mumps: Software Engineering Evolution Toward the Fifth Generation

The Mumps Users Group has published *ANS Mumps: Software Engineering Evolution Toward the Fifth Generation*, which includes a section on the evolution of the programming language since its inception in 1966.

The publication also includes a 12-page set of tables comparing more than 40 available Mumps implementations and including the name, address and phone numbers of the sources. It also offers a list of hardware from 22 suppliers for which Mumps implementations exist.

A Software Engineering Methods section examines three implementations, including the development of a software data base, terminal-to-terminal portability and a color graphics workstation.

The publication is available for $5 for association members and $6 for nonmembers, plus a 10% shipping charge, according to a spokesman for the users group.

Mumps Users Group, Suite 208, 4321 Hartwick Road, College Park,

PERFORMANCE SOFTWARE GROUP
Fastran

Performance Software Group has announced Fastran, a compiler for Hewlett-Packard Co. HP 3000 Transact source code.

According to the vendor, CPU times are improved by two to 20 times using the compiler.

The product has been designed to run on any HP 3000. An HP SPL compiler is also necessary, the vendor said.

The price is $10,000.

Performance Software Group, P.O. Box 1464, Sandy Spring, Md. 20860.

TALK SENSE TO THE IBM PC.

Introducing PC/204, a link that lets PC users turn mainframe data into spreadsheets effortlessly.

PC/204, the newest productivity tool from Computer Corporation of America, is a powerful, efficient, easy-to-use software link between IBM personal computers and mainframes. It effectively answers the pressing problem of how to let corporate managers take full advantage of today's personal computers for making decisions, while also giving them access to the corporate database in a format they can use.

First, PC/204 guides PC users as they browse through the MODEL 204 database. Then it extracts the data they need and converts it into meaningful management information for spreadsheet analysis. Lotus 1-2-3 for example. And PC/204 does all that automatically. Without the PC user having to understand anything about mainframe technology.

If you aren't already using Lotus 1-2-3, we can supply it along with PC/204. Or you can use any current IBM PC business package.

While PC/204 is helping business managers, it's also helping MIS directors.

PC/204 uses the power and intelligence of the personal computer for increasing the overall efficiency of an application.

For one thing, it improves performance of the mainframe by offloading some of the processing to the PC, while reducing PC users' response time. It also makes communication between the PC and the mainframe more efficient.

What about security and control? PC/204 provides individual management views of the corporate database while still allowing PC users access to all the information they need.

PC/204 is the latest reason to get MODEL 204 DBMS which has been so highly rated for performance and programmer productivity.

For more information or to arrange for a demonstration of PC/204's capabilities, simply return the coupon or write to us on your letterhead.

SOFTWARE & SERVICES

REMOTE COMPUTING SERVICES

INFORMATION ACCESS CO.
Search Helper/prepaid searches

Information Access Co. (IAC) has announced the combination of its Search Helper microcomputer software with a package of prepaid searches designed to reduce the average cost of a search of a company's on-line data bases.

According to the vendor, Search Helper provides menus to coach the user in establishing search parameters off-line.

Once the search criteria are established, the package automatically dials IAC's Dialog Information Services, and the search begins.

Search Helper is currently designed for use with the IBM Personal Computer, the Apple Computer, Inc. Apple IIe and Apple II+ and the Eagle Computer, Inc. Eagle II.

The combination package includes an annual Search Helper license, priced at $200, and 700 prepaid searches, valued at $1,750, for a cost of $1,950.

The package is said to reduce the cost of a typical search from $15 to $2.50.

IAC indexes on-line through Dialog include Newsearch, the Magazine Index, the Trade and Industry Index, the Legal Resource Index and the National Newspaper Index, according to a spokesman.

IAC, 404 Sixth Ave., Menlo Park, Calif. 94025.

NEWTON-EVANS RESEARCH CO.
Guide to the Remote Computing Services Industry

Newton-Evans Research Co. has announced the publication of the third edition of its single-volume *Guide to the Remote Computing Services Industry.*

A condensation of its sources of information on the remote computing services (RCS) industry, Newton-Evans' guide is organized around four major sections.

The first section consists of extracts of original research reports based on periodic surveys of the RCS marketplace, plus results from studies planned for 1984 as they become published.

The second section is a collection of the firm's monthly publication "The RCS Industry Newsletter."

A third section includes detailed profiles of the most important RCS suppliers. The fourth section is an industry analysis.

The basic subscription price is $595.

Newton-Evans Research, Suite 204, 10176 Baltimore National Pike, Ellicott City, Md. 21042.

ON-LINE DATA BASES

CAUSE
On-line member data base

Cause, a professional association for development, use and management of information systems in higher education, has announced that on-line information from its members' institutional profiles is available to its members.

Information from 160 data processing departments with 10 types of applications, including financial management, admissions and records and physical operation, has been placed in a data base, according to the vendor.

Members call the Cause office, and staff members use an on-line system to find the needed information.

Data may be selected by a variety of categories. There is no charge for the service.

Cause memberships cost between $100 and $1,000, depending on the size of the institution.

Cause National Office, 737 29th St., Boulder, Colo. 80303.

METHODOLOGIES

AGS MANAGEMENT SYSTEMS, INC.
Structured analysis course

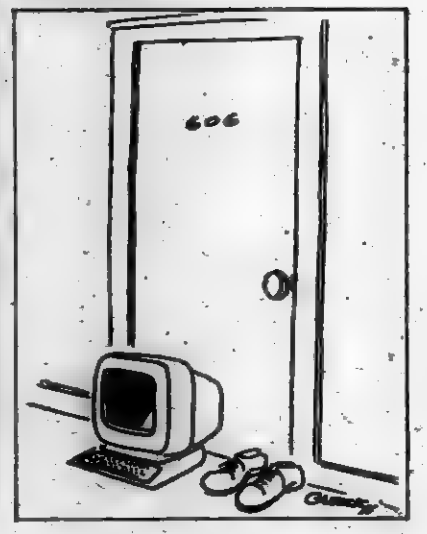
AGS Management Systems, Inc. has announced the first of a five-course series on structured techniques.

"Structured Analysis: Tools and Techniques" will be conducted Feb. 21-23 and March 27-29 at the AGS Training Center in Philadelphia.

The three-day workshop is designed as an introduction to the analysis process and will cover data-flow diagrams, data dictionaries and process descriptions, according to the sponsors.

The fee for the workshop is $550.

AGS Management Systems, 890 Valley Forge Plaza, King of Prussia, Pa. 19406.



COMMUNICATIONS

FCC still facing AT&T petitions

AT&T and its recently divested operating companies have begun another attempt to change the Federal Communications Commission's Second Computer Inquiry decision, this one aimed at the decision's provisions on protocol conversion.

Already pending at the commission are petitions from AT&T and the operating companies seeking reconsideration of a ruling last summer (Docket 81-216) that wideband channel interfaces constitute terminal equipment and that carriers must therefore order that equipment through separate subsidiaries or an equivalent alternative.

Bell South, one of the newly created regional holding companies, recently came up with an alternative that appears to be less than equivalent. And independent private branch exchange manufacturers have filed objections to "enhanced" Centrex-CO services that allegedly cross the line established in Computer Decision II between basic and enhanced services.

The latest development consists of petitions filed early this month by AT&T and two regional holding companies, American Information Technology (Ameritech) and U.S. West. They want the FCC to let AT&T and its former subsidiaries perform end-to-end protocol conversion as part of a basic transmission service.

In Computer Decision II, intranetwork protocol conversion is part of a basic service, but conversions involving information that reaches the end user are not. AT&T and the regional holding compa-

See AT&T page 51

ISDN tech building up

All-digital transmission evolving

By Lynn Haber
CW Staff

An integrated services digital network (ISDN) may be more a vision than a reality at the moment, but some pieces of its architecture are already in place.

For instance, AT&T last month announced its Circuit-Switched Digital Capability (CSDC) technology, which will let computers send voice, graphics and data transmissions at high speeds over the same lines that can be used for regular phone calls [CW, Jan. 9].

AT&T's ABS Net 1000, IBM's Information Network, the General Electric Information Services Co. (Geisco) and Tymshare Co. are also part of the evolution toward the all-digital transmission, switching and interfacing of voice, data, video and image applications.

"Some of these nascent ISDNs were in place all along, such as Geisco. Others are brand new — IBM's Information Network — and others are parcel parts of systems such as AT&T's ruddus network after the divestiture," according to Charles P. Lecht, chairman of Lecht Sciences, Inc., a New York-based creative lab and think tank.

Large-scale evolution

Dixon Doll, president of the DMW Group of Ann Arbor, Mich., said, "What you're really talking about, regarding the buildup of ISDNs, is the phaseout of the analog and the phase-in of the digital. And that's something that's been a very large-scale evolutionary process which began about 10 to 15 years ago."

The fundamental idea behind ISDNs is the notion of building one huge digital network in which a number of technologies are utilized to deliver a combination of dedicated lines, switch services and transaction communications to subscribers.

See ISDN page 51

Study finds ignorance of ISDNs

By Lynn Haber
CW Staff

WELLESLEY, Mass. — Ninety-one percent of data terminal manufacturers don't have a clue about what integrated services digital networks (ISDN) are. And of the 9% of data terminal manufacturers who have heard of ISDNs, none has begun an ISDN product planning strategy, according to a study recently released here.

An ISDN represents the future structure of the current public-switched telephone network. ISDNs combine voice, data, video and other communications services into a single digital link.

The study, "The ISDN Evolution: A Strategic Analysis," prepared by Venture Development Corp., reveals that data terminal manufacturers exhibit the lowest level of awareness pertaining to ISDN standardization activities among future ISDN hardware suppliers.

"Data terminal manufacturers typically follow the lead of manufacturers of equipment to which terminals are attached — and that is computers. They do what everybody else does," said Marc H. Rudov, manager of the communications consulting division at Venture Development.

"I guess they look at their business plans and they must not see anything

Orion Software unveils net for System/34, 36, 38

WALTHAM, Mass. — Orion Software, Inc. has introduced Network Orion, a modular family of generalized communications software for the IBM System/34, 36 and 38 user.

According to the vendor, Network Orion combines various methods of communication and types of traffic. The software includes data processing, telemessage (electronic mail) and text transmission. Users of the network can combine text and/or data files with telemessages for transmission to any remote location.

Information can be sent to other IBM System/34, 36 and 38 machines, to word processors from Wang Laboratories, Inc. and IBM and to simple remote data terminals. It also enables information to be sent via external networks.

Regardless of the destination system of networks, the procedures for transmitting information are identical. Through standard menus, the user specifies the information to be sent and addresses it to a location, a department or an individual user. Transmissions can be a free-form message, a word processing document, software and/or records from a data base file.

The intelligence of Network Orion is contained in three modules, the Network Orion Control Facility, the Text and Message Facility and the Remote Data Processing Facility.

The Network Orion Control Facility (NOCF) directs information traffic by reference to a predetermined network configuration. Initially, the network configuration and control rules are defined to NOCF as a series of profiles that detail the locations on the network, the machines connected at each location, authorized users or groups of users, transmission priorities and scheduled transmission events.

The Text and Message Facility (TAMF) provides for office automation facilities such as communication of information as free-form messages typed in at a keyboard, word processed documents, extracts from data base files or a combination. The information can be transmitted in a variety of ways, such as via General Electric Information Services Co.'s Quik-Comm electronic mail, direct dial to other System/34, 36 and 38 computers or word processors or via the Telex network.

The third module, the Remote Data Processing Facility (RDPF), was designed to meet the requirements for distributed data processing, including the transfer of data and program files, spool items, library and source members.

In addition, Remote Job Management allows jobs to be scheduled and executed at remote sites under control of the central site data processing management. Multisystem networks of System/34, 36 and 38 computers can thus update remote fields, perform software maintenance, execute jobs on a scheduled basis at remote sites and receive data from remote sites for consolidation reporting.

The communications options of Network Orion can be extended by adding new communications modules for other devices such as mainframe computers, other network facilities and office automation facilities. These will be made available according to demand and technological development, and the additions require no change to existing Network Orion locations other than the installation of new communications modules.

Typical applications include consolidation of information from several remote locations, the control and transfer of new application programs and procedures, data base updating, order processing between multiple sites, transmission and receipt of day-to-day operational transactions and other company reports, data processing or text-related activities, as well as single- or multiple-site electronic mail creation and transmission.

Network Orion is modularly priced. Licenses begin at $1,000 for a single-site electronic mail capability on a System/34 and 36. The new Network Orion is available for immediate delivery on a System/38.

Orion Software, Suite 300, 490-2 Totten Pond Road, Waltham, Mass. 02154.

COMMUNICATIONS

AT&T from page 49

nies can convert the latter only if they first obtain a waiver from the FCC.

When the Computer Decision II protocol provision was adopted about three years ago, the FCC realized it might require modification and launched an inquiry (Docket 80-756).

FCC decisions

When the investigation was completed last November, the commission decided:

■ The basic protocol conversion policy would not be changed.

■ Conversion of control signals — for example, the dialing pulses used in telephone communication to designate the number of the called party and the address bits attached to data packets — are part of a basic service.

■ All other end-to-end signal conversions constitute enhanced services, but waivers will be granted more quickly and easily for some of these services than for others.

The favored group includes internetwork protocol conversions (X.25 to X.75) and "a change in electrical interface characteristics to facilitate transitional introduction of new technology." One example: the conversion of a digital voice input to an analog voice output.

In their petitions for reconsideration submitted this month, AT&T and the two regional holding companies objected strenuously to continuation of the waiver requirement.

AT&T contended that "an ad hoc waiver process is unworkable, harmful to competition and contrary to the movement toward minimization of regulatory oversight. . . . A carrier . . . cannot . . . invest . . . time, money and other resources in innovative design in the face of fundamental regulatory uncertainty over whether it will be allowed to use the product of its investment."

Waiver requirement

Because of the waiver requirement, AT&T added, carriers would have to reveal their business plans to competitors in advance. AT&T said the commission should "adopt rules permitting AT&T to provide code and protocol conversions on the same unrestricted basis as other carriers."

The three petitioners also said the FCC should:

■ Declare that all protocol conversions now performed within the network are "basic."

■ Allow the carriers to perform internetwork protocol conversions and "conversions of electrical signals incident to changes in transmission media or techniques" on a nonwaiver basis.

ISDN from page 49

"ISDN will consist of different pieces," Doll said. "It will consist of digital local distribution facilities, digital switches [and] digital long-haul services. [Long-haul services will be a mixture of satellite, fiber optics and microwave.]

"And the local distribution facilities or the regional or metropolitan services will be provided using combinations of coaxial cable and fiber and digital termination services. There will also be other technologies like local-area data transmission," Doll explained.

ISDN architecture

One way to conceptualize ISDN architecture is to think of it in terms of a big computer.

"Think of it as a massive hi-fi set which can handle everything from alarm signals to video signals and everything in between, at varying speeds and volumes. It will allow everything from the simplest sending of a message from point A to point B, to the sending of a whole television show, to doing data processing from the moment the data is received and shipped," Lecht said. "It's a big computer system as well as a massive network."

ISDN is an architecture, not a single system. There are bits and pieces of it in place now and some networks that more or less comply with the provisions of ISDN as it has been defined. "ISDN itself isn't the magic pot of gold at the end of the rainbow," Doll said. "It's a concept that will continue to evolve or change over time. There'll be a little bit more of it every year for as far out as one can see."

While these embryonic

GET EVERYBODY ON BOARD.

Now there's a way to let everyone in your company chip in.

AT&T Information Systems, the company whose unparalleled communications heritage has been bringing people together for 100 years, now brings your office together. With state-of-the-art office automation that's designed to get your company moving ahead.

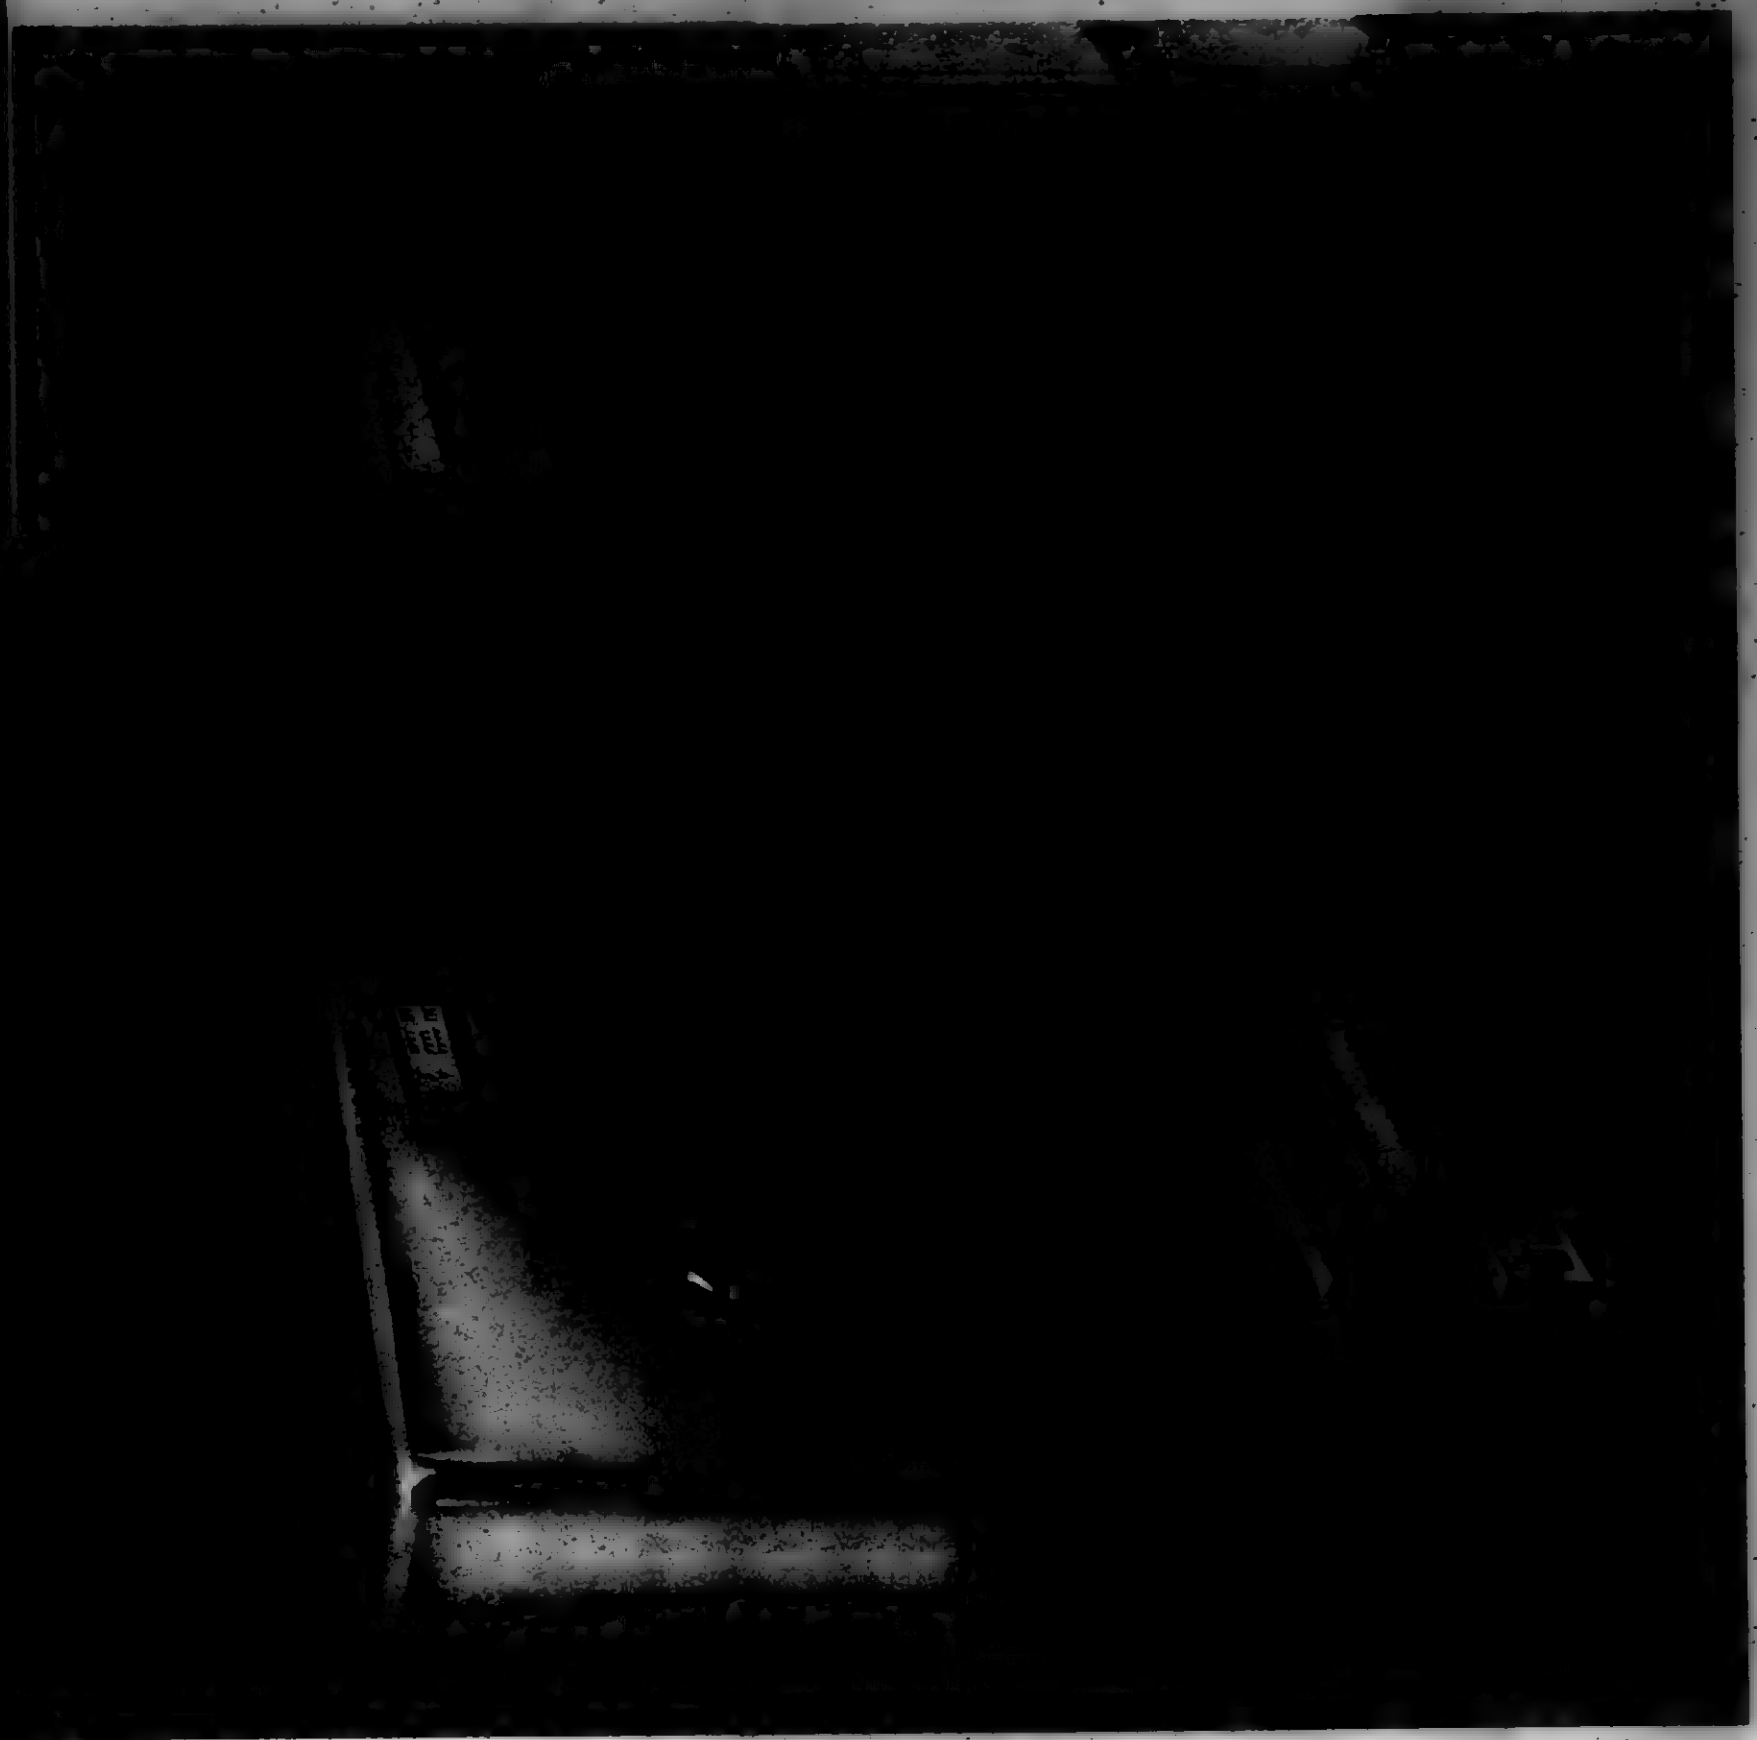
Electronic Document Communications, now available on System 85 and DIMENSION PBX, is an easy-to-learn software application that's hard to beat. Because it integrates your office by letting everyone prepare, send and store documents and messages with the speed and efficiency of a computer. So you can have better access to the right information in the right form at the right time.

Electronic Document Communications can streamline your office in three ways:

Preparing Information—Reduces the time, effort, cost and wasted paper between drafts by electronically creating, editing and formatting documents and messages. "The Composer," a special software feature, checks spelling, grammar, punctuation and usage. EDC even measures whether documents are readable by technical and nontechnical readers.

Moving Information—Speeds documents to many people in different locations simultaneously so they can act decisively. EDC allows you to determine the timing and cost of delivery, and even check to find out when documents were received. Using a password ensures the privacy of your messages.

Managing and Storing Information—Locates documents, and retrieves and evalu-



ates contents quickly and easily with electronic files—while reducing the possibility of losing documents. An electronic "Mailbox" allows you to quickly determine which documents to read first. EDC reduces storing and filing costs with an electronic "Archives" that allows for either short- or long-term storage, and the "Wastebasket" which enables you to permanently delete items after a determined period of time. There's even an electronic "Calendar" that checks personal schedules and arranges mutually convenient meetings.

Not only will all these features help you further integrate your office, Electronic Document Communications is itself just one part of AT&T's line of completely integrated business systems. For state-of-the-art office automation, you can implement EDC in conjunction with other applications software like Message Center/Directory, a call coverage and message system. These office management applications are now available on System 85 and DIMENSION® 600 and 2000 systems with the Applications Processor.

The result is you'll be able to improve staff productivity at every level and get everybody on board. And as new features are developed in the future, they'll be compatible with your existing equipment.

EDC was developed by Bell Labs systems designers who now work for AT&T Information Systems Laboratories. AT&T Western Electric produces EDC, and AT&T Information Systems will maintain it with comprehensive, conscientious service from the largest service organization in the industry. To find out more, call toll-free 1-800-247-1212, Ext. 879M.

AT&T's Electronic Document Communications: It's part of the integrated office of tomorrow that you can board today.

COMMUNICATIONS

ISDN from page 51

forms of ISDNs presently offer limited ISDN-type capabilities, the future use of a more solidly in-place system has far-reaching capabilities.

"They'll be used the way a computer would be used," Lecht said.

"Only this will be the computer of your dreams. What about a computer that not only distributes into different rooms in different buildings, but also to different cities and countries? You can still think of it as one computer which is in fact a house for other machines — thousands of machines in AT&T's case — so you have the capacity to have computer access and data delivery any place and the power to process in the network [rather than going] into your own data center," Lecht speculated.

"My forecast is that by the end of this decade, maybe 30% to 90% of all data processing in America will be acquired that way, that the majority of data processing — that is the powers that computer systems give us — will be distributable through networks [and] obtainable through networks, and nothing less than a terminal at the recipient's or deliverer's location is going to be required," according to Lecht.

STUDY from page 49

that's going to affect their business. Perhaps they think that this is so far into the future that they're not going to worry about it now," Rudov continued.

The Consultative Committee on International Telephony and Telegraphy (CCITT) has been developing worldwide ISDN standards during the past four years through a special study group. The CCITT will unveil its ISDN recommendations in Geneva, Switzerland, in November 1984.

Two basic factors

According to the study, the motivations for establishing ISDN standards originated from two basic factors. First, the telephone network — which originally was all analog — has been evolving increasingly into a digital network.

Second, as more corporate data is being routed outside companies' premises, use of the telephone system for data carriage has increased. Therefore, a symbiosis has developed between computing and communicating, and it becomes more logical and economical to combine voice and data into one standardized network — an ISDN.

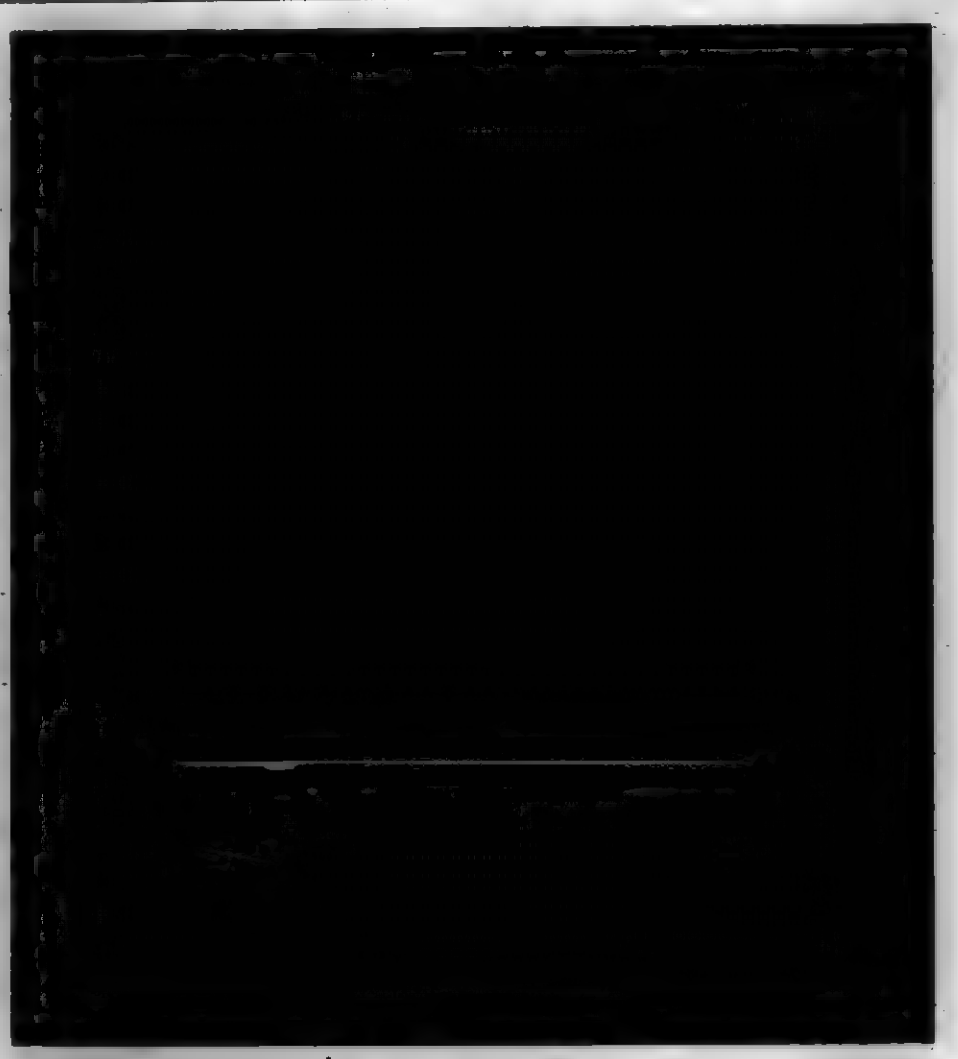
"There has never been a significant need for data terminal manufacturers to participate in those kinds of standards. They've had to think about RS-232, basically, and that's it," Rudov said. "Now a lot of data terminal manufacturers are starting to incorporate modems inside of their terminals, and the funny thing about that is ISDN will eliminate modems."

According to the report, the significance of this ignorance is that data terminals will be viewed second to telephones as the ubiquitous gateway to ISDN.

Rudov believes this situation may prompt foreign manufacturers to flood U.S. markets with ISDN-compatible terminals, as these manufacturers have been heavily involved in the ISDN standardization process.

The ISDN study is priced at $4,950.

Venture Development, One Washington St., Wellesley, Mass. 02181.



Now, a major advancement in Net/One local area networking. Lower cost.

Our new VLSI chip set has allowed us to do with one printed circuit board what we used to do in three. The result is a new Network Interface Unit, the NIU 150, that's half the cost of its predecessor, the NIU-1. In areas where a smaller number of either broadband or baseband connections are required, the pared-down NIU 150 brings per-port connection costs well below $500.

Streamlined NIU 150's mean more flexibility, too, by serving small equipment clusters in more diverse locations at a lower cost.

Like our other Network Interface Units, the new NIU 150 is equipped, off the shelf, to support most industry-standard equipment interfaces. And like our other NIU's it comes with complete network services software. It's also programmable, so special interface protocols can be added now or anytime in the future to support special equipment.

The broadband version of our new NIU 150 has an integral modem. Both baseband and broadband NIU 150's can accommodate up to six ports for device attachment.

Give us a call, or write for more information about turning the equipment you have now—whatever it is—into the network you need now, at a lower cost than was possible before.

OXFORD JUST TAUGHT CICS to COBOL

UFO/COBOL™ replaces Command Level COBOL with plain vanilla COBOL.

UFO/COBOL is the perfect answer to your procedural on-line programming needs. For the first time, all your COBOL programmers can now develop CICS applications without learning one word of new code. No longer will the lack of specialized Command Level programmers be a barrier to satisfying the growing demand for more on-line applications. Now your present staff can put their ANSI COBOL programming skills to work cutting your backlog of on-line applications…doing it faster, more efficiently, more automatically than ever before.

Without modifying your on-line environment or operating system, UFO/COBOL takes standard COBOL commands, and automatically translates them using a unique COBOL compiler into the language necessary for CICS program execution. Your ability to utilize the substantial benefits of the on-line environment increases enormously, while your programmers continue to write in a familiar and natural way.

An example of UFO/COBOL commands.

In COBOL	In Command level	In UFO/COBOL
DISPLAY (SCREEN-NAME)	EXEC CICS SEND MAP ('XDFHCMA') MAPONLY ERASE END-EXEC.	DISPLAY (SCREEN-NAME)
READ (FILE-NAME)	EXEC CICS READ DATASET ('FILE-NAME') INTO (FILE-NAME) RIDFLD (KEYNUM) END-EXEC.	READ (FILE-NAME)

UFO/COBOL defines CICS 3270 screens on-line.

In addition to extending the capabilities of your programmers, you'll find that UFO/COBOL is a powerful new method to speed-up the CICS application process dramatically. Built into UFO/COBOL is an interactive screen painting facility that lets you design CICS 3270 screens on-line. UFO/PAINT allows you to build or modify screens without writing one line of code. You design the screen simply by positioning fields where you desire. Then COBOL data descriptions are *automatically* generated from the screen.

UFO/COBOL makes prototyping easy.

By quickly defining a sequence of screens, you can prototype the final system…testing and modifying each screen before writing code. You can develop applications interactively with end-users, gaining all the efficiencies of their direct involvement.

Developed by Oxford…#1 in CICS application development.

UFO/COBOL is a development of Oxford Software Corporation, the leading independent supplier of on-line application development software. With more than 1500 installations of UFO…the premier, 4th generation non-procedural approach to application development …no one knows more about the CICS application development environment than Oxford.

If you'd like to learn how you can dramatically add to your on-line development capabilities, using your present programming skills, call in the leader. Call Oxford today at (800) 631-1615.

OXFORD SOFTWARE CORPORATION
174 BOULEVARD/HASBROUCK HEIGHTS, NJ 07604/201 288-4515

I'd like to schedule a UFO/COBOL demo. Please call to set a date.

Please send me literature on UFO/COBOL.

Wang Labs introduces DVX upgrade

LOWELL, Mass. — Wang Laboratories, Inc. has announced the DVX Message Waiting Unit, DVX Feature Package 3.8 software and DVX networking capabilities — enhancements to the company's digital voice exchange (DVX), automated voice communications system.

The message-waiting unit, which sits under the user's telephone, notifies a person called by lighting a message-waiting lamp when a message is deposited in a DVX user's audio mailbox, either internally through DVX or externally by an outside caller, the vendor said. The price is $225.

DVX networking capabilities allow users to access all DVX functions in exchanging messages with individuals on other DVX systems. Software for the first phase of networking is $1,000/node plus a $10/mo license fee for each node.

DVX Feature Package 3.8 software provides users with a facility called Informational Services that allows information to be dispersed by phone to a large audience, regardless of whether or not the inquiry originates with a DVX or non-DVX user, the vendor said.

The information storage capacity of Informational Services consists of nine of the vendor's Voiceline audio mailboxes that hold up to 60 six-minute messages each. All that is needed to access the messages is a standard Touch-Tone-type telephone set, according to the vendor.

The product provides the following capabilities: message confirmation, mailbox scan, on-line directory, play positioning, password modification, 12-digit outbound calling and message purge. The price is $14,000 plus a $140/mo license fee.

Wang, One Industrial Ave., Lowell, Mass. 01851.

NCR Comten announces 4034 console

ST. PAUL, Minn. — NCR Comten, Inc. has announced the 4034 operator console for the company's 3690 data communications system.

The 4034 is available in two models. Model A-5 consists of an 80-char. by 24-line CRT with a detached keyboard and an 80-col., dot-matrix, bi-directional impact printer with stand and paper catcher. The printer attaches directly to the CRT, the vendor said. Model B5 comes without a printer and stand.

From the console, the network operator can control any local or remote communications processor in the network, reconfigure the relationship between lines and subchannels without regenerating the system software and execute network-control-program (NCP) line swaps.

The operator can also invoke utilities, traces and commands from the local console for remote nodes in an access-control-field/NCP network, the vendor said. The A-5 model costs $3,650. The B5 model is priced at $1,645.

NCR Comten, 2700 Snelling Ave. N., St. Paul, Minn. 55113.

Hmmm ... Worst data byte I've seen in a long time.'

Workstation out from Ambi

STAMFORD, Conn. — Ambi Corp. has announced an integrated voice and data executive workstation designed as a desktop, two-line, integrated voice and data private branch exchange (PBX).

The Ambiset reportedly combines telephone features with personal processing capabilities that can be upgraded to include compatibility with IBM and with computers using the Microsoft, Inc. MS-DOS operating system.

The unit is said to look like a business telephone with the addition of a typewriter keyboard and an 80-col. by eight-line display screen. It reportedly can be installed by plugging in to a standard analog RJ11 telephone jack for use on rotary and pulse lines.

It is said to feature 128K bytes of random-access memory (RAM) for general messaging functions; 64K bytes of battery-backed Cmos RAM to support a 250-entry, fast-dial directory; and 48K bytes of erasable programmable read-only memory that is set aside for special function keys.

These special function "learn" keys are designed to allow the user to teach the system how to handle special communications needs, the vendor said.

The suggested retail price is $2,495.

Ambi, 1639 Washington Blvd., Stamford, Conn. 06901.

PREVENT BAD

IT SPREADS.
CORRUPTS.
ERODES.
DESTROYS INTEGRITY.

Bad data is really bad news. Because it's impossible to get good information from bad data. And once bad data gets into a system, there is no cure. The bad simply gets worse.

There is only one way to guarantee good information: *PREVENT BAD DATA.*

TSI International can do just that. We're the good information specialists. With software designed specifically to make sure your data starts good and stays good. Our products will capture, control and deliver consistently good data to assure nothing but good information. You can depend on it. No one knows more about how to prevent bad data than TSI.

COMMUNICATIONS

COMMUNICATIONS CONTROLLERS

AMDAHL CORP.
4470 Network Concentrator

Amdahl Corp. has announced the 4470 Network Concentrator, a packet-switching product which allows users to communicate with private and public X.25 data networks and computer systems using the industry-standard IBM Systems Network Architecture (SNA). It is an extension of the company's 4400 series of communications products.

The product features single or multiple X.25 links to public data networks. It supports IBM 3274 and 3276 control units and associated printers and keyboard displays with up to seven Synchronous Data Link Control (SDLC) lines, 16 SDLC 3270-type clusters and 128 SNA logical units, the vendor said. The price is $12,500.

Amdahl, 1250 E. Arques Ave., P.O. Box 470, Sunnyvale, Calif. 94086.

VOICE/DATA COMMUNICATIONS

GTE BUSINESS COMMUNICATION SYSTEMS, INC.
Omni SI

GTE Business Communication Systems, Inc. has announced the Omni SI office communication system, an expansion of the company's private branch exchanges.

The system can handle up to 256 voice and data ports and is designed to serve businesses with between 20 and 200 employees, the vendor said.

The product utilizes dual-bus architecture — a pulse-code-modulation bus for voice and a packet bus for data. The product is available with specially designed packages for specific industries such as lodging and health care, the vendor said. The price range is $900 to $700 per line.

GTE Business Communication Systems, 12501 Sunrise Valley Drive, Reston, Va. 22096.

SURE COMMUNICATIONS, INC.
Solution III Telemanager

Sure Communications, Inc. has introduced the Solution III Telemanager, an automated, on-site telemanagement system designed to assist organizations with up to 3,000 extensions.

The system features a microcomputer, hard disk storage and a CRT and utilizes Digital Equipment Corp. hardware, the vendor said.

The product was designed to function in a regular office environment rather than a computer room and is compatible with almost every telephone system and telephone switch, according to the vendor. The price ranges from $40,000 to $45,000.

Sure Communications, 257 Park Ave. S., New York, N.Y. 10010.

CP NATIONAL
Telepol II

CP National's Software and Systems Division has introduced Telepol II, a telephone-traffic data storage system which allows polling of call records from multiple sites for processing on a central IBM mainframe.

The system collects telephone call records from almost any computerized telephone system and records them onto 5¼-in. flexible disks for later polling. It uses the IBM-compatible 3780 Binary Synchronous Communications protocol for polling, with a transmission speed of 1,200 bit/sec, the vendor said.

Processing on an IBM mainframe can be accomplished with the company's Telemanagement Software Systems. The price is $4,900.

CP National, 345 Old New Brunswick Road, Piscataway, N.J. 08854.

MULTIPLEXERS/MODEMS

TIMEX COMPUTER CORP.
TS2050

Timex Computer Corp. has announced the Timex Sinclair (TS) 2050 telecommunications modem, which allows users of the vendor's computers to use their telephones for services such as electronic mail and home banking and shipping.

The modem, when used with the TS1500 computer, provides an interactive system that can be used to communicate with other computers. The TS2050 is compatible with all Timex Sinclair personal computers and peripherals. It includes a Timex Smart Terminal I software cassette, which enables users to access computer subscription services and computer data bases immediately.

It also comes with modular phone cables and jacks for connection to standard or electronic telephones, a 9V ac adapter and a step-by-step instruction manual.

The TS2050 Telecommunications Modem has a retail price of $119.95.

Timex Computer, P.O. Box 2655, Waterbury, Conn. 06725.

GENERAL DATACOMM INDUSTRIES, INC.
4800S; 2128S

General Datacomm Industries, Inc. has introduced two modems, the 4800S and the 2128S Super Saver.

The 4800S is a switched network, key-featured, single card modem. It features asynchronous or synchronous operation with autodialing and autoselect request-to-send, clear-to-send delay.

DATA

FACETS. Preventing bad data begins with stable database designs. This leading edge design tool assists in all phases of database projects, from information analysis to finished design.

KEY/MASTER. From the moment you capture data, this widely used on-line data entry system helps you screen bad from good — to assure initial and ongoing accuracy.

DATA CATALOG 2. By applying inventory techniques to information, this dictionary system controls your good data — to keep it good.

DATA ANALYZER. As a powerful information center tool for the retrieval and analysis of production data, it will help turn your good data into good information.

DOCU/MASTER. A new way to deliver all your good information — from highly structured data to unstructured text. This on-line information system allows users to query any way they want.

TSI International. The good information specialists. For good data that produces good information, call us at 800-227-3800, Ext. 7005. You can rely on TSI.

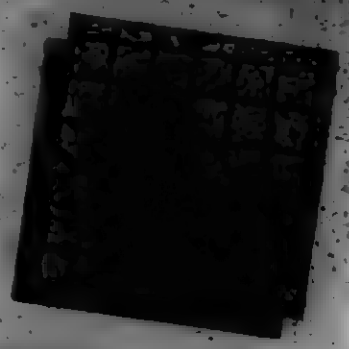
The Goal News

For VSAM Dataset Management

AUTOMATIC BEATS MANUAL



VSAMAID/XP™ Slashes Man-Hours From VSAM Management

Goal Systems International has developed a product called VSAMAID/XP which makes virtually any systems person a VSAM expert. Data processing managers everywhere know that when VSAM is running, it is necessary to continually tune the system in order to keep response times within acceptable limits. Before VSAMAID/XP, that job required highly specialized technicians working full time to manually keep disk utilization and CPU overhead to a minimum.

VSAMAID/XP changes all that. The system eliminates the inefficiencies of VSAM and automates the tuning of VSAM files.

A historical file of all VSAM data sets in DOS/VSE, OS/VS1 and MVS is created from VSAM performance data. Then, as required, vital statistics are generated through VSAMAID/XP's Recommendations Processor, Device Capacity Processor or History File Treads Processor. Working through mathematical algorithms, VSAMAID/XP will tell you exactly how to best tune your system for your VSAM files. If you wish to see how altering various factors will change your efficiency, there is a modeling system built into VSAMAID/XP for that purpose.

Product Of New Software Technology

Calling on its highly skilled software development team, Goal Systems International began research on VSAMAID/XP in mid-1981. The system required the experience of telecommunications software experts, mathematicians, and skilled programmers to produce. "The challenge," a spokesman said, "was to make the system do all the work, yet allow the user to maintain control over a wide variety of VSAM data."

Some of the VSAM factors VSAMAID/XP handles include variable selection for key sequenced files, the use of free-space values, VSAM default parameters, allocation of virtual storage, records organization, most common access patterns, and more.

VSAMAID/XP makes its recommendations in the IDCAMS DEFINE format to simplify redefining each file.

Over 200 Systems On Trial in First Three Months

Named as the most popular product in the history of Goal Systems, VSAMAID/XP has been shipped to more than 200 sites for trial in its first three months of availability.

Works With FAVER/XP For Total VSAM Management

Goal Systems International has revealed that they have an interface between the FAVER/XP Backup & Restore system and the VSAMAID/XP system which creates the only complete VSAM dataset management system available today.

During backup, the FAVER/XP special interface creates a historical file, which is used by VSAMAID/XP to create a "recommendations" report. The report tells resource managers how to manage VSAM datasets for optimum space allocation and resource utilization. VSAMAID/XP recommendations may then be implemented with simple commands through the FAVER/XP Auto-Delete/Define facility.

"It seems like all we have to do is mention VSAM and people are eager to listen," said Jenny Yost, Sales Manager for the XP Product Line. "But then, installations are only now realizing that a great deal of manual labor is spent keeping VSAM files tuned. VSAMAID/XP can be installed in a few minutes; it will make its first recommendations after just one week of gathering [illegible] data. People quickly become delighted with [illegible]

VSAMAID/XP and FAVER/XP are great news for installations with VSAM. They are two of the Extended Productivity Systems from Goal Systems International. Both are available for a free trial. Call Goal Systems toll free today.

Continued from page 87

The 4906S is available in a compact stand-alone enclosure or high-density rack-mount shelf that houses 16 modems.

The vendor's other new product is the 2123S Super Saver modem, an asynchronous, full-duplex modem designed for switched network operation. It is compatible with Bell 103, 113 and 212-type modems and allows any RS-232C-compatible asynchronous terminal to communicate with any other computer and a Bell 212-compatible modem.

According to the vendor, the 2123S has a digital adaptive equalizer that provides greater tolerance to telephone line impairments often found on the switched network. The list price of the 4906S is $1,645; the 2123S costs $495.

General Datacomm Industries, One Kennedy Ave., Danbury, Conn. 06810.

C-COR ELECTRONICS, INC.
Model 7140 modem

C-Cor Electronics, Inc. has announced the Model 7140 Synchronous Data Modem which operates at speeds up to 9.6K bit/sec.

The product is an extension of the company's Cableport 7100 Series Narrowband Modems for two-way broadband coaxial network applications.

The Model 7120 Voice Modem offers audio response up to 10 kHz for off-premises extension and bypass telephone applications. The Model 7130 provides medium-speed data transmission up to 19.2K bit/sec. All models operate in simplex, half-duplex and full-duplex modes, the vendor said. The prices are $675 for the 7120 Voice Modem, $625 for the 7130 Asynchronous Modem and $650 for the 7140 Synchronous Data Modem.

C-Cor Electronics, 60 Decibel Road, State College, Pa. 16801.

NOVATION, INC.
Access 1-2-3 package

Novation, Inc. has bundled its PC1200B smart modem with Crosstalk XVI from Microstuf, Inc., to create a data communications package for the IBM Personal Computer, Personal Computer XT and compatibles.

The system includes a modem, software and documentation and is part of Novation's communications system called Access 1-2-3. The modem is capable of full-duplex operation at either 300 or 1,200 bit/sec and can perform an automatic self-test and receiver alignment at power-on and can be put into analog or digital loop-back test modes, the vendor said.

The software package for the IBM Personal Computer is an intelligent terminal employing all the features of the modem to accomplish autodial, autologon and autoanswer and allows for disk-to-disk data transfer, according to the vendor. The price of the package is $595.

Novation, 20409 Prairie St., Chatsworth, Calif. 91311.

THE NEWEST FEATURE ON THE 3000 FAMILY OF PRINTERS IS OUR NEW NAME.

Our 3000 family of printers has an impressive list of features. But the most prominent new change on our printers is our new name.

Formerly the Data Communication Products Department of General Electric, we're now independently owned...and our new name is Genicom.

So the GE 3000 family is now the Genicom 3000 family. But while the name has changed, the product retains its established superiority.

The Genicom 3000 series of output printers still features speeds from 40 to over 400 cps. Single or dual mode printing. Type quality from EDP to NLQ. Multi-color printing. Graphics. Selectable type fonts. American craftsmanship and more.

Genicom 3000 printers will be as popular as ever with end users as well as OEM's, distributors, retailers and dealers...thanks to our list of outstanding features, plus the unique compatibility advantages of several models all based on a single design.

And Genicom will also offer other products including our 2000 teleprinters and the soon to be introduced 4000 plastic matrix printers. You'll find we have the same complete product line we had with GE.

Genicom. We have proven products, experienced personnel, established manufacturing facilities, a nationwide service network, plus a new commitment to excellence that stands behind our new name.

Genicom Corporation, One General Electric Drive, Dept. M311, Waynesboro, VA 22980. In Virginia, call 1-703-949-1170.

TEST EQUIPMENT

B & B ELECTRONICS
Mini Tester Model 232MT

B & B Electronics has introduced the Mini Tester Model 232MT, a smaller version of the company's RS-232 Tester.

The Mini Tester features one male and one female connector for insertion into any RS-232 interface. Twenty-five pins are connected straight through, with seven lines connected to LEDs, which indicate the status of transmission data, receive data, request to send, clear to send, data set ready, carrier detect and data terminal ready, the vendor said.

The product measures 2¼ by 2¼ by ¾ in. and is available with two-color LED. Red and green LED can indicate a low, high or open condition.

The Mini Tester is priced at $49.95; with two-color LED, it costs $59.95.

B & B Electronics, Box 475, Mendota, Ill. 61342.

HEWLETT-PACKARD CO.
HP 4945A Time

Hewlett-Packard Co. has announced a transmission impairment measuring set (Time), designed for problem isolation on high-speed, data- and voice-grade circuits.

The HP 4945A Time reportedly combines a comprehensive measurement set, a wideband frequency range, convenient display formats, programmability and hard-copy capability through multiple I/O and remote testing capability.

The HP master/slave technique is said to increase productivity with one-person, two-way testing by allowing the local master set to control a remote slave set with automatic control and collection of slave functions and measurements.

The company offers delivery in eight to 12 weeks after receipt of order. The HP 4945A Time is priced at $14,950.

Hewlett-Packard, 1820 Embarcadero Road, Palo Alto, Calif. 94303.

DOLCH LOGIC INSTRUMENTS, INC.
SIP 80E

Dolch Logic Instruments, Inc. has introduced a serial interface probe that configures the front end of a logic analyzer for analysis of asynchronous V.24/V.28 RS-232 serial data.

The SIP 80E probe is available for use with the company's 4950A and 64300 logic analyzers. The probe connects into a serial communications link through standard RS-232C, 25-pin D connectors, according to the vendor.

Features of the probe include capabilities to monitor a serial link's send and receive lines simultaneously or individually and to transmit any selectable Ascii characters on those lines.

It accommodates data rates to 19.2K bit/sec, has a built-in clock burst generator for triggering on the first incoming character and maintains the timing relationships on the logic analyzer's screen by writing blank characters for unchanging and invalid characters. The price is $1,300.

Dolch Logic Instruments, 3052 Orchard Drive, San Jose, Calif. 95134.

AUXILIARY EQUIPMENT

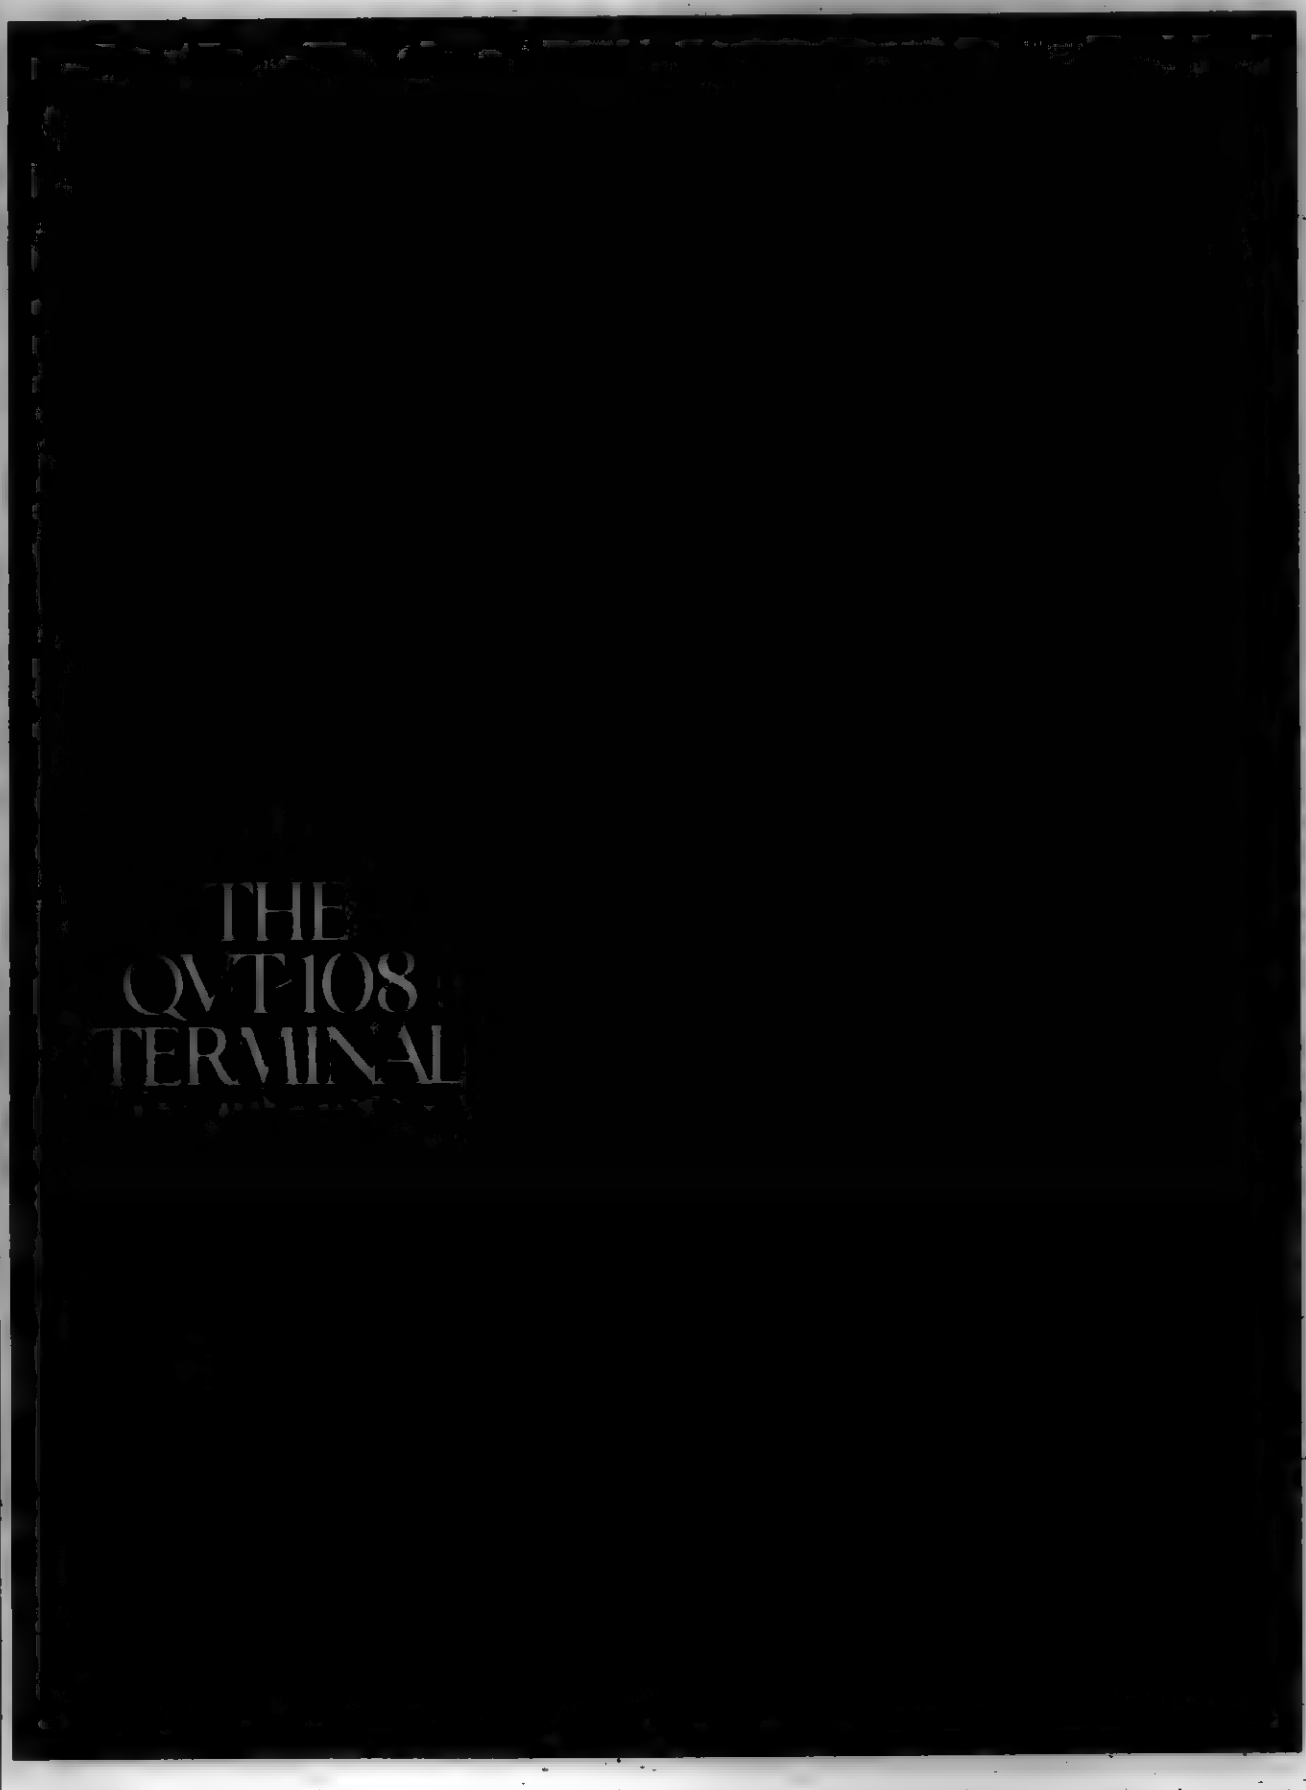
SATELLITE SEMINARS
Tele-Update '84

Satellite Seminars has announced a teleconference designed to inform major telecommunications users of current regulatory and technological changes and of their potential impact on rates and service options.

Scheduled for Feb. 9, Tele-Update '84 will be televised from Biznet, the U.S. Chamber of Commerce facility in Washington, D.C.

According to the vendor, key individuals, agencies and regulatory and technological developments will be featured in a four-hour program, which will also include background and identification of issues, discussion of bills still before Congress, court settlement provisions and other topics of interest to telecommunications users and associations.

The program will be broadcast to at least 25 downlink facilities at universities, hotels and other meeting sites in major metropoli-



COMMUNICATIONS

tan areas across the country. The registration fee for the teleconference is $75 in advance or $85 at the door.

Satellite Seminars, Box 364, Salt Lake City, Utah 84110.

DIGITAL MICROSYSTEMS, INC. Self-study course

Digital Microsystems, Inc. has added a self-study course for its Digital Research, Inc. CP/M, local-area network, manufacturing resource planning (MRP) system.

The system includes five workstations, 46M bytes of hard disk storage and networking and office automation software. The office automation software includes Perfect Software, Inc.'s Perfect Writer, Perfect Calc, Perfect Speller, Perfect Filer and an electronic mail system.

The MRP software includes material processing, sales order management, master scheduling, inventory control, work order processing, purchasing, inventory, shop floor control and job costing functions. The self-study course is a 14-unit course developed by Bourke-Arnold Enterprises, manufacturing training consultants.

In addition to the self-study materials, Digital Microsystems provides its customers with a one-day class concerning the office automation software and a one-day training session for the networking and MRP software. An MRP system costs $39,900.

Digital Microsystems, 1755 Embarcadero, Oakland, Calif. 94606.

HADAX PRODUCTS, INC. PC-Mate

Hadax Products, Inc. has announced the PC-Mate series of data switches. The series includes two push-button switches, each with an input panel connector, plus two output connectors mounted on 6-ft-long ribbon cables.

One switch has a 36-pin/36-lead switched interface for parallel printers, and one has a 24-lead switched D-25/RS-232 interface for serial printers, the vendor said. The price is $99.

Hadax Products, 79 Hazel St., Glen Cove, N.Y. 11542.

COMPUTER APPLICATION SERVICES, INC. Electronic Mail System

Computer Application Services, Inc. has introduced Electronic Mail System (EMS), a device that reportedly connects IBM mainframe computers running on either OS or DOS directly into Western Union Corp.'s Easylink. Easylink, in turn, supports such sites as TWX, Telex I and Worldwide Telex.

Easylink features automatic dialing and sign-on, transmittal of messages from EMS, inquiry of messages from Western Union and the distribution of Easylink messages to EMS mainframe users at IBM CICS terminals.

Typical users of the Easylink connection of EMS, according to the vendor, are purchasing departments who use it to send orders and sales departments who use it to send shipping confirmations.

EMS is a full-featured electronic mail system for IBM 3270 terminal networks running CICS. The system includes message forwarding, full screen message editing, route lists, tickler files, to-do lists and calendaring.

EMS is offered for $8,000 for the OS version and $7,500 for the DOS version. There is currently no separate charge for the Easylink connection.

Computer Application Services, Suite 210, 13535 Seal Beach Blvd., Seal Beach, Calif. 90740.

GILTRONIX, INC. 9000 series DCU; Selecto-Switch

Giltronix, Inc. has announced the 9000 series Distributed Control Unit (DCU), an automatic switching device for computer interfacing.

The DCU allows communications to be established between any device connected to one of the DCU ports. The product's automatic switching unit allows keyboard-controlled selection of peripherals and computer systems.

Prices range from $509 to $847.

The company has also introduced a Selecto-Switch system for the IBM Personal

QVT-108

The Great Emulator.

Qume's new QVT108+ VDU terminal emulates Televideo models 925, 920 and 912, making it a perfect fit for operators familiar with any of these terminals. It more than matches the Televideo 925 with sophisticated features like 11 function keys, 22 user-programmable functions, 12 editing functions, 25th status line, a menu set-up mode, two full pages of screen memory, and many other standard features.

The QVT108 takes up minimal workspace, and operators will love its ergonomic design: a non-glare green or amber screen with full tilt and swivel, a big 9 x 12 dot matrix for each character to minimize eye-strain, and a detached, low-profile, adjustable-tilt keyboard.

Engineered and built to Qume's exceptional reliability standards, the QVT 108 is backed by our six-month warranty and a nationwide service network. Features include:

• Local or duplex editing • 11 function keys (22 user-programmable functions avail) • Bidirectional auxiliary port • Two pages of screen memory • Line drawing graphics character set • Tilt/swivel, non-glare, green screen (amber optional) • 9 x 12 character cell resolution, 7 x 9 character size • Detached, low-profile, adjustable-tilt typewriter style keyboard with numeric pad • 24 lines x 80 characters with a 25th status (defeatable)/menu/user-programmable line • Screen-saver time out (an inactive terminal shuts off its screen after fifteen minutes with no screen data loss) • 6 video attributes: blink, blank, normal video, reverse video, underline, and half-intensity • Televideo model 925 code compatible • Emulations: Televideo 925 and 912/920 • Self test • Time of day • Monitor mode • Switching power supply (efficient operation and low power consumption)

Display Format
24 lines x 80 characters
25th status/set-up/user-programmable line

Character Formation
7 x 9 matrix in a 9 x 12 cell

Displayed Character Set
96 ASCII characters, 32 control character symbols, and 15 graphic symbols

Editing (Local and Duplex)
Cursor: up, down, left, right, home. Character/line insert and delete, erase to end of line/page, tab, back tab, alternate page.

Communications Interface
EIA RS232-C, optional current loop (active or passive)

Communications Protocols
DTR and/or XON/XOFF

Communications Modes
Full or half duplex, block line or block page; 7 or 8 data bits

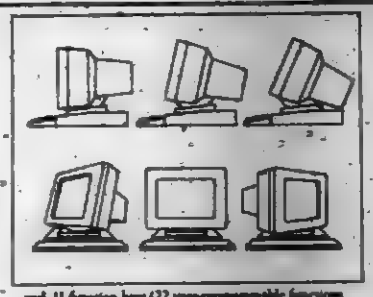
Baud Rates
16 selections from 110 to 19.2K

Auxiliary Port
Bidirectional. Modes: parallel, transparent, screen copy. EIA RS232-C

Screen
Tilt/swivel, 12-inch diagonal, non-glare green (optional non-glare amber, 14-inch screen)

Character Attributes
Blink, blank, normal video, reverse video, underline, half intensity

Keyboard
Detached, adjustable-tilt, low-profile (home row 30mm from work surface), alphanumeric keys, 14-key numeric pad, 11 function keys (22 user-programmable functions with shift), defeatable escapement and key click, 12 editing keys. Print, set-up, and scroll lock keys.



Fields
Protected and unprotected

Parity
Odd, even, mark, space, none

Screen-Saver
Screen shuts off after 15 minutes of inactivity without data loss (defeatable)

Screen Memory
Two pages

Set-Up Mode
Menu-style password in non-volatile memory (lithium battery with 7-year life)

Power Supply
Switching-type (low power consumption)

Options
Amber screen *
14" screen
20mA current loop
Special character sets

Command Set
Televideo 925 compatible

Emulations
Televideo 925
Televideo 912/920

Power Requirements

Finally, someone who sees the forest. As well as the trees.

In their great rush to fill the office with personal computers, people lost sight of the ultimate objective. To work together more productively.

Then Sperry appeared.

With a remarkably simple solution. The Sperry PC.

It was personal, but not so personal that it would keep people from being part of a system.

It could run all of the software of IBM's PC.

It performed all the user-friendly functions people expected. It was, in fact, even friendlier than IBM's machine.

It had a more comfortable keyboard. A more dramatic display of graphics. And a high-speed "turbo" switch that allowed it to run 50% faster than IBM.

And it could keep people in touch with the most valuable resource an organization can have —the main computer.

No matter whose big system they have.

Sperry *or* IBM.

Or both.

The Sperry PC.

Admittedly, big picture.

But then, that's what happens when you look at the forest. As well as the trees.

See how the Sperry PC can work for you. Call 800-547-8362, toll-free. Or write us, Sperry Corporation, Computer Systems, Department 100, P.O. Box 500, Blue Bell, PA 19424.

© Sperry Corporation, 1983

SPERRY PERSONAL COMPUTER SPECIFICATIONS

OPERATING SYSTEM MS DOS Version 1.25 or 2.0 with G.W. BASIC	KEYBOARD 84 keys, 6 ft. cord
MICRO-PROCESSOR High-Speed 16-bit 8088	AUXILIARY MEMORY Up to two internal 5¼" diskettes 10MB internal fixed disk when configured with single diskette.
DISPLAY SCREENS High Definition monochrome display. High resolution color display. IBM compatible graphics.	USER MEMORY Standard 128K bytes, expandable to 640K
COMMUNICA-TIONS Built-in Asynchronous	DIAGNOSTICS Power-on self test
	CLOCK Time-of-day with battery back-up

The Sperry PC. What the personal computer should have been in the first place.

COMMUNICATIONS

Continued from page 61

Computer, which eliminates the need for plugging and unplugging of cables connecting such peripherals as printers, plotters, terminals and modems to various computers, the vendor said. The system is available in more than 10 models. Prices range from $119 to $299.

Gilbreath, 3720 Fabian Way, Palo Alto, Calif. 94303.

XYPLEX, INC.
XP-UN32-A

Xyplex, Inc. has announced the XP-UN32-A, a host interface unit for the company's networking system.

The product is a 32-port version of the vendor's Digital Equipment Corp. Unibus host interface unit. The Xyplex system converts the terminal subsystem of DEC's VAX-11 minicomputer from a character-at-a-time system to an intelligent message processor. It provides the VAX/VMS system with equivalent capabilities of the IBM 3270 terminal family, the vendor said.

The unit provides a single-board interface for up to 32 or 64 ports via a single coaxial cable into a VAX computer system. The system supports up to 255 host interface units and cluster controllers connected to a single coaxial cable, which can be up to six miles in length, the vendor said. Unit price is $5,700.

Xyplex, 100 Domino Drive, Concord, Mass. 01742

ATTACHMATE CORP.
3270 Coax Interface

Attachmate Corp. has announced the 3270 Coax Interface, said to allow IBM Personal Computers to function as new IBM 3270 Personal Computers with more features and enhanced performance.

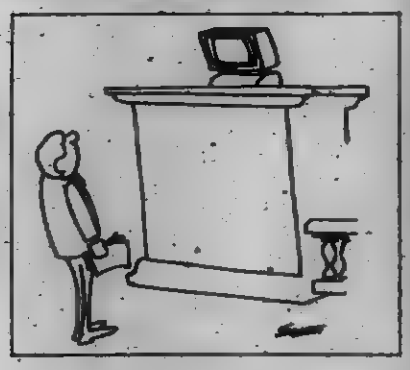
The 3270 Coax Interface adds Personal Computer-to-mainframe windows to IBM Personal Computers and their counterparts. When connected to mainframes, Personal Computers with the Attachmate 3270 can be transformed into as many as four terminals, the vendor said. The product can function with up to seven distinct programs, displaying each one in a separate screen window.

A lock and key secure access to the mainframe, the vendor said. A Personal Computer memory is not used, and 256K-byte capacity is an option on the board, the vendor said. The Attachmate 3270 Coax Interface costs $910.

Attachmate, 3241 118th S.E., Bellevue, Wash. 98005.

K-SYSTEMS, INC.
KTL-100

K-Systems, Inc. has introduced the KTL-100, a printed-circuit module that emulates Digital Equipment Corp.'s VT100 CRT terminal.



A dual-height board provides two full-duplex, serial asynchronous channels for keyboard and computer interface and an RS170 composite video output for a monitor. Installed into a standard DEC backplane or equivalent power source, the module implements the vendor's Advanced Video Option, including 80 and 132 columns, nonvolatile setup parameters and all display attributes, the vendor said. Its unit price is $600.

K-Systems, 3005 Lilac, Las Cruces, N.M. 88005.

TYMNET, INC.
Asynchronous Terminal Concentrator

Tymnet, Inc. has announced the Asynchronous Terminal Concentrator (ATC) for users to access its public and private packet data communications networks. The product reportedly serves up to eight simultaneous users.

The ATC measures 12 in. wide by 3 in. high by 12 in. deep. It performs automatic, independent speed detection in a range from 110 to 9,600 bit/sec. Integrated into the ATC is a set of hardware diagnostics, including communications and remote reporting software for both terminal and network connections, the vendor said. The price is $3,300.

Tymnet, 2710 Orchard Pkwy., San Jose, Calif. 95134.

DATA COMMUNICATIONS BROKERS, INC.
"Modem Options"

Data Communications Brokers, Inc. has introduced a videotape to be included in its training series.

"Modem Options" deals with the variety of modems on the market. The color videotape demonstrates what each modem option does and how it is used in various applications. Some modem options include constant carrier, switch carrier, receiver sensitivity level, equalization, automatic vs. manual answering and leased line vs. dial-up, the vendor said.

The videotape is available in ½-in. Betamax or VHS and ¾-in. U-Matic formats. Two-week rental is $40 for ½-in. and $50 for ¾-in. tapes. Tapes may also be purchased for $150 (½-in.) or $180 (¾-in.).

Data Communications Brokers, 3000 Research Road, Champaign, Ill. 61821.

HUGHES

Since you'll be spending millions of dollars per month on data communications networks, you want all the information you can get. Right?

Here's how to get it.

Just wait for your February 27th issue of **Computerworld.** Then read the special report on Data Communications Networks from cover to cover. You'll get it all:

- *Local area networks*
- *public packet-switched networks*
- *private branch exchange (PBX) networks*
- *teleconferencing networks*
- *satellite networks*
- *CATV networks*
- *videotext and facsimile networks*
- *voice/data network integration*

You'll get tutorials — bylined opinion/analysis pieces by experts in the field on the use of networks and the future of the networking industry. You'll get case studies of how companies have used specific networks to solve specific business communications problems. And you'll get information on lots more — with articles on everything from microwave links to how AT&T's divestiture will affect voice/data networks.

If you spend — or are planning to spend — millions on data communications networks, then you can't afford to miss the February 27th special report on Data Communications Networks in **Computerworld.**

COMPUTERWORLD
THE NEWSWEEKLY FOR THE COMPUTER COMMUNITY

And, if you've got product or service ads that will help our readers make informed choices for 1984 — then you need to get your ad to us by February 10th. To reserve space in the February 27th issue, call one of the sales offices listed below, or call Ed Marecki, National Sales Director.

To: Ed Marecki, *National Sales Director*
CW Communications/Inc., Box 880, Framingham, MA 01701

Cullinet

on Cullinet's New Software Products

"On April 19, 1983 Cullinet made a number of significant new product announcements. Since that date, these products have generated much interest and related discussion in the industry, in the trade press and at technical forums. The purpose of this brochure is to put these products in perspective for the reader. At the same time, the brochure highlights some of the key members of Cullinet's outstanding technical staff responsible for the design and development of these products. During the past decade, with products and people like these, Cullinet has continually achieved significant advances in the state of the art of software technology."

John Cullinane *founded Cullinet Software in 1968, with the, then revolutionary, idea of specializing in computer software products. Since that time, Cullinet has become the most successful and respected software products company in the world and the first such company to be listed on the New York Stock Exchange. John has always been committed to the concept of a user driven company, where success is measured by the success of the users of Cullinet products.*

As a tribute to Cullinet's success, John was elected CEO of the Year in the software industry in 1982. He is a graduate and Trustee of Northeastern University and Chairman of the Advisory Committee of its College of Computer Science.

What is

IDMS/R?

Ed Savoie *is Cullinet's Manager of Database System Software development. He joined Cullinet five years ago and has made important contributions to the development of IDMS. Today, Ed is responsible for the development of IDMS/R, the Integrated Data Dictionary and IDMS-DC. Ed is a graduate of Harvard University where he majored in Psychology.*

Thomas Nelson, *Director of Software Design and Integration, has contributed to most of the important technical accomplishments of Cullinet Software products for ten years, these include the IDMS-Central Version, Distributed Database System and the Universal Communication Facility. He is a key figure in the design of both IDMS/R and the Information Database. Tom is a graduate of Massachusetts Institute of Technology.*

IDMS/R is not only a relational database management system, but a particularly powerful one. IDMS was made relational by removing all pointers and allowing the user to define data as tables and providing the traditional relational operators such as selects, projects and joins. In other words, IDMS/R will more than satisfy the relational purist. The major benefit of any relational DBMS is the capacity to develop applications faster because the developer does not have to be concerned with the database design. IDMS/R provides this and much more.

For example, the Automatic Systems Facility (ASF) of IDMS/R is a major advance over fourth generation languages. ASF is so comprehensive and easy to use that all a user need do to develop an application is to define a relational record. Then the Automatic Systems Facility dynamically generates all necessary supporting structures including data definitions, screen formats, application processing logic, and documentation. In other words, the developer can witness the application being produced, literally, in seconds. Thus IDMS/R is the perfect system for the end user.

But suppose when you build a complex, high volume production application with IDMS/R, you desire high performance. Typically 5% of the data relationships (joins) in any application are accessed 95% of the time. With IDMS/R you can simply change these relationships to predefined joins and benefit from a dramatic boost in performance. We call it Relational Fastpath. This is what makes IDMS/R a unique relational DBMS, and a perfect system with which to build production applications. In addition, IDMS/R has the most sophisticated back-up and recovery capability of any DBMS, an absolute must for on-line applications.

In summary, IDMS/R was designed to satisfy the requirements of those who want to develop both production and end user applications faster and those who have the responsibility of processing them.

What is

The Information Database?

Don Heitzmann *is Cullinet's Director of System Software Development. Don joined Cullinet seven years ago. His early efforts were in design and development of IDMS-DC and he is now responsible for the complete IDMS database product line. Don is a graduate of Princeton University with a B.S. in Electrical Engineering and a Masters in Architecture.*

Ernie Peabody *is Cullinet's Project Leader for development of the Information Database. Ernie is uniquely qualified since he has experience in mainframe and personal computer processing and communications. Ernie holds a degree in Mathematics from the University of Kansas and a Masters in Computer Science from Georgia Tech.*

The Information Database is an extremely exciting product for those organizations who have studied it. They understand how important it is to the success of the Information Center concept and effective use of personal computers in their organization.

The Information Database is the critical link between an organization's data residing in databases or files located in the company, or in outside databanks, and personal computer users. While PC users can access an IDMS/R database directly, we believe that a typical company would prefer that their PC user community access a specialized database, containing pertinent information summarized from appropriate sources, rather than directly from production data.

The Information Database works this way: selected data (information) is automatically fed from IDMS/R eliminating duplication of data while ensuring timely and accurate information. Utilities are provided to feed the Information Database from various databases and files, including IMS and VSAM. The Information Database is the intelligent link because the PC users can get the information they need, without having to master mainframe systems. Facilities built into the Information Database and Cullinet PC software make this possible. The Information Database appears as a new directory on the PC, so users can move information down to the PC or up to the mainframe without having to learn a new language. As a result, the user can store a private database in the Information Database and make it available to other PC users. Sophisticated security techniques insure privacy where appropriate, while allowing sharing of information when desired.

This is why the Information Database is so important. It is the intelligent link between the PC and the mainframe and is a must for any company considering significant use of personal computers.

What About

Cullinet's PC Software?

Mary Kroening *is Manager of Cullinet's Personal Computer development project. She joined Cullinet in 1982, when Computer Pictures was acquired by Cullinet. Mary's experience in microcomputer software has been a key factor in accelerating Cullinet's entry into the personal computer field. Mary attended the University of California at San Diego where she worked on the UCSD Pascal system and the University of California at Berkeley where she majored in Computer Science.*

Dave LitwacR *is Cullinet's Vice President of Product Development. Dave oversees all Cullinet software development activities for the company. Previously Dave held key roles in Cullinet's entry into Applications Software and in the development of the Application Development System/Online. Dave joined Cullinet in 1976. He is a Cum Laude graduate of Brandeis University and holds a Masters in Computer Science from Boston University.*

The lack of an integrated software solution has existed on the personal computer just as it once did on the mainframe. The size of the computers may be different but the problems have been the same. Cullinet derived its initial success by pioneering the concept of a comprehensive and integrated software solution to the mainframe users' requirements. We have applied this same philosophy to the personal computer. As a result, Cullinet's PC software includes all the capabilities needed by the user including: spreadsheet, financial modeling, document processing, electronic mail, relational database, graphics and information management. Individually these components compare favorably with their respective equivalents on the market, but collectively Cullinet offers a unique capability to its PC software customers, namely a comprehensive and integrated solution.

However, we don't stop there. We have developed a very sophisticated and intelligent interconnection with the mainframe via Cullinet's Information Database and PC software. This connection allows the use of reports, graphs, spreadsheets and relational data tables stored on the mainframe as if they resided on the PC disk. The intelligent link enables the database to process user queries and updates regardless of the location of the data. The resulting information can be used as input for spreadsheets, or to create graphs and documents. This entire process of retrieval, analysis and presentation can be automated, and the results shared with other users via the Information Database.

The Cullinet PC software combined with the Information Database provides the solution to corporate information problems. We make it possible to organize corporate and personal data, regulate access to it, and provide the end-user with the tools they need to analyze and understand that information to make sound business decisions.

What About

Cullinet's Applications?

Fred Buckley *is Cullinet's Manager of Manufacturing Applications Software Development. His efforts have been crucial in achieving the integration that makes Cullinet's manufacturing system unique. Fred joined Cullinet in 1977. Fred holds a degree in Computer Science from Thames Valley State and is a member of the American Production and Inventory Control Society.*

Ed Blumstein *is Cullinet's Manager of Financial Applications Software Development and has directed Cullinet's rapid entry into this field. He joined Cullinet in 1981 with experience in database and applications software. Ed holds a B.A. in Economics from Brown University and an M.B.A. in Finance from Boston University.*

Cullinet's Financial and Manufacturing applications, designed in the 80's, are the first applications on the market that feature both vertical and horizontal integration. Vertical integration means the application is built with fourth generation languages fully integrated with a Database Management System including Decision Support Systems and Personal Computers.

Horizontal integration means all applications share a common database thus eliminating the traditional problems of duplicate data, multiple updates, file conversion, etc., associated with older applications. For example, the purchasing and accounts payable system share the same vendor file. One update to the database means that all applications using that data are updated.

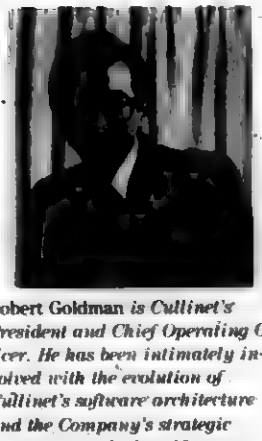
Also, Cullinet's applications are very easy to install and to tailor to the changing requirements of any organization. This is made possible through the use of a powerful fourth generation language. For example, all the on-line transactions of Cullinet applications are written using Cullinet's powerful Application Development System. In addition, information from Cullinet applications can be accessed and analyzed for senior management purposes using Cullinet's touch sensitive TREND-SPOTTER system or Cullinet's Personal Computer software.

The combination of horizontal and vertical integration means for the first time applications are available that meet the requirements of both the data processing and user management.

All successful applications software of the future will be built taking advantage of advanced database technology. Cullinet is the first to have introduced applications using this technology.

What About

Cullinet's Information Syst
Strategies for the 80's and



Robert Goldman *is Cullinet's President and Chief Operating Officer. He has been intimately involved with the evolution of Cullinet's software architecture and the Company's strategic direction for the last 10 years. Bob has consistently contributed to many aspects of Cullinet's success. He holds a Bachelor of Science Degree in Computer Science from Purdue University.*

Frank L. Chisholm *is Executive Vice President of Cullinet and is also responsible for the Company's extensive field operations, including sales and technical support activities. As a key member of Cullinet's management team, Frank has contributed heavily to Cullinet's product development strategy. Frank has been with the Company for over 6 years. He is a graduate of Pierce College with a degree in Computer Science.*

Often, as many as seven or eight major corporations from t
States and around the world visit Cullinet's headquarters i
Westwood, Massachusetts each day. They are coming in in
numbers because they've heard about what Cullinet is doi
information systems technology, and it sounds very excitin
After the meetings, the unanimous view is that what Cullin
doing "makes sense" and they are convinced that Cullinet
tion in Information Systems is the route that their respectiv
organizations should be taking. It is, in their opinion, the o
coherent and intelligent approach available. Specifically, t
the full integration of Database, Applications, Decision Su
Systems, Information Database and Personal Computer So

Interviews: Vigilante, Casales, Schwartz

AT&T is getting down to new business in 1984. Product introductions are scheduled for the second quarter; several major acquisitions and tie-ups are coming as well as new marketing and service policies.

Lead player in the organization is the new AT&T Technologies Group, which encompasses the old Western Electric organization, Bell Laboratories, AT&T International and AT&T Information Systems. Since Federal Communications Commission restraints oblige the company to keep its manufacturing and marketing activities separate, AT&T Information Systems will serve as the marketing end of the company for all except consumer products. AT&T Information

Soup up your Volkswriter.

Everybody knows Volkswriter, the word processing software package that's become synonymous with high performance. Now, there's a way to get even higher mileage out of your Volkswriter. Hook it up to a Dataproducts P Series dot matrix color printer.

The versatile P Series translates the executive class, word processing capabilities of the Volkswriter into brilliant full color charts, graphs and text. It delivers a full page of text quality print in nothing flat while its sheet feeder automatically prevents loading hassles. And the P Series uses pin feed or plain paper and has the brains to fill every appropriate line with crisp, sharp copy, even if it has to justify to do it. And the P Series color printer has dual speed capability for correspondence quality output for the Volkswriter's many word processing applications and high speed output for draft and spreadsheets.

The Dataproducts P Series color printer. Think of us as a supercharger for your Volkswriter.

AT&T interviews

Continued from IN/1

Systems employs about 100,000 people organized in a central staff and six regions. About 37,000 people will work in sales and marketing and 60,000 will move over from the operating companies to handle service. AT&T Information Systems takes over responsibility for the embedded base currently leased from the operating companies, and from there on in it will be competing with them as well as with the independents for the customer premises equipment market.

Under the current structure, AT&T Information Systems is headed by three coequal presidents, Frank Vigilante (product planning and development), Robert Casalet (marketing and sales) and Bruce Schwartz (service). All report to AT&T Information Systems Chairman Charles Marshall. In interviews last month with Brian Jeffery, research director of International Technology Group, they spoke on the market, competition and the plans and prospects of AT&T in the information processing marketplace.

Cover picture: "The Spirit of Service" illustrates the reputation for service AT&T would like to preserve as it enters a new era of business. Angus MacDonald patrolled the New York-to-Boston line during the blizzard of 1888. In June of that year, he posed for the photograph on which the drawing was based.

Frank Vigilante
President, Product Planning and Development
AT&T Information Systems

Nearly every major vendor wants to link up with us. And we will — we want to open our architectures, and we expect that from time to time you'll see announcements with major vendors about linking up with our systems. There's a lot of interest. I won't tell you names, but if you named six of the biggest companies around, probably four or five have called about wanting to link up with us . . . Many of them would like to go into business with us, but that's another story.

You have been quoted as saying that new products planned for 1984 will form part of a "general plan for data." What do you mean?

Well, instead of announcing one or two boxes, we would like to announce a little more in the way of architectural planning for data . . . I think it will be in the second quarter, although it could be later. We intend to relate announcements in several areas, probably local-area networking and some kind of processing, and perhaps some workstations. We would make an interrelated announcement and, of course, relate those products to our current line. Whatever we announce has got to relate to the rest of our product line so our customers know what we're doing.

How are you defining local-area networking?

What it means to me is a specialized network for certain customers. Not everyone needs a local-area network. We already have one in the System 85, and we will [enhance this capability] with other announcements. However, there are some customers who have large numbers of terminals that they want to connect to hosts. It doesn't pay to switch those, to make a lot of connections through a voice/data switch. So if they have hundreds of terminals connecting to hosts, then they should have a separate network to serve those rather than switching them through the System 85.

We can use the System 85 as is for most customer needs for interconnection of terminals and hosts. However, if there is a very large requirement, then we want a local-area network to take care of that.

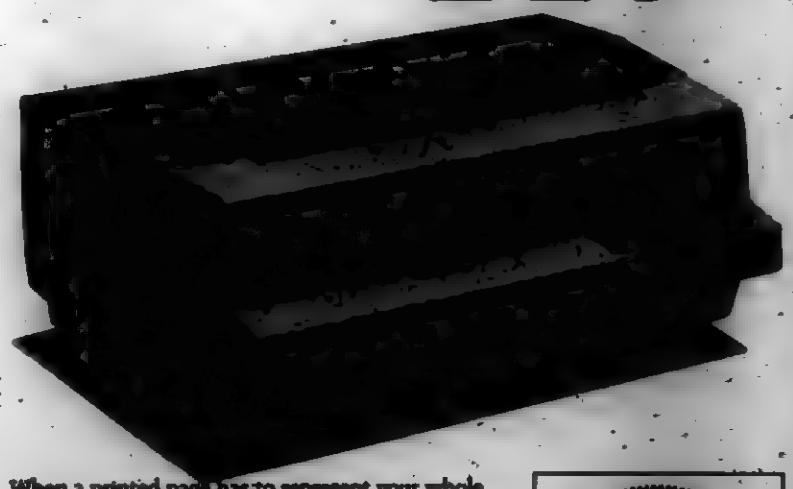
So you're talking about something that would allow a higher transmission speed?

Yes, but more important is high occupancy . . . It will have packet-switching.

What do you regard as the main requirements for workstations?

One of them is that the stations that we put on work with some synergy with our switches so that we can use our own applications processors to work with them. We believe, like everyone, that we're evolving toward a point where a single station

Make it snappy.



When a printed page has to represent your whole company, it'd better look sharp. Our DP-35 and DP-55 daisywheels rival the finest office typewriters for crisp clean impressions. And they zip along at just about a page a minute. Call your printer distributor. Or contact Dataproducts at (213) 887-8024, 6200 Canoga Avenue, Woodland Hills, CA 91365. In Europe, 136-138 High Street, Egham, Surrey, TW 20 9HL England.

or maybe two will perform most of the functions required.

So you'll get something that performs like a personal computer but at the same time works with at least mini-level hosts. I'm not talking about big mainframes; I'm talking about minis and superminis — our workstations will work directly with those. Probably, we would also provide some kind of compatibility with [Microsoft, Inc.'s] MS-DOS because that seems to be sweeping the field. [We want] to get as many capabilities in a couple of stations as we can.

You mentioned an announcement related to "some kind of processing." What will that involve?

We already have an application processor attached to the System 85. What we will be doing later is probably adding more power — we'll add an application processor that has more power than the current one, the AP 16. We'll add a bigger, more capable machine to that product line. The thing is that you have to handle large buildings. Some of the System 85s [with the larger processor] that we'll be putting in next year are for very large customers. And so they need a larger application processor than we currently have.

Do you see yourselves moving into the territory of the DP vendors with this?

Well, somewhat. We're talking about only a certain part of the range here. We'll have presence at the lower end and in the middle. We have no plans for anything more than that . . . The big mainframe business is not in our plans at this time.

So what you're talking about offering here is a communications architecture. Is that a reasonable description?

Yes.

Is this going to be comparable to, say, the IBM architecture?

Well, I suppose, broadly speaking, it will be, but SNA is primarily a linkage of computers, [particularly] the large systems that IBM offers. Our architecture is a linkage of, for example, a System 85 or a Dimension with our applications processors and with terminals. So broadly speaking, yes, we have an information systems architecture that we're evolving, but it's for different kinds of equipment than the SNA systems that IBM works with. Now at some point we need to link to SNA, and we will do that if we possibly can.

So you see yourselves coexisting with the IBM world?

No question about it, yes.

What kind of response have you been getting to the Unix operating system?

Unix is getting very popular, in many ways exceeding our expectations. There's plenty of evidence that Unix is becoming a very popular and broadly used operating system. Now I'm not saying it's going to supplant all the other operating systems, but it's going to take its place alongside all the others and be one of the more popular systems. I believe Unix has caught on. It was given to the colleges for a long time, and a lot of the students coming out want to work on Unix because they learned it in college. They bring it to the work place, and it seems to have caught on very well.

Have you found much acceptance of Unix from corporate DP departments?

I don't know the answer to that question. I think it's just beginning. It certainly hasn't had any penetration in the large mainframe operating systems area, no. But I believe it will.

What will be the relationship between the kind of solutions you've been describing and the broader services offered by AT&T Information Systems?

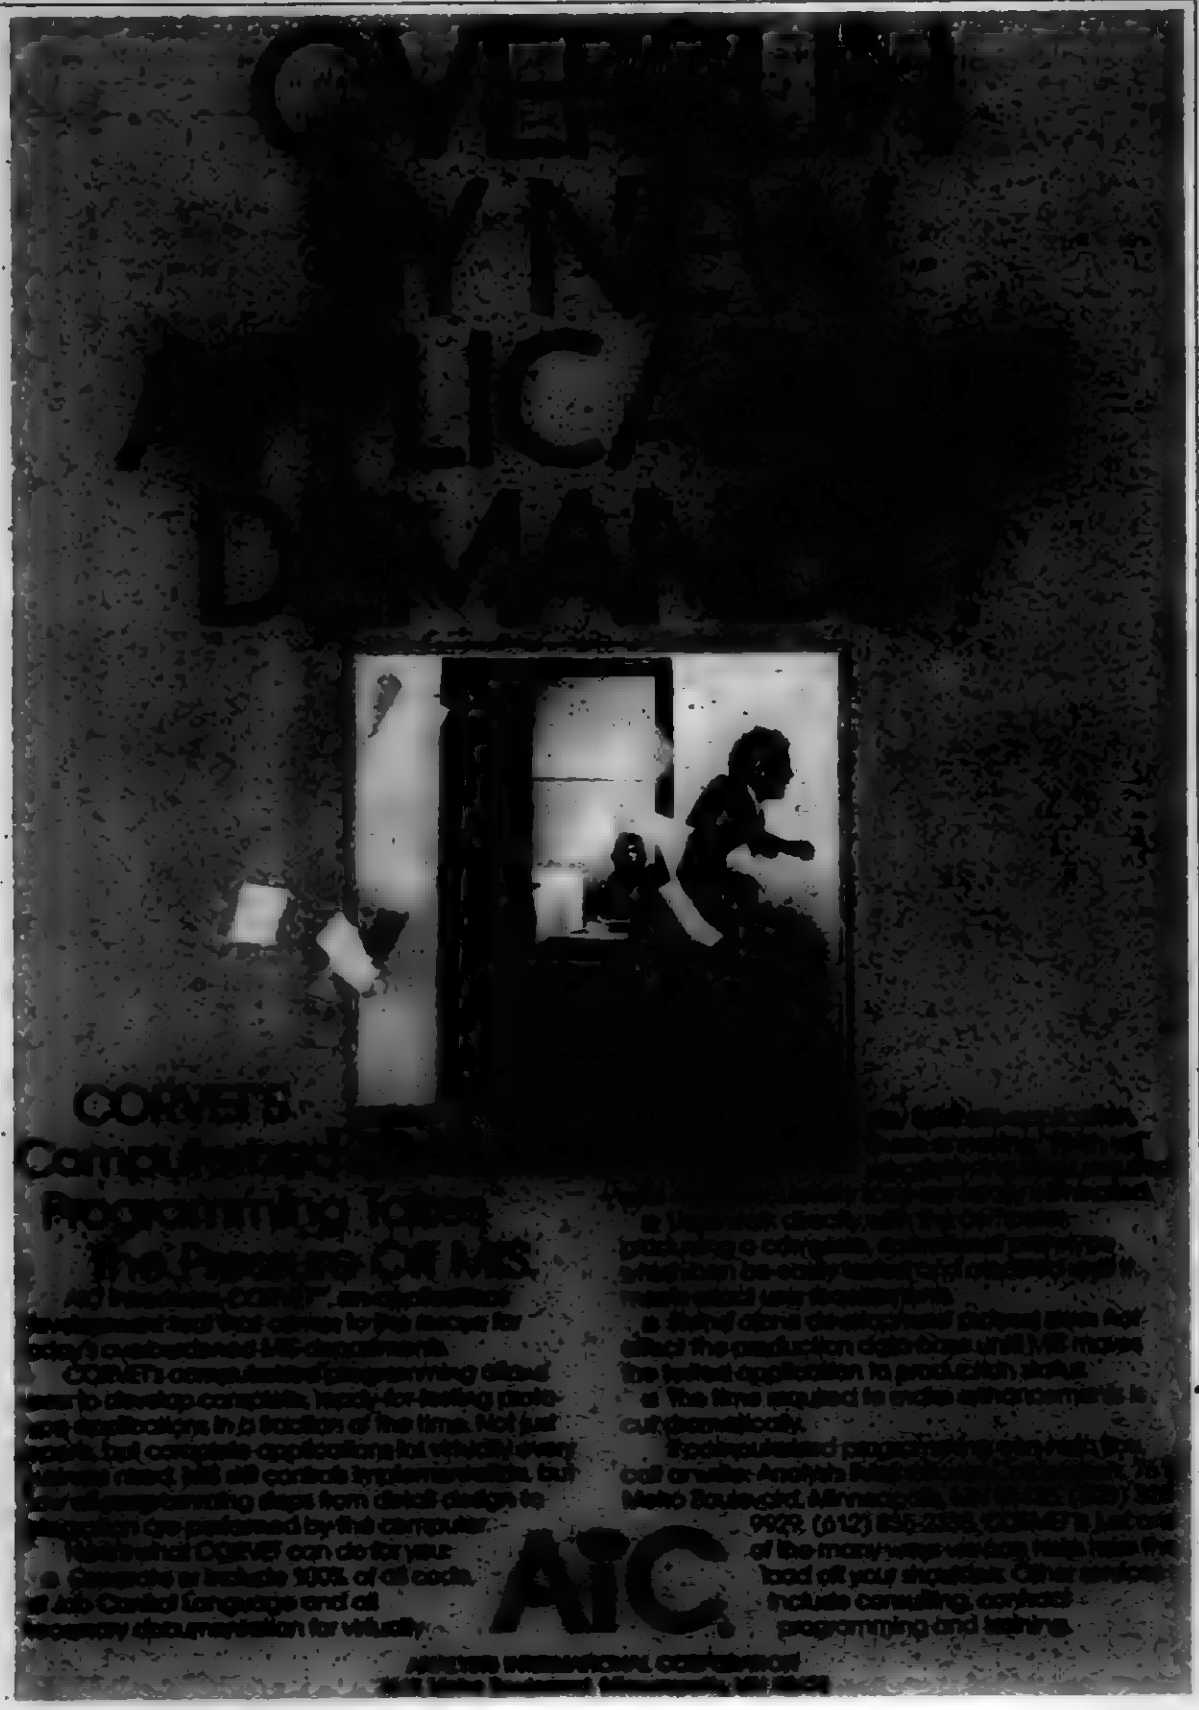
They're linked together. If there's an electronic mail system on a System 85 or on a related local-area network, we want to link it with a system like Net/1000, and we'll be able to move messages from our local system through . . . Net/1000 and on into either a terminal on a customer's premises that might be [linked to] one of our processors or somebody else's, or to another System 85. If you have a compatibility across the whole range of systems, you can move information from local to network and back down to local again as required.

So you're talking about a global architecture here?

Yes, we are. That's the kind of thing we've always done — we have networks across this country right now. Nobody else is anywhere near us on that, and we want to keep capitalizing on it. Our System 85 can be set up nationwide, System 85s that are linked together. It looks like one system. Nobody else can do that.

Do you find that your customers are looking for that type of solution?

Definitely. Our large customers — I could name you half a dozen, but I'm not going to — expect technological excellence from us, and they believe in the tradition of Bell Labs and Western Electric. And they also expect us to be excellent in networking. They know what we've always done — put together the world's largest



networks — and they want us to help them plan their networks. We're doing that.

So you are assisting companies in setting up their own networks?

If that's what they want to do. [Or] they can buy it from us and have us run it, or they can lease it from us. We've gotten very flexible. This is a big improvement as we're getting away from regulation. We've become very flexible in service arrangements and in pricing arrangements with customers, and we'll do whatever they want. We couldn't do that in the past.

With large customers, do you find you're dealing with a single set of decision makers or still with different departments such as DP, telecommunications and the like?

There's both, no question about it. The large customers in particular have several departments that get involved. Many customers are also trying to get some corporate control over expenditures, which is leading them to want to centralize more. What they try to do is make deals on a corporate level and then try to get some control over what's going on in the branches and remote locations. I think they're having some success.

When they do that, they want to deal with a large, dependable vendor, and we find them very much coming to us for that kind of operation. They can't afford to risk it with a fly-by-night who might be out of business in another year. There are a lot of people in this business now that aren't going to be in it in a few years. It's overcrowded right now, and a number of our competitors will be off doing something else in a few years.

Whether some of the computer companies will end up being in our business and we in theirs to a significant extent, I don't know. Everyone seems to think so. There's endless talk about our competing with IBM, DEC and the others, but that talk has been going on for a long time, and there really is not yet significant competition between us. Maybe there will be, but I think our main competitors will continue communications-based companies.

What competitors are you thinking about here?

I'll leave that to your imagination.

How do you see your relationship evolving with the Bell operating companies?

In the near term, we are largely going to be competitors of them. They are willing and able to sell customer premises equipment in their territories, and we'll be in competition with them in a number of cases. They will offer Centrex, and we will, of course, be competing against Centrex. In some cases, they will be offering products from other vendors, and we will be competing against those.

On the other hand, they'll be customers of ours for certain things, and so you'll get the kind of mixed relationship that is very common these days. Companies can be customers of each other and competitors with each other, and that's what's going to happen here.

But do you see the Bell operating companies emerging as fairly significant players in the marketplace?

I think they would like to be. It remains to be seen whether that will really happen.

A number of agreements have been announced relating to interfaces with AT&T equipment, notably Wang Laboratories, Inc., Hewlett-Packard Co. and Bailey Controls. Are we going to be seeing more of these?

Yes, there will definitely be more like that. Nearly every major vendor wants to link up with us. And we will — we want to open our architecture, and we expect that from time to time you'll see announcements with major vendors about linking up with our systems. There's a lot of interest. I won't tell you names, [but] if you named six of the biggest companies around, probably four or five of them have called me about wanting to link up with us.

How do you mean "link up"?

Just about anything, but the major thing would be general-purpose interfaces, high-speed data communications, document transfer, that kind of thing. Many of them would like to go into business with us, but that's another story.

Do you see AT&T making more substantial tie-ups with other companies, say by acquisition or joint venture?

Well, we're looking at a number of these. How many of them are sure, I don't know, but there's an interest. Just what we'll do [is] very sensitive information. But we certainly have an open interest, and my guess is

Better letters.

We can't help your spelling or grammar, but we can help your important correspondence look a little brighter than the next guy's. In less than a minute our DP-55 daisywheel dashes out a letter-perfect page. Throw out your white out, call your printer distributor. VAX/VMS is a trademark of Digital Equipment Corporation

that we'll do some things as time goes on.

How is your relationship with Digital Equipment Corp.?

We have a long-standing relationship with DEC — we're very good customers of each other and have been for years. And I would say our relationship is still good. That's all I want to say.

We haven't seen any major encroachments from DEC on the Unix operating system.

I don't want to comment on that.

Where do you see AT&T Information Systems in five to 10 years?

The first thing I will tell you is that we will still be in business, and I expect we'll be prospering. We believe that working in an unregulated environment that is growing more unregulated with time, we can begin to improve our market share in all areas of voice communications and voice/data communications. And I expect that five years from now our market share in those areas will be considerably higher than it is now.

Whom do you see as your main competitors in that time frame?

One of them will probably be Northern Telecom. They're a reasonably broad-based company and I believe they'll continue to do well. Another that will hang in there is some collection of the Japanese companies. Nippon Electric seems determined to stay in this business, and obviously they have the resources to be successful, so I would expect Nippon Electric to be a significant competitor of ours indefinitely.

Whether some of the computer companies will end up being in our business and we in theirs to a significant extent, I don't know. Everyone seems to think so. There's endless talk about our competing with IBM, DEC and the others, but that talk has been going on for a long time, and there really is not yet significant competition between us. Maybe there will be, but I think our main competitors will continue to be some of the communications-based companies. Some of the others I believe will be gone by that time.

Some of the small PBX vendors have found a niche here and there, [but] I have serious doubts that they'll be able to survive standing on their own. They may get absorbed by others and in that way survive, but otherwise I don't see how they're going to make it in this business with the current competitive levels. But I could be wrong. The business could expand a lot more and make allowance for everyone.

What about competitors in the computer services business?

Well, we have some competition with them through our Net/1000 offering; there'll always be some competition there. We have competition there now with IBM, but it's not a big volume of business. That tends, in any case, to be an offering that we like to make together with our other products, and I don't see it dominating our business.

We can assist customers in setting up their own network, if that's what they want to do. Or they can buy it from us and have us run it, or they can lease it from us. This is a big improvement as we're getting away from regulation. We've become very flexible, and we'll do whatever they want.

How do you see the long-term changes in AT&T Information Systems?

Well, I guess the major change has been a lot of communications processing being added to our products. I don't want to call it data processing — that's not what it is. It is processing for communications, processing for networking, allowing people to communicate more easily. That's the area that I believe we will grow and prosper in because that's been our tradition, supported by very strong technology based on our Bell Labs roots.

Presumably you'll be more competitive?

There's no question about it. We have a strong thrust now, and I believe we'll continue to hone down the organization and sharpen our own competitive skills. Some of our obligations from the past give us a little more expense in some areas than we would like, but we're taking care of those things. We're very confident of success. I think when we get past all the regulatory hurdles — and we're almost there now — when we can spend our full energy on the business, we'll do very well.

Do you think that will be reflected in the public perception?

I already see a lot of perceptions turning around. When I see all the negative publicity we got a year ago, and I compare that to now, I think it's a lot better. There's still some negative stuff out there, but I see a lot of good things, too. It is turning around, and I believe there'll be a preponderance of good information about us in the press as time goes on, although there will always be people that find some fault with big organizations and want to kick us around a little bit. That's their prerogative.

Outpaced.

This DP department doesn't have the skills to stay ahead of new hardware/software developments.
DELTAK CAN HELP.

As the pace of technology keeps changing, even seasoned staffers find their skills are falling behind. Meanwhile, applications backlogs are skyrocketing. And in most companies, there's no sign of a departmental staff-up in sight.

That's the problem. So what's the solution?

It all starts with training. You see, a properly planned DP training program can help personnel gain the practical knowledge they need to stay up-to-date. It can also ease applications backlogs by boosting productivity.

And proper training starts with DELTAK. We offer over 800 multimedia and computer-based courses for all levels of MIS professionals, from COBOL programming to database management. And since we're the world's leading DP educator, we can show you the latest ways to keep your people informed and productive.

For all the facts, call or write DELTAK today. And watch the pace pick up right away.

Robert Casales
President, Marketing and Sales
AT&T Information Systems

The tendency is to characterize a solution as being offered by a company in a specific business. What we're talking about is solutions that cut across these definitions. It isn't that someone offers a computer solution and someone a communications solution. They both offer a solution that embodies the technologies of both computing and communications. We do not want our customers to think of decisions associated simply with hardware; we want them to think in terms of a much broader business context.

With the divestiture final, what are your priorities for AT&T Information Systems?

First of all, AT&T leads in and is committed to a major posture in the world of information movement and management. There is a great opportunity for our business in that environment. There is, we believe, a great need in the marketplace for the capabilities that we have as a corporation. AT&T Information Systems, then, is the deregulated entity with the mission to bring that technology and those products and services to the opportunities in the marketplace.

Now, we've looked at that marketplace in a very broad way, and we've cut it in ways that would segment functions, in ways that would segment customers, industries and so on. So when we talk about a direction for the corporation, we're talking about it in the context of a "polar direction."

In that context, we think about doing business in these arenas that you might want to segment along the lines of data and voice. For voice, [in terms of AT&T Information Systems], I mean the premises equipment and networks associated with voice; we look at enhancing services with computer-based applications in transfer, storage, retrieval, editing and so on.

[On the data side], we look at the office environment, what has been an office equipment environment but is really evolving to what we think of as an office automation environment. We perceive our potential to cut across all those segments.

Looking at the office automation environment, AT&T has traditionally been selling PBXs to telecommunications departments. How are you changing that emphasis now?

Well, we're finding that it is shifting in the marketplace itself. As the Fortune 500 companies begin to link their business strategies with their computer and communications strategies, the decisions that they make cut across all those areas. So when you market, you have to market to all of those areas — we market to the telecommunications manager, we market to the DP managers and we market to the decision-influencers.

So you will, in fact, be offering solutions that have previously been offered largely by computer vendors?

I think that's correct. I think it's important to recognize that often the tendency is to try and characterize a solution as being offered by a company that has been in a specific form of business. What we're really talking about here is solutions that cut across these definitions. It isn't that someone offers a computer solution and someone a communications solution.

They both offer a solution that embodies a lot of the technologies of both computing and communications. We do not want our customers to think of decisions associated simply with hardware; we want them to think in terms of a much broader business context.

Do you see any shift in the market towards more centralized decision making in, say, office automation?

What we see in the marketplace is an enormous proliferation of divergent technologies — personal computing is an example. These divergent technologies create considerable pressures for managers — they have to ensure that the technologies now being utilized permit them to bridge from where they've been to where they believe they want to go. They have to be able to protect their investments in, for example, their word processing systems or their applications portfolio. So they need to know that new technologies permit them to utilize those applications and permit access to those applications to be expanded within their user groups. I think they are trying to manage both the centralization

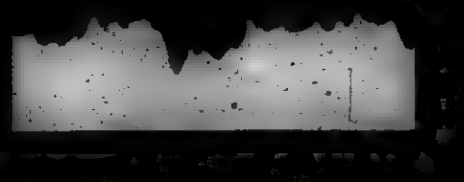
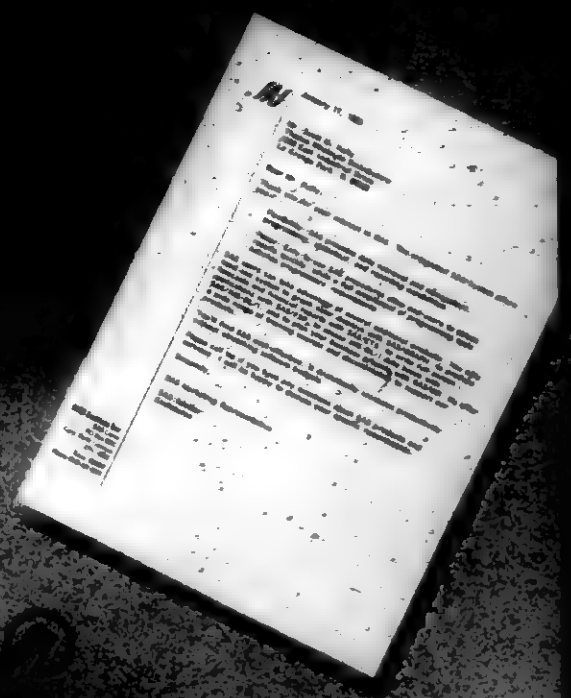
ibility
r Needs





and the distribution of technology, and it's not an easy task.

You're talking about the integration of a number of different technologies here. How does local-area networking fit into the picture?

We see local-area networks as being really the highway that permits our customers to move information in different media — voice, data, video, graphics and so on. It's the highway for the various professionals and departments within the company that permits the integration of that information and its transfer to users in various forms. [It may be] high speed or the lower band speeds, but all of it will be managed on the network. It's an open approach. We think that's terribly important to productivity. Our customers can begin to manage the distribution of information to those in their business who need to have it.

So you would see those needs as something that could not be handled by existing PBX technology?

You have various transmission media — twisted pair, for example, which works very well in the context of a PBX, is a major component of the local-area network. You might have other requirements in terms of very high-speed data that might be outside the realm of the PBX, but that doesn't mean that you take it outside the local-area network. Our plan is to have a local-area network that is integrated with a PBX.

How do you see the future of the Centrex system?

I think Centrex has been a good service. The issue there really rests in how responsive it can be to the user, and I think the marketplace is looking for greater access, greater flexibility, greater control of the technology by the customer. I think that is more difficult to do with a service like Centrex.

Will we see more links between AT&T and other vendors, similar to the HP and Wang announcements recently?

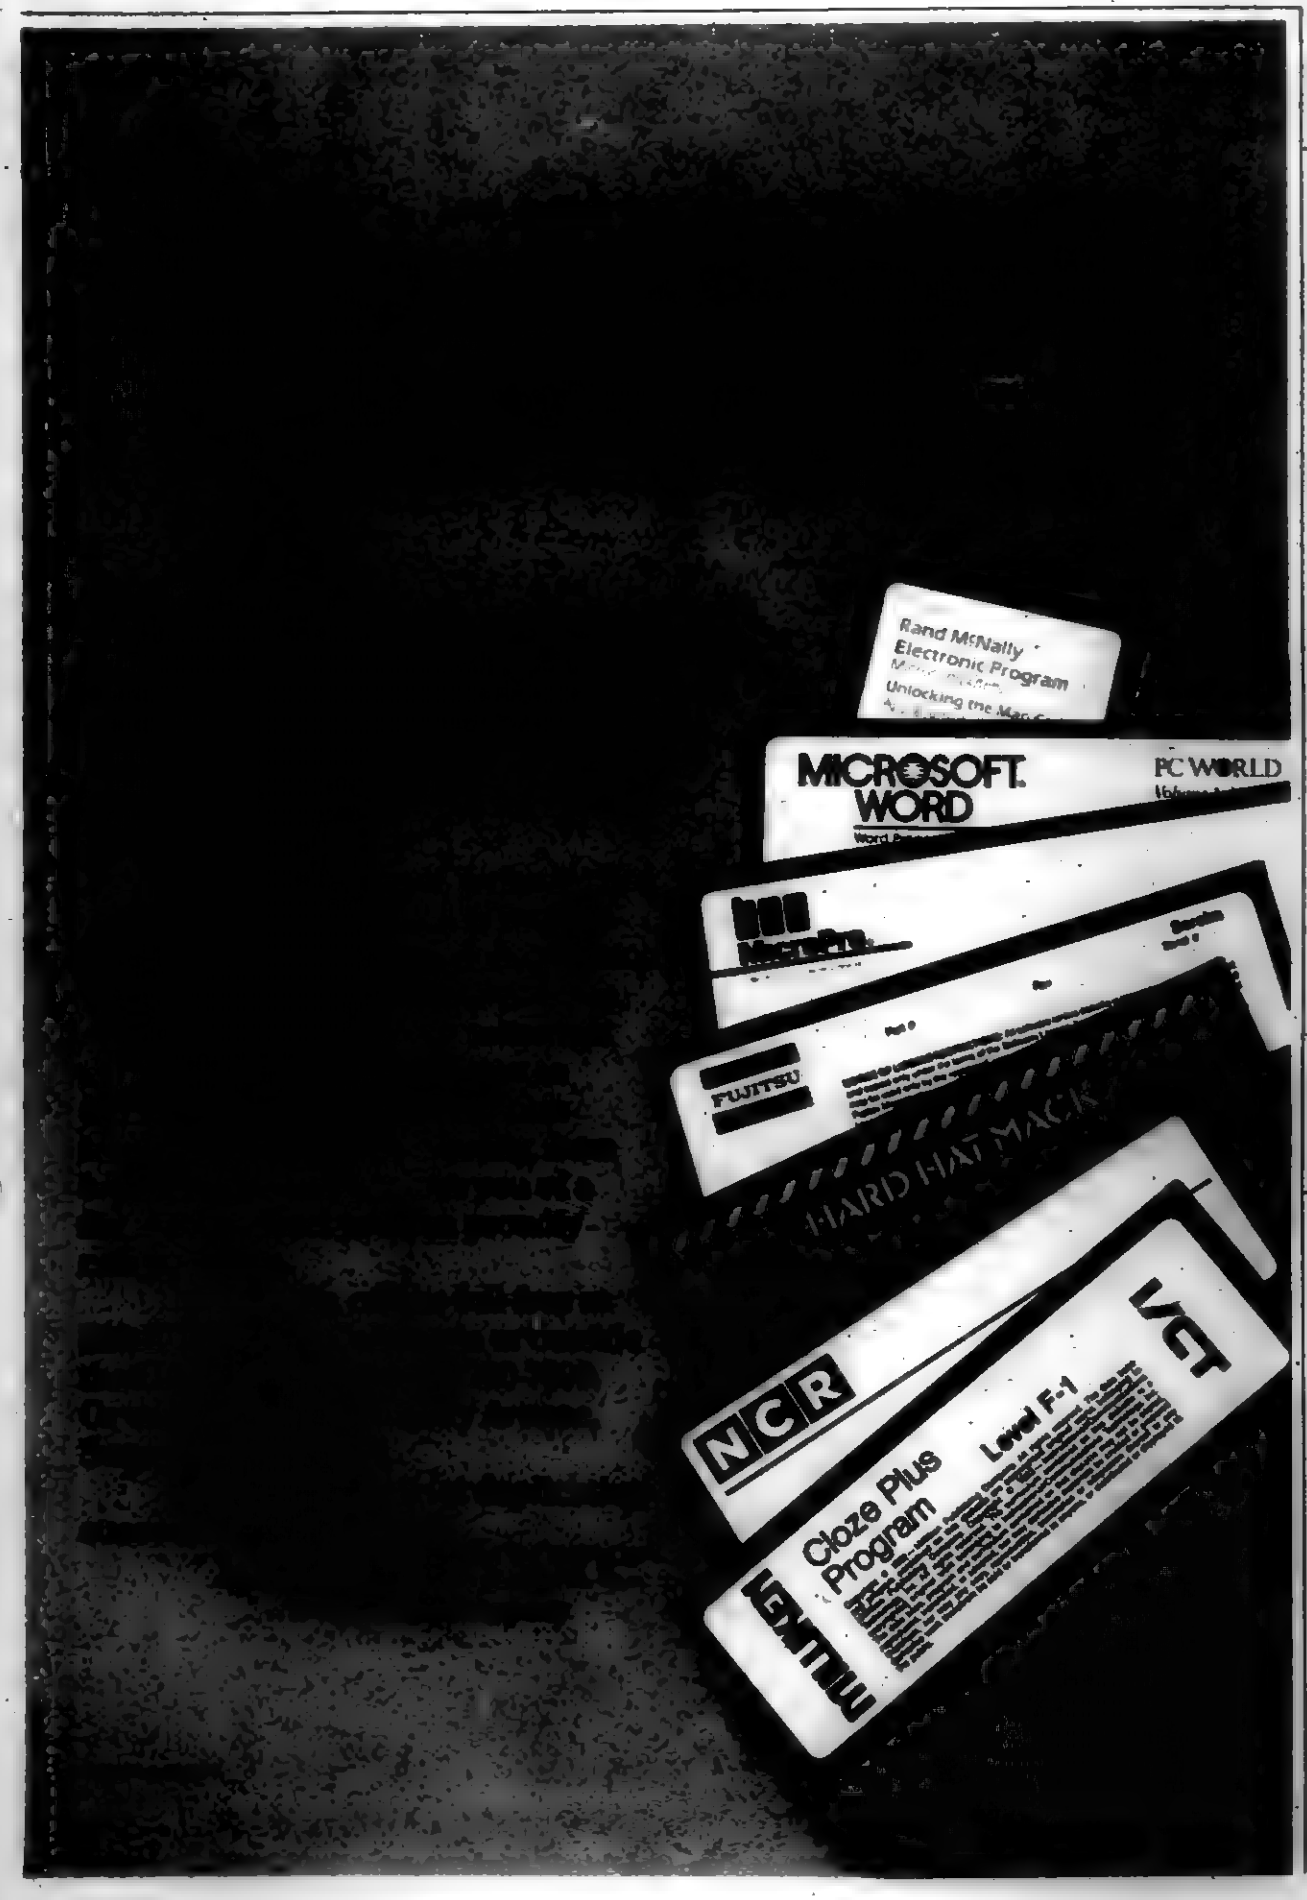
Yes, clearly, with vendors that have a vested interest in the marketplace we're talking about. Those who have a customer base that they want to protect, who want to ensure that their systems interact with ours so that the opportunities for utilization of their systems by their customers are maximized . . . This isn't the kind of game where any one company can be all things to all people.

One of the things we've been seeing in the marketplace is the emergence of IBM as a de facto standard. What is AT&T's position on standards matters?

If you mean in terms of, say, an IBM architecture that we would have to be compatible with in order to be successful, we clearly will be compatible. Do we need to be compatible with SNA [Systems Network Architecture] and SDLC [Synchronous Data Link Control]? Yes, we intend to and we will do that.

We have seen a number of statements from AT&T Information Systems that indicate you will be offering a distinct communications architecture next year. Is that correct?

Yes, you will see a communications architecture. That is part of our philoso-



NEW LIFE FOR 1401 PROGRAMS

CS-TRAN converts your 1401 object programs to COBOL for the mainframe or mini of your choice.

CS-TRAN is the *only* translator that accepts your object programs, patches and all, yet allows you to include actual COBOL paragraph names and record definitions.

If you'd like more details about new life for your 1401 programs just call or write Russ Sandberg.

C-S Computer Systems Inc.

Manville, NJ 08835 • 201-526-6000

pby in terms of our business and in achieving what we expect to achieve in the marketplace, that that architecture will be open.

What about the low end of the PBX market, say the small business market? What penetration are you seeing there?

People want the capability for voice and data in communications in a way that doesn't require expensive capital outlays. They evaluate it with considerable price sensitivity, they want the function level that's appropriate to the needs of their business. I think they want access to those networking capabilities that permit them to grow their business and interact in various ways with other businesses.

So you are thinking in terms of providing the small businessman access to the outside world through data as well as voice, presumably through Net/1000?

That's correct. It's why the concept of our systems and network services being shared as well as dedicated is very important, because in sharing them, you then have a very low threshold of entry per user. You might use an example where a small business wants to use a service like Net/1000 for interactions and purchase orders — with us, or with one of their customers or suppliers. They would have a capacity in the network to do that and to utilize the technology and intelligence in the network to do that. [It] offers them considerable efficiencies and the potential for economies over other methods.

The issue of data base management is terribly important. What is, perhaps, paramount is the operating system software that supports those data bases and lets you begin that accessibility to a wide range of users . . . We see a tremendous amount of activity in the area of data base management and a tremendous opportunity for access to data base services. Data has to be packaged and then distributed to customers, and that distribution technology has to have access to a central data base and has to accommodate all the users on the other end.

What kind of market interest are you finding in data base services?

I think the issue of data base management is terribly important. What is, perhaps, paramount is the operating system software that supports those data bases and lets you begin that accessibility to a wide range of users. If you look at a service like videotex, critical there is the cost of the technology and the access that

China Computerworld 电脑世界

The only specialized computer publication written exclusively for the People's Republic of China (PRC).

The PRC is a huge country which now has a rapidly growing installed base of computers. And the future looks very bright for the Chinese EDP market.

Government plans call for extensive use of computers in the PRC's technological modernization, and annual EDP expenditures are expected to grow into the billions of dollars in the 80's.

A good deal of this money will be spent on foreign computer equipment and the purchase decision-makers for this equipment will be using *China Computerworld* to help them choose the products and the companies they need.

China Computerworld is a joint venture of the Fourth Ministry of Machine Building and CW Communications/Inc. Its 50,000 subscribers include the key government officials and computer managers who have EDP purchase decision authority.

China Computerworld is published on the fifth and twentieth of each month. Its tabloid newspaper format gives you a unique opportunity to introduce your products and services to this awakening giant of a marketplace.

CW International Marketing Services Department gives you one-stop advertising service in countries around the world. For more information about *China Computerworld* or any of our other foreign publications, just fill out the coupon below.

VM/CMS USERWARE™

A Family of VM Products

SO ADVANCED IT'S SIMPLE

In just 60 days over 100 sites installed the Simple Approach.

BACKUP/CMS
THE SIMPLE APPROACH TO BACKUPS
(VM/CMS Minidisk Backup/Restore Facility)

- Interactive use
- Incremental & full backup capability
- Dynamic password acquisition
- Tape management interfaces
- Online catalog allows a restoration with only two commands: a FIND and a RESTORE
- No batch processing of any kind

TAPELIB/CMS
THE SIMPLE APPROACH TO TAPE MANAGEMENT
(VM Tape Management Facility)

- Interactive commands
- Full support for SL or NL tapes
- Capability to share tapes
- OS/DOS tape management interfaces
- Manages tape drive allocation and tape requests
- Active tape catalog
- Full management & audit reports

FPT/CMS
THE SIMPLE APPROACH TO PROGRAMMER PRODUCTIVITY
(VM Programmer Productivity Tools)

- SECURE
- TSCAN
- MODZAP
- TAPECOPY
- SEARCH
- SCRATCH

- All three products can be installed and working for you in the same day, thus saving you valuable time, tape, manpower and computer resources.
- An easy to use online help facility is included with each product.
- No modifications to your VM system are required.
- VM/SP release 3.0 support available.

For under $10,000, you can put all 3 Userware™ products to work in your shop today! Why pay more?

Boole & Babbage, Inc.
510 Oakmead Parkway, Sunnyvale, CA 94086

Boole & Babbage

The single source for harder working software.

you can offer for it. We see a tremendous amount of activity in the area of data base management, and I think a tremendous opportunity for access to data base services. If you look at the financial services industry, for example, you see more and more use of on-line data bases. Data has to be packaged and then distributed to customers, and that distribution technology has to have access to a central data base and has to accommodate all the users on the other end.

We're finding that it is shifting in the marketplace itself. As the Fortune 500 companies begin to link their business strategies with their computer and communications strategies, the decisions that they make cut across all those areas. So when you market, you have to market to all of those areas — to the telecommunications manager, to the DP manager and to the decision-influencers.

How do you see videotex evolving?

There's a lot of review of that question today, and, in fact, we've had discussions with some of our large customers. I think that [companies in] the marketplace are working to ascertain how that technology and service can be utilized in their business, especially that have broad-based consumer business. I think this is going to evolve in the course of the next few years, but I think it's kind of being shaped at this point.

AT&T Information Systems is obviously going to be presenting some new capabilities here. But then, so are a lot of your competitors. How is AT&T-IS different?

Well, I think that if you look at the world or the marketplace the way we have looked at it, and the way you and I have discussed it, AT&T-IS comes from a very strong base in terms of communications. I think the marketplace recognizes, as we recognize, that's what is really going to be at the hub of the integration that we talked about.

I really think that we are better positioned than any of our competition, and we have a very real distinction from our competitors in terms of our history and our knowledge, resources and service. That's really captured in our antecedents in Bell Labs, in Western Electric and in our long history of service to the marketplace. I don't think there are many competitors today that enjoy equal stature in terms of capabilities.

Who would you say does enjoy equal stature?

Well, if you were to say who enjoys the complement of R&D and service in the same way, I think IBM very much enjoys that reputation.

You've talked in terms of knowledge, resources and service here. You haven't talked about being innovative — AT&T has not recently had the reputation as an innovative company.

It's pretty tough when you have been primarily a regulated company to enjoy an innovative reputation. I think we have enjoyed a reputation of being innovative in our basic research and in some of our technologies. For example, cellular radio is an important technology and really we were ready to bring it to the marketplace about 10 years ago. The course of regulation has taken that much time. You can't enjoy an innovative reputation when you have to deal with the rigors of the regulatory process to bring technologies to the marketplace.

You have a liberal arts background.

I do — my college major was English. My background professionally is in marketing.

Has your original liberal arts background been an asset?

Very much so. What I think is of great benefit in a liberal arts background is the capacity to develop a capability in thinking, being able to understand issues and being able to translate thinking from the strategic to a tactical perspective. Being able to recognize that if you are in the business of dealing with the marketplace and with customers, much of your strategy must be driven from your capacity to think as an organization.

I think it's fundamental — if you think about all of the dynamism taking place in the market, you need the ability to understand and to respond quickly and to use different marketing techniques, to use a multitude of distribution channels, owned and nonowned, to be able to manage and stay ahead. Much of that, I think, resides with those companies that have the ability in their executive environment to understand and to have confidence in their thinking, confidence in their ability to take risks, confidence in the sense of perhaps not being afraid to make mistakes. And I think the better able a corporation is to think [in this way], the greater the success it will enjoy.

HOW TO GET A NETWORK OFF THE GROUND.

Codex 6000 Series Intelligent Network Processors for minicomputer networks.

Say you have a small minicomputer network. A dumb terminal here, a dumb terminal there, and a DEC, HP, Data General or some other minicomputer miles from either. They're probably joined by modems and phone lines. But that's no way to run an efficient, economical network. And it doesn't give you any room to grow.

To really get a network off the ground—to really get one running efficiently—you need to take a different route.

You need a Codex 6000 Series Intelligent Network Processor specifically designed to improve the efficiency of smaller networks.

In a minicomputer situation with as few as two dumb, asynchronous terminals, these statistical multiplexers will boost operating efficiency, reduce line costs and protect your data from errors caused by line disturbance.

The model 6001 can support as many as eight asynchronous terminals. The 6005, as many as 16 asynchronous and synchronous terminals. Or any combination of word processing or graphics terminals and printers.

Both models are inexpensively priced. So the money you save on line costs and error-free transmission will bring you a healthy return on investment quickly. Our Application Engineers offer planning expertise to help you get off the ground that much faster. And when you grow, we'll show you how these stat muxes can be linked to larger 6000 Series products as your networking needs expand.

In short, Codex 6000 Series Intelligent Network Processors can push your small network in the direction it ought to be going. Up.

Bruce Schwartz
President, Service
AT&T Information Systems

What is the AT&T Information Systems service organization going to look like in 1984?

It will consist of roughly 60,000 people. That is made up of about 30,000 systems technicians and 13,000 people in our business service centers. We have various groups of engineers, and the balance would be management and support personnel. In prior days, we had 22 operating companies, each with a service division, so we had 22 separate service organizations, so to speak. We've been molding that into a national service division headed up by six regions rather than 22 operating companies. So we have a substantially slimmed-down management staff as a result. And then sub-organizations to the regions — we had roughly 350 district level operations divided among the 22 operating companies. We've since reduced that to about 100 such district organizations.

What difference is the average customer going to see?

Let me talk about a couple of things in that area. Since we're nationally organized now, we have established a high-level maintenance surveillance operation — we call it National Customer Service — in Denver. From that location, we remotely monitor the higher end of our PBX switches on a constant surveillance basis. That's new, plus it's more efficient.

In addition, we've established some technical support centers in clusters on a national basis, and we've centered there some high-level expertise in voice, data and software. We call them Voitek, Datek and Softek — not very inventive, but they're pretty effective. The purpose is to give field personnel a close-by location where they can call for troubles that they're not able to fix right away. We've also established in each of the regions a high-tech laboratory. There we have models of each of our major products, so if we get into a difficult situation, we're able to simulate the trouble there with experts and talk the on-site technician through to a problem resolution.

Probably the thing the customers have noticed most is our new mode. We've been moving into this all through 1983 — it's not a "stroke of lightning" kind of thing. In the past, we had repair centers located in each of the Bell operating companies — thousands of them. People who had trouble would call into this repair center, and then the people there would assign the trouble reports to systems technicians on a random basis. So one customer might see four or five different technicans in any given period.

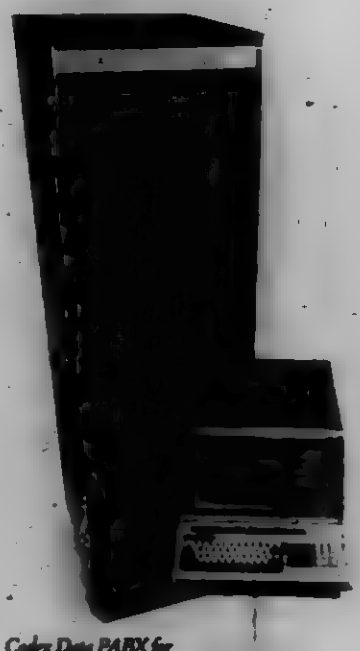
We've been putting in place for the last 12 to 14 months [a system where] we assign customers on a permanent basis to a particular technician who is dedicated to that account. The smaller customers may have one technician who has four or five customers on a permanent basis. That way we're able to zero in on our customers . . . Under the plan or reorganization, the overriding rule has been that people follow their work. So in a high percentage of cases, easily 90%, the technician who has been maintaining a customer's switch before divestiture will be maintaining it in the future. A lot of customers won't be seeing a change in personnel. But we'll have more of an entrepreneurial approach to service and maintenance.

Will we be seeing any major changes in service policies?

Yes, in fact there'll be several. As the rates go from regulated to unregulated, of course there's a lot of opportunity for change. We'll give to the customer more options on service arrangements. The customer may want maintenance eight to five, Monday through Friday — we'll have an

Let me say some of the things that haven't changed: dedication to service, a commitment to service that just transcends everything we do. I have an old picture in my office . . . of a lineman trudging through the night in the snow with a coiled wire over his arm, looking for a break in the line. That always kind of captures what you call the spirit of service. Maybe it's all corny, I don't know, but it's a deep heritage.

HOW TO GET A NETWORK OFF YOUR BACK.



Codex Data PABX for minicomputer networks.

You're in a situation now where there are more than 50 users in your minicomputer network. All of them working on dumb terminals directly linked to your processors. The situation is such that your processing capacity has just about reached its limit.

Do you add more minicomputers? Or do you add more processor ports?

Don't do either. There's a better way: The Codex IMS 7800 Data PABX.

Our Data PABX monitors and controls the way your people access your minicomputers. And it does such a good job that you can get more out of DEC, Prime, Data General or other minicomputers — even add more terminals — simply by making better use of what you already have.

So, for instance, instead of having dumb terminals dedicated to any single minicomputer, Data PABX lets you get any processor, from any terminal, from any point in your network.

This approach makes even more sense when you consider that any given terminal is only on-line about 20% of the day. It's a more efficient use of computer resources, more economical, and altogether easier to implement than any other option in front of you.

What's more, this approach is backed by Codex. Before the sale and after. So you know it will work when you install it. And you know it'll work long after.

Data PABX. It can cure all the pains of growth in a local or long-haul network.

Including the one in your lower back.

Call 1-800-821-7700 ext. 894 for more information or write: Codex Corporation, Department 707-94, 20 Cabot Boulevard, Mansfield, MA 02048.

MOTOROLA INC.

We've been putting in place for the last 12 to 14 months [a system where] we assign customers on a permanent basis to a particular technician who is dedicated to that account. The smaller customers may have one technician who has four or five customers on a permanent basis. Under the plan of reorganization, the overriding rule has been that people follow their work.

arrangement for that. Other customers may want 24 hours, seven days a week, and we'll have an agreement in that. Others will want more — they may want someone to help design or plan their entire system. We'll have an arrangement for that.

You'll be offering more in the way of support for system design, configurations, that kind of thing?

Yes. We have in our group a tremendous network engineering capability — very good at network design, very good at network maintenance and very good at network monitoring. So we can monitor the performance of customer networks, recommend changes and more effective rearrangements. We know the communications business.

How will the kind of service you will be offering differ from that of your competitors?

I think it's substantially better. We're everywhere. We have a ubiquitous force, and they're highly trained. For example, we've trained a number of technicians this year in software . . . We've trained about 300 so far through this new software training. We review Unix, we review about four computer languages and do some basic programming. I've got to tell you, they're just like kids at a candy store. Those that have gone out to customers afterward are just eager to get in and [talk] with customers about how our applications processors interface with other applications. So we're going to continue that training as we need it.

We have a nationwide remote maintenance testing system that's already deployed. And we have a nationwide spare parts inventory. We're really equipped. We're in all the major locations, where we have trained people. And we have an excellent reputation with our customers. We're not complacent about it; we're out to make it even better than it is. That is our major objective, to increase dramatically the level of customer satisfaction with our service.

How do you propose to do that?

In a number of ways. First and foremost is the process I described earlier where we have assigned a technician to accounts. We call it our customer service management system. It's the technician's account, and he or she becomes more deeply involved with it in performance. The technician knows how the system operates, how the customer wants it to operate.

Yes, but how do you judge performance?

Several ways, the most important of which is the customer satisfaction testing process we have where we constantly test customer satisfaction with the various aspects of our service. From

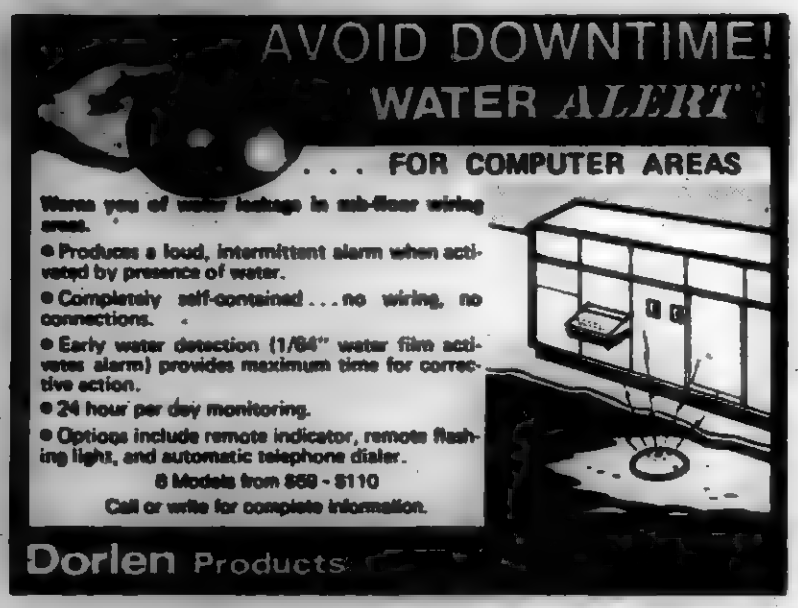
(800) 323-7335

Pansophic Systems, Inc., 709 Enterprise Drive, Oak Brook, Illinois 60521. In Illinois, call (312) 986-6000.



PICK UP WHERE IBM LEAVES OFF.

Portable or desktop, you're way ahead when you pick up CORONA PC™ Because we give you everything you've ever wanted in an IBM[1]-compatible PC and more. For a great deal less.

COMPATIBLE AND MORE.

Our systems run all software that conforms to IBM PC programming standards. And the most popular software does.

We deliver twice the memory, with room for eight times as much.

We deliver a fast-access 320K floppy drive, a communication port and an improved IBM PC keyboard with indicator lights.

Our systems include high-resolution monitors (12" desktop, 9" portable) for crisper, cleaner displays, and both have built-in high-resolution graphics (640 x 325).

You get a complete system, ready to go to work.

MORE VERSATILITY.

With all the necessary features built into the main unit, the four expansion slots can be used for your special needs. For example, color or our optional 10MB hard disk.

Our RAM-disk software gives you temporary disk-type storage that works many times faster than disks.

PLUS SOFTWARE.

Our systems come with the operating system: MS-DOS.[2] A programming language: GW BASIC.[2] A training course: PC Tutor.[3] A professional word processor: MultiMate.[4] Plus DOS utilities and demonstration programs. Or you can get the p-System[5] from N.C.I. and write or run portable Pascal packages.

ALL FOR A GREAT DEAL LESS.

Even with all the extra features and performance, our systems still cost significantly less than the equivalent IBM PC.

Drop by your nearest CORONA PC dealer for a very convincing demonstration. Or contact us at 31324 Via Colinas, Westlake Village, CA 91361. (213) 991-1144 or (800) 621-6746 toll-free. Telex 658212 WSLK, in Europe 76066 CDS NL.

IN DEPTH/AT&T's Schwartz

the start, we [cover] the salesman, the billing procedure, the order process — whether it's on time, whether people are courteous. It's a system we've had in operation for a couple of years now, so we know its statistical soundness. We do a lot of factual testing on how many customer complaints there are, how long it took us to process those complaints, how long it took to repair.

How important is the service function to selling AT&T Information Systems?

I've talked to a lot of customers lately about this and in a nutshell, as you add features and functions to your communications system, as your communications system becomes your information system, it becomes the way that you run your business. It's not just something you use to communicate on an intercom with your associates, or to get a call from outside — it is the way that you manage your business. Therefore, what becomes paramount above things like price, perhaps an extra whistle or gong [is] reliability. Reliability is very high on the list. Customers are absolutely aware of that.

Are you going to be making any major changes in pricing?

No, I wouldn't say "major." We'll provide more options to customers, and they'll be priced competitively. But I wouldn't say they'll be major changes.

AT&T Information Systems has concluded a number of agreements with companies like Wang and Hewlett-Packard for implementing interfaces. What is your position on systems attached to AT&T equipment in that way?

We're in the service business. We have a huge embedded base now, but it's not 100% Western Electric. We maintain equipment that is not Western Electric now, and I wouldn't see any reason to change that policy.

So you might be extending maintenance coverage to some of these other systems?

We'll have various maintenance agreements available for customers, and if they're part of a major AT&T Information Systems system, it may be part of the service.

How are your relations with the other divisions of AT&T Information Systems?

I think the Service Division is part of the team. We have a team approach, with the people with development, Bob Casales and his people with marketing/sales, our people with installation/maintenance . . . Everyone understands that while each is important, by itself it can't do much. If you had the best design group in the world, for example, and if you couldn't sell it, you really haven't accomplished much. Vice versa, if you have the best salesmen in the world and don't have a well-designed product, you're not going to be very successful.

You have been with the Bell system now for more than 30 years, starting as a lineman. How have you seen it change over that period?

I don't think I've seen any cataclysmic changes over that period. I've seen us move in the last year — AT&T Information Systems has put about 35 new products in our product line. Technology is moving at a much faster clip than it was 10 years ago. Let me say some of the things that haven't changed: dedication to service, a commitment to service that just transcends everything we do. So that's not changed. I have an old picture in my office of Angus MacDonald — perhaps you've seen it. It's a pretty famous picture, at least in the Bell system, of a lineman trudging through the night in the snow with a coiled wire over his arm, looking for a break in the line. That always kind of captures what you call the spirit of service. Maybe it's all corny, I don't know, but it's a deep heritage.

SYSTEMS & PERIPHERALS

TI to offer 32-bit CPU
First to use MIT's Nubus

By Patricia Keefe
CW Staff

AUSTIN, Texas — Texas Instruments, Inc. has introduced the Nu Machine, said to be the first commercial system to implement the 32-bit technology developed at MIT. TI now owns the rights to that technology, which it calls Nubus.

TI's first 32-bit processor, the Nu Machine is a high-performance system based on the 37.5M byte/sec Nubus, making the system particularly well-suited for applications requiring multiple or special-purpose processors, such as very large-scale integrated circuit design, printed-circuit board design, simulation and advanced software development, according to the vendor.

The system is expected to attract the interest of sophisticated end users, system integrators and OEMs in the scientific and engineering marketplace.

The Nu Machine is currently supplied with a Motorola, Inc. 10 MHz, 68010-based processor with a 4K-byte, 45-nsec cache memory and a memory management system implemented in hardware. Also included is a Unix-based operating system, high-resolution graphics display, mass-storage peripherals and an Intel Corp. Multibus subsystem.

TI's system reportedly supports 32-bit data transfer and addressing and can support future 32-bit microprocessors. The processor-independent Nubus also allows systems to be designed using other standard microprocessor families or special-purpose instruction sets.

The 800- by 1,024-pixel, 15-in., 60Hz, noninterlaced black-and-white display and bit-mapped graphics controller produce graphics and multifont text. Two

TI's Nu Machine

Winchester disk storage systems are available: a 474M-byte Winchester disk with 20-msec access time and an 84M-byte disk with 30-msec access time. For disk backup, ¼-in. streaming and ¼-in. cartridge units are available, the vendor said.

Also included are a high-bandwidth translator, said to provide an interface between the Nubus and Multibus systems, and a windowing system that provides capabilities for multiple virtual terminals on the Nu Machine's high-resolution display. Programming languages currently available include Fortran and C.

The basic Nu Machine is a small office model configured with a 68010 CPU, a 512K-byte memory, an 84M-byte disk, a ¼-in. cartridge tape, display, keyboard and mouse.

It is end-user priced at $53,450, the vendor said.

TI, P.O. Box 402430, Dallas, Texas 75240.

Oldies still goodies, but change to come

HARD TALK
TOM HENKEL

Computerworld, as do similar publications, talks endlessly about new products, new technologies and industry firsts. The fact is, most DP executives are in charge of what could best be described as ancient hardware — technology that is pushing 20 years old.

While there are outlandish stories about U.S. government agencies still using tube-based processors and dinosaurs like the Philco 2000, classics like IBM's 360 and 370 lines still make up about 10% of the domestic IBM installed base, according to the market research firm, International Data Corp. (IDC). Furthermore, IDC reports that there are still almost 600,000 traditional minicomputers currently in use — the kind most industry watchers wrote off two years ago. IDC predicts that it will take at least until 1985 for the 32-bit architecture made popular by the superminicomputer to become the dominant architecture among computer users.

So if your idea of a step-up in technology is a 370/158, you're not alone. There appears to be a big difference between the technologies that are ballyhooed on the business side of the computer industry and those that are actually used in the trenches — the DP shop.

But just because there is little hope your company will suddenly decide to embrace the latest in computer technology, explore gallium arsenide circuits or install optical disks does not mean you

Unidot 32-bit systems debut
Based on Unix version

GOLDEN, Colo. — Unidot Systems, Inc. has announced two multiuser, 32-bit systems utilizing the University of California at Berkeley version of Unix.

Cerebra I is said to offer performance similar to Digital Equipment Corp.'s VAX-11/750 system, and the Cerebra II is said to be roughly equivalent to a DEC VAX-11/780 processor.

According to the company, the Unix-based systems will be useful in universities, government agencies and commercial organizations using eight to 32 workstations. Officials say that the systems' floating-point processor will be useful for computer-intensive applications.

The Cerebra systems are based on the National Semiconductor Corp. NS16032 32-bit microprocessor and reportedly feature virtual memory using software utilities distributed by the university.

The systems use the Intel Corp. Multibus, an IEEE 796 bus, to offer options for peripheral configuration, the vendor said.

They are said to feature 8K bytes of cache memory with a memory-cycle time of 45nsec.

Unidot's Cerebra

The Cerebra I has 2M bytes of main memory, 84M bytes of high-performance disk storage, a 16-line intelligent serial controller and either cartridge tape or floppy disk backup, a Unidot spokesman said.

The Cerebra II is said to include a second CPU with cache memory, eight additional serial lines and an additional 1M byte of memory.

The units are reportedly packaged in office-style pedestals with locks designed to prevent tampering of cables, boards or consoles.

Cerebra is the first system to be marketed by Unidot, which has operated primarily as a consulting firm for several years, the spokesman said.

The systems are scheduled for delivery in April, according to Unidot.

Prices start at $26,895 for the Cerebra I and $46,000 for the Cerebra II, the vendor said.

Unidot Systems, 600 Park Point Drive, Golden, Colo. 80401.

CAM/CAE stories needed for report

There's an automation revolution happening on the factory floor, and computerized manufacturing systems are leading the charge. *Computerworld*'s March Special Report will take an in-depth look at computerized manufacturing systems and how they are altering production, planning, operations and the relationship between DP departments and factory automation people.

The report will focus on computer-aided manufacturing and engineering, material requirements planning, robotics, inventory and shop floor control. More importantly, it will look at the impact of these technologies on traditional manufacturing operations.

Contributions are welcome in one of two forms: a tutorial covering a trend or an application story describing a case study of a particular user and product. Manuscripts should be three to six double-spaced typewritten pages in length. The deadline for all submissions is Feb. 10. Charts, photographs or other graphics are encouraged.

Authors should include with all submissions a very brief biography and a telephone number at which they can be reached. Articles should be sent to Bill Laberis or Pete Bartolik, *Computerworld*, 375 Cochituate Road, Box 880, Framingham, Mass. 01701.

SYSTEMS & PERIPHERALS

TURNKEY SYSTEMS

ULTIMACC BUSINESS SYSTEMS GROUP
Champ

The Ultimacc Business Systems Group, a subsidiary of Storage Technology Corp., has announced the Champ, a 16-bit multiuser turnkey business system based on the Fairchild Camera and Instrument Corp. 9445 microprocessor.

Aimed at businesses with annual sales of $1 million, the Champ consists of a central processing unit with 128K bytes of random-access memory, one 50M-byte hard disk drive, a 64 line/min bidirectional printer and two STC Model 4200 terminals, the vendor said.

The basic Champ system can accommodate up to six terminals. A 256K-byte memory upgrade allows users to add up to 15 terminals. A 30 line/min band printer and cash drawer module are also available, according to a spokesman for the vendor.

Designed to be used by operators without previous data processing experience, the system includes its own operating system, called the micro-Champ, peripherals, software documentation, training, telephone support, maintenance and financing, the vendor said.

The Champ system costs $35,000 and was designed for turnkey users in the wholesale/distribution industry. Additional terminals cost $1,950 each, the vendor said.

Ultimacc Business Systems, 4 North St., Waldwick, N.J. 07463

UNITRONIX CORP.
System 4000

Unitronix Corp. has announced its System 4000 with fixed Winchester disk drives of up to 800M bytes and an 80M-byte magnetic tape drive backup.

The System 4000 reportedly offers emulation of Digital Equipment Corp.'s RSTS/E, RSX-IIE and VMS, Unix and S&H Computer Systems, Inc.'s TSX operating systems and features 256K bytes to 1M bytes of main memory.

According to the company, the system is available with the DEC Micro-11, PDP-11/23 Plus, PDP-11/34, PDP-11/44, PDP-11/73 or VAX-11 processor and is compatible with existing 18-bit direct memory access controllers or DEC Q-bus interfaces, as well as 22-bit devices.

Unitronix also announced that the system offers both DEC and non-DEC peripheral options.

Other features are said to include a port serial interface for up to 64 terminals, a peripheral bus mapping module, 18- and 22-bit LSI-11 backplane handling old and new controllers and communications options to multiplexer and modems.

The system reportedly runs DEC diagnostics, according to the vendor.

It is available with a 160M-, 300M-, 500M- or 800M-byte fixed Winchester drive and with an optional 80M-byte removable Winchester drive for backup, the vendor said.

The system is available now at prices ranging from $29,000 to $53,000, depending upon the desired central processor.

Unitronix, 197 Meister Ave., Somerville, N.J. 08876.

CAV CORP.
Cav/Cad

CAV Corp. has introduced Cav/Cad, a turnkey computer-aided design and manufacturing (CAD/CAM) system that uses a 32-bit Motorola, Inc. 68000 microprocessor and the Unix operating system.

The system offers three-dimensional CAD; multiuser, multitasking capabilities; automatic dimensioning and bill of materials generation; and menu-driven graphics production, according to the vendor.

A base CAD/CAM system consists of a 68000 microprocessor; 1M byte of random-access memory, expandable to 5M bytes; 30M bytes of hard disk storage, expandable to 500M bytes; a graphics terminal with 1,024- by 1,024-pixel addressable resolution or a 1,024- by 768-pixel viewable resolution; a 1M-byte floppy disk drive; six RS-232 ports, which can be expanded to 12 ports; and a digitizing tablet.

The system can be expanded to support six users, a Touch-Tone screen, tape storage and a modem, according to CAV.

The system price is $50,000.

CAV, 3150 La Selva Drive, San Mateo, Calif. 94450.

FOUR PHASE SYSTEMS, INC.
Low-end turnkey system

Four Phase Systems, Inc. has announced a low-end turnkey system which can accommodate up to eight terminals using the firm's Vision distributed data processing software.

The system was designed to address a variety of applications and configuration requirements of the small-scale office environment. It will include a complement of peripheral devices, data transfer capabilities and software offerings, the vendor said.

The system includes 96K bytes of processor memory and 5M-byte disk capacity. The CPU incorporates the vendor's proprietary architecture, featuring window into memory and interrupt-free display. Each terminal reportedly can handle more than 10 keystroke/sec without any perceivable delay. The alphanumeric, keypunch-style keyboard was designed for data entry, IBM 3270 simulation and Vision, according to a spokesman.

The system is offered in two configurations: either with a bisynchronous communications controller or with a magnetic tape drive. A sample configuration consisting of a CPU, bisynchronous communications, eight terminals and keyboards and a lineprinter sells for $34,512.

Four Phase Systems, 10700 N. De Anza Blvd., Cupertino, Calif. 95014.

PROCESSORS

INTERNATIONAL TECHNOLOGY GROUP, INC.
Integrity system expansion

International Technology Group, Inc. (ITG) has announced the expansion of its Integrity computer system from 64- to 96-terminal capacity.

The system uses twin Data General Corp. Eclipse S/140 processors, each with 2M bytes of erasable correctable memory, and reportedly provides disk storage space of up to 2.4G bytes.

The Integrity operating system is compatible with Mini Computer Systems, Inc.'s Micos system. The ITG enhanced version of Micos Extensive Basic supports CALL routines, reducing a typical program size by 50%; offers Boolean logic to facilitate structured programming; and can address up to eight 600M-byte logical disk volumes, a spokesman for the vendor said.

The low-end, DG-based Integrity systems utilize single 128K-byte DG Nova series processors and support Control Data Corp. Lark II disk drives — 25M bytes fixed, 25M bytes removable, according to the vendor spokesman.

Nationwide hardware and operating system maintenance service is provided by ITG. All systems contain onboard diagnostics and are continuously monitored via ITG's remote support network.

Prices start at $175,000 for a dual-processor configuration with 64 terminals, ITG said.

ITG, 3 Barker Ave., White Plains, N.Y. 10601.

MicroAge

"BECAUSE WE COULDN'T AFFORD MISTAKES!"

"They guided us over the rough parts when we needed it"

"During September of 1982, we started our MicroAge Computer Store in Tulsa, Oklahoma with 3 people. Today we have 11 people working for us and we're still hiring. By following MicroAge's advice and marketing strategy when we started in business, we were able to reach Tulsa's business computer buyers in a much shorter time than we could have on our own."

"Both of us had technical backgrounds in computers but lacked the marketing experience necessary to reach our goals. We used MicroAge's experience and leadership to guide us through the rough spots and boost our sales and marketing potential.

"MicroAge . . . they helped us build a sales organization to reach the Oklahoma businessmen."

OLDIES from page 73

can ignore technology. DP shops are changing at a much more rapid rate now. DP managers who used to plan on making hardware changes every five years are now making those changes in three. Larger shops say they re-evaluate their hardware needs every six months.

And let's face it, you probably won't be locked into your current job forever.

You might wind up staring at the cutting edge of technology sooner than you think. And you will certainly be in a more marketable position on the job market if you keep abreast of technology.

Introducing MARK V™ for CICS users: a *unique*, 4th generation non-procedural application development system that saves you time and money at every stage of your application life cycle. See it at a free seminar near you!

Informatics just broke the productivity barrier with MARK V, an extraordinary timesaving application development system. But, MARK V is not for everyone. *It may be for you if:*

- ☑ You need help in reducing your backlog of medium to complex CICS applications.
- ☑ You use CICS with IBM-supported data access such as VSAM or DL/I.
- ☑ Your CICS system demands highly efficient application execution.

Then, MARK V can help you produce efficient compiled applications that rival the execution of well-written COBOL—in less than half the development time!

Easy application development and maintenance is just the beginning!

MARK V improves productivity throughout the application development and maintenance cycle—not just in the coding—by providing:

- Interactive application design and simulation
- Easy to use, menu-driven specification language for development and maintenance
- Transparent and complete data access/communications control
- Automatically produced application documentation

That means, with MARK V your programmer need only specify the solution. MARK V generates the *complete* application. This methodology allows you to solve more complex problems more efficiently using less highly trained personnel—*and that saves you money!*

Reserve your place at a *free Seminar* on MARK V—the simple new way to develop and maintain your medium to complex CICS applications.

As a data processing professional, you're also a professional skeptic. But the simplicity, versatility and timesaving capabilities of MARK V are easy to see—and prove. To do so, simply mail the coupon below or call toll free. We'll reserve your place at a free MARK V Seminar in a city near you. But attendance is limited.
So mail this coupon or call *today*.

SYSTEMS & PERIPHERALS

DATA STORAGE

CUSTOM SYSTEMS, INC.
BMX-1 disk controller

Custom Systems, Inc. (CSI) has introduced a disk controller, the BMX-1.

The BMX-1 is plug-compatible with the burst multiplexer channel on Data General Corp. minicomputers. According to the vendor, it allows users to select any storage module drive-interfaced disk drive for use with the DG S-140, S-280 and MV Series CPUs.

The product offers the user four disk drive connect ports with software-configurable drive characteristics on a port-by-port basis.

According to the vendor, the unit uses electronically erasable programmable read-only memory technology, eliminating the need for switches and making all functions configurable via downline loaded software.

The BMX-1 contains a 32-bit error correction code, offering burst error correction to 11 bits in length.

The list price of the controller is $4,995, with quantity discounts available.

Custom Systems, 6950 Shady Oak Road, Eden Prairie, Minn. 55344.

INNOVATIVE DATA TECHNOLOGY, INC.
Magnetic tape subsystems

Innovative Data Technology, Inc. has introduced three ½-in. 9-track, 800/1600 byte/in. magnetic tape subsystems for the Small Computer Systems Interface (SCSI) Bus.

The tape subsystems, which boast IBM/Ansi/Ecma compatibility, use an intelligent controller embodded behind two of the tape transports and in a stand-alone 3½-in. chassis when used with the streaming recorder, the vendor said. Variable data block sizes are programmable in both the read and write mode up to a maximum of 32K bytes of buffer storage, the vendor said.

The magnetic tape subsystems feature full hardware and software compatibility with any host unit or other peripheral supporting the SCSI standard bus, the vendor said. In addition, the subsystems control up to four ½-in. Industry Standard Tape Transports, and all of the systems may use 7-, 8½- and 10½-in. standard reel sizes, the vendor said.

Other features include a tape-to-tape copy feature which can be implemented in the software, and over 40M bytes of data may be stored on a single 2,400-ft reel of tape, the vendor said.

Model TD1012/SCSI, which sells for $4,550, supports 9 tracks and 1,600 bit/in. in the start/stop mode operating at 12.5 in./sec or 100 in./sec in streaming mode. The data transfer rate is 20K byte/sec in start/stop mode and 160K byte/sec in streaming mode, according to the vendor.

Model TD1050/SCSI costs $5,150 and supports 7- or 9-track dual density 800 bit/in. and 1,600 bit/in. in start/stop mode operating at 45 in./sec. The data transfer rate is 72K byte/sec, the vendor said.

Model TD1750/SCSI sells for $5,950 and supports 9-track dual density 800 bit/in. and 1,600 bit/in. in start/stop mode operating at 75 in./sec. The data transfer rate is 120K byte/sec.

As options, rack enclosures, factory installation and maintenance contracts are available.

Innovative Data Technology, P.O. Box 178160, 4060 Morena Blvd., San Diego, Calif. 92117.

TERMINALS

KIMTRON CORP.
ABM 85H VT-52/100

Kimtron Corp. has introduced a terminal that reportedly emulates Digital Equipment Corp. VT-52/100 CRTs.

The ABM 85H VT-52/100 features green or amber characters, a 24-line by 80-col. screen, 16 programmable function keys, programmable cursor, an RS-232 port, user-selected embedded attributes and four international character sets, the vendor said.

By using different programmable read-only memories, the terminal also reportedly emulates Televideo Systems, Inc. 920, 925 and 950 or Data General Corp. D100/200 terminals.

The terminal is priced at $895.

Kimtron Corp., 2225-I Martin Ave., Santa Clara, Calif. 95050.

GOULD, INC.
PC Workstation

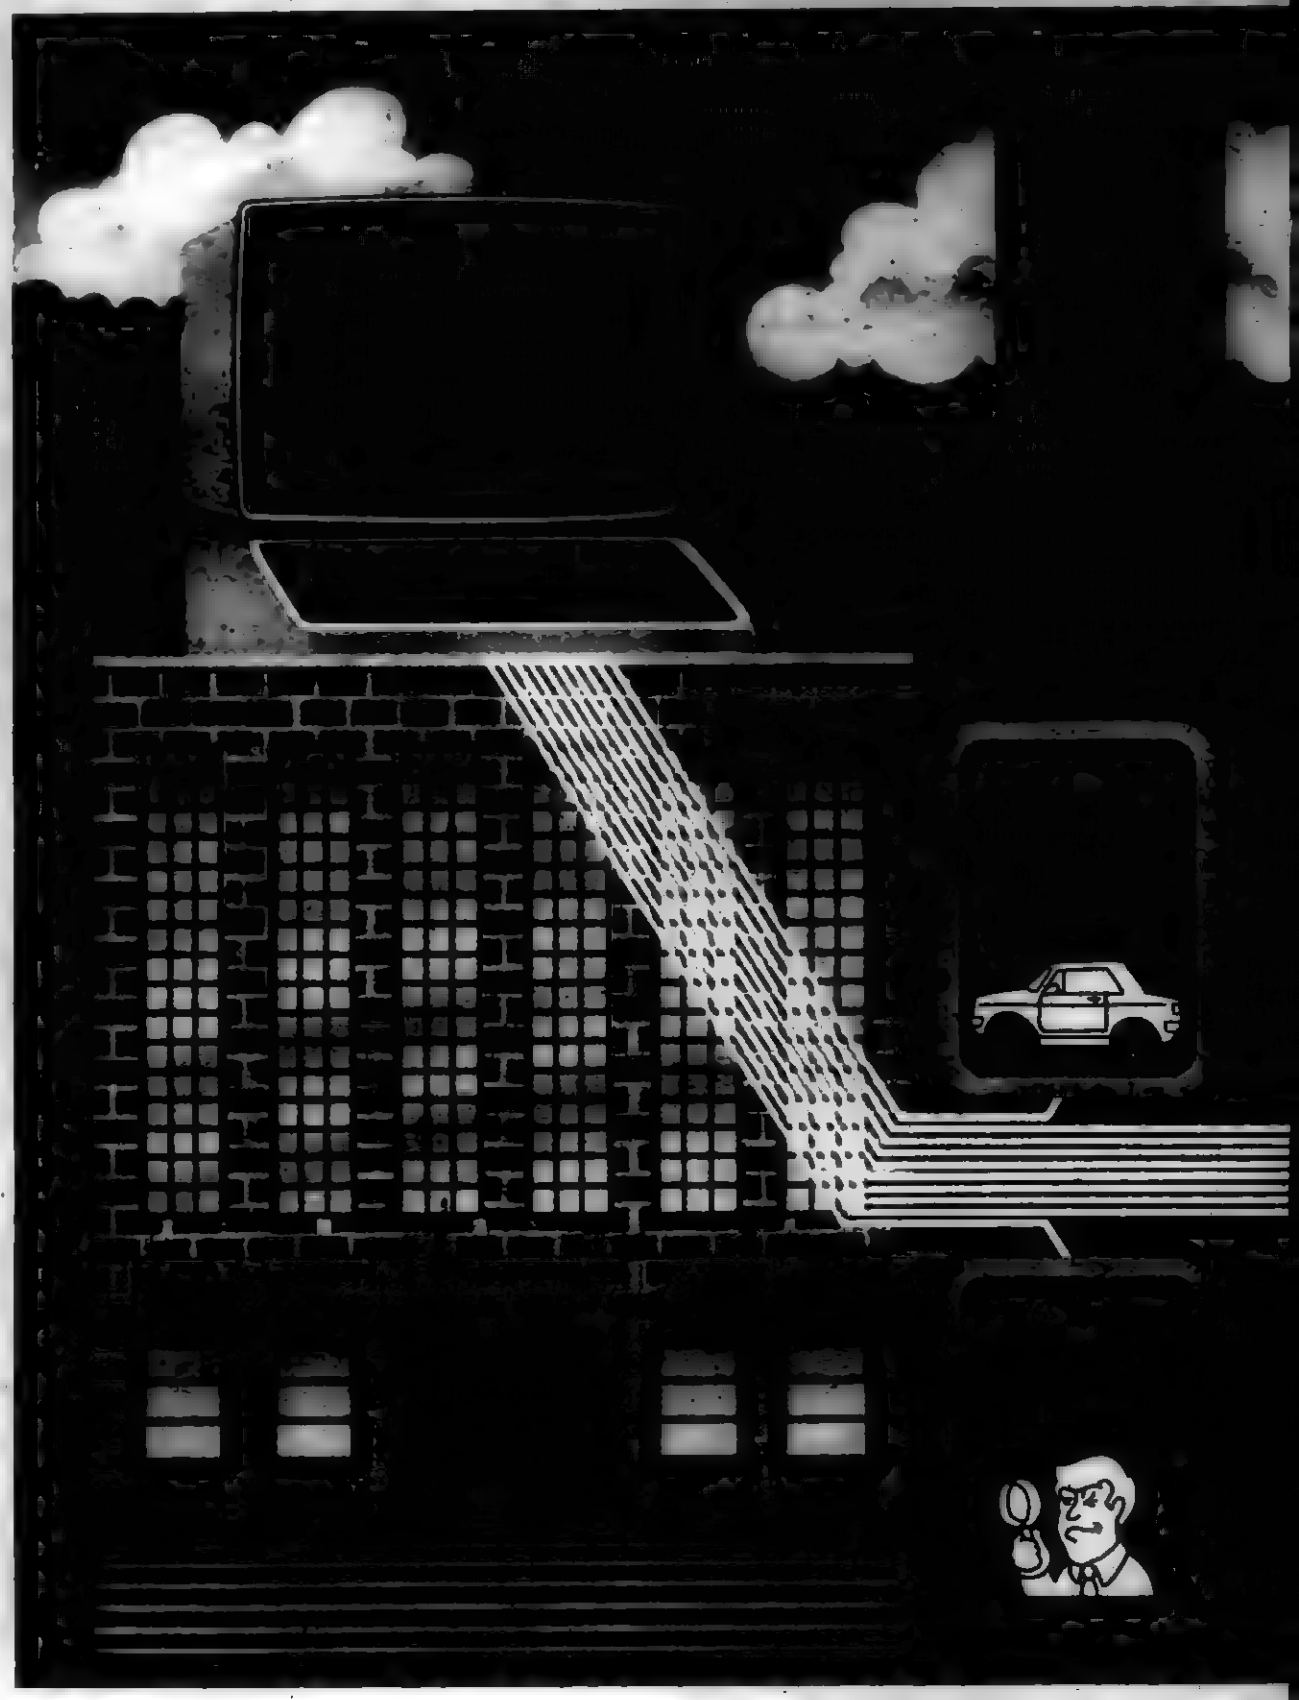
Gould, Inc.'s Modicon Programmable Control Division has announced a documentation and drafting workstation said to be compatible with many models of programmable controllers.

The PC Workstation includes a 16-bit processor and 512K bytes of program memory and a 16M-byte Winchester disk drive with a 5¼-in. floppy disk drive, the vendor said. The product reportedly provides text ladder diagrams and user-customized drafting for programmable controller equipment drawings.

The workstation also reportedly combines fully-formed graphics symbols with extensive commentary to produce high-resolution, informative displays.

The PC Workstation, including high-speed printer and software, is priced from $21,000, according to the vendor.

Gould's Modicon Programmable Control Division, P.O. Box 83-SVS, Andover, Mass. 01810.



SYSTEMS & PERIPHERALS

PENTA SYSTEMS INTERNATIONAL, INC.
Pentavision enhancements

Penta Systems International, Inc. has announced enhancements for its electronic graphics terminal, Pentavision, designed for use by publishers, in-plant printing operations and commercial typesetters using Data General Corp. computer systems.

According to a company spokesman, the enhancements allow precise lineup of type in made-up pages in the computer-assisted page-makeup terminal.

Features include visual locks that align type to alternative positions beyond the normal locking, based on the line measure and the quadding specified during original input. It also is said to allow automatic contouring of text by tracing an outline of the desired shape on Pentavision's bit pad, use of electronic scissors for cutting the page into sections for output and justification of type by feathering between lines or elsewhere in the text.

The terminals cost $33,995, according to the vendor.

Penta Systems, 1511 Guilford Ave., Baltimore, Md. 21202.

KEY TRONIC CORP.
KB 100

Key Tronic Corp. has introduced KB 100, a plug-compatible replacement keyboard for the Digital Equipment Corp. VT100 CRT terminal.

The KB 100 is a low-profile keyboard requiring less vertical space than the terminal's original keyboard, the vendor said.

Additionally, the KB 100 is intended for heavy office use and incorporates a microprocessor and solid-state capacitive switches.

Cost of the plug-compatible replacement keyboard is $379.

Key Tronic, P.O. Box 14687, Spokane, Wash. 99214.

KIMTRON CORP.
KT-7

Kimtron Corp. has announced a video display terminal featuring what the company describes as an ergonomic design.

The KT-7 terminal reportedly features a tilt-and-swivel screen, height adjustability, a 12-in., nonglare green or amber screen, menu setups and user-selectable hidden or embedded attributes. The menu setups, 20 programmable function keys with answer-back, are set from keyboard or host and stored in nonvolatile memory, according to the company.

The terminal is said to emulate the Televideo Systems, Inc. 920, 910 and 925 terminals and to offer code compatibility with the Televideo 924, 914 and 950. It reportedly can emulate other terminals with the addition of an optional programmable read-only memory.

The terminal is available now for $595.

Kimtron, 2225-I Martin Ave., Santa Clara, Calif. 95050.

DIGILOG, INC.
Remote Monitor Select Switch

The Network Control Division of Digilog, Inc. introduced the Remote Monitor Select Switch (RMSS), which reportedly allows users at a central location to monitor remote data circuits.

The system requires central and remote-site equipment. An Ascii terminal, master remote line monitor (RLM), data line monitor (DLM) and asynchronous modem are needed at the central site; the remote site requires a slave remote line monitor and RMSS. The Ascii terminal uses an RLM to monitor signal information. The signal causes RMSS to bridge the line so data traffic can be monitored by the DLM at the central site.

RMSS costs $325, which includes cables.

Digilog, 1370 Welsh Road, Montgomeryville, Pa. 18936.

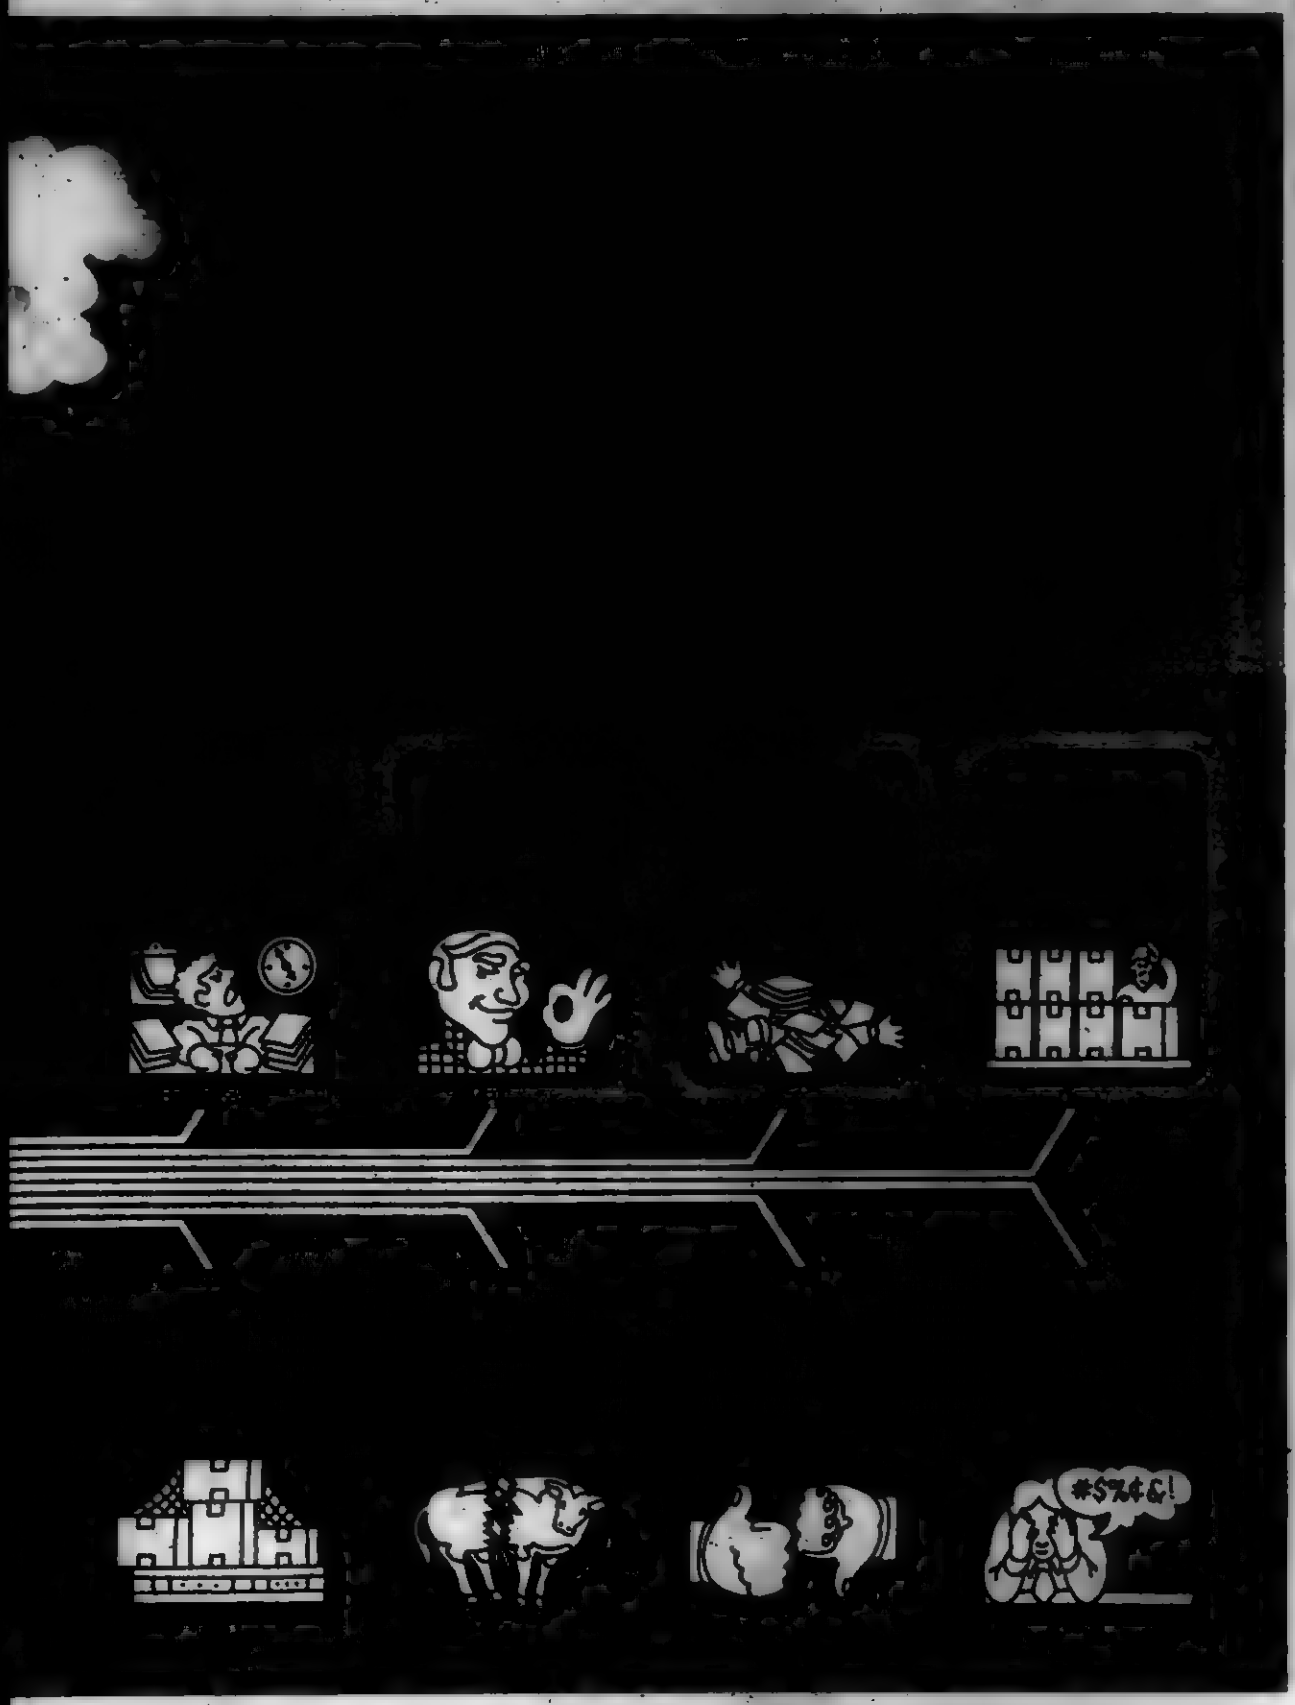
INTECOLOR CORP.
Fastscreen

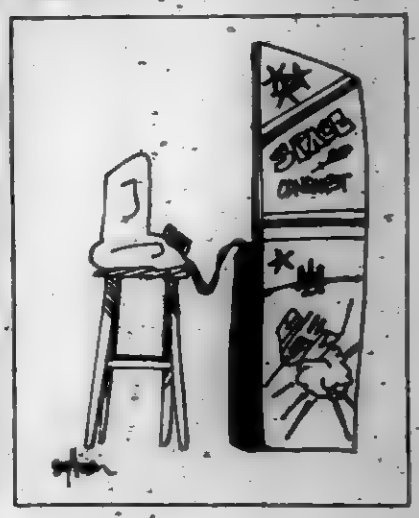
Intecolor Corp. has introduced a computer memory facility said to permit displays to be created on its 8001G color graphics terminal screen in one-quarter of a second.

Since it uses random-access memory, Fastscreen reportedly provides faster access to information than do conventional, flexible-media storage devices for process-control operations. Any of 63 different screens can be displayed on 8001G color graphics terminals equipped with single Fastscreen with 512K-byte storage. Up to 126 screens are available with dual Fastscreen, which provides more than 1M byte of storage.

Fastscreen is supplied on a printed-circuit board for use in the Intecolor card cage. The price for single Fastscreen is $1,245; the dual version is $2,450.

Intecolor, Intecolor Drive, 225 Technology Park, Norcross, Ga. 30092.





SYSTEMS & PERIPHERALS

PRINTERS/ PLOTTERS

GOLD KEY ELECTRONICS, INC.
Switchmate; Switchmate Jr.

Gold Key Electronics, Inc. (GKE) has announced the development of an intelligent printer switch for use with Digital Equipment Corp.'s LQP02 printer.

Switchmate reportedly allows as many as three Decmate system users to share the functions of a printer without having to wait for current printer activity. The sharing can be suspended at any time and dedicated to a single Decmate.

The switch is attached by cable to the Decmate systems and the LQP02 printer. Also offered is the Switchmate Jr., which has a two-user capability.

The Switchmate retails for $749 and the Switchmate Jr. for $499. Service and a warranty period are provided by the vendor.

GKE, P.O. Box 29, 735 Chestnut St., Manchester, N.H. 03105.

GRAPHICS SYSTEMS

TENTIME
Graphics T/S service; Management Touch

Tentime has announced two services for Digital Equipment Corp. users: graphics time-sharing capabilities for DEC VAX-11 users and Management Touch, said to provide a DEC VT100 with touch-sensitive screen capabilities.

Using a California Computer Products, Inc. Model 1051 plotter, contour mapping, bar charts, pie charts and bubble charts reportedly can be produced under the graphics time-sharing service.

Graphics features include dc servomotor drive, continuous drum roll, four-color pen action and .25mm resolution.

Time-sharing costs are $78/hour plus materials and a 15% surcharge on all materials, according to a vendor spokesman.

Management Touch consists of a touch-sensitive screen and logic board for $1,095.

A yearly maintenance service is also available for $150.

Tentime, 5375 Western Ave., Boulder, Colo. 80301.

POWER SUPPLIES

COMPUTER POWER SOLUTIONS, INC.
Electra-Guard

Computer Power Solutions, Inc. (CPSI) has expanded its line of electronic surge suppressors to include standby power supply systems.

The Electra-Guard standby power supply system comes in 200 Vac (optional 400 Vac) with an audible alarm and is sized approximately 6 by 11 by 13 in., a spokesman for the vendor said.

The unit itself is protected against line and battery fuses and a has a low battery cutout to protect against potentially damaging overloads, according to the vendor spokesman.

Suggested retail starts at $499.95 for the 200 Vac model.

CPSI, Suite 203, 3800 49th St. N., Pinellas Park, Fla. 33565.

TII ELECTRONICS, INC.
GPM-PX

TII Electronics, Inc. has enhanced its programmable power line monitor with a feature said to direct programming of power line fault thresholds by a front-panel keyboard.

The feature reportedly allows the operator to pinpoint fault conditions and to track and identify, via printout, power line problems such as high-line voltage, low-line voltage, voltage spike and drop, power failure and high-frequency noise.

Other features of the enhanced product, called GPM-PX, include a summary of events and threshold-setting capability, an RS-232 output, a dc high/low monitoring capability and spike amplitude window detection.

GPM-PX costs $1,950, the vendor said.

TII Electronics, 286 Terminal Road, East Setauket, N.Y. 11733.

THIS IS ONE FORM OF REAL TIME SCHEDULING.

ADC2 SOFTWARE IS ANOTHER.

Automated Data Center, ADC2, is *innovative* and *non-traditional* software that manages critical components of IBM's MVS computer operating system. It takes unique advantage of the MVS subsystem architecture.

It's intelligent software that's a real-time scheduler and monitor of job and system performance.

A software system that's very simple to use. Even for the novice.

ADC2 dynamically gathers job performance statistics and maintains this information as current and historical data for quick, on-line access.

Of course, ADC2 is designed to smoothly build schedules and access all your data center management information, ensuring increased control and throughput under the most demanding circumstances.

Additionally, your scheduling can be conveniently decentralized: different departments and remote sites are able to develop their own job schedules with simple commands.

And we made ADC2 extremely easy to implement. While other job scheduling systems typically require months and months of pre-planning and data entry, ADC2 can be productive the very same day it's installed.

It's that good.

For a demonstration of ADC2 or further information on the Cambridge A**2 family of high-performance software systems, we invite you to call Mr. Shawn McLaren direct: 415/941-4558.

He'll be glad to tell you about a software system that performs with flying colors.

The Cambridge Systems Group

24275 Elise, Los Altos Hills, CA 94022, U.S.A.
(415) 941-4558 • Telex 357437

London Paris Munich

SYSTEMS & PERIPHERALS

EDP POWER, INC.
Survivor

EDP Power, Inc. introduced the Survivor, a back-up power source for personal and small business computers.

The Survivor protects a computer from power flickers, power outages, line surges and brownouts, according to the vendor.

The product features automatic dc circuit breaker, two duplex outlets, a zero maintenance sealed battery and an automatic battery charger, the vendor said.

Three models provide 300, 400 or 1,000 watts of power and battery power that lasts 15 minutes or longer.

Prices for the Survivor back-up power source begin at $600, the spokesman said.

EDP Power, Suite 211, 1108A W. Devon Ave., Elk Grove Village, Ill. 60007.

EXIDE ELECTRONICS CORP.
Power Distribution Module

Exide Electronics Corp. has announced a line of power distribution systems for mainframe computers.

Exide's Power Distribution Module distributes and monitors power in a computer room, thus protecting it from voltage spikes, transients and other electrical surges, according to the vendor. The module has two options: metering and monitoring. The metering option displays output, voltage and other parameters, the vendor said. The monitoring module scans system parameters, stores 100 alarm conditions and provides printer or terminal interfaces, the vendor said.

The base system price starts at $3,760, a model with the metering option is priced at $4,800, and a module with the monitoring option costs $8,170.

Exide Electronics, P.O. Box 58169, Raleigh, N.C. 27658.

BOARD-LEVEL DEVICES

PRIVAC, INC.
Electro-Screen BT-1 2.0

Privac, Inc. has announced enhancements to its Electro-Screen BT-1 graphics board, designed for SS-50 and SS-64 buses.

Electro-Screen BT-1 2.0 enhancements reportedly provide 19.2K bit/sec character equivalent throughput, two-dimension output with scaling capability and rotation in one-degree increments.

Electro-Screen BT-1, equipped with a 6809 microprocessor, provides bit-mapped, 512- by 480-pixel resolution and 84- by 48-line text display, the vendor said.

The enhanced graphics board is priced at $795.

Privac, 3711 S. George Mason Drive, Falls Church, Va. 22041.

MOTOROLA SEMICONDUCTOR PRODUCTS, INC.
M68BSA1-1; M68BSA3; M68BSAC

Motorola Semiconductor Products, Inc. has announced support of its MC68008, MC68010 and MC68451 chips with a real-time bus state analyzer (BSA) and two additions to its series of personality modules.

The additions include:

- The M68BSA1-1 — An MC68000, MC68010 and MC68451 personality module. The M68BSA1-1 is a redesigned version of the vendor's MC68000 BSA1 personality module. The new product supports the MC68000 and expands its support to the MC68010 virtual memory microprocessing unit and the MC68451 main memory unit. It has two cable and probe/connector assemblies.
- The M68BSA3 — An MC68008 personality module. It supports the MC68008 microprocessing unit and has a cable and probe/connector.

Both of these personality modules require a third offering, the M68BSAC BSA control module.

The personality modules function with three BSA trigger modes (continuous trace, sequential and window) and provide address (software) and discrete (hardware) histogram displays, the vendor said. Also, the BSA1-1 and the BSA3 modules reportedly provide matching support for the MC6800, 68008 and 68010 emulator modes that are used in the vendor's HDS-400 hardware development station. Combined with the HDS-400, the BSA can provide complex event break points — specified by up to seven events from 79 qualifier lines — on other than program instructions.

Pricing for the control module and two personality modules is: $3,500 for the M68BSAC and $1,050 each for the M68BSA1-1 and M68BSA3.

Motorola, P.O. Box 20912, Phoenix, Ariz. 85036.

STD MICROSYSTEMS
Models 5870A and 5380A

STD Microsystems has announced two additions to its line of bus modules.

The Model 5870A is said to be a fully standard bus-compatible interface with Zilog, Inc.'s Z80 microprocessor.

The unit also offers a dual RS-232C serial interface. It contains two software programmable asynchronous or synchronous RS-232C serial channels with transmission rate selection and an optional crystal-referenced transmission rate oscillator, the vendor said.

The external RS-232C interface is configurable with data communications or terminal equipment and meets the requirements of RS-232C configuration F. The asynchronous configurations cost: $175 for 2.5 MHz, $200 for 4 MHz and $235 for 6 MHz. The synchronous configurations cost: $185 for 2.5 MHz, $210 for 4 MHz and $245 for the 6-MHz version, the vendor said.

Also unveiled was the Model 5380A Z80 dual parallel I/O module, also said to be STD-Z80 bus-compatible.

It reportedly provides four independent 8-bit I/O ports, two of which are capable of bidirectional I/O. The module has all bus signals fully buffered for minimum loading and maximum system expandability. The Model 5380A costs $150 for 2.5 MHz, $180 for 4 MHz and $210 for the 6-MHz version.

The STD bus interrupt daisy chain is implemented on board both modules, reportedly allowing serial priority interrupt arbitration within modules of the system.

STD Microsystems, 599 Sherman Ave., Palo Alto, Calif. 94306.

AUXILIARY EQUIPMENT

PERIPHERAL CONNECTIONS, INC.
E-Z-Reader

Peripheral Connections, Inc. (Percon) has introduced a bar code reader called E-Z-Reader, which supports the two most prolific industrial bar codes, 39 and interleaved 205, according to the vendor.

Communications are standard via an RS-232C port. There is a beeper to indicate a good read. Operator feedback is available by two LED host-controlled status indicators and a low-frequency tone, the vendor said.

The vendor said the product was developed for the customer who wants to read dot matrix or medium-density printed labels and have operator feedback.

The E-Z-Reader costs $395. An operating and installation manual is available for $20.

Percon, P.O. Box 1952, Eugene, Ore. 97440.

COMPUTRONICS LTD.
Forms Driver

Computronics Ltd. introduced Forms Driver, which supports Prime Computer, Inc. Forms software for Televideo, Inc. 925 and 950 and Hazeltine Corp. Espirit III terminals.

Forms Driver supports five types of cursors: blinking block, steady block, blinking underline, steady underline and none, the vendor said. The software allows the user to select the type of cursor used with Forms and when Forms is exited. Forms Driver supports reverse video and blinking characters, according to the vendor.

Forms Driver is available for a one-time license fee of $1,500 for each type of terminal.

Computronics, 150 North Ash, Wood Dale, Ill. 60191.

SWITCHMASTER CORP.
VS controller

Switchmaster Corp. has introduced a new control system for its line of IBM-compatible channel switches.

The VS controller includes specialized hardware and software to control a single channel switch as well as a network of channel switches.

The system reportedly allows up to 24 switches to be operated from a single CRT terminal.

The 880 series channel switch allows up to 16 strings of peripheral devices to be connected to as many as eight CPUs in any configuration, according to the vendor.

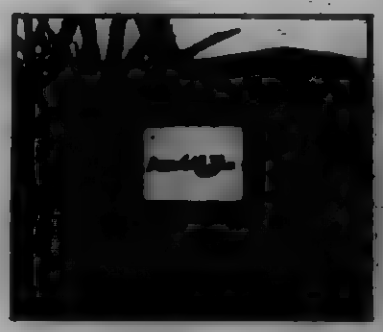
With the VS feature, the 880 can coexist in the same network with the previously announced 880 switch, the vendor said.

The switches range in price from $61,000 to $99,000.

The 880 switch reportedly includes the VS control system with a CRT terminal, but there is a charge of $8,900 for the feature when installed on the smaller switches.

Switchmaster, Suite 9, 35 Mitchell Blvd., San Rafael, Calif. 94903.

Saudi Computerworld is your link to the Saudi Arabian computer market.



The Saudi Arabian computer equipment market was worth $78 million in 1981. Researchers forecast a total market value of $222 million by 1987. The market is well-developed with computers, minis and mainframes, in virtually every sector. Government and related public organizations represent 50% of the market.

Now you can reach this valuable market with *Saudi Computerworld*. As part of *Computerworld*'s worldwide family of computer publications, *Saudi Computerworld* shares in the largest international computer information network. It is a monthly bilingual (Arabic/English) magazine circulated to 12,000 DP professionals in the computer user environment in the Gulf Peninsula. *Saudi Computerworld* reports on news and ideas of interest to small and large computer users in business, industry, government, and educational organizations.

CW International Marketing Services gives you one-stop advertising service in countries around the computer world. For more information on *Saudi Computerworld* or any of our other foreign publications, just fill out the coupon below.

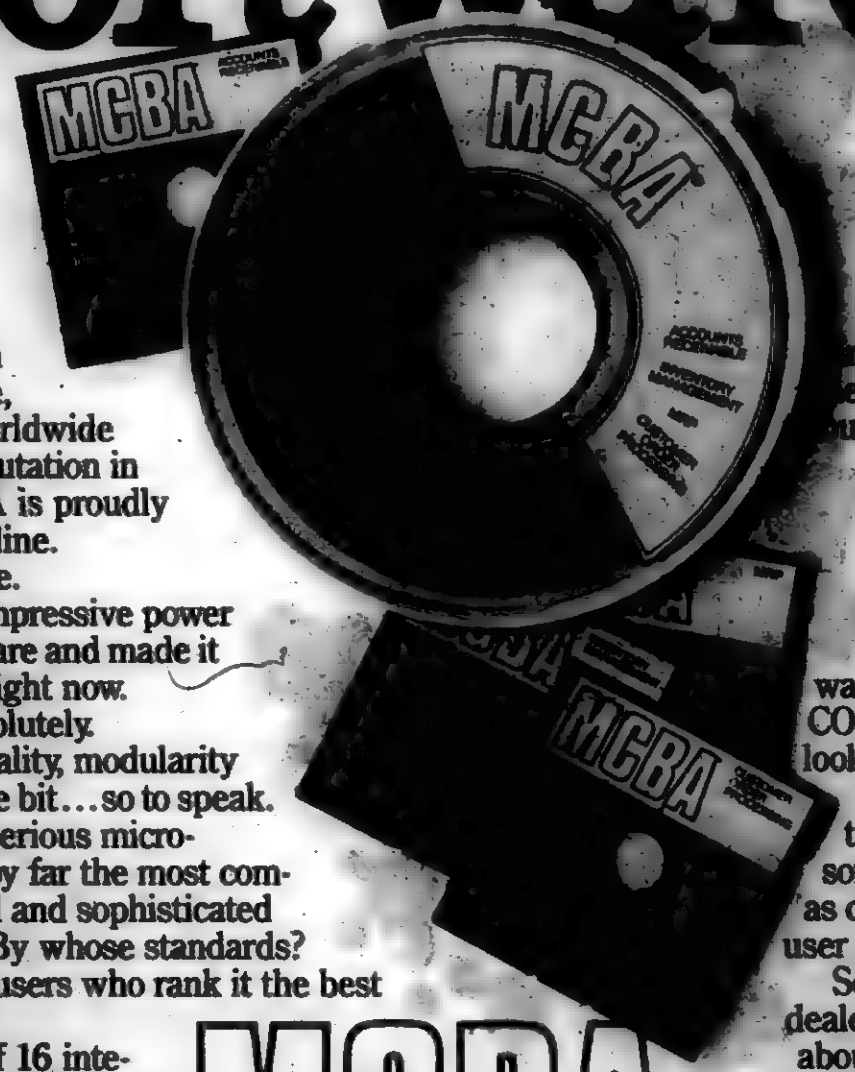
MCBA introduces shrink-to-fit software.



With nine years in minicomputer software, 15,000 installations worldwide and an established reputation in the mini world, MCBA is proudly shrinking its software line.

Down to micro size.

We've taken the impressive power of minicomputer software and made it available for micros. Right now.

Alter the fit? Absolutely.

Alter the functionality, modularity and capability? Not one bit…so to speak.

This new line of serious microcomputer software is by far the most comprehensive, well-tested and sophisticated in the industry today. By whose standards? Thousands of MCBA users who rank it the best in the business.

MCBA's library of 16 integrated manufacturing, distribution and accounting packages can be installed in whatever combination

nd sequence a user eeds for his or her usiness.

It grows with businesses. No matter what size they are now. Or want to be later.

And MCBA software now runs in RM/COS,® UNIX™ and UNIX look-alike environments.

In other words, we've tailor-made our newest software to fit micros—as comfortably as it fits user needs.

So whether you're a dealer or a user, find out about it. Call us now at (818) 957-2900.

Shrink-to-fit software. For growing businesses.

MICROCOMPUTERS

Micro tools called short of user needs

By Peter Bartok
CW Staff

PALM SPRINGS, Calif. — Microcomputer software is working some wonders in the corporate environment, but a lot more innovation is required, according to systems designers for four top U.S. corporations who spoke here recently.

Systems executives for General Electric Co., Bank of America Corp., McKesson Corp. and Aetna Life and Casualty Co. shared their expectations with information industry representatives attending Infocorp's 1984 Strategic Issues Conference.

"We've got to deliver real data to the user in terms that he can deal with it," according to Coby Dunn, vice-president of interactive corporate services for Bank of America.

Dunn said his centralized data processing functions serve 10,000 users worldwide, along with several thousand word processing users, from seven mainframes.

Projects currently under way at Bank of America's new End-User Computing Department are focusing on integrating personal computers into vertical markets and building an extract facility to enable users to extract the data they are demanding. "Users are trying to get data off systems that aren't designed to give data in that format," he said.

Center of expertise

Jeffrey L. Ehrlich, manager of systems architecture with GE, said his department serves as the center of expertise for GE's 250 separate businesses and is responsible for distributing information, establishing policy and guidelines and major acquisition approval, among other functions.

Micro applications software has improved, and vendors are becoming more professional, he said, but several problems need to be resolved: "me-too products — we don't need a Dbase that is 10% faster"; unfinished products that don't perform to claims; overpriced software; and the perception that popularity equals quality. Ease of use is low on the list, he added. "The bottom line is getting the job done."

In poll of IBM micro users

By Paul Gillin
CW Staff

SAN JOSE, Calif. — Although most IBM Personal Computer users in large corporations believe their microcomputer acquisitions have been well worth the cost, they would like to see a faster machine and better provisions for connections to mainframes and other Personal Computers. Those are among the findings of a report released here recently by Strategic, Inc.

While most respondents said connections between Personal Computers and the mainframe and between individual Personal Computers are important, they indicated that no vendor yet deals effectively with both aspects of that communication. Most large users desire the connections to share expensive peripherals, programs and data, the survey said.

In order to deal with the problem, most users are actively considering purchasing a local-area network, the survey found. However, the report said no current local-area networks provide capabilities for efficient mainframe access, and most mainframes cannot function effectively as network controllers.

About two-thirds of the large users employ IBM 3270 emulation to access other systems, while over 35% wanted to use the Personal Computer strictly as a terminal. Over one-third wanted to use both computer and terminal capabilities.

The report surveyed 70 larger companies that use both the Personal Computer and at least one mainframe system and 100 smaller companies that use at least one Personal Computer and some other minicomputer or microcomputer. All of the organizations used at least one IBM Personal Computer.

Large users cite speed

Almost 90% of the large users stated that their Personal Computers allowed them to perform major applications faster; 83% said the micro improved work quality; and 68% said they had implemented applications that were not previously computerized.

However, 60% of the users indicated at least some interest in a faster version of the Personal Computer. Planned en-

See RESPONSE page 82

IBM micro strategy outlined

SAN JOSE, Calif. — IBM's business-based Personal Computer product line, including the Personal Computer XT, 3270 Personal Computer and Personal Computer XT/370, will be significantly enhanced over the next two years and phased out entirely by 1987 in favor of much more powerful products. IBM will also settle on an expensive price umbrella, under which all other vendors will compete.

Those are among the predictions contained in a report on the Personal Computer market released recently by Strategic, Inc. The report predicted that the high-growth phase for Personal Computer products will end by 1986, after which IBM's products will settle into a comfortable 30% growth rate.

The IBM price umbrella will be larger and higher for future products, largely because IBM's Independent Business Unit, which originally designed the products, has been absorbed into IBM's Entry Systems Division and will now bear the burden of higher research and development overhead, the study said. However, increasing price/performance pressure from plug-compatible vendors and major competitors will force Big Blue to improve performance to avoid losing market share.

IBM's 3270 Personal Computer and XT/370 effectively have no competition, and the company still controls the large

BECK DOUBLE DENSITY DISKETTES

SINGLE SIDED $2.19 ea. / $2.79 ea. DOUBLE SIDED

Our message to you is simple. If you like the quality of Dysan, Verbatim, 3M, et al, you'll like the quality of Beck soft sector

5¼" flexible diskettes. The only major difference is cost. We're less expensive. In fact, a lot less expensive.

Why does Beck cost less?

Our philosophy is: Excellent quality and reliability, at a cost that beats the jacket off other diskettes. We can do it because we (1) put our money into the product, not mega-marketing schemes and fancy packaging; and (2) sell our money-saving 25-diskette pack to you direct via a toll free order line, so you get fast, door-to-door service efficiently.

What about quality and reliability?

At Beck we take no shortcuts. You get the best because we are committed to excellence. Every diskette is manufactured to very strict quality standards.

• Full 7 Year Warranty • 100% Certified, 100% Error Free • Satisfaction, Money Back Guarantee • Meets or Exceeds ANSI Standards

DP department control of IBM Personal Computer acquisitions

MICROS from page 81

hancements include better printers, enhanced memory, graphics plotters and communications hardware and software.

File sharing between Personal Computers was cited as a need by over 75% of the users. In addition, 85% of the large users share their IBM Personal Computers among two or more people. In most cases, a primary user kept the computer in an office and secondary users occasionally employed it.

Most of the users in either type of organization were middle-level managers, the report stated. In large companies, purchase, installation, training and service are handled mainly by the DP department. Large companies also tend to purchase more complete systems than smaller companies, with over 70% of these configured with two floppy drives or 10M-byte disk drives. The report anticipated that over 80% of the large users who need access to central data files will install 10M bytes or more of hard disk capacity.

Twenty-five percent of the respondents cited spreadsheet analysis as their primary application. Financial applications and word processing were cited by about 15% of the large users.

Lotus Development Corp.'s Lotus 1-2-3 and Visicorp's Visicalc were the most popular application packages.

The report, "IBM PC User Reactions, Requirements and Plans — 1984," is priced at $950.

Strategic, P.O. Box 9747, San Jose, Calif. 95157.

STRATEGY from page 81

corporate market, the survey noted. Most competitors will be forced to compete in sales to smaller firms.

Main push

IBM's main push in 1984 will be with the 3270 Personal Computer, which will be promoted in IBM MVS and VM operating environments. The XT/370 will be enhanced this year to allow it to interact more effectively with mainframe systems, the report predicted. A possible improvement to the 3270 Personal Computer would be a menu-driven IBM TSO interface. Future versions of IBM's 3274 terminal could include a network controller supporting networks of 3270 Personal Computers and XT/370 workstations, the study said. Future versions of the XT/370 will probably feature larger disks and peripherals, as well as better integration of the VM/PC operating system within IBM PC-DOS environments.

The XT/370 is a strategically important, but technically weak, product that is seriously hampered by its limits of 416K bytes of physical memory in 370 mode and maximum performance of .1 million instruction/sec, the report stated. There is little integration of the XT/370 with the host processor.

However, the XT/370 continues IBM's push to make the mainframe the center of the information processing system and represents an effort to establish IBM as a leader in the personal workstation arena, the survey noted.

Toshiba unveils T300 updates

TUSTIN, Calif. — Toshiba America, Inc. has announced the enhancement of its 16-bit T300 Personal/Business Computer and its release as a system with bundled software.

The T300 Computing System reportedly features as software Microsoft, Inc.'s Multiplan and Softword Systems, Inc.'s Multimate. The standard system is said to include 192K bytes of random-access memory with an Intel Corp. 8088 microprocessor.

The enhancements reportedly include an option for Microsoft's MS-DOS operating system 2.0 Release 2.

The system is available for $3,090.

Toshiba America, Information Systems Division, 2441 Michelle Drive, Tustin, Calif. 92680.

IF EVER THERE WAS A YEAR
YOU SHOULD ATTEND INTERFACE...

1984 IS THE YEAR

Local area networking. Desktop integration. Digital networks. Voice, data integration. Workstation management. The AT&T divestiture. These are just a few of the concerns that confront you daily as data communications, DP and MIS professionals.

That's exactly why the 12th annual INTERFACE Conference and Exposition for the data communications community is more important than ever.

In Las Vegas, March 12-15.

Manufacturers, suppliers and carriers in the communications and information processing industries will be repositioning themselves to address vital end-user concerns—at INTERFACE '84

At INTERFACE '84, explore the numerous user strategies and the newest advancements in technology to help take the confusion out of the vast selection of systems integration opportunities open to you.

Participate in the INTERFACE conference—75 plus sessions and more than 200 industry speakers and analysts. Visit the big INTERFACE exhibit floor offering more than 1200 exhibit spaces of the latest products and services from giant companies as well as from future industry leaders.

Whether your focus is hardware-oriented or policy-oriented...from software systems to network controllers...you'll find your answers at INTERFACE '84.

For more information about the INTERFACE '84 Conference and Exposition, call (617) 449-6600.

INTERFACE '84
TWELFTH ANNUAL CONFERENCE & EXPOSITION
Co-Sponsored by BusinessWeek and Data Communications
March 12 to 15 □ Las Vegas Convention Center

A presentation of The INTERFACE GROUP, Inc., world's leading producer of computer conferences and expositions including INTERFACE, FEDERAL DP EXPO, COMDEX/Winter, COMDEX/Spring, COMDEX/Fall, COMDEX/Europe, COMDEX in JAPAN, the nationwide COMPUTER SHOWCASE EXPOs and The BYTE COMPUTER SHOWS.
300 First Avenue, Needham, MA 02194 • Offices in Ft. Lauderdale, Washington, D.C., Amsterdam and Tokyo.

Now you don't have to be rich to be powerful.

Riches and power don't always go together. Take Plexus, for instance. The world's most powerful UNIX*-based supermicros.

Powerful because multiple processors share the UNIX load. So processing power is distributed to where it does the most good.

Terminal I/O. Disk I/O. Data communications. And, of course, data processing.

Our unique architecture also lets us bring you the world's first UNIX Network Operating System (NOS). So you can combine Plexus systems in an Ethernet network for even more power.

NOS gives you real time, continuous access to files. From anywhere in the network.

Files are also updated on the same basis. So everyone in the network works with up-to-the-minute data. Automatically.

No waiting for file transfers. And that's a decided improvement over everything else that's out there.

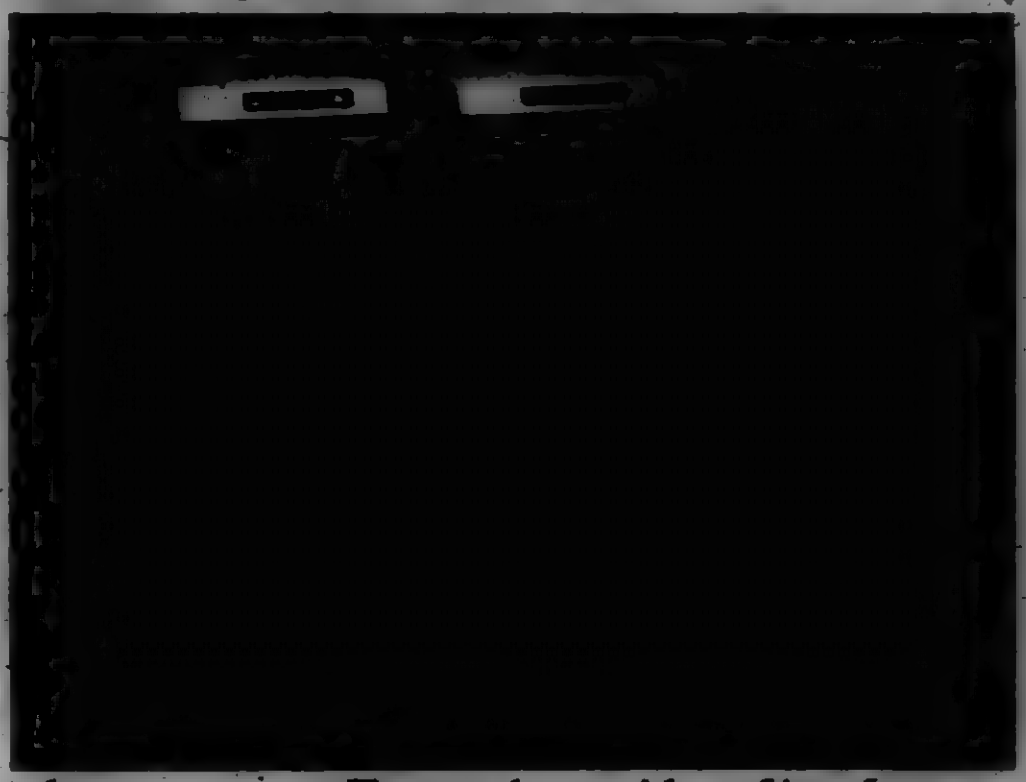
You also get to save money on powerful UNIX-based software, including COBOL, FORTRAN, Pascal, BASIC, and C. Database management and word processing, too. As well as hundreds of third party UNIX packages.

Plus our own software and maintenance support. And even a software referral service for your OEM programs.

Does all this make us expensive?

Absolutely not.

In fact, Plexus systems cost thousands of dollars less than the minicomputers we outperform.



To get a better idea of just how good that performance is, come get a demonstration. Call *800-528-6050*, ext. *1444*. In Arizona, *800-352-0458*, ext. *1444*. Or write Ralph Mele at Plexus Computers, Inc., 2230 Martin Avenue, Santa Clara, CA 95050.

You see? You don't have to be rich to be powerful. Just smart.

PLEXUS

Built for speed.

Arete Systems comes out with microcomputer

SAN JOSE, Calif. — Arete Systems Corp. has announced the Arete 1000 microcomputer. The high-performance system reportedly utilizes the strengths of various microprocessors to achieve performance levels of more than 2.8M instruction/sec.

According to a company spokesman, the microcomputer was developed in response to marketing research that found most high-end computer companies provide more hardware than is effectively utilized within the system. That excess hardware increases cost and lowers reliability.

Three separate buses implement the Arete 1000 architecture. Up to four Motorola, Inc. 68000 microprocessors share a common main memory, which may be as physically large as 16M bytes. Main memory is accessed via a 32-bit processor memory bus. With the system's tightly coupled CPUs, the Arete 1000 achieves extremely rapid dynamic load leveling between processors, the vendor said.

The system is able to store and retrieve large amounts of data on as many as 60 terminals simultaneously from a common data base. The Arete 1000 is thus able to perform large jobs that have always been reserved for large minicomputers and small mainframes, the vendor claimed.

Mass storage is provided by an 80M- or 160M-byte Winchester technology Fujitsu Ltd. disk drive and an Archive Corp. 45M-byte streaming cartridge tape drive. To deal with the problem of fault tolerance, there is 100% redundancy in all electromechanical systems. Components such as the CPUs, less prone to failure, are not duplicated, the vendor said.

Prices range from $46,950 for the Model 1114, which includes one 68000 CPU, 16 serial ports, 2M bytes of random-access memory, 180M bytes of hard disk memory and 48M bytes on a streaming tape. A larger 1200 series unit costs $102,450. Model 1200 configurations include four 6800 CPUs, 60M bytes of random-access memory, 64 serial ports, 320M bytes of hard disk memory and 48M bytes on a streaming tape, the vendor said.

Arete Systems, 2040 Hartog Drive, San Jose, Calif. 95131.

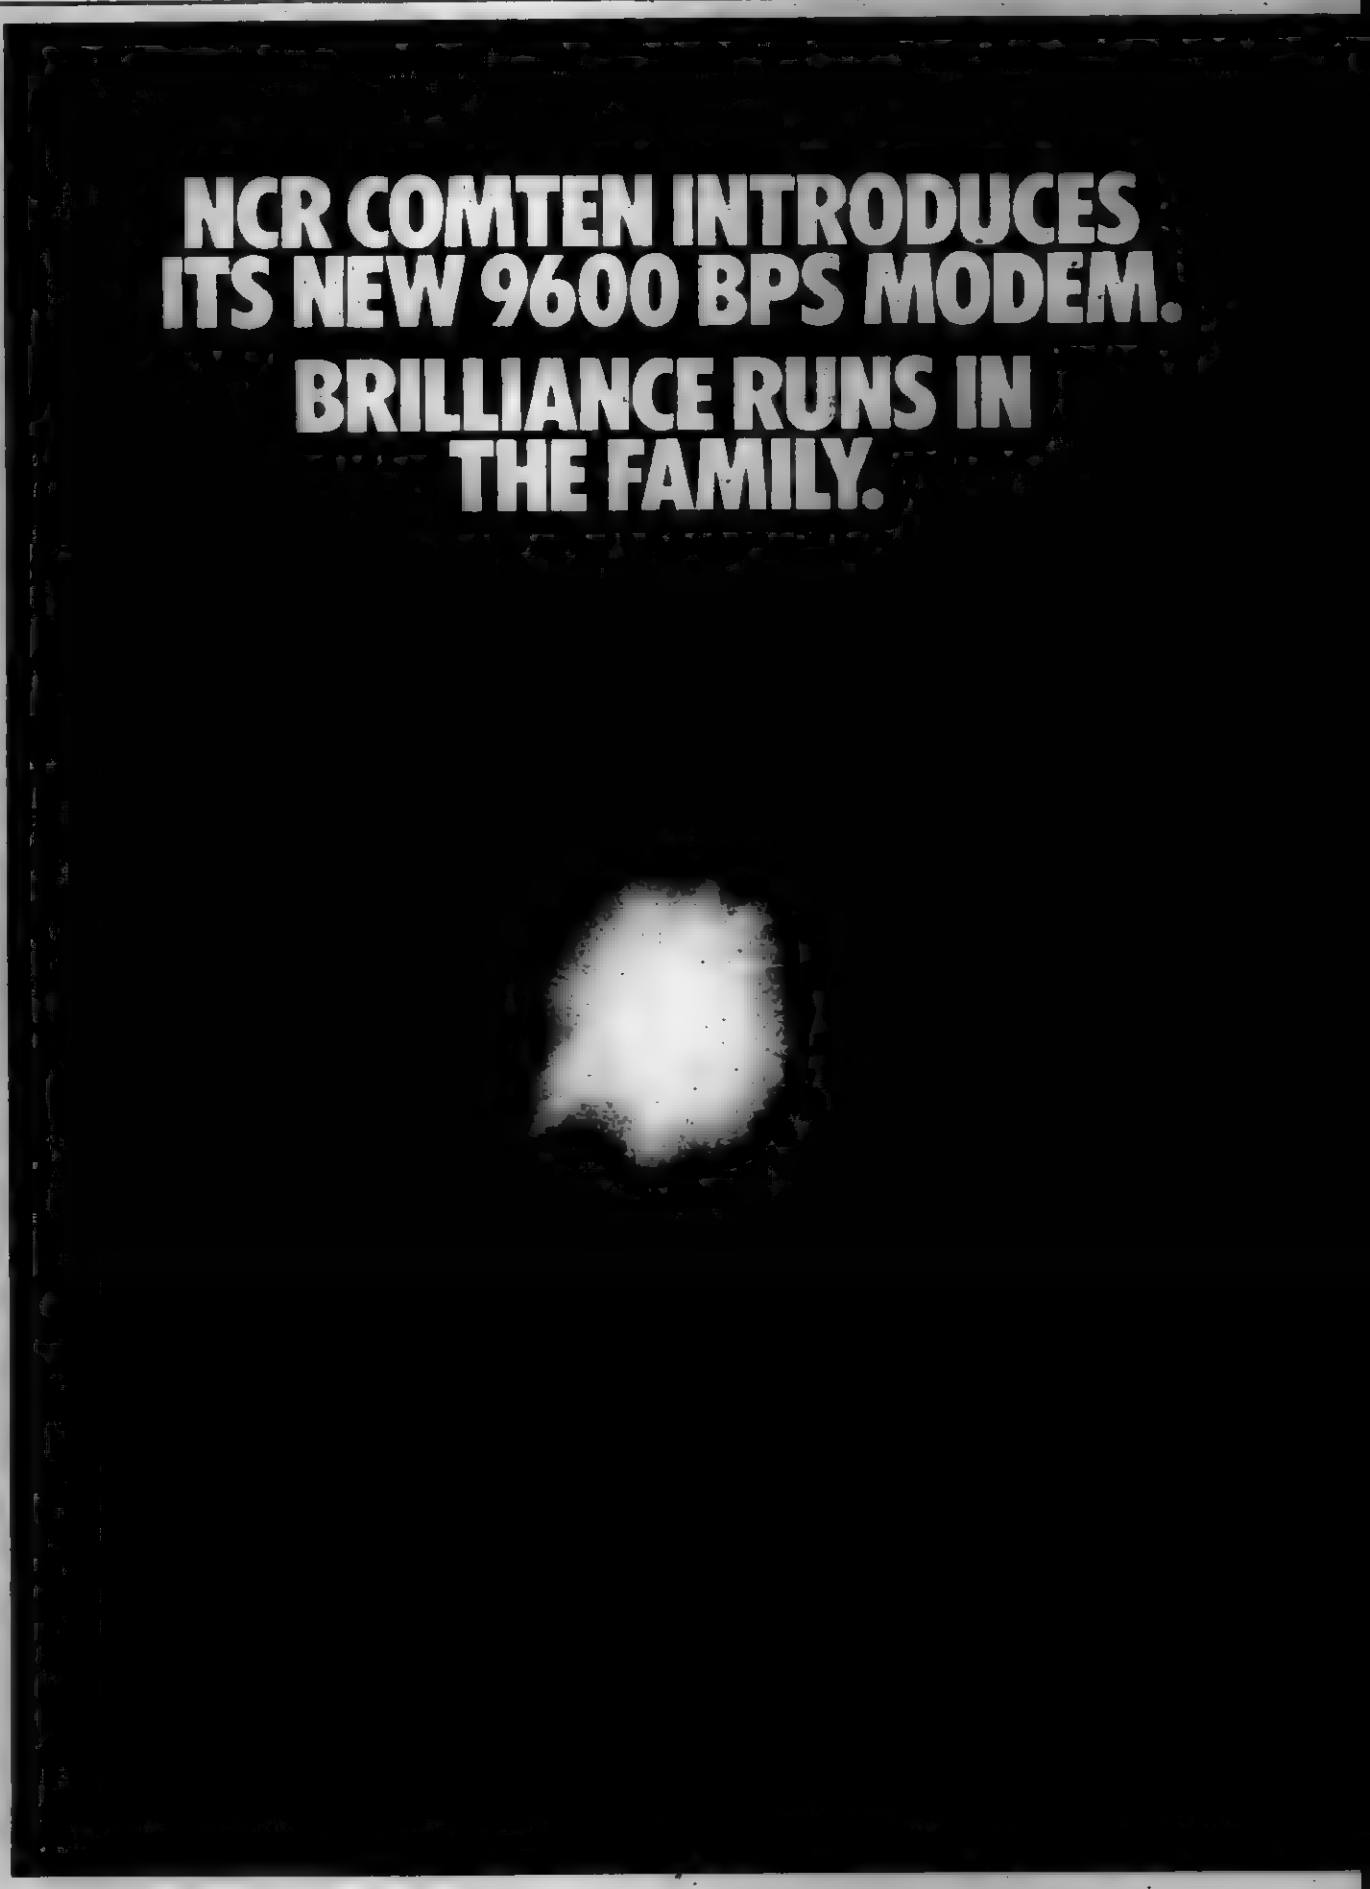
EXECS from page 81

At McKesson's divisions, according to Charles C. Hoerner, manager of office systems in the Information Services Division, similar problems exist as at GE and Bank of America. Additionally, he said, "Very often what [users] ask us for is not really what they need . . . [and] the tools that are introduced into the equation redefine the needs."

J. Curtis Roberts, director of systems architecture with Aetna, said that by the end of the decade his company expects to have some type of terminal on the desk of each of its 56,000 employees.

Before that can happen, Roberts said, it is necessary to meet several needs: communications innovations and standards to handle document interchange between personal computers and workstations "so the Personal Computer on my desk can look at and manipulate the document my secretary prepared on her workstation"; inexpensive and easy-to-install local-area networks for micro-to-micro file sharing and peripheral sharing; ease of use; multitasking of basic everyday applications; integrated software; and interfaces to mainframe host software.

All four executives said their companies have arranged for some type of discount program for employees to purchase micros for personal use. The day Bank of America announced the discount program, Dunn said, 1,100 orders were placed by employees.



Olivetti portable computer

Olivetti unwraps IBM-compatible micros

IRVING, Texas — Docutel/Olivetti Corp. has announced portable and desktop personal computers that are compatible with IBM Personal Computers.

The Olivetti personal computer is available in three desktop versions and two portable versions. The systems reportedly include video displays, detached keyboards and bundled tutorial and application software.

According to a spokesman, the products are capable of running most popular business applications software written for the IBM Personal Computer and use Intel Corp. 8088 microprocessors and the IBM PC-DOS operating system. They reportedly also can run on several other operating systems.

They are said to feature 12-in. green monochrome screens in the desktop models and 9-in. screens in the portable versions, with 640-by 325-pixel displays, reverse video, underlining, blinking and two levels of character intensity.

The standard versions, the DT-1 and P-1, are said to feature 128K bytes of memory and a single 320K-byte floppy disk drive. Models DT-2 and P-2 are said to include an additional floppy disk drive, while the desktop model, DT-HD, contains a floppy disk drive and a 10M-byte hard disk system.

The computers feature the vendor's Ram Disk, on which random-access memory can be isolated to function as an electronic disk drive for quick access.

The systems reportedly include built-in serial and parallel ports, internal disk drive controllers and video display interfaces.

Bundled application software is said to include Micropro International Corp.'s Wordstar word processing system, Infostar data base system and Calcstar spreadsheet program.

Suggested retail prices are $2,995 for the DT-1 and P-1, $3,295 for the DT-2 and PT-2 and $4,995 for the DT/HD.

Docutel/Olivetti, Office Products Division, 106 Decker St., Irving, Texas, 75062.

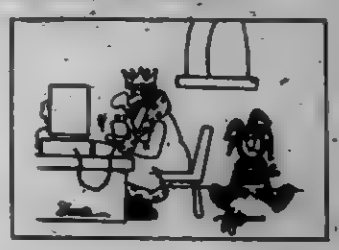
'Appgen' fits Xenix

HOUSTON — The Software Express, Inc. has announced a version of its Appgen applications generator package designed for use with Microsoft Corp.'s Xenix microcomputer operating system.

The Appgen applications generator is said to develop bug-free, self-documenting software and modify existing software to meet user needs. Appgen reportedly prompts the user through a series of English-language instructions, employing a menu-driven system that enables nontechnical programmers to develop applications packages.

The Xenix operating system, according to a spokesman, is compatible with most industry-standard microprocessors, including the Intel Corp. 8088, the Zilog, Inc. Z8000 and the Motorola, Inc. 68000. The Xenix version of Appgen is priced at $6,000.

The Software Express, Suite 220, 10103 Fondren, Houston, Texas 77096.



COMTEN SERIES 7160

9600 • 4800 BPS

GOOD NEWS COMES IN FAST PACKAGES.

Now the NCR Comten modem family is more flexible than ever. A *new* 9600 BPS modem joins our 4800 BPS model to give you a broader line of SNA-compatible modems. Even better, the new 7165 is available in both point-to-point and multi-point versions. It's fully synchronous. It operates over unconditioned, voice-grade leased lines, transmitting in full duplex mode.

That's more good news from NCR Comten, the recognized specialist in data communications processing systems. The new Comten 7165 not only delivers the speed, it gives you the reliability that NCR Comten has engineered into all its 7160 family modems. And unlike sideband modems, it delivers full compatibility with Systems Network Architecture.

YOU GET DSP, QAM AND MAINSTREAMING.

Digital Signal Processing—DSP—controls mod, demod, dynamic equalization and more. In fact, DSP—not analog—handles 98% of the modems' functions. Your benefits? Faster problem determination than with old-style analog methods. Fewer problems on problem lines. And freedom from component drift. You also get QAM, Quadrature Amplitude Modulation, one of the fastest, most stable transmission methods in the industry today.

SNA-compatible NCR Comten modems use the entire bandwidth. You get greater transmission integrity than with sideband modems, without transmission interruption. Their extensive diagnostics are part of the system so you don't have to cope with separate processors or extra black boxes. They fit easily into existing SNA networks. And they're up to all the standards, from RS232, V.24 and V.28 right through the CCITT recommendations on the phone line side.

INCREASED UP-TIME FROM A BRILLIANT DIAGNOSTICIAN.

The Comten 7165, like our 4800 BPS modem, comes with a range of diagnostics that can be initiated automatically by the host, or by the operator. First, of course, full SNA compatibility means that the host itself acts as the diagnostic monitor. Self-test, power loss, signal quality tests—and more—are all designed to let you test, check and log from one location.

The diagnostics you control, right from the front panel, let you isolate user problems in the network. Interactive lights flash to indicate trouble—and tell you precisely where the trouble is.

THE FAMILY TO GROW WITH—AT A PRICE YOU CAN LIVE WITH.

Whether you've an SNA-compatible system or not, NCR Comten modems are the ones to grow with. Common family features and capabilities mean you won't get caught behind an electronic wall when it's time to expand your system. There's reliability, too. Our modems are rugged, easy to install and repair with your own staff. Or NCR Comten will do the installation and service wherever your site is.

Add in the support only a company with the resources of NCR can deliver, worldwide, plus a range of maintenance options that makes your job easier than ever before. You've got a flexible family of intelligent 4800 and 9600 BPS modems that deliver superior performance at a price that'll light up your life.

For more on the brilliant new Comten 7165, call or write NCR Comten, Inc., Dept. 8015, 2700 Snelling Avenue North, St. Paul, MN 55113. (612) 638-7944.

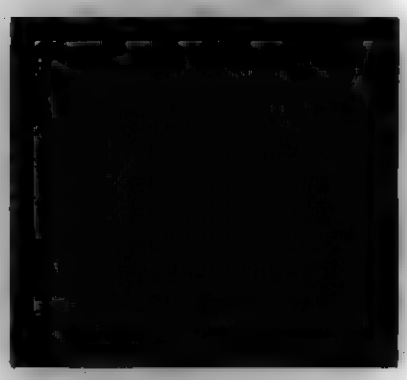
NCR Comten, Inc.

It's just not fair to claim that TEMPLATE® is the best graphics software available. Our competition's already discouraged.

And we like competition. We really do. It's just that it's difficult, if not impossible, to find graphics software as efficient and functional as TEMPLATE. Try as you might. TEMPLATE is the hands-down winner. With true device-independence and intelligence, total graphics functionality for CAD, scientific analysis, seismic work, process control, molecular modelling, and a host of other applications.

In almost any environment, whether it's batch or interactive, 2D or 3D, TEMPLATE wins. Benchmark tests prove it. TEMPLATE, besides being a true 3D graphics package for 32-bit or larger computers, features powerful commands that provide matchless productivity. TEMPLATE makes optimal use of available computer resources, giving you fast, efficient computer graphics program execution. And it supports over 125 graphics devices, from dumb terminals to sophisticated systems.

We also provide on-site installation and training, continuous updates, a regular flow of new device drivers, and ongoing documentation. What's more, we back you up with a telephone hotline so TEMPLATE software specialists can provide help if you need it.



But let's be fair. If you're looking for graphics software, call our competitors first. Find out what they have to say about theirs. Then call us, and find out why TEMPLATE really has no competition.

And why the competition has been so discouraged for so long.

SYSTEMS

QDP COMPUTER SYSTEMS QDP-400

QDP Computer Systems has announced the QDP-400 multiuser system based on Software 2000's Turbo DOS operating system and designed for increased system throughput.

The system features a standard 6 MHz Zilog, Inc. Z80B CPU for its master CPU and a Z80A CPU for each of the two to five individual slave CPUs, the vendor said. The QDP-400 master CPU has up to 256K bytes of random-access memory available, with 128K bytes for each of the user workstations.

The system is compatible with Digital Research, Inc.'s CP/M and MP/M operating systems and offers Turbo DOS memory and disk management and, when combined with QDP's bank-switched memory, provides more user storage, fast buffering and faster loading of programs and files, the vendor said.

Its configuration program allows the QDP-400 system to be used with most terminals, printers or modems. The system also features over 30M bytes of Winchester hard disk storage and a 1.2M-byte, 8-in. floppy disk with programmable drive shutoff, the vendor said.

Advanced QDP system features include an on-line Help program, a menu program, a hard disk format, system status and a hard disk diagnostic program, according to the vendor.

Prices for the system start at $9,995.

QDP, 10330 Brecksville Road, Cleveland, Ohio 44141.

ALPHA MERICS CORP. Datascribe 5

Alpha Merics Corp. has introduced the Datascribe 5, a microcomputer-based drafting system.

Datascribe 5 replaces the Datascribe IV and features an interface that supports both RS-232C and IEEE-488 protocols.

With the interface, the Datascribe 5 can be used as a stand-alone, keyboard-driven system for applying lettering or symboling to drawings or as a computer plotter, according to the vendor.

Also included in the product is a software emulation program that makes the Datascribe 5 compatible with application programs written to drive Hewlett-Packard plotters, the vendor said.

According to the vendor, the product can expedite preparation of schedules, charts, posters, formats, signs, parts lists, simple schematic diagrams and view graphs.

Datascribe weighs 29 lb and has a printing area of 18 in. by 39 in. Character heights are adjustable from 1/16 in. to 3⅛ in.

According to the vendor, users without computer-aided design (CAD) systems would be able to upgrade to any CAD system at any time.

Customers with CAD systems gain the benefits of a stand-alone Datascribe system and the advantages of a high-quality, low-cost flat-bed plotter, a company spokesman said.

The suggested retail price of Datascribe 5 is $8,450.

Alpha Merics, 20931 Nordhoff St., Chatsworth, Calif. 91311.

APPLIED INSTRUMENTATION CORP. Scout

Applied Instrumentation Corp. (AIC) has announced a stand-alone field microcomputer that measures hydrological, geotechnical and meteorological variables.

The Scout is a compact, battery-operated (three-month life span/battery) micro capable of storing approximately three months' worth of stand-alone measurements, recordings and control of multiple sensors. For example, a standard Scout with three sensors each recording every half hour and having 12K bytes of random-access memory (RAM) would record 48 sample/day on each sensor. At this rate, it would take 40 days to fill the RAM, a spokesman said. After expanding the same system to 56K bytes of RAM, it would take 200 days to fill the memory.

The Scout runs on the vendor's proprietary operating system and comes with 64K bytes of memory and up to four sensor interface cards, which support multiple channels of 4- to 20-mA current loop, 5V single-ended and mV differential, as well as digital I/O and supply sensor power. It has built-in RS-232C and current loop serial interfaces. All electronics are housed in one sealed enclosure and operate over a temperature range of -35 C to 65 C.

The user communicates with the Scout via any compatible hand-held terminal, and the cassette tapes are compatible with the Apple Computer, Inc., Apple II or IBM Personal Computer.

The Scout package, which includes the first interface card, a terminal and audio cassette, costs $3,950.

AIC, P.O. Box P195-169, Blaine, Wash. 98230.

CMA MICROCOMPUTER Computerized bulletin board

CMA Microcomputer has announced a computerized bulletin board service.

The service will allow users to share information, resolve problems and receive updated versions of the firm's applications packages, the vendor said.

Upon installation of the service, the vendor's Technical Center will be open to service users 24 hours a day during the business week. Users who

Large systems hardware is not an impulse buy.

Now there's a guide coming to you that will help with your homework.

The *Computerworld Buyer's Guide to Large System Hardware* is designed to give you a valuable, one-stop information source for large systems hardware and peripherals. Take a look at all the tools it will give you to help you make the right large systems choice:

- Large systems product listings, including mainframes, superminis, minis and small business systems and the terminals and peripherals designed to work with them. You'll get listings of printers, memory products, teleprinters, controllers, magnetic media and supplies, plotters, digitizers and much, much more.
- Vendor profiles that include company name, address, contact information, and primary markets served.
- An industry-specific editorial section that's designed to keep you right up to speed on the trends in large systems hardware. We'll give you news of the latest developments in mainframes, superminis and minis and their changing roles. You'll get information on the latest management techniques used in running data centers; planning for cost effectiveness and the new technologies in fifth generation computing.
- In addition to its comprehensive listings and editorial, the *Computerworld Buyer's Guide* will give you pages of detailed ads for large systems hardware products and peripherals that you can refer to all year long.

Each issue of the *Buyer's Guide* is updated before publication, and contains hundreds of listings that are accurate, complete and easy to use. The *Buyer's Guide to Large System Hardware* is distributed to *Computerworld*'s 114,000 subscribers in the U.S. — it's one more of the additional benefits you get as part of your *Computerworld* subscription. Look for it this April 16th.

And if you market your products to buyers of large systems hardware and peripherals, the *Buyer's Guide* will reach them with your product message just when they're researching products and vendors. Reserve space in the *Buyer's Guide* by March 2nd by calling one of the sales offices listed below, or call Ed Marecki, National Sales Director or Kevin McPherson, Product Manager, at (617) 879-0700.

are unable to call during regular business hours will be able to dial the service and leave a message for a technician. The technician will then prepare an answer or solution for the user and leave it on the message service. The service allows users to pick up updates when available or recover files which may have been lost due to hardware failures, the vendor said.

The extended service is free to users of the company's applications packages, which range in price from $49.95 to $1,700.

VISION-80 PTY., LTD. Five products for Apple II and IIe personal computers

Vision-80 Propriety, Ltd. has announced a series of five products for Apple Computer, Inc. Apple II and Apple IIe personal computers.

The Vision-80 circuit board plugs into the Apple motherboard, allowing a display of 80 columns of text with applications such as word processing, terminal emulation, data base and electronic spreadsheet, the vendor said. It costs $195.

The Vision 128/256 memory expansion card is said to be fully buffered with low power consumption and capable of replacing the 16K-byte random-access memory card used in many Apple IIs. It costs $295.

The Vision-VCE is a preboot disk for use with the Vision-80 board, allowing the user to see 80 columns of display with Visicorp's Visicalc. It costs $69.

Vision-AWII is said to be a preboot disk for Apple's Applewriter II word processing program, providing an 80-col. display when used in conjunction with the Vision-80 board. It costs $69.

The Vision-128 utility disk reportedly contains a variety of utility programs designed to take advantage of the extra memory of the Vision-128. It costs $79.

The products are available now through Vision-80 Pty., Ltd.'s U.S. distributor, Action Research Northwest.

Action Research Northwest, 11442 Marine View Drive S.W., Seattle, Wash. 98146.

NEC HOME ELECTRONICS, INC. New PC-8800 prices

NEC Home Electronics, Inc. has announced new bundled prices on its PC-8800 8- and 16-bit desktop personal computer systems.

The Smart Small Business package sells for $1,999 and the Middle Manager package for $2,499.

The first package features the PC-8801 8-bit CPU and keyboard with 64K bytes of random-access memory (RAM), the PC-8831 5¼-in., 640K-byte dual disk drive and the following 8-bit software: Wordstar and Mail Merge by Micropro International Corp.; Microsoft, Inc.'s Multiplan; Digital Research, Inc.'s CP/M 2.2; and two Microsoft Basic programming languages.

The Middle Manager package includes the PC-8801 8-bit CPU and keyboard with 64K bytes of RAM, as well as the PC-8801A-16 16-bit card with 128K bytes of RAM and Microsoft's MS-DOS operating system, the PC-8831 5¼-in., 640K-byte, dual disk drive and the same software as the Smart Small Business package.

According to the vendor, both packages are available with an 8-in., 2M-byte dual disk drive for an additional $800.

The PC-8800 system features high-resolution monochrome (640 by 400 pixels) and color (640 by 400 pixels) graphics. The detachable keyboard features a numeric key pad, five user-programmable function keys supporting 10 different functions and editing keys.

NEC Home Electronics, 1401 Estes Ave., Elk Grove Village, Ill. 60007.

CLM/SYSTEMS, INC. Unifier System

CLM/Systems, Inc. has announced the Unifier System, which is said to be a computer system for civil engineering, surveying, mapping, construction and utility organizations.

The multiuser, multitasking system includes a Sage Computer Technology Sage Super Microprocessor with 1M byte of random-access memory, an 18M-byte hard disk, floppy disk, two to four graphics terminals/workstations, multimode printer, plotter and interactive digitizer, according to the vendor.

Software, including an operating system, data base manager, word processor, spreadsheet, utilities and the complete CLM Cogo applications software package, is provided with the Unifier System.

The Unifier System costs under $25,000.

CLM/Systems, 3654 Gaidy Blvd., Tempe, Fla. 33611.

PROFESSIONALISM IS A COMMITMENT CERTIFICATION IS THE TEST

The 23rd Annual Examination for the CERTIFICATE IN DATA PROCESSING (CDP) has been scheduled for Saturday, May 5, 1984, at test centers throughout the world. Offered by the Institute for Certification of Computer Professionals (ICCP), the CDP certification program is directed primarily at business-oriented data processing people at the management and supervisory level.

If you are truly committed to professionalism, the CDP examination offers you an opportunity to validate your basic data processing knowledge and provides you with self confidence and a sense of professional identity in the data processing field.

CDP Examination content is updated each year, so give yourself time to review your knowledge in the field by mailing in the coupon below today. Application deadline is March 1, 1984.

☐ Send "Certificate in Data Processing Announcement and Study Guide," including an Application, Test Site List, Exam Content Outline, Bibliography, and Codes of Ethics, Conduct and Good Practice.

☐ Also send information on 1984 Certificate in Computer Programming Examination to be held on Saturday, December 8.

A CRT COMPATIBLE WITH DATAPOINT SYSTEMS

FOR ONLY $995*

SIMPLY AMAZING!

INTRODUCING KIE-3682
THE INTELLIGENT CHOICE

Today the intelligent Datapoint® user is demanding the KIE-3682. Why?. . .Because of the performance, economy and the service. Some of the standard features of the KIE-3682 are self diagnostics upon power up, printing from the screen directly to a serial printer, and displaying all control codes passed to the terminal. The KIE-3682 recognizes all DATABUS® software commands, and also enables the user to take advantage of Datapoint's® 5 function keys. An on site service contract is available through Western Union. The KIE-3682 carries a full 12 month factory warranty.

With all of the performance, economy and service, you can see why the intelligent Datapoint® user relies on the KIE-3682. Call today for more information, and be sure to ask about our 30 day, no risk plan.

MICROCOMPUTERS

Continued from page 88

microcomputer which can also run programs written for Digital Research, Inc.'s CP/M operating system.

The product features Zilog, Inc. Z80 and MOS Technologies, Inc. 6502 microprocessors, 64K bytes of random-access memory, a single-side, single-density disk drive, 14-lb weight, a monochrome monitor with 280- by 192-pixel resolution and a Centronics Data Computer Corp. parallel port. The microcomputer will bundle word processing and personal management software.

Assistant CP/e costs $1,595, a spokesman said.

Data Technology Industries, 701-A Whitney St., San Leandro, Calif. 94577.

STORAGE

AMDEK CORP.
AMDC-I; AMDC-II

Amdek Corp. has introduced two 3-in., microfloppy disk drive systems compatible with Atari, Inc. 400, 800 and XL series computers.

The AMDC-I, a single drive, provides up to 180K bytes of double-density, on-line formatted storage capacity.

The AMDC-II, a dual-drive, offers up to 360K bytes of double-density storage per side. The full capacity can be accessed by the user manually flipping it over, the vendor said.

According to the vendor, both units have an integral intelligent controller that is compatible with the Atari microcomputers.

Both units control up to four disk drives, each programmable for single- or double-density operation. The controller includes an Atari-compatible printer/plotter port.

According to the vendor, the two units may be used in conjunction with a 5¼-in. disk drive for Atari-compatible software.

The suggested retail price for the AMDC-I is $500; the AMDC-II is $650. The 3-in., double-sided cartridge is priced at $6.99.

Amdek, 2201 Lively Blvd., Elk Grove Village, Ill. 60007.

WINCHESTER SYSTEMS, INC.
Datasafe-8; MDS-256

Winchester Systems, Inc. has announced an 8M-byte Winchester disk system for the Intel Corp. Intellec Series II and III and the Mohawk Data Sciences Corp. MDS-800 microprocessor development system. It is said to be compatible with Intellec's operating system, Isis-II.

The Datasafe-8, based on a 5¼-in. disk drive, reportedly provides twice the system throughput of floppy drives. With 5M bytes of formatted storage capacity, the hard disk system has 39,168 blocks allocated in two directories.

The system offers a data transfer rate of 625K byte/sec with an average access time of 85msec. Drive mean time between failures is rated at 11,000 hours. Power consumption is 120W at 115/230 Vac line voltage. The Zilog, Inc. Z80-based controller includes 32-bit error-correction code with 11-bit burst error correction, the vendor said.

A print spooler option allows printing while programming, the vendor said. Its 256K-byte buffer holds about 60 to 80 pages.

Datasafe-8 costs $4,995 and has a one-year warranty. The MDS-256 print spooler option costs $1,250, also with one-year warranty, the vendor said.

Winchester Systems, P.O. Box 545, 14 Laurel Hill, Winchester, Mass. 01890.

Continued on page 92

Can you answer these questions on local area networks the way you would have two years ago?

1. Is broad *versus* base band still an important issue?
2. Will local area networks and PBXs co-exist, be mutually exclusive or will one be subservient to the other?
3. What role does VLSI technology play in linking peripheral devices to local area networks?
4. What are the standards?

The March issue of *Computerworld On Communications* will give you answers to all the questions above—and much more. You'll get an overview that takes a close look at LAN products and technology and then examines it in the light of competing PBX technology.

You'll get information on linking mainframe computers and local area networks. You'll get an examination of token ring technology. And there's more! You'll get lots of special features articles on communications topics from "Who the Bell operating companies are hoping fewer" to a profile of Rolm Corporation. Take a look at what some of our other features will cover for you:

- Communications procurement.
- R&D in communications companies.
- Fiber optics.
- The low end of the PBX market.
- International record carriers.
- Workstation telephones.
- The future of Centrex.
- Protocol conversion.

Computerworld On Communications is designed to give you in-depth coverage of the broad spectrum of voice, image and data communications from a systems perspective. As a *Computerworld* subscriber, you'll be getting six issues of *Computerworld On Communications* in 1984—as part of your subscription! And if you need to be on the cutting edge of networking technology, you won't want to miss the March 14th issue.

If you've got communications products our readers should know about, then you need to get your ad reservation in by February 3rd. The materials are due one week later on February 10th. To reserve ad space in the March 14th issue of *Computerworld On Communications*, call one of the sales offices listed below, or call Ed Manydel, National Sales Director at 617-879-0700.

OEM alert: The new Perkin-Elmer 3205 packs supermini performance into a micro price tag.

Introducing the Perkin-Elmer 3205. Now OEMs and system integrators can provide 32-bit supermini computing power at micro system economics, without making any compromises.

No micro system can approach the per-terminal cost advantages of the Perkin-Elmer 3205 supermini. Or the migration paths. Or offer access to a common database.

No supermini system can touch the Perkin-Elmer 3205 proven price/performance statistics.

Small investment. Big potential.

A basic 3205 costs just $6,169* and includes a ½ megabyte of memory, eight communications lines, floating point and a lot more. There's even a microprocessor handling just communications support that has more power than you get in most complete microcomputers.

The 3205 can be expanded to 4 megabytes of memory, 16 communications lines and 1.2 gigabytes of disk storage. And every configuration in the broad 3205 range offers a choice of operating systems: our own Real Time OS/32 or one derived from the UNIX** operating system.

Fully configured value.

50 megabytes of fixed/removable Winchester disk memory, 8 communications ports and a full complement of related capabilities are included in a fully configured 3205 computer for only $15,469.* That lets you supply powerful computer systems your customers can afford to buy.

The support you need.

Perkin-Elmer has been an OEM supplier for over 15 years. We know how to support you. We have a worldwide service network, powerful, quality software, reliable hardware and the terms and conditions you need.

Mini/Micro/Maximization.

The Perkin-Elmer 3205 gives you the small purchase price of micro systems, and the power, growth potential and common database advantages of supermini systems.

For the complete story, call or write the Perkin-Elmer Corporation, Two Crescent Place, Oceanport, N.J. 07757. **1-800-631-2154.** In N.J., 1-201-870-4712.

*OEM quantity 100, U.S. only.
**UNIX is a trademark of Bell Laboratories.

PERKIN-ELMER

The science and computer company.
Where solutions come first.

MICROCOMPUTERS

Continued from page 90

SBX motherboard with six SBX connectors, as well as two SBX modules — a stepper-motor controller and a dual-channel serial communications controller.

The Am94/2000 motherboard's six SBX connectors provide support for single- and double-width modules not requiring direct-memory access. The motherboard also includes on-board Intel Corp. Multibus address decoding and data buffering and Multibus/SBX timing reconciliation, as well as two of the firm's Am8259A programmable interrupt controllers. The on-board SBX connectors can handle any 8- or 16-bit SBX module and provide for up to six single-width modules, one double-width and four single-width modules or two double-width and two single-width modules, the vendor said.

The Am94/1530 is a programmable dual-channel serial communications module. Enabling the designer to add incremental I/O capability to a Multibus system, the unit adds two RS-232C serial channels to any host board that includes an SBX bus-compatible connector.

Incorporating the 28530 serial communications controller, the Am94/1530 module handles a variety of communication formats, including asynchronous, binary synchronous, IBM High-Level Data Link Control and Synchronous Data Link Control protocols, the vendor said.

The Am94/1541 stepper motor controller is a programmable, single-width SBX module. Through its on-board 8-bit microcontroller integrated circuit, it can drive one four-phase stepper motor via either a program stored in the microcontroller or commands sent from the CPU board. A line is provided for an external clock to synchronize several Am94/1541s so that multiple stepper motors can be controlled synchronously. Also included in the module are buffered lines for external feedback from the devices controlled by the Am94/1541.

The single-quantity price of the Am94/2000 SBX motherboard is $495, while both the Am94/1530 dual-channel serial communications module and the Am94/1541 stepper motor controller cost $395 each.

Advanced Micro Devices, 901 Thompson Place, Sunnyvale, Calif. 94086.

MICROTEK, INC.
Price reductions

Microtek, Inc. has reduced the prices of its entire line of add-on products for Apple Computer, Inc. microcomputers.

Among the reduced products is a 128K-bit memory card, formerly $479, now available with Digital Research, Inc.'s CP/M operating system and Pascal enhancement diskettes for $299. The Q-Disc, a 128K-bit, solid-state disk emulation card supplied with CP/M and Pascal enhancement disks, Visicorp's Visicalc spreadsheet program expansion software and Artaci's Magicalc spreadsheet program, has been reduced from $529 to $399.

In addition, the Dumpling-GX graphics printer card now costs $89.95, down from $175. A complete pricing schedule is available from the company.

Microtek, 4758 Viewridge Ave., San Diego, Calif. 92123.

PROFIT SYSTEMS, INC.
Multigraph

Profit Systems, Inc. has announced the Multigraph board, a graphics board for the IBM Personal Computer.

The board works with either monochrome or color monitors. It features soft scrolling, 720- by 350-pixel resolution, 32K bytes of random-access memory and flicker-free scrolling, according to the vendor. The board runs software written for an IBM color board without requiring a color monitor. An option allows the use of a 132-col. monitor.

The board costs $499.

Profit Systems, P.O. Box 1089, Berkley, Mich. 48072.

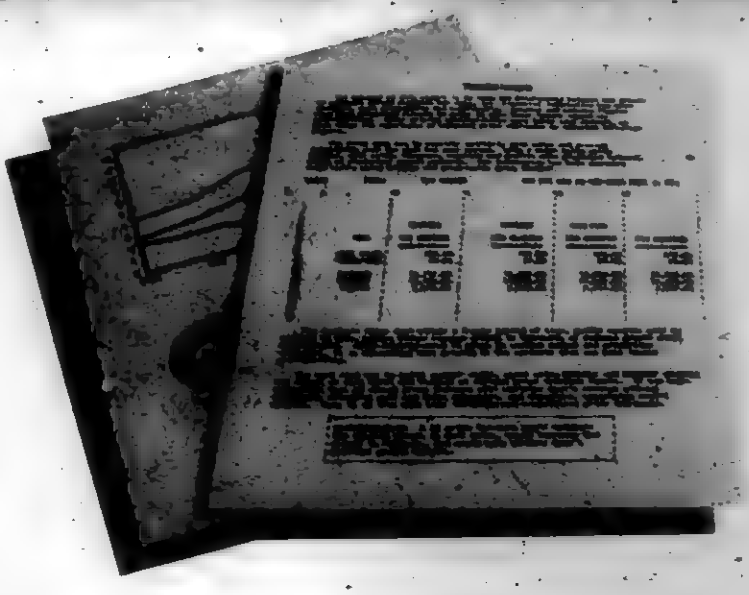
AUXILIARY EQUIPMENT

COMPUCABLE CORP.
IBM mono screen

Compucable Corp. has announced an enhancement screen for the IBM Personal Computer.

The screen enhances char-

NEW FROM CINCOM:
THE MANAGE USER SERIES™...
MAINFRAME PERSONAL COMPUTING POWER WITH DP CONTROL.



MICROCOMPUTERS

actor display and eliminates reflection and glare, according to the vendor. The screen's material consists of woven, black, optical-fiber mesh. The screen is housed in a polycarbonate frame, which reportedly eliminates electronic shock. A foam gasket around the frame holds the screen in place, while a pull tab on the frame's bottom is used for removing the screen.

The product costs $34.95.

Compucable Corp., Suite 6-J, 1440 South State College Blvd., Anaheim, Calif. 92806.

MICRO SOFTWARE

DATAMEDIXON CORP.
Report Manager

Datamexion Corp. has announced a new release of Report Manager, a three-dimensional, programmable spreadsheet for the IBM Personal Computer.

Enhancements exchange data between Report Manager and other software packages; sort columns, rows or pages; expand local and global formatting; support color monitors; and use full-word command prompts, according to the vendor. Twelve exec program statements and 11 additional preprogrammed functions have been added to the program, the vendor said. Reportedly, files created with the first version of the program are compatible with the latest release.

Report Manager costs $495.

Datamexion, 615 Academy Drive, Northbrook, Ill. 60062.

I.P. SHARP ASSOCIATES LTD.
Sharp APL/PC

I.P. Sharp Associates Ltd. recently announced the implementation of its Sharp APL development language in a package for the IBM Personal Computer.

Sharp APL/PC, according to a company spokesman, is compatible with Sharp's mainframe software products. The package reportedly incorporates all features of Sharp APL for mainframes.

The package for the Personal Computer runs as a user program under IBM PC-DOS operating system Versions 1.1 or 2.0. It includes the interpreter, file system, session manager, several auxiliary processors and utility software. Auxiliary processors reportedly provide access to the operating system, DOS files, asynchronous communications, the parallel printer and a full screen manager.

The package, including diskettes containing Sharp APL/PC and utility programs, APL stickers for the Personal Computer key buttons and manuals, costs $375 and will be available in the first quarter of this year. An APL-character read-only memory, enabling the Personal Computer to display APL characters, costs $25. A Sharp APL package for the IBM XT/370 will be available in the third quarter of 1984.

I.P. Sharp Associates, Suite 1900, 2 First Canadian Place, Toronto, Ont., Canada, MSX 1E3.

SOFTWARE DIGEST, INC.
Software ratings

Software Digest, Inc. has announced the availability of a newsletter that rates IBM Personal Computer software.

Programs are tested by 10 evaluators, then scored to produce ratings on each. Word processing program testing has been completed. Data base management systems and graphics programs are planned in the near future, the vendor said.

Newsletter rates range from $90 for a six-month trial series to $240 for a two-year subscription.

Software Digest, 1 Wynnewood Road, Wynnewood, Pa. 19096.

MANAGE USER SERIES

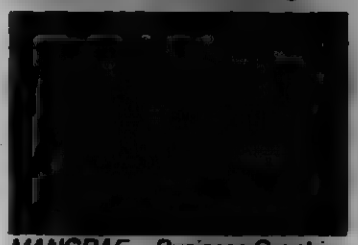
Cincom's new MANAGE USER SERIES™ combines the benefits of personal computing capability, mainframe power and greater data processing control into one comprehensive Decision Support System.

Personal Computing On The Mainframe

Simply explained, the MANAGE USER SERIES is Cincom's family of integrated mainframe software tools that work together as one powerful Decision Support System. No other software vendor offers such a wide range of Decision Support capabilities at the mainframe level.

Using the power and accessibility of the mainframe, MANAGE enables data processing to provide a wide range of personal computing capabilities while maintaining control over the corporate data resource. And because MANAGE has a conversational, user-friendly personality, it easily wins friends among end-users.

MANTEXT – Text Processing



MANGRAF – Business Graphics

MANCALC – Spreadsheet

Powerful Decision Support Tools

The MANAGE USER SERIES currently integrates four powerful tools that allow end-users to access, store and use production information from the corporate mainframe to aid in key business decision making:

- MANTEXT is a sophisticated free-form text processing system that enables users to access corporate files for the creation of business documents and corporate mailings.
- MANGRAF is an advanced business graphics tool that provides output from on-line applications using centralized production data base information.
- MANCALC is a 3-Dimensional electronic spreadsheet that facilitates "corporate-size" models and can automatically load information stored in corporate files, or build models based on private data as well.
- MANTIS is Cincom's industry acclaimed application development language. As the "integrator" of the MANAGE USER SERIES, MANTIS provides an effective bridge between the Development Center and the Information Center.

End-User Productivity Through Integration

The key to the power and versatility of MANAGE is its elegant integration. MANAGE provides the tools needed for preparation of business reports and day-to-day decision making. And because all components of MANAGE can access central or personal data files, users can merge a multitude of data types, display them graphically, simulate "what-if" futures and document the findings in one business report. The power of MANAGE is limited only by one's own creativity.

Another Major Cincom Technology

Like TIS,™ ULTRA Interactive Data Base System,™ MRPS™ and MANTIS™, MANAGE USER SERIES is a member of the integrated family of new Cincom software technologies. From data base to application software to Decision Support, the name Cincom has come to stand for excellence in software technology the world over.

For more information on MANAGE, or any of our new integrated software technologies, simply contact the Cincom Marketing Services Department, 2300 Montana Avenue, Cincinnati, Ohio 45211.

Cincom Systems

Excellence in Software Technology.

Only Lee Data's Universal Terminal System can satisfy all of your information processing needs... 3270, Async and personal computing.

Finally, there's a single, universal way to satisfy the individual information processing needs of all your people. From sales manager to accountant. From research to production. The Lee Data Universal Terminal System can do it all.

And our system is modular by design to provide you any or all of these cost-effective, problem-solving advantages:

3270-compatibility plus more

Combine complete 3270 system-compatibility with an innovative Lee Data design and you have a System that delivers greater convenience and flexibility.

Our System not only offers standard 3274-compatible local and remote control units, but now also provides combination local/remote controllers with a unique dual-host access capability.

In addition, you can choose from a full line of terminal capabilities, beginning with our cost-effective 3178-compatible display on up to our popular All-In-One Display which offers, in a single unit, four selectable screen sizes—including 132-column—a great advantage in program development, spread sheet applications and many others where flexibility is required.

3270-plus-Async: another cost-effective advantage

If your application needs currently find you switching between 3270 and VT100-style terminals to get the job done, Lee Data has a better way.

As part of our System, you can enjoy the further advantage of a 3270/Async capability that allows dynamic selection of 3270 and VT100 operating modes from a single Lee Data display. A simple command entered at the keyboard provides you access to applications running on an IBM CPU, non-IBM systems (such as DEC, H-P or Prime), as well as timesharing services. Another Lee Data solution to simplifying your company's terminal network.

And now integrated personal computing too

That's right! Now our System also includes a sophisticated personal computing package that can easily be integrated into an existing Lee Data 3270 system.

With our approach, you get continued interactive access to host-based files, plus all the advantages of professional business computing from the same Lee Data workstation.

Advanced features include a host file transfer capability, a single-board design, four standard system expansion slots and, of course, complete IBM-compatibility.

All these additional capabilities plus the same user-friendly Lee Data displays.

Plus these added benefits...

To any Lee Data System, add our unique Coax Eliminator products and realize additional savings of up to 85% in cabling costs alone.

Combine this with all the outstanding features already mentioned and you'll find a System offering everything you need for efficient, cost-effective operation.

Discover the advantages of our Universal Terminal System for yourself. For more information, call our system specialists toll free:

COMPUTER INDUSTRY

DEC airs rise in earnings
After five quarters of decline

MAYNARD, Mass. — After five straight reports of declining earnings, Digital Equipment Corp. will announce today that earnings for the second quarter ended Dec. 31 exceeded results from the same period one year ago.

The company issued a preliminary report Jan. 13 which indicated that, prior to an audit review, earnings for the quarter would fall between $1.30 and $1.45, compared with the $1.08 figure of the corresponding quarter one year earlier. One financial analyst told *Computerworld* that part of the improved earnings may be attributed to increases in personal computer shipments and shipments of other equipment that were delayed during the first quarter of the present fiscal year.

Beginning in October 1982, the company disappointed the stock market with the first of five successive quarterly reports showing reduced earnings in comparison to year-earlier results. The disappointment culminated in last October's announcement that first-quarter earnings had plunged 72% to a dismal $15.9 million, or 28 cents per share [CW, Oct. 24, 31]. The first-quarter shortfall was linked by the company to lower than expected shipments of personal computers, delayed shipments of high-end peripherals and administrative problems.

The second quarter figures are significantly higher than had been predicted by Wall Street analysts, who had forecast earnings ranging from 28 cents per share to 90 cents per share.

DEC officials would not comment in detail on the unofficial results, but Alfred M. Bertocchi, vice-president for finance and administration, said the company had experienced strong customer demand for its VAX-11/780 superminicomputers, MicroPDP-11s, personal computers and office products.

Stephen K. Smith, an analyst who follows the company for Paine Webber Mitchell Hutchins, said the DEC announcement was certainly a good surprise, even if it

See DEC page 96

Intel, AMD semi sales booming

With recent announcements of its quarterly sales and earnings, Intel Corp. joined the $1 billion-plus vendor group, and Advanced Micro Devices, Inc. (AMD) continued its strong expansion, as semiconductor sales boomed.

Santa Clara, Calif.-based Intel closed out its fourth quarter and fiscal year posting sales of $1.1 billion, a 25% jump over 1982's annual total and the first time the company surpassed the $1 billion sales level. Intel's profit for the year increased threefold to $116 million or $1.05 per share, compared with earnings of $30 million or 32 cents per share, last year.

For the fourth quarter, Intel's sales climbed 39% to $332 million, compared with $239 million the same period a year earlier. Profit in the quarter was $47 million or 40 cents per share, 40% of the company's total profit for the year.

Commenting on Intel's performance, Gordon E. Moore, chairman and chief executive officer, said, "Our business outlook for 1984 is very strong, as the deluge of orders that hit us last June shows no sign of abating."

Quarterly sales and profit at AMD, for the company's third quarter, again surpassed previous highs. Sales totaled $154 million, 69% greater than the same period last year. Profit for the Sunnyvale, Calif., firm totaled $20 million or 35 cents per share, a better than threefold increase over the third quarter of last year.

Like other semiconductor companies reporting financial results in recent weeks, AMD reported record-setting research and development spending and lengthy order

IBM/Unix foster speculation

INDUSTRY INSIGHT

BILL LABERIS

While it came as no great surprise, IBM's announcement of Unix support on its Personal Computer line has fostered divergent speculation on just what the announcement means — to IBM, AT&T and the user community at large.

On the face of it, it looks as though, with widespread Unix acceptance, IBM could in time find itself in the pitiful position of its plug-compatible manufacturers, namely, at the mercy of AT&T-launched updates of the operating system, particularly as its usage proliferates among larger systems. If anyone knows the market power of the company holding the keys to the instruction set, it is IBM.

So why get behind the eight ball? The answer is that IBM has not, and it may, in fact, end up looking a lot rosier than AT&T in the Unix game.

Welcomed relief

For one thing, IBM's endorsement of Unix, albeit token, will come as a welcomed relief to the growing legions of Unix aficionados. Their numbers are relatively small now, but bear in mind that Bell Laboratories has made Unix a fairly cheap tool for university use. According to International Data Corp., 90% of computer science majors in the U.S. (50% in Europe) have been exposed to Unix as a result.

Judging from comments passed at last fall's meeting of the Association of Data Processing Management Organizations, Inc., there is some animosity in both the Unix user and the third-party vendor communities toward AT&T, animosity that could work to IBM's great favor now.

Speaking at the meeting were the current and future heads of the Unix users group. Bob Marsh, chairman of Plexus Computers, Inc., claimed that AT&T has been an obstructionist force in the move-

IBM from page 95

want to promote Unix as an industry standard. In fact, the old Western Electric did not support Unix a year ago. In particular, Marsh knocked what he considered AT&T's onerous Unix licensing fees — in the neighborhood of $43,000 for the first copy and another $25,000 or so for redistribution rights.

'Enlightened view' urged

IBM's Unix endorsement "would be more valued," Marsh said at that time, adding that it was "just an accident" that AT&T owns the Unix rights. Both he and Mike Fiorio, also from the users group, called upon AT&T to adopt a more "enlightened view" toward Unix development. Each, however, doubted he would get what he wanted from AT&T in the near future.

But as a standard-bearer, IBM is second to none, even if the product is not IBM's to start with. The chances are good for those disenchanted with AT&T's Unix position that IBM will appear as a white knight, doing for the marketing of Unix as a standard what they say AT&T would not.

Meanwhile, IBM is not about to get locked into a Unix world of its own making. While IBM's endorsement will make third-party Unix vendors very happy, IBM doubtless has proprietary operating systems plans of its own for its low- and mid-range multiuser systems of the future. In the absence of any AT&T presence in the systems market at this time, IBM still calls the tune for the third-party software developers.

Most likely, IBM will gather as much of the Unix market as it can, particularly as it bolsters its thrust into the automated office, while trying to control the pace of Unix acceptance by keeping the third-party software vendors and the user community occupied with other systems. ■

DEC from page 95

was "still not tremendous."

Smith said he believes DEC revenues for the quarter were up 25% to 26% over the previous year. Some of that increase can be attributed to equipment shipments that had been deferred during the first quarter, he said. Accounting for catching up on the previous delays, revenue growth for the current year should be about 20% to 21% ahead of last year, he added.

Software available

DEC will probably report shipments of 30,000 personal computers for the quarter just ended, according to Smith, compared to just 19,000 in the previous quarter. "There is software available now, and [DEC is] offering free maintenance," Smith said.

The news may not be quite so good for the third quarter, in Smith's view. "I think quarter three [earnings] will be below quarter three last year. [DEC] has built up [its] expenses; [it has] added 2,500 to 3,000 employees," he said.

DEC was also the latest company to be involved in rumors of an imminent takeover by General Electric Co., according to a Boston newspaper.

Mark A. Steinkrauss, director of investor relations, issued a flat denial of such a prospect. "I don't know of any discussion between the two companies," Steinkrauss said.

With about 58 million shares issued, DEC's street value, based on the $78 per share closing value the day the company issued its preliminary report, is about $4.5 billion. The company does not appear to be very closely held, with founder and president Kenneth H. Olsen, the largest single shareholder, owning slightly more than 4% of issued shares, or 2.4 million shares, according to the latest financial report.

The General Electric Co. high-tech rumor mill was working overtime again this month, this time piping sounds that the cash-rich giant was considering buying none other than Digital Equipment Corp. The result, of course, was an upward spike in DEC's stock price, boosted even further by the good financial news from the No. 2 computer maker.

The fact is, given the approximately $5 billion in cash and liquid securities now hoarded by GE, the company can afford any U.S. computer company but one, IBM. The fact is, that DEC is but one of a string of companies named in recent months as possible takeover candidates.

Add Hewlett-Packard Co., Data General Corp., Gould, Inc. and Prime Computer, Inc. to the list. And in virtually every case, the initiation of a takeover rumor has provoked a buying spree in the allegedly courted company, despite there not being one shred of evidence that GE ever talked with any of the companies.

One wonders what the stimulus for all this rumor mongering might be. It is entirely possible that, by the time this column runs, GE could own DEC. But it is unlikely, notwithstanding DEC's relatively cheap stock price right now. Why blow the entire wad on one company, to whose systems the rest of GE would be ostensibly committed, when GE can buy several, smaller, high-growth firms or even large pieces of bigger firms, not unlike what IBM has done with Rolm Corp. and Intel Corp.?

And as far as the acquisition of HP is concerned (which would cost about as much as DEC — $4 billion to $5 billion), it seems that Mr. Hewlett and Mr. Packard have very little to gain at this stage of their lives in liquidating interest in the company they founded in a garage back during the Depression. The smart money is taking the GE rumors at face value.

FOR THREE DAYS IN TEXAS WILL TURN

No single computer, personal or otherwise, has so profoundly affected all of business and industry as the IBM Personal Computer.

And now, for three days only, you can see, touch, use and compare the hardware, software, peripherals and compatibles that run on, like or with this revolutionary machine. It's the PC *World Exposition* in Houston, and you are invited to join us.

You'll see hundreds of exhibits from all the product leaders. Both makers and marketers of hardware, software, printers, peripherals, add-ons and services in a giant exhibition and retail selling event. Here's a list of some of the product leaders you'll see:

Is IBM qualified to set all industry standards?

OUTSIDE LINES

BOB DJURDJEVIC

A modern version of a Greek tragedy, complete with sacrificial victim, has been unfolding in U.S. courtrooms on both coasts since last November.

In Connecticut, IBM filed suit against The Gartner Group, Inc., a Stamford, Conn.-based market research company, and the same day settled the case. In California five days earlier, IBM added a former Gartner employee, who was also an ex-IBMer, to the list of defendants in its civil lawsuit against National Semiconductor Corp. and its subsidiary, National Advanced Systems, Inc. (NAS).

Without admitting liability, The Gartner Group agreed to return any IBM "protected information" it may still have; to identify to IBM all persons who might have disclosed or may in the future disclose such information; and to cooperate with IBM in any investigation of disclosure.

Why did IBM continue litigation against an individual after it had forced his employer to its knees? Why had IBM waited so long to file the charges against him? How did IBM obtain evidence against him?

An IBM spokesman refused to comment about the case "since the matter is before the courts." The plaintiff's lawyer has advised his client to remain mum for the time being, too. But NAS President David Martin sees this as yet another IBM effort to make an example out of the individual's case. "IBM is on a self-appointed mission to clean up the industry to their set of standards," he said.

No wonder IBM's adversaries are giving up, when even a federal judge commended the parties in the IBM/Hitachi Ltd. case for their wisdom in arriving at a settlement. "This could be an industrywide standard for a dispute resolution," the presiding judge said.

The consequences of such settlements may also affect innocent observers. Let us assume one meets an IBM employee who voluntarily begins to spill the beans about his employer. If IBM were to act consistently, the listener, and not just the IBM employee, could be found "guilty" by IBM's standard if he did not report this incident "forthwith" to IBM.

In the past, many people have volunteered to assist IBM if the company's legitimate trade secrets were being threatened. But it is one thing to let each individual act in accordance with his conscience and another to have IBM tell you (as in the Gartner settlement) that you "shall notify IBM forthwith" and "shall cooperate with IBM's reasonable requests in an investigation of the circumstances."

If you were a journalist, for example, this could mean IBM has just put you out of business. Is IBM, therefore, attempting to extend its power not just over its employees and competitors, but also over the press and other third parties?

None of this is to take away IBM's right to protect its own trade secrets. But if new standards of business conduct are needed, such issues should be decided by our elected representatives and the industry as a whole, not just by a single competitor pointing a gun at the head of its adversaries.

How qualified is IBM for this self-appointed role? Is IBM itself above reproach?

A Phoenix-based law firm, Brown & Bain, was retained in 1981 by National Semi for another alleged trade-secret violation case. This case was settled in June 1982. Two months later, Brown & Bain advised National Semi that it would be acting for IBM, its old client, "in the pending dispute between National and IBM."

Ultimately, National Semi/NAS lawyers managed to get this law firm disqualified from the case. Though the court said there was no indication of unethical attitudes or practices as far as Brown & Bain was concerned, one cannot help wondering about IBM's business judgment, if not its motives, in retaining counsel which it knew had just concluded a case acting for the opposite side.

Or consider the preannouncement hype of the PCjr and the System/36. Media articles hurt IBM competitors' sales, as some buyers held back on their purchases until the IBM products were finally unveiled. The level of detailed product information which the press reported left little doubt that the source of that information must have originated inside IBM. Yet this time there were no lawsuits. No IBM employees were fired to set an example, at least as far as the public is aware.

Could it be that such information leaks are condoned, if not intentionally planted, if they serve IBM's purposes? If so, doesn't that make IBM a company with double standards? And if that's the case, is that the kind of company that should assume the role of setting the industry's business conduct rules?

Djurdjevic is president of Annex Holdings Corp. of Phoenix and publisher of the Annex Computer Report.

FEBRUARY, ALL EYES IN TO THE IBM PC.

Plus, we'll present personal computer experts from around the nation in an up-to-the-minute conference program. You'll learn how to choose and how to use the technology and equipment surrounding the PC family of microcomputers. Here's a partial listing of the conference sessions:

Wednesday, February 1, 1984
User Sessions:

The Benefits of the IBM PC for Small Businesses
Financing Options and Tax Advantages
Available Add-Ons and Peripherals
Software: What's Available and How to Find It
What Do the Compatibles Have To Offer?
How I Became Compatible With My IBM PC
Medical/Dental Applications for the PC
The PC in the Law Office
PC's and Real Estate
Manufacturing Resource Planning with the PC
Investment Software for the PC
CPA Software: The Bottom Line
Software for Insurance Applications
Distributed Control Software for the PC

Thursday, February 2, 1984
User Sessions:

The Anatomy of the IBM PC
Defining Levels of Compatibility Between Systems
Overview of Compatibles: Desktops and Portables
Word Processing Software
Database Management Software
Business Graphics Software
Analyzing Your Software Requirements
Overview of Major Business Applications Software
Integrated Software Solutions

Friday, February 3, 1984
User Sessions: The PC in the Corporate Environment

Review of Policy and Planning Issues
Implementation Strategies
Use of PC to Mainframe Communications (Includes Security Issues)
Local Networking for the PC

Quite simply, the PC *World Exposition* is the biggest event in Texas for the most important computer in history.
Don't miss it.

FREE ADMISSION to one Conference Session of your choice. Just present this coupon at the Registration Desk any day of the Show, pay the regular $10 exhibits only admission and choose any one Conference Session free of charge. One coupon per person.

The PC World Exposition
Houston
February 1-3, 1984, Astro Hall

SAVE $5.00 on Full Exhibit & Conference Admission. Present this coupon at the Registration Desk and pay just $25.00 for a Conference Pass entitling you to attend all Conference Sessions and three days of exhibits. One person per coupon.

IT'S WHAT THE WORLD IS COMING TO.

The PC *World Exposition* is produced by Mitch Hall Associates in cooperation with CW Communications, Inc., publishers of PC World, MICRO MARKETWORLD, InfoWorld, and Computerworld.

Three-day admission to all exhibits and conference sessions is $50.00. Admission to the exhibits only for three days is $20.00. Show hours: Wednesday and Thursday, February 1 and 2, 10:00 AM to 5:00 PM; Friday, February 3, 10:00 AM to 3:30 PM. Conference sessions run from 8:30 – 10:30 AM and 2:30 – 5:30 PM on all three days.
For attendee and conference information, call CW Communications at 1-800-225-4698.
For information on exhibiting, call Mitch Hall Associates at 1-617-229-7486.

High-tech trade groups press for R&D bills

SAN JOSE, Calif. — As the U.S. Congress convenes this month to begin its election-year deliberations, a rainbow coalition of powerful, high-technology trade associations is pressing the Reagan administration to beef up its support for permanent tax incentives for their members.

With the current research and development tax credit provision due to expire at the end of next year, the Semiconductor Industry Association, together with the American Electronics Association, the Computer and Business Equipment Manufacturers Association and the Scientific Apparatus Makers Association, is seeking passage of the High Technology Research and Scientific Act now before Congress.

The act's companion bills — S. 2165, introduced in the U.S. Senate by Sen. John Danforth (R-Mo.), and H.R. 4475, sponsored by Rep. James Shannon (D-Mass.) — are intended to enhance and make permanent the R&D-tax credits included in President Reagan's 1981 Economic Recovery Tax Act and to improve the level of scientific education in U.S. colleges and universities.

The ad hoc group had prepared a study, "High Technology Tax Policies for the 1990s," which was to be presented in Washington, D.C., last week.

The study, prepared over the last year, contended essentially that many current tax policies are not well suited to aid in the economy's transition toward an internationally competitive technology-based economy.

"World leadership in the semiconductor industry is dependent in the long term on continuous innovations and an adequate supply of qualified scientists and engineers," Tom Hinkelman, president and executive director of the SIA, remarked. "Passage of this act will contribute substantially to our industry's ability to help to keep the U.S. in the forefront of technological innovation."

According to the four trade associations, the proposed act provides enhanced incentives for investment in R&D by expanding the current laws allowing tax credits for increased research activities and corporate funding of basic university research and by making the R&D tax credit a permanent part of the tax laws.

Hinkelman also called for swift action on the proposal, claiming that the election year hoopla will detract Congress from pressing legislative matters.

Lease a Magnuson PCM for a short term at low, long term rates...

We'll give you long term rates. You give us a short term commitment. With more processing power to the dollar, the Magnuson M80 is the most cost-effective alternative to IBM's 4300 series. Now Phoenix Leasing sweetens the deal by offering low, two-year rates on a lease you can cancel after every 6 months — with no penalties! **Phoenix Leasing means inexpensive flexibility.** Meet your immediate processing needs, without tying yourself to projected long term hardware requirements.

Compare Magnuson with IBM

		MIPS*
Magnuson	M80/42	.77
IBM	4341-1	.72
IBM	4341-10	.58
Magnuson	M80/32	.56
Magnuson	M80/31	.42
IBM	4331-2	.40
IBM	4341-9	.38

MCI posts flat earnings

WASHINGTON, D.C. — For the first time in several quarters, MCI Communications Corp. has posted flat earnings, attributing the results to heavy capital spending as the company prepares to compete with an unregulated AT&T.

MCI showed profits of $43.6 million, or 19 cents per share, for the fourth quarter, compared with $43.5 million, or 22 cents per share, for the same quarter a year earlier. Revenues in the period jumped 47% to $430 million, compared with $294 million a year ago.

For the year, MCI earned $203 million, or 89 cents per share, a 34% increase over last year's $151 million profit. Sales for the year totaled $1.5 billion, an increase of 67% over fiscal 1982.

Increased spending for communications lines leased from other long-distance competitors, which permitted MCI to offer customers interstate calling regardless of whether the call terminates in a city on the MCI network, also had a negative effect on the quarterly bottom line, the company said.

"The increased expense . . . is part of a strategy to build MCI's market share as rapidly as possible in anticipation of equal access," commented V. Orville Wright, president and chief executive officer.

Gould plans to sell division

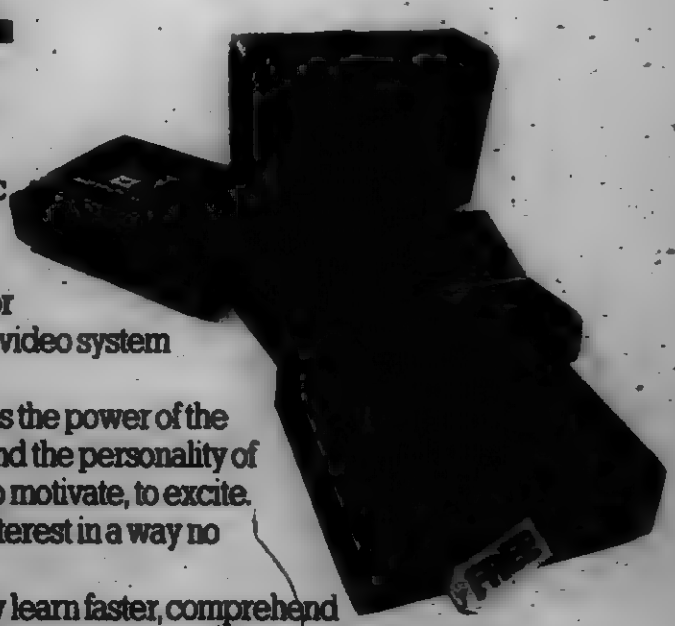
ROLLING MEADOWS, Ill. — Gould, Inc. is planning to sell its $26 million Power Conversion Division as a further move to focus its holdings more specifically on electronics, the company announced recently.

The company said the division's products are not strategically critical to its primary business base in computers, factory automation systems and other electronic components.

Gould declined to speculate on possible suitors for the division or on its asking price, saying only that the company has held discussions with several companies.

A WORD TO ANYONE LOOKING FOR UNIX TRAINING:

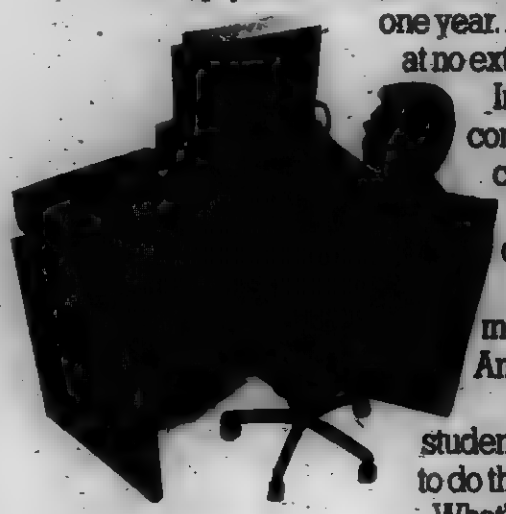
FREE.



Introducing Vision. The first Unix Interactive Video Training Curriculum. And our last Free Introductory Offer.

Now you can own an IBM Personal Computer, laser videodisc player, color monitor and Interactive Training System Controller, absolutely Free.

Simply lease our new Unix Interactive Training Curriculum for one year. And get this complete interactive video system at no extra cost.



Interactive video training combines the power of the computer, the speed of a laser disc and the personality of classroom instruction. To involve, to motivate, to excite. To capture and hold a student's interest in a way no other medium can.

Students learn by doing, so they learn faster, comprehend more and retain information longer. They spend less time away from the job. And are more productive once they return.

Because training is targeted, students learn only what they need to know to do the job. Now.

What's more, Vision was developed by Interactive Training Systems, the leader in interactive video training, and Computer Technology Group, the leader in Unix training.

The result? Unix training so fast, so effective and so affordable, we back it with a full 30-Day Money-Back Guarantee.

Take advantage of our Free Introductory Offer. Send in the attached coupon. Or call us at 1-800-227-1127.

AFTER MARCH 31, 1984 OUR FREE INTRODUCTORY OFFER IS NO LONGER FREE!

Exec views storage mart

PALM SPRINGS, Calif. — Erasable optical storage products will enter the market in 1987 and will impact both the high end and low end of the present magnetic storage market, according to Peter Lloyd, vice-president and general manager of Shugart Corp.'s Optimem Division.

Speaking here earlier this month at a session of Infocorp's 1984 Strategic Issues Conference, Lloyd predicted that 1984 "is the year of evaluation of (nonerasable optical) products by system companies and integration into the end-user market," and that 1985 will see a large volume of such products.

In 1986, he continued, will come the introduction of optical storage workstations.

Nonerasable optical storage, either read-only or write-once, will find a willing market because of high-storage capacity, user-friendliness and because there are many applications where erasability is not required, Lloyd said.

High-end hardware users will use nonerasable optical storage for its "greater off-line storage access" and comparatively low cost, he claimed, adding that the products will eventually replace tape libraries. Low-end hardware users will use the products for image storing and the ability to access large amounts of data at low costs, he continued.

Optical storage, in Lloyd's view, will follow the same trends as magnetic storage: lower cost, higher performance and smaller size. But, he added, reductions in cost and size will be faster than experienced by magnetic storage.

IEEE edition available

SILVER SPRING, Md. — The Institute of Electrical and Electronics Engineers (IEEE) has announced the availability of the fourth edition of its best-seller, *Tutorial: Software Design Techniques*, edited by Peter Freeman and Peter Wasserman, both of the University of California.

The edition includes 47 papers, 22 of which did not appear in the previous edition, and captures the latest ideas in software design, IEEE said.

Major enhancements include Freeman's original paper, "Fundamentals of Design," along with coverage of user interface design, object-oriented design, design of concurrent systems and integration of design into software development methodologies, IEEE said.

The book has been published for analysts, designers, programmers and managers seeking a broader perspective of software design, as well as for classroom use in software engineering courses.

The 736-page *Tutorial: Software Design Techniques* is priced at $20 for IEEE members and $32 for nonmembers.

IEEE, Suite 200, 1109 Spring St., Silver Spring, Md. 20910.

Hughes plans satellites

WASHINGTON, D.C. — Hughes Communications Galaxy, Inc. has hatched plans for a $450 million private satellite communications system designed to operate in a heretofore unused frequency band and to provide six times the communications capacity of existing domestic satellites.

Hughes has requested authority from the Federal Communications Commission to build, launch and operate two satellites that will function at 20 and 30 GHz, with the first satellite to be launched in late 1988. Both satellites' designs will be based on the Intelsat VI spacecraft Hughes is building for the Intelsat consortium.

The satellites' 5,000-lb payloads will provide 3,000 channels, each capable of transmitting one full-motion videoconferencing call or the equivalent amount of wide-band data service.

"The millimeter-wave technology needed to build this new generation of communications satellites has been developed for two decades here and elsewhere," commented Albert D. Wheelon, chairman of Hughes.

"The technology is ready now for commercial application . . . the lower frequency orbital positions are being filled rapidly, and it is timely to move ahead with a millimeter-wave system," according to Hughes.

IBM micro seen costly

SAN JOSE, Calif. — The IBM Personal Computer with a local-area network connection is too expensive to be used by more than a fraction of the office work force, according to a recently released report from Strategic, Inc.

In a study titled "Multi-User, Multiprocessor Computer Systems: Impact and Opportunities," the research and consulting firm concluded that a Personal Computer costing $3,000 to $4,000 with local-area network connections is not competitive with the offerings of vendors such as

COMPUTER INDUSTRY

Convergent Technology, Inc., Burroughs Corp., Molecular Computer, Inc. or NCR Corp.

"Today, with a multiuser microprocessor system supplied by these companies, it can cost less than $2,000 to put a workstation on an employee's desk and to be able to share data and costly peripherals among all the workstations," asserted Michael Killen, president of Strategic.

The report forecast the market for multiuser microcomputers, including Personal Computers and local-area networks, multiprocessors and shared-processor systems, will grow from $448 million in 1983 to $5.9 billion in 1987.

The report is priced at $1,500.

Strategic, Box 9747, San Jose, Calif. 95157.

DG reports strong gains

For first quarter

WESTBORO, Mass. — Citing continued growth in both orders and shipments, Data General Corp. reported strong gains in sales and profits for its first quarter that ended Dec. 17.

Sales totaled $230 million, a 28% jump compared with the same period a year earlier.

Profits jumped nearly threefold to $9 million, or 96 cents per share, compared with profit of $3 million, or 14 cents per share, last year.

Most demand continuing

According to Edson deCastro, DG's president, an increase in demand that began last summer for the company's minicomputer line has continued, as has the economywide increase in capital spending.

"If this trend in capital spending continues, I am optimistic about DG's prospects for strong growth," he commented.

"Sustaining that growth will depend not only on the continuing improvement in customer orders, but also on the availability of raw materials and components, primarily semiconductors," deCastro maintained.

Olivetti airs merger plan

DALLAS — Docutel/Olivetti Corp. has announced a consolidation and reorganization designed to streamline marketing operations for the company's office and financial product lines.

The reorganization combines the former office products and financial systems divisions into a single entity. The company said that, with the consolidation, it will institute three marketing-support units. The newly created customer service and telemarketing groups will work directly with office product dealers, while the third group, field marketing, will include automatic teller machine and terminal product sellers.

Approximately 60 positions will be eliminated as a result of the consolidation. John J. Douglas, company president, said the changes are steps in a long-range program to mesh the office products and financial systems operations into a single profitable organization "by concentrating personnel in key support and operations areas."

Honeywell sees profits

MINNEAPOLIS — Honeywell, Inc. announced Jan. 17 a 15.3% profit increase for fiscal year 1983 in comparison to the previous year. Profits from the Information Systems Division increased by $51 million over the same period, "largely as a result of aggressive cost-saving efforts."

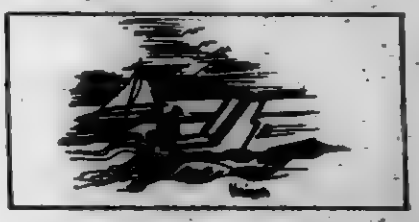
Total profits for the fourth quarter ended Dec. 31 increased by only $3.9 million over the $88 million reported for the corresponding period one year ago.

Income for the year ended Dec. 31 was $231.2 million on revenues of $5.7 billion; the previous year, the company had reported total net income of $206.6 million on revenues of $5.4 billion.

Edson Spencer, chairman and chief executive officer of the company, cited a sharp improvement in the company's computer business and a significant reduction in interest expense as the major reasons for the improved earnings.

Honeywell's Aerospace and Defense Division also reported a profit increase, $22 million, over the previous year, but the Control Products and Control Systems Divisions reported profit decreases of $33 million and $52 million, respectively.

The Information Systems Division, however, experienced a reduction in total yearly revenues of $19 million; Control Systems also reported reduced revenues, while the other two divisions increased revenues.



With a complete set of tools, you can build almost anything.

While other companies offer OEMs a few tools to build with, Cadmus provides the complete set.

For example, the Cadmus 9000 combines all the power of a mainframe, the speed of a mini, the price of a micro and the unlimited application flexibility of UNIX™ System V with Berkeley 4.2 enhancements.

All in a distributed environment.

In fact, the system's unique UNISON™ networking software provides the full resources of the entire network to any computational node through network-wide virtual memory with demand paging.

A 10 Mbit Ethernet™ or 50 Mbit fiber optic LAN serves as the interprocessor bus.

And comprehensive graphics, development and decision support tools facilitate graphics applications in a windowed, multiple process environment.

In addition, we support every Cadmus 9000 with Thunderbolt™ service that puts an engineer at your door anywhere in the country within 24 hours. Guaranteed.

To get the complete picture on this high powered graphics-oriented distributed system, call Cadmus at 617-453-2899.

The Cadmus 9000. Finally, you've got a complete set of tools.

CADMUS COMPUTER SYSTEMS The Distributed Mainframe.™

ADF Users-Get A Grip!

Don't get carried away with ADF before you know how to use it right!

DKI's one week ADF class covers a wide variety of topics including: standards, procedures, usage guidelines, design methodology, coding techniques, testing, performance considerations and problem solving.

ADF Designers & Coders, Systems QA Personnel, DBA's, Performance Tuners and Project Managers will all benefit from attending our course.

COMPUTER INDUSTRY

SUPERSHORTS

Computervision Corp. has signed an agreement with **Invotech, Inc.** and **Richard Muther & Associates, Inc.**, under which the companies will jointly develop, market and support space and facilities planning software designed to meet the needs of architects, space planners and facilities managers.

■

The Ultimate Corp. has signed a four-year contract with **Bull Group, Paris**, under which Bull will supply Ultimate with up to $26.8 million of minicomputer systems. Bull will provide Bull Mini 6 systems, which are based on Honeywell, Inc. DPS 6/level 6 minicomputer systems, for distribution by Ultimate's international network of independent dealers.

■

Honeywell, Inc.'s Communication Services business has been elevated to divisional status. M.L. Jackson, who has served as director since 1980, has been promoted to vice-president and general manager of the new division.

■

Perception Technology Corp. (PTC) has announced an agreement with **AT&T Information Systems, Inc.** calling for the inclusion of PTC's Interactive Data Entry/Voice Response System in proposals by AT&T Information Systems to its customers for call-management systems. PTC will supply equipment directly to interested customers.

■

American Software, Inc. and **Pratech Research and Development Partnership** have announced the formation of a joint venture under which **American Research**, a subsidiary of American Software, will perform research pursuant to the development of two new application software products. The new products will be an accounts receivable system for IBM mainframe computers and manufacturing management application software for the IBM System/38.

■

Fujitsu Ltd. and **Texas Instruments, Inc.** have signed an alternate source agreement under which Fujitsu will supply semiconductor design and fabrication information to TI. Fujitsu has the option of using TI's computer-aided design tools for its gate arrays.

■

The Hall L. Hibbard Computer-Aided Aerospace Design Facility has been established at MIT through gifts from **Perkin-Elmer Corp.** and **Cadam, Inc.**, a subsidiary of **Lockheed Aircraft Corp.** Dr. Jack L. Kerrebrock, Richard Cockburn Maclaurin Professor of Aeronautics and Astronautics and head of MIT's Department of Aeronautics and Astronautics, said Perkin-Elmer has donated hardware and Cadam has donated software for the center. Each company gift is valued at about $250,000. Lockheed is providing a $50,000 operating fund for the first five years.

■

Ridge Computers, manufacturer of 32-bit personal computers, is offering discounts totaling $4 million on its computer systems to universities and national research laboratories. Under Ridge's special year-long "Commitment to Education" program, the first 100 universities and/or national research laboratories that qualify can buy a Ridge 32 computer for $19,900, a discount of 66% off the regular list price.

■

IBM recently donated $2.8 million to more than 1,100 colleges and universities under its IBM Matching Grants Program for Higher Education, bringing 1983 contributions to $10.8 million, up 20% over a year ago. For every dollar IBM employees and their spouses contribute to approved degree-granting colleges and universities, up to $5,000 per donor per college annually, IBM contributes two dollars to the educational institutions.

Communications.

How to tie things together today without being tied down tomorrow.

This April, *Computerworld Office Automation* will give you a close look at the world of communications products and services. You'll read about what's out there now and what's coming. And how to get started while leaving your architecture open for the technologies of the future. And you'll get it all from the perspective of end users who have to increase productivity now while making sure the their company's investment won't be obsolete in two years.

And that's not all. There'll be feature articles on:

- PBX versus local area networks and how they'll merge
- voice technology
- videoconferencing technology
- satellite technology
- inter and intra company communications strategies
- product evaluations and comparisons

And after we cover all the developments for you, we'll offer you strategies to link them all together into one integrated system.

Computerworld Office Automation is designed to give you OA information geared to the DP/MIS environment — in a way that no traditional office publication can. As one of *Computerworld*'s 114,000 subscribers in the U.S, you'll get six issues of *Computerworld Office Automation* in 1984 — as part of your subscription! And if your users need to increase their communications links, you won't want to miss this issue devoted to Communications in the office.

If you've got office automation and office communication products our readers should know about, then you need to get your ad reservation in by March 2nd.To reserve ad space in this April 11th issue of *Computerworld Office Automation*, call one of the sales offices listed below, or Ed Marecki, National Sales Director at 617-879-0700.

PROFITS from page 95

backlogs.

"Record R&D spending in the [third] quarter exceeded the $100 million annualized rate for the first time . . . and for the year to date was 18.5% of sales," said W.J. Sanders, chairman and president. "Pretax and net profit margins of 18% and 13%, respectively, were the highest since the 1974-75 recession."

Sanders said that new orders at AMD rose 26% in the quarter to $292 million, compared with the previous quarter, with this growth led by orders for microprocessors and telecommunications products.

Adapso names board

ARLINGTON, Va. — The Association of Data Processing Service Organizations, Inc. (Adapso), representing 650 software and service companies, has announced its slate of officers and directors for 1984.

Doug Altenbern, chairman and president of Endata, Inc., has been named board chairman, while Arthur Kramer, managing partner of Arthur Kramer & Co., was reelected vice-chairman.

Other officers include: George Raymond, president of Automatic Business Centers, treasurer; Fred Lafer, general counsel of Automatic Data Processing, chairman of the executive committee; and George Shea, corporate counsel of National Data Corp., vice-president of government relations.

Also named were Jay Goldberg, president of Software Design Associates, vice-president of competitive practices; J. Allen Hufft, president of University Computing Co., vice-president of educational and information-al services; John P. Imlay, chairman of Management Science America, Inc., vice-president of image.

Wang posts strong sales

LOWELL, Mass. — Wang Laboratories, Inc. continued on its strong and steady growth track in its second fiscal quarter, posting earnings and sales gains of nearly 40%.

Sales for the quarter totaled $515 million — in excess of $2 billion on an annual basis — compared with sales of $367 million in the same period last year. Profits for the quarter jumped to $48 million, or 35 cents per share, a 38% increase over last year.

In addition, new orders increased 34% to $618 million. The company reported that the earnings and sales gains were consistent with its business plans and were achieved "despite increased competitive pricing practices within the industry, which continued to affect profit margins adversely." The company further reported that a strong U.S. dollar reduced overseas profits, as 40% of Wang's sales are made abroad.

Wang recognizes need to coexist

Study analyzes leading OA vendors

FRAMINGHAM, Mass. — "Wang [Laboratories, Inc.] will never be, for all the users in its served markets, ' "the only office automation company you'll ever need," ' according to a report recently released here that analyzed the strategies of four leading vendors in various segments of the office automation market.

The first of two parts, "Major Vendor Strategies in the Electronic Office — Part 1," by Framingham, Mass.-based International Data Corp. (IDC), focused on Wang Laboratories, Inc., Digital Equipment Corp., IBM and Xerox Corp.

IDC prefaced its report with a qualifier: "Ranking in OA is a little like establishing suspension bridge records: define the relevant universe closely enough, and virtually any span can be the longest or tallest."

Nevertheless, the report did settle on a number of conclusions: IBM, in OA, as in virtually every other market, intends to be number one; DEC, which has billed itself as the Number 2 computer vendor, similarly intends to become the Avis of OA; Wang is still working to establish its claim as "the office automation company"; and Xerox "continues to search for a winning office strategy."

While Wang, at the end of 1982, had captured 51.4% of the installed base in the clustered word processing market, according to IDC, Wang has realized it will never be the only OA company for its customers and "must be able to coexist with systems that it will encounter in the larger world — that is to say, live with IBM." Wang dominated the markets of word processing and small business computers, but according to IDC, those markets are shrinking, and the company that made it being where IBM was not "cannot afford not to succeed in becoming a full-line office automation vendor."

IBM, according to IDC, "has set a goal of being the Number 1 player in the markets it enters, and there is no single compelling reason why this will not be the case in the office." However, IDC countered, users will "discover that there is still a long way to go before the diverse range of IBM devices is capable of genuinely unrestricted communication . . . IBM has gone too far along too many different paths to offer a uniform and relatively consistent set of office products."

'Ranking in OA is a little like establishing suspensions bridge records: define the relevant universe closely enough, and virtually any span can be the longest or tallest.' — IDC report.

IBM has already committed itself to a coherent office strategy, with integration riding the backs of Document Content Architecture and Document Interchange Architecture protocols being developed and publicized to permit document transfer among dissimilar devices, IDC concluded. While those protocols do not meet the criteria of a multiproduct-line, uniform user interface, other vendors will continue to develop their products along IBM's standards, according to IDC.

DEC's thrust into OA, with the introduction of its All-in-One software less than two years ago and a much-noted internal reorganization, has begun to sway the perception that the company could only deal with highly technical computer professionals, according to IDC. But perception remains the "primary strategic challenge" and will require a protracted and expensive marketing and promotional effort on DEC's part, IDC said.

Xerox, according to IDC, "does not seem to be nearly the force to be reckoned with that it did even 18 months ago." A "strategic drift" and lack of new products has seen the company lose momentum as a total systems supplier for the electronic office, the report said.

Part two of the report will include Data General Corp., Hewlett-Packard Co. and others, including a number of software companies.

IDC, 5 Speen St., Framingham, Mass. 01701.

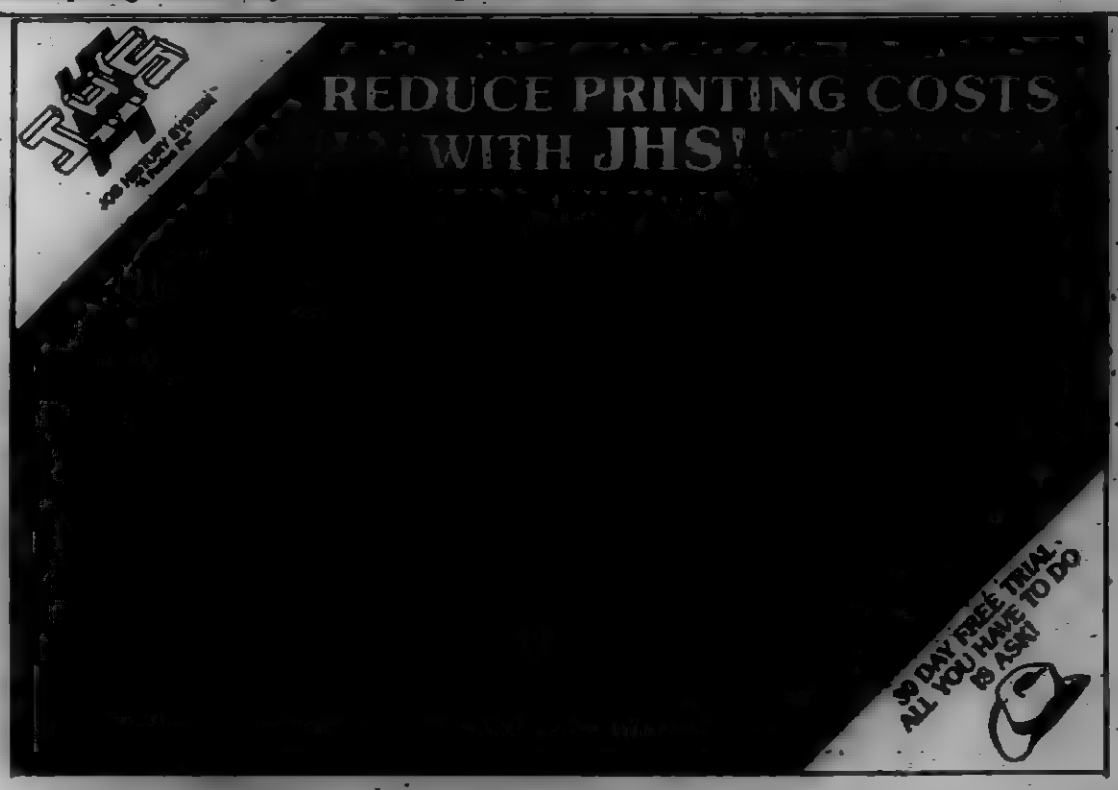
China-U.S. tech exchange set

SPOKANE, Wash. — A delegation of U.S. computer graphics specialists has been selected to conduct a three-week technical exchange with counterparts in the People's Republic of China.

Peter C. Wang, president of Automation Technology Institute, Inc. of Pebble Beach, Calif., has been named delegation leader, according to the People to People Citizen Ambassador Program, which selected the delegates and is sponsoring the exchange.

Through a series of seminars, meetings and on-site visits in several Chinese cities, the delegation of specialists will examine China's progress and needs in computer graphics technology, focusing particular attention on automated production, maintenance and retrieval of engineering data and the more traditional research areas.

Founded in 1956 by President Eisenhower to further international understanding, People to People International is now chaired by President Reagan.



POSITION ANNOUNCEMENTS

COMPUTER SCIENTISTS

WE NEED YOU TO HELP US DEVELOP A STATE OF THE ART SCIENTIFIC INFORMATION SYSTEM

At Chemical Abstracts Service, an established (founded 1907) world leader in scientific information services, we are continuing our development of an advanced, on-line information system serving the needs of the chemical community. Our development environment includes:

- [illegible] and 370/168AP mainframes
- VAX 11-780 and PDP-11 minis
- DEC PC-350's
- ADABAS, UNIX, MVS/XA, SNA, X25, RT11, Ethernet
- Programmer Workbench, TSO

SEVERAL POSITIONS AVAILABLE IN COLUMBUS, OHIO

DATABASE ANALYST

Must have strong skills in database design and administration to consult in the use of our current DBMS's, manage installation of enhancements to those DBMS's, evaluate new technology, design and implement databases, and establish standards and procedures for data and database administration. Requires a Bachelor's Degree or equivalent and experience in several of the following: use and maintenance of database software such as ADABAS or other inverted key, hierarchical, or relational systems; database design and implementation; data or database administration using a data dictionary; and use of end-user query languages.

DATA COMMUNICATIONS/NETWORKING ENGINEERS

To help design, develop, and support data communications networks for UNIX and IBM systems. Requires a Bachelor's degree or equivalent and 2-5 years experience in one or more of the following: UNIX internals; network protocols; Ethernet; PDP-11 and VAX architecture; IBM MVS or MVS/XA operating systems; and DEC RT11 operating system.

APPLICATIONS PROGRAMMER/ANALYSTS

To help develop both online and batch applications software in a UNIX and TSO environment. Work will include the full range of programming and analysis tasks - from problem definition, design using a formal methodology, coding and testing IBM 370 Assembler, PL/1, or C programs, to documentation and installation. Requires a Bachelor's degree or equivalent and experience in developing applications software via UNIX or TSO using languages such as 370 Assembler, PL/1, or C.

OFFICE AUTOMATION SYSTEM ENGINEER

To help design integrated office automation systems using advanced work-stations in a UNIX environment. This person will promote advanced office automation development and support other application development efforts. Requires a Bachelor's degree or equivalent and 2-5 years design and development experience in one or more of the following: office automation applications, UNIX based applications, online office automation system user interfaces, or distributed office systems using minicomputers and/or intelligent workstations.

If you are looking for challenging and rewarding job assignments, an ongoing career development program, a progressive benefits package, a professional working environment, and a salary commensurate with your background and experience, please send your resume to:

CHEMICAL ABSTRACTS SERVICE
Employment Department
P.O. Box 3012
Columbus, OH 43210

IIT RESEARCH INSTITUTE
Rome, New York

IIT RESEARCH INSTITUTE (IITRI) is an independent research organization founded in 1936 to provide research, development and design services to industry and government. Today, IITRI ranks as one of the largest and best known contract research organizations and continues to extend its capabilities to effectively meet research challenges of our changing society. The IITRI facility in ROME, NEW YORK has openings for experienced professionals to join a group of software engineers and computer scientists performing software engineering research and developing special purpose databases.

SOFTWARE TECHNOLOGY

B.S. or M.S. in Computer Science or related discipline; at least 2 years experience in one or more of the following areas:

• Systems Development • Networking • Software Tools/Methodologies • Office Automation • Data Base Management • Data Collection/Analysis • Software Metrics • Software Acquisition • Software Assessment.

Exposure to Unix, DoD applications and research methodologies a plus. Projects will support Ada*, STARS, DACS, and other DoD programs.

*Ada is a registered trademark of the U.S. Government (Ada Joint Program Office).

If you are interested in professional growth and increasing responsibility, in advanced educational opportunities, and would like to live in upstate New York where you'll enjoy casual living and easy access to year round recreational activities, send your resume to: Professional Employment, Dept. SR3, IIT Research Institute, 19 West 35th Street, Chicago, IL 60616. An equal opportunity employer M/F/V/H.

IITRI

SYSTEMS PROGRAMMERS

American Electric Power System's solid commitment to constant improvement for more than 75 years has meant better service at lower costs to its customers, as well as rewarding, challenging careers for the professionals who make improvements happen.

AEP's advanced, multi-state computer network, based in our new corporate headquarters in Columbus, Ohio has immediate opportunities for systems programmers.

Our current environment is dual IBM-3032 processors in Columbus and dual IBM-3033's in Canton, Ohio. We will soon be expanding our capabilities by installing an IBM-3081. Our operating system is MVS/SP with JES-2/ NJE shared spool. Real-time systems include TSO, CICS and ROSCOE.

The primary responsibility of these positions is to generate and maintain a large-scale, virtual-storage operating system. The ideal candidate will have a B.S. degree and a minimum of two years experience with SMP, MVS or JES-2.

We offer salaries based on experience and a comprehensive benefits package. If you are seeking real professional involvement, recognition and opportunity, please send your resume including salary history and requirements in confidence to:

SOHIO CORPORATE RESEARCH

Combine your technical and interpersonal skills in supporting SOHIO's R&D staff with personal computer applications. Your diverse experience in micro, mini and mainframe computers, ideally coupled with your scientific degree (or equivalent experience) and 3 years of computer related application activities could qualify you for this challenging opportunity. Other key qualifications include specific experience in IBM/PC, DEC and/or CDC computers. Systems software support experience is highly desirable.

This position will provide a career-oriented individual with the opportunity to:

- Determine appropriate software and hardware for scientific and administrative applications.
- Select appropriate equipment for computer work stations.
- Work with and train R&D staff in the application of personal computers.
- Maintain current knowledge relative to a wide variety of software and hardware applications.

We offer an excellent compensation/benefits package, as well as the opportunity to grow technically at our new Corporate Research Center in Warrensville Heights. SOHIO's comprehensive relocation package for new hires includes all normal moving expenses. Homeowners also qualify for mortgage interest differential allowance, third party home purchase and other features typically restricted to internal transfers.

For prompt, confidential consideration, please send a detailed resume of your experience to:

Cities Service is the domestic oil and gas subsidiary of Occidental Petroleum Corporation.

An Equal Opportunity Employer

DATAPOINT
We sparked the revolution.

Seven years ago when DATAPOINT introduced the first local area network, ARC® (Attached Resource Computer®), we sparked a revolution in business communications. Today, DATAPOINT's comprehensive approach to office automation, communications, dispersed data processing and desktop computing continues to make major demands on software technology. If you are a degreed software development professional, and want to be involved in developing the most widely used LAN's in the world, then match your skills to the opportunities below:

4300 Systems Manager

If you are a Systems Programmer with experience in RAS, CICS, MVS and VM/VSE this will be your opportunity to run your own shop that is part of a state-of-the-art development center.

Operating Systems Programmers

From a creative point of view, you will design and implement current as well as future operating systems and utilities. You'll need knowledge of Assembly, Pascal and "C".

Office Automation Programmers

You'll be part of a highly skilled professional team developing the office of the future - stressing reliability and user friendliness. Programming experience using high level "C" and similar languages, and interactive software tools is desired.

Support Analysts

Your team will be the key in support of state-of-the-art operating systems, utilities, languages, communication and network products. You'll need to be a strong communicator and problem-solver. Systems programming and/or support experience helpful.

Documentation Writers

We're looking for proven communicators with skills in operating systems, languages, communications, and office applications. End-user documentation experience preferred. Knowledge of on-line documentation, "Help" facilities, and other user aids helpful.

Software Quality Analysts

Join a team that has high visibility in our quality-conscious organization. These positions involve systems test, analysis, planning, and development, as well as, software performance analysis and testing.

File Management & Languages Development Programmers

Operating Systems, DBMS, or language development in assembly language is required for this advanced team of software professionals. Experience in using "C" language or Pascal is a plus.

Working with excellent resources and some of the best minds in the industry, you'll be able to achieve recognition and professional advancement rapidly in this "electric" atmosphere.

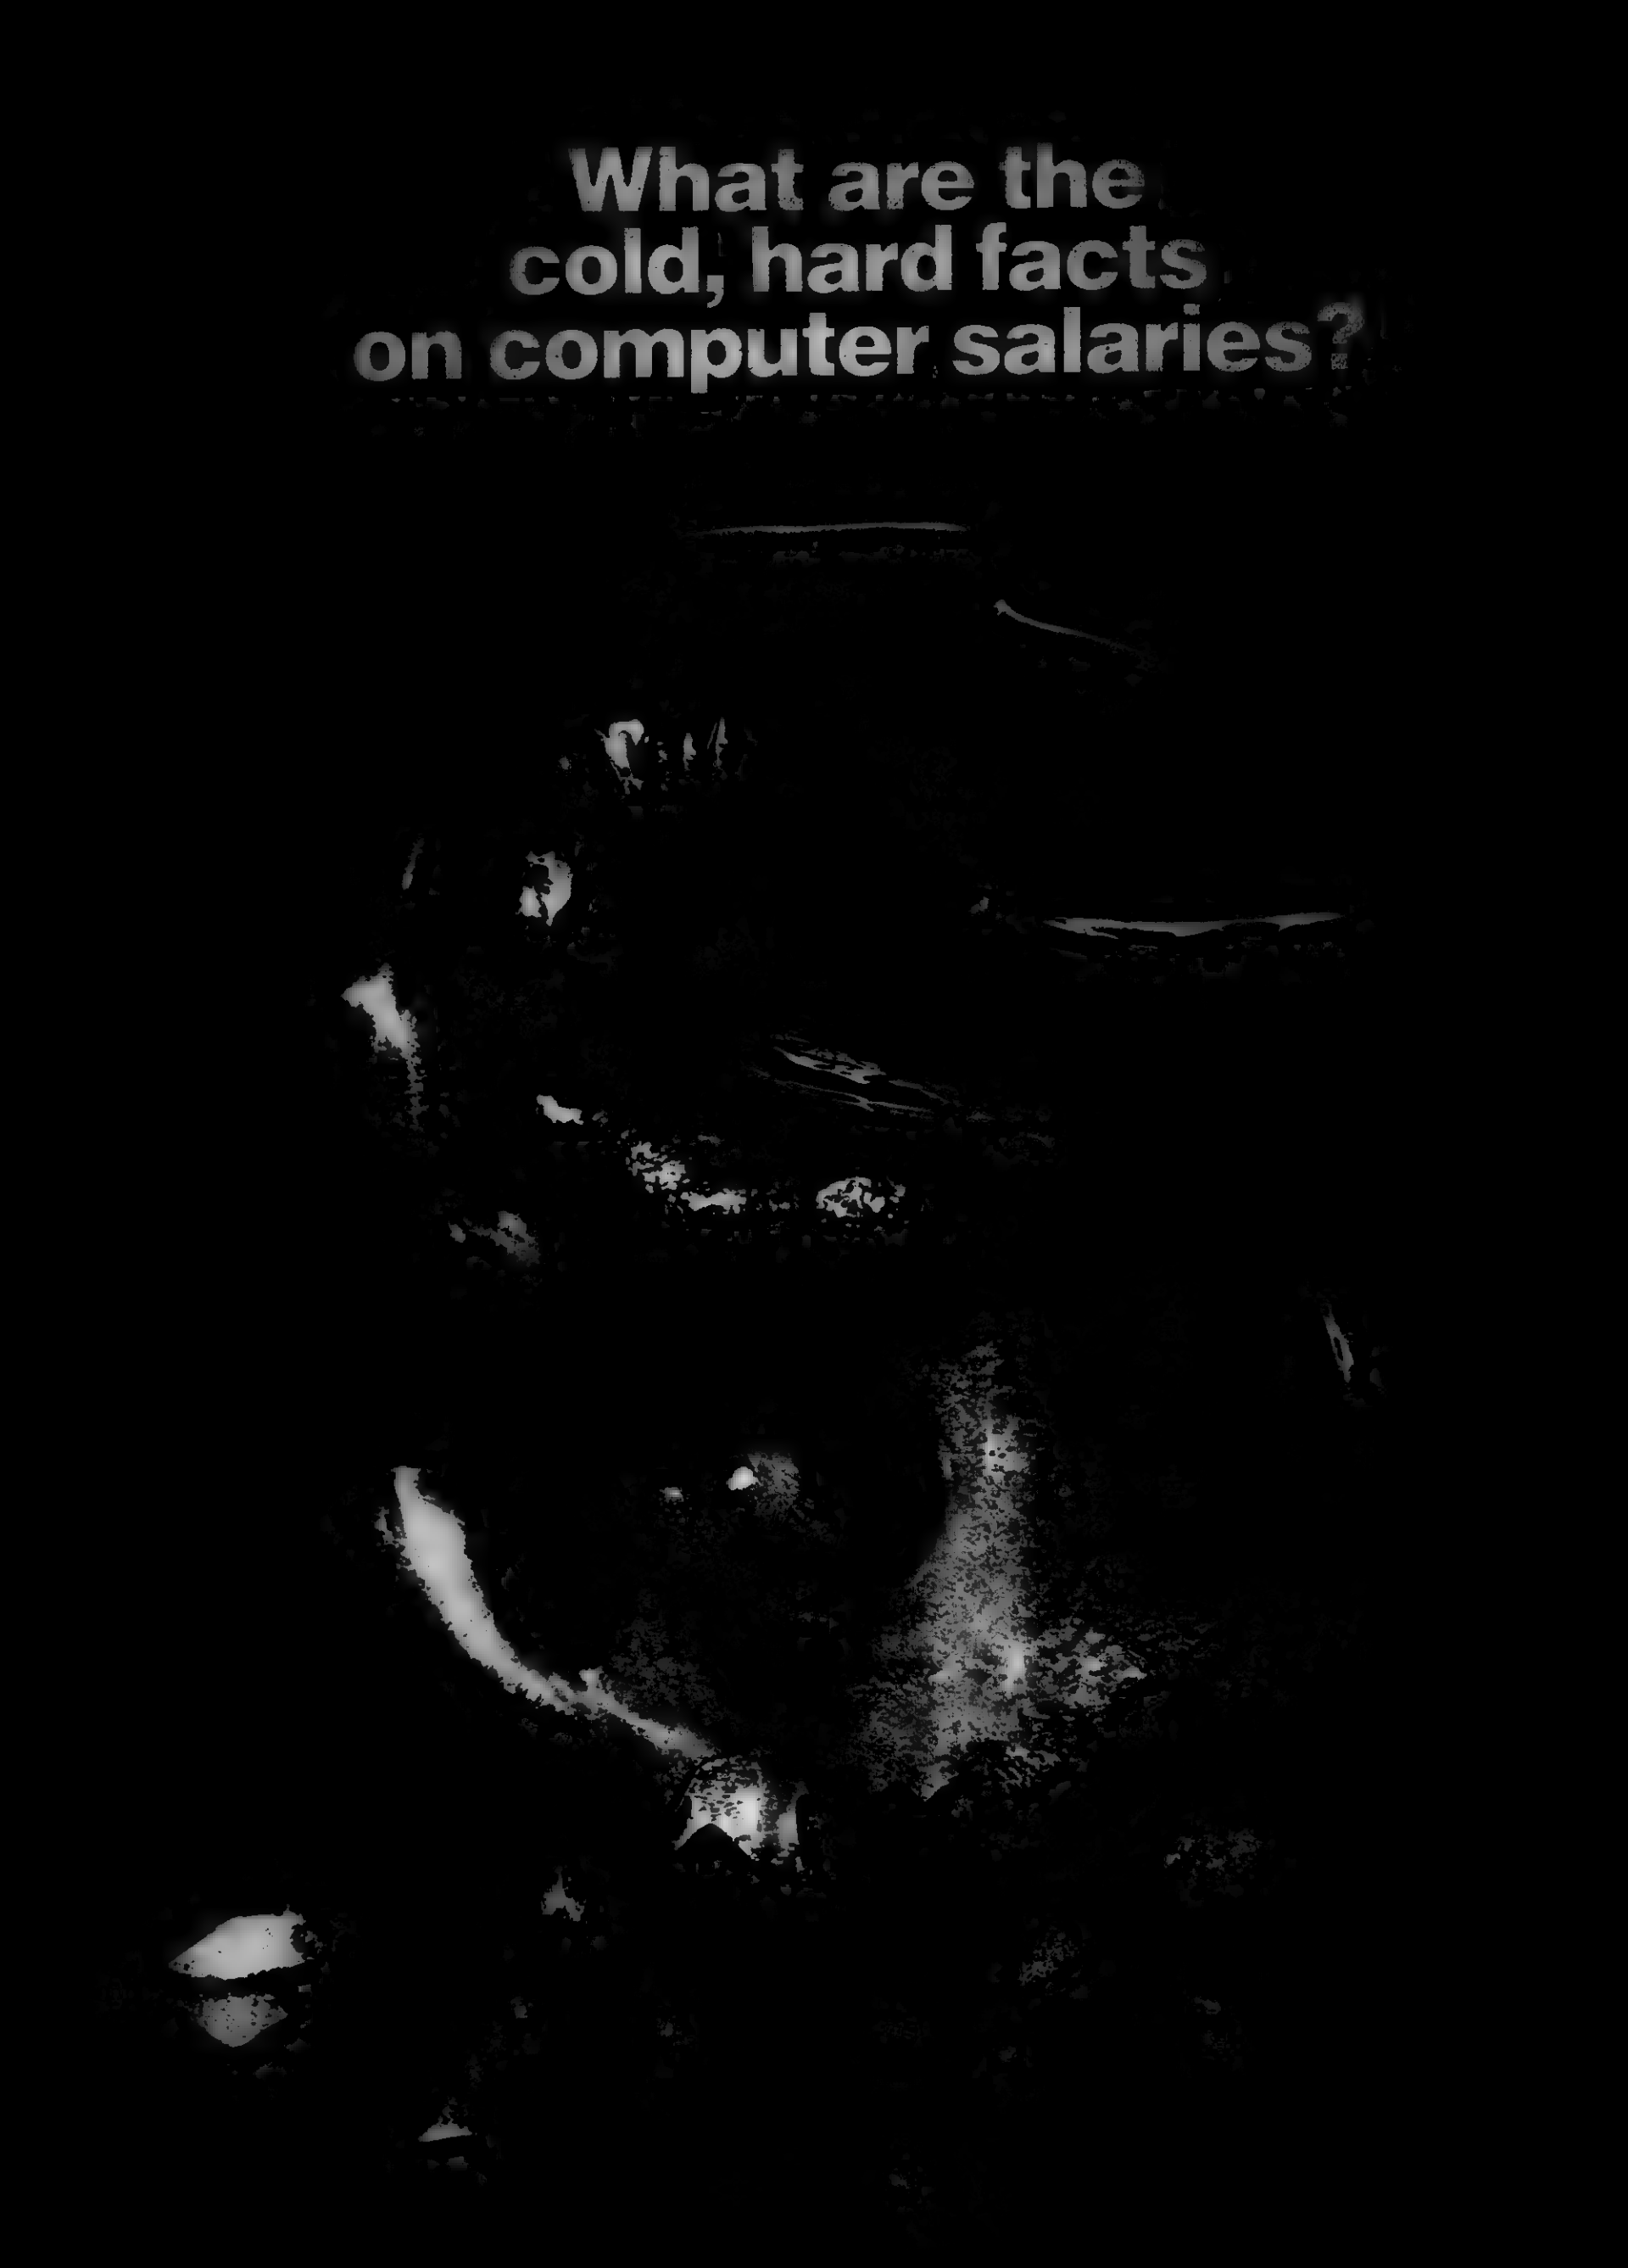
EQUAL EMPLOYMENT OPPORTUNITY/AFFIRMATIVE ACTION EMPLOYER

What are the cold, hard facts on computer salaries?



Find out in our new, free Salary Survey.

No doubt during 1993, you knew that many organizations took a hard line on awarding liberal salary increases.

The effects of the salary freeze were felt by many computer professionals. Firms enacted across-the-board cuts, lowered compensation ranges for "new hires," restricted bonuses and benefits or set forth other policies to lower their personnel costs in countless situations.

Yet, on the other hand, did you know that salaries for *some* computer professionals *soared* right on through the uncertain business outlook?

A favorable climate for skilled professionals.

Our *1994 Computer Salary Survey and Career Planning Guide* will give you new insight on trends that impact compensation, provide current salary figures and review ways the computer profession will be affected in the future. It will also explain why many computer professionals are able to advance their careers more successfully than others.

In the new Survey, you'll learn how salary differences between computer professionals are becoming more pronounced than ever.

- How some professionals—performing the same work and having a similar amount of experience—are earning significantly more than their peers.
- Why some professionals now earn as much as 25% more than they did last year.
- What emerging skills are most in demand and which positions command high salaries now and in the future.
- How size of firm and computer installation greatly affects compensation levels.

Cold, hard data with helpful tips.

The new Survey is based on contacts with more than 44,000 computer professionals and 35,000 organizations. Not only are salary averages for fifty-eight positions reviewed (including ten new ones which we never before covered), but high and low compensation ranges are also covered.

Included are positions in programming, software, systems design, data base/data communications, Edp auditing, operations, computer sales, marketing, marketing support and management. The new 32-page Survey is available without charge.

Since 1966, this annual report has helped approximately a quarter of a million computer professionals understand current trends in technology and compensation, realize how and where they fit in and what they need to do to reach their fullest potential.

Source Edp is the world's largest recruiting firm devoted exclusively to the computer profession. Because each of our professional staff has had extensive computer experience prior to joining our firm, we are able to provide remarkable insight on computer careers.

You owe it to yourself—especially if most of your career lies ahead—to call or write for your free copy today.

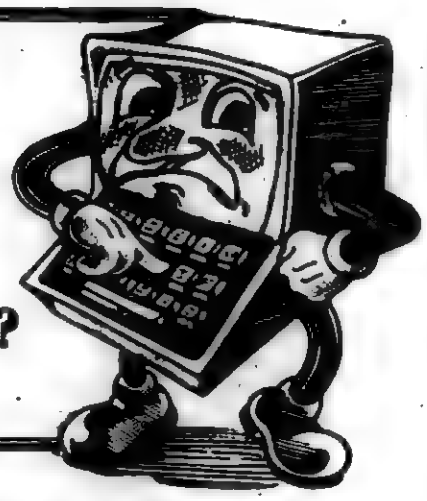
SYSTEMS PROGRAMMERS

Do you feel "terminally ill" in your present position?



If all you do all day is "talk" to machines, maybe it's time to make a change. . .to cga

Cure your problem with an exciting new career at CGA. If you're comfortable working with people and enjoy the challenge of systems software development, please read on.

CGA Software Products Group is one of the largest systems software companies in the U.S. . We're dedicated to the development and support of state-of-the-art systems software products.

Work directly with our clients, in product support and assist them with any problems or questions that may arise. A minimum of 2 years experience with MVS BCP internals is essential as is good communications skills and the ability to deal professionally with people of all levels. Knowledge of multiple CPU related software, preferably MSI, MSM or GCD would be a major asset. Some travel to SHARE, CMG and GUIDE meetings is also necessary.

You will find that being a member of our team is highly rewarding. We offer a superior salary and benefits package including profit sharing, major medical/life/health/dental insurance, tuition reimbursement, and relocation assistance.

Why waste time, call Chris Blum collect at (201) 946-7500 to arrange an immediate interview, or send him your resume in complete confidence.

ASSIGNMENT OPPORTUNITIES IN EUROPE AND SOUTH AFRICA FOR DP PROFESSIONALS, BUSINESS ANALYSTS, ENGINEERS

GEC! is an internationally recognized consulting group who has earned a first class reputation in several countries in Europe, Africa and the Far East. Our insistence on excellence and integrity for our clients, and generous conditions and growth opportunities for our consultants, have ensured this success. For our continuing expansion in short and long term projects and training programs, we require

- DATA /BUSINESS ANALYSTS
- DB/DC PROFESSIONALS
- APPLICATION SPECIALISTS
- SYSTEM AND NETWORK PROGRAMMERS
- TECHNICAL COMPUTING ENGINEERS
- EXPERIENCED ANALYSTS/PROGRAMMERS
- TRAINING SPECIALISTS
- 8100 SPECIALISTS

If you are interested in our overseas positions, please send your detailed resume, professional and personal details and objectives, and earning expectations to:

COMPUTER SCIENTISTS/COMPUTER SPECIALIST

Center for Programming Science & Technology of the INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY

Challenging opportunities to perform research, provide technical assistance in the use of new technology, and to develop technical standards and guidelines. Laboratory based environment, with advanced facilities that include VAX's, other UNIX based systems, database machines, and personal computers such as IBM and Apple Lisa.

Technical areas for which staff is currently needed include:

- Database Management Technology – Database Management Systems, Database Machines, Distributed Database Technology, Data Administration.
- Application Development Technology – Very High Level Languages, Program Generators, Advanced Software Development Environment.
- Knowledge-based Systems – Expert Assistance System Technology, Application to Software Development.
- Computer Security and Risk Management.
- System Architecture – Microcomputer Software Technology, Micro-Mainframe Link, Distributed Systems.
- Systems Programming – Database Laboratory Software Development.

Graduate degree in computer science or mathematics or equivalent experience with demonstrated ability to conduct research is required. Recent experience commensurate with Civil Service grade level in the area or areas of specialization is required.

The computer scientist positions range from GS-9 to GS-14 ($20,555 to $55,539) and the computer specialist position ranges from GS-12 to GS-15 ($30,402 to $46,587) depending upon qualifications and experience, and offer competitive salary, excellent career benefits, and other professional growth opportunities. Please send your Personal Qualifications Statement (SF-171) to:

U.S. Department of Commerce
National Bureau of Standards
Administration Building, Room A-123
Washington, D.C. 20234
ATTN: Ms. Jo White (640-CW)

The National Bureau of Standards is located in modern facilities in Gaithersburg, MD and is an equal opportunity/affirmative action employer. U.S. citizenship is required.

APS WANTS THE BEST... PROGRAMMER ANALYSTS

We are proud of our State and proud to serve Arizonans. As more businesses and industries locate here, Arizona Public Service Company faces increasing challenges. We welcome professionals who can help us grow.

Our Corporate Models Development Department has openings for Programmers with experience in Fortran, IMS, and TSO/SPF. A knowledge of PLI and SAS or Mark IV would be helpful. You would provide both design and development and support for our Decision Support, Financial Planning and Engineering Systems. 3 to 5 years experience on a large scale computer system is required.

Combine Arizona living with a dynamic career. Send your resume with salary requirements to:

FACULTY POSITIONS COMPUTER SCIENCE/ MATHEMATICS

Three positions are anticipated in the Mathematics and Computer Science Department for the Fall semester of 1984. One or more of the anticipated openings may become tenure track positions.

Applicants for the Computer Science positions must have at least a Master's degree in Computer Science and be prepared to enroll in a Ph.D. program. Applicants for the Mathematics positions must have a Ph.D. in Mathematics. Appointments will be made at the Assistant or Associate Professor rank commensurate with experience. Teaching responsibilities shall include upper-level undergraduate courses in computer science and/or mathematics, along with traditional introductory and service courses. Candidates with specified qualifications in both areas offer the greatest flexibility. New computing equipment currently being acquired will provide extensive support for separate administrative and academic systems.

Millersville University is the oldest of the 14 universities of the Pennsylvania State System of Higher Education. The campus is located in a suburb of historic Lancaster, oldest inland city in the U.S. Located less than three hours from New York City, Washington, D.C., and Philadelphia, it offers a pleasant atmosphere with easy access to the Jersey shore and the Pocono resorts. The department has 24 full-time faculty and offers a B.S. in Computer Science as well as the B.A. and B.S. degrees in Mathematics. Our programs are well respected in the region and have drawn highly motivated and able students.

Interested applicants should submit resume showing education and experience, transcripts of all graduate and undergraduate courses, and three letters of reference to: Dr. James A. Stager, Chairperson, Department of Mathematics and Computer Science, MILLERSVILLE UNIVERSITY, Millersville, PA 17551. Interviews will begin in mid-February and continue until suitable candidates are located.

Millersville currently seeks and is eager to receive applications from women and minority candidates. Affirmative Action/Equal Opportunity Employer.

Head, Library Systems Duke University

Duke University Libraries is seeking a strong individual to plan and coordinate the utilization of new technology to enhance Duke's present automated systems, while working toward implementation of an on-line, integrated library system. The position requires 3-5 years experience in analysis and programming, preferably in a library environment; demonstrated ability to plan, budget, analyze, program, work well with others, and communicate effectively both orally and in writing; documented knowledge of major computer programming language (COBOL experience with IBM or Tandem computers preferred), computer hardware, and library automation; supervisory experience and MLS from an ALA accredited program strongly preferred.

Duke has a superior benefits package and offers competitive salaries.

Letter of application and resume should be submitted to:

Library Personnel Office
210 Perkins Library
Duke University
Durham, North Carolina 27706

An Affirmative Action Equal Opportunity Employer

SYSTEMS PROGRAMMER

Aggressive Billion $, Sunbelt Bank, expanding its technical staff, seeks IBM Systems Programmer.

Our current environment includes RACF, JCS 2, CICS.

Candidate should possess application programming background and a minimum of three years 4341 MVS systems programming experience. Proficiency with SMP4 is a plus.

Send resume and salary requirements to:

Southern National Bank of N. C.

SOFTWARE ENGINEERS

OPTICAL DISK DEVELOPMENT OPPORTUNITIES

Storage Technology Corporation has announced the first high-performance optical data storage product for high-level electronic data processing. In only 14 years of existence, Storage Technology has grown from a minor supplier of computer peripherals to an industry leader with over $1 billion in sales. Located at the base of the beautiful Rocky Mountains near Boulder, Colorado, the Optical Disk Division has current needs for:

SENIOR MVS SOFTWARE DEVELOPMENT ENGINEERS

Primary responsibilities will include the design and implementation of data management software for the Optical Storage product line. The ideal candidate will be knowledgeable in MVS Architecture, proficient in 370 Assembler language and have direct experience with MVS internals.

TEST/STAFF TEST ENGINEERS

You will be part of a UNIX Programming team involved in the design and implementation of a large scale automated test floor software system written in the C language. Expertise in any or all of the following areas is required: design and implementation of database management systems, manufacturing systems, quality assurance systems, and local area networks. Knowledge of MVS/VM and computer hardware is desirable. BSCS or equivalent is required. Salary and grade will be commensurate with experience.

So, if you like challenging problems, high technology, an atmosphere of experienced professionals and the fast growing future of one of the most dynamic companies in the field, please call Dan O'Reilly collect at (303) 673-3034 or forward your detailed resume to his attention, Storage Technology Corporation, MD FF, Dept. 0123, #16, 2270 South 88th Street, Louisville, Colorado 80028. Equal Opportunity Employer.

Mobil

Mobil Exploration and Producing Services Inc. (MEPSI) provides programming and data processing support to Mobil Oil Corporation's exploration and producing activities worldwide. Several openings are immediately available for experienced, preferably technically oriented, computer applications analysts/programmers. As a member of the Technical Applications Support Group, you will be involved in challenging assignments in support of our engineering and other technical departments.

Preferred candidates should possess:

- Minimum 3-5 years of technical programming experience or equivalent credentials. Oil & Gas industry experience desirable.
- High proficiency in use of IBM OS and/or VM computer systems (MVS, CMS, TSO, FORTRAN, PL/I, JCL, Utilities, PANVALET, FOCUS).
- BS degree in mathematics, engineering, or other industry-related technical profession.
- Willingness to accept domestic/foreign travel assignments of short duration.

Responsibilities include:

- Interact with units in MEPSI and other worldwide divisions within Mobil to interpret application needs and provide user support.
- Design, develop, implement, and maintain computer programs supporting the various technical departments.
- Write user/programmer support documentation.

Mobil offers the salary and comprehensive benefits package that you expect from an industry leader. Qualified candidates should send their resume to: Carol Redeker, Employee Relations, Mobil Exploration & Producing Services Inc., Dept. CW 123, P.O. Box 900, Dallas, Texas 75221.

An Equal Opportunity Employer, M/F.

Recognition For Excellence

ADVISORY SYSTEMS ENGINEER AND SR. SYSTEMS ENGINEER

Become associated with a firm which recognizes excellence in its employees and rewards accordingly.

IN GTE DATA SERVICES,

Our information sciences organization in Tampa, Florida, is responsible for the development and deployment of architecturally compatible hardware/software systems integrating voice, data and text in a distributed data environment utilizing end user computing and intelligent workstations.

We are interested in individuals with:

- Demonstrated creativity, ingenuity, judgment and breadth of comprehension
- Capability to perform with minimal direction
- Demonstrated leadership qualification in Information Management techniques
- Excellent oral and written communication skills

Advisory Systems Engineer - Telecommunication Planning

5-8 years experience in:

- Voice Networking Strategies
- Data Networking Strategies
- Simulation Modeling
- SNA Networking
- X.25 Networking
- Satellite Communications
- LANS
- Network Management

Sr. Systems Engineer - Data Administration

3-5 years experience in:

- Logical Modeling
- Userview Consulting
- Data Standardization Consulting
- Logical Model Synthesis
- Information Center Consulting
- Global Model Consulting
- Information Systems Planning
- Data Administration
- Data Security
- Dictionary Administration

Candidates should have a masters or bachelors degree preferably in Mathematics, Computer Sciences, Engineering, or equivalent.

Please submit a detailed resume with salary history to N. Fitzpatrick, Personnel Representative, Dept. CW, GTE Data Services, P. O. Box 1548, DC 136, Tampa, Florida 33601. An Equal Opportunity Employer.

Explore The Infinite Boundaries Of Telecommunications

With Northern Telecom In North Carolina

There's no limit to the imagination, and there's no limit to how far yours can take you with Northern Telecom. We provide a foundation of years of innovation, give full support to good ideas, and provide a creative atmosphere to generate those ideas. Turning the possible into the probable and the probable into reality has made Northern Telecom the leader in digital switching systems.

People who want to explore their potential are invited to consider these immediate opportunities:

Data Base Analyst: Requires BSCS or equivalent with 4 years experience in data base design and administration utilizing IBM 370 and HP 3000. (1130-JD)

Data Base Manager: Requires BSCS or equivalent with 10 years experience in data base design and administration utilizing IBM 370 and HP 3000. (1130-JD)

Senior Systems Analyst: Requires BSCS or equivalent and 5-plus years experience in manufacturing systems utilizing HP 1000. (1140-JD)

Engineer-CIM: BSCS/Math or equivalent and a minimum of 3 years experience in computer integrated manufacturing applications. Distributed systems graphics and IMAGE experience a plus. Familiarity with HP 3000 desired. (1130-JD)

Senior Engineer-CIM-CAD/CAM: Requires BSCS/EE or equivalent, MS preferred, and a minimum of 5 years experience in CAD/CAM and the use of robotics. Familiarity with machine vision and computer controlled industrial processes desired. (1130-JD)

Senior Engineer-CIM-Computer Communications: Requires BSCS/EE or equivalent, MS preferred, and a minimum of 5 years experience in the implementation of computer communications. Requires at least 3 years experience in HP distributed systems, specifically DS-1000. Knowledge of HP 1000 RTE internals strongly desired. (1130-JD)

Senior Staff Engineer-CIM: Requires BSCS or equivalent, MS preferred, and a minimum of 5 years experience with large real time systems. Familiarity with distributed systems and strong system integration skills are essential. HP 1000 experience desired. (1130-JD)

North Carolina is a place where you can enjoy the high-technology challenge along with a scenic drive in the gently rolling hills, the sight of early morning mist among the pines and the quiet beauty of the nearby Smokies. We'll pay for your relocation and provide you with competitive compensation. Send your resume in confidence to the address below.

TO EXPEDITE CONSIDERATION, PLEASE INCLUDE THE CODE WHICH APPEARS AFTER THE POSITIONS OF INTEREST TO YOU ON THE FRONT OF YOUR MAILING ENVELOPE.

AMERICAN DIVERSIFIED

American Diversified Information Systems Division currently operates a 100-user network on VAX 11/780 equipment. We need highly motivated professionals to help expand our VAX cluster to a network serving over 1000 users nationwide by 1985. Our unique data center makes use of state-of-the-art hardware data base processors and the latest cluster and ETHERNET technologies. We currently have the following needs:

MANAGER, SYSTEMS DEVELOPMENT

Degreed professional with 6 years' data processing experience to supervise systems programming team, monitor system performance, maintain computer security and assist in hardware/system software selection and implementation. B.A. degree.

MANAGER, APPLICATIONS DEVELOPMENT

Full responsibility for corporate applications development. Must have 5 years' experience as skilled manager with heavy project planning, capable of supervising a team of systems analysts and programmers. Perform project planning, estimating and control. B.A. degree.

MANAGER, HARDWARE AND COMMUNICATIONS

Hardware and communications expert with a B.S. or B.A. in electronics and experience in the computer field to manage technicians team installing and maintaining computer, peripheral, telephone and communications equipment in our Costa Mesa based corporate office and area offices nationwide.

SYSTEMS PROGRAMMER

Thorough understanding of VAX internals to create and maintain system software, utility programs and application subroutine libraries. Will perform data base design, monitor overall system performance and provide technical assistance to the application programming staff.

SENIOR SYSTEMS ANALYST

Surveys, identifies and evaluates user requirements including developing building/contractor applications, requirements, program specifications, schedules, training materials, support and maintenance. Must be experienced in make/buy decisions and vendor negotiations.

PROGRAMMER/ANALYST

Performs detailed program design and implementation. Ability to assist in systems specifications and design preparation desirable.

SUPERVISOR, COMPUTER OPERATIONS

Computer operations experience should include shutdown/startup and system/users maintenance. Requires 2 years' college, 5 years' data processing experience and 3 years as computer operations supervisor. Requires knowledge of DCL command language.

ELECTRONICS TECHNICIAN

Knowledge of digital circuits and familiarity with oscilloscope and data line monitor for troubleshooting and diagnosis. This position involves installation and maintenance of terminals, modems, data concentrators, printers and other digital equipment.

The successful candidate will have at minimum a Master's Degree (with Ph.D preferred) and significant computer experience in the area of educational delivery. Experience in software support, documentation functions, and the supervision of others will also be considered.

Application deadline: March 9, 1984.

(Position to be filled on or before July 1, 1984)

Send resume and salary requirements to:

Mark Reed, Acting Director
University of Nevada
System Computing Center
Southern Nevada Facilities
4505 Maryland Parkway
Las Vegas, NV 89154

Copies of transcripts and three letters of recommendation will also be required for a complete application.

The University of Nevada System is an equal opportunity/affirmative action employer, and does not discriminate on the basis of race, creed, color, sex, age, national origin, handicap, or veterans status in any program or activity it operates.

SOFTWARE SPECIALISTS
WITH DIGITAL, YOU'LL SUPPORT NEW PRODUCTS THAT YOU HELP DEVELOP.

CALL (404) 953-0959, COLLECT MONDAY-FRIDAY, JANUARY 23-27, FROM 9 A.M. TO 5 P.M.

Learn how you can work at Digital's Customer Support Center in Atlanta. Field test new products and support product planning. Interact with design engineers. Help influence the final forms new products take. And then provide phone support to users of Digital's microcomputers over a vast range of scientific and engineering applications.

We are looking for Micro Specialists to provide MICRO-POWERED / PASCAL, VAXELAN, and DEC-PRO-11 support to customers, sales reps, and field specialists.

To qualify for these positions, you should have a B.S. in Electrical Engineering, Math, Computer Science, or equivalent and at least 2-4 years' experience developing software applications on micro-computers. You must have RSX-11 or VMS and RT-11 experience.

We are looking for Laboratory Specialists to provide support to engineers and scientists.

To qualify for these positions, you should have a degree in Electrical Engineering, Math, Computer Science, or equivalent and at least 2-4 years' experience developing software applications on micro-computers. You must have RSX-11 or VAX/VMS experience and knowledge of FORTRAN and BASIC. Knowledge of PC-350, PDP-11 hardware, or MACRO is desirable.

If you join us, you'll be rewarded with the fully competitive salary, excellent benefits, and unparalleled advancement opportunities only Digital, the world's second largest computer company, can provide.

So, if you want to support new products that you've helped develop, Digital wants to hear from you.

Call (404) 953-0959, collect, Monday-Friday, January 23-27, from 9 a.m. to 5 p.m:

Or, if you can't call, send your resume to: Employment Office, Digital Equipment Corporation, Dept. 0123 3804, 360 Interstate North Parkway, Atlanta, GA 30339.

We are an affirmative action employer.

Cheryl had wanted, for a long time, to move to another city clear across the country. Her problem was that she lacked information about wage levels, cost-of-living expenses, housing, etc. Also, she was not sure of the best way to find a good EDP position in her preferred city.

She had gone to other placement firms that were not nationally structured to help her. Then she came to us... and we made it easy for her. We contacted our affiliated office in her preferred city, got all of the information she needed on wage levels, cost-of-living expenses, housing, etc. We also arranged five employment interviews for her. She accepted an EDP position she felt was ideal for her, and her new employer paid all her interview and relocation expenses.

We can do the same thing for you, as we have done for thousands of others. Come in. Call. Or mail your resume to the firm nearest to you. Confidentiality is assured. Company clients assume our fees.

AN EQUAL OPPORTUNITY EMPLOYER

GROWMARK INC.
SUPPLIES DIVISION

The NS16000, Elegance Is Everything.

An elegant approach led to a very elegant solution — National's NS16000 microprocessor and its product family. The revolutionary top-down architecture delivers 32-bit power, and memory management capabilities on par with the latest mainframes. The upward-compatibility will accommodate a shift from 16- to 32-bit hardware. In essence, the NS16000 performs more like a computer than a chip, and we think that's a very elegant package.

A "Software-Intensive" Effort.

The NS16000 microprocessor is the springboard for an entire family of products currently being developed at National's Microprocessor Systems Division. The key to their success lies in the development of software that enhances the NS16000 family's performance, applicability, and elegance. From development through marketing, our "software-intensive" effort is rapidly gaining momentum as we develop demand-paged UNIX* systems based on Berkeley 4.1bsd and 4.2bsd for National's NS16032 and NS32032 microprocessors. We are also working with Bell Labs to define a version of SYSTEM V, . . ., etc. for NS16032 and NS32032. These developments are creating opportunities for software professionals to join us in the following areas:

Sr. Software Engineers: Language Tools Development

You will be involved with developing compiler code optimizer, linker, or debugger. Requirements include two to five years' of language tools development experience; including knowledge of "C", Pascal, FORTRAN, and UNIX.

Sr. Software Engineers: UNIX System Architect

You will be defining a version of SYSTEM V for NS16032 and NS32032. Two to five years' experience in UNIX kernel development is desired.

Sr. Software Engineers: UNIX Kernel Development

You will work on porting Berkeley 4.2bsd to NS16032 and NS32032 based microcomputer systems. Two to five years' experience in UNIX kernel development is desired.

Sr. Software Engineers: Networking

You will work with developing/porting networking software under Berkeley 4.2bsd on NS16032 and NS32032 based microcomputer systems. Two to five years' experience in networking protocol design and development is desired.

Software Engineers: UNIX Utilities Porting and Development

You will be involved with porting and developing UNIX utilities. One to five years' experience in UNIX is desired.

The Rewards Of Elegance.

The elegance and power of the NS16000 will become evident as more software is developed for it. And those who develop that software will reap the rewards, personally and professionally. That's definitely something to think about if you're ready to take on the challenge of our opportunities.

To learn more about National's Microprocessor Systems Division, send your resume to Dept. MS, National Semiconductor, P.O. Box 62499, Sunnyvale, CA 94088. We are an equal opportunity affirmative action employer. Principals only please.

*UNIX is a trademark of Bell Labs.

let's talk about your career.

National Semiconductor

Systems Programmers
Applications Programmers
Manager for Network Services

Syracuse University announces the availability of positions for highly motivated people in its Academic Computing Center and its new CASE Center (Computer Applications and Software Engineering). The CASE Center is dedicated to industrial collaboration in research and education leading to the wider use of computer technology. The Center is designed to promote academic excellence and technological innovation in two principal areas: computer-enhanced reasoning and computer tools research in artificial intelligence.

The systems used here are VM/CMS and MVS on three IBM 4341 computers, with a large minicomputer/terminal network. Applicants for the programming positions must have a minimum of one year experience. VM/CMS experience is desirable; bachelor's degree preferred. Applicants for Manager of Network Services should have a minimum of 5 years experience with computer communication protocols, hardware, and software. Knowledge of computer networking essential. Supervisory experience desirable.

Syracuse University's benefits include competitive salaries, advanced degree opportunities, dependent scholarships, and generous vacation and retirement plans. Closing date for applications is February 10, 1984. Send resume to: CASE Search Committee, Syracuse University, Personnel Department, Skytop Office, Syracuse, New York 13210.

Syracuse University, located in beautiful and culturally rich central New York, is an Equal Opportunity Affirmative Action Employer.

SYSTEMS PROGRAMMERS

Large Detroit area manufacturing operation has immediate openings for an individual knowledgeable and experienced in VAX/VMS system, VAX-11 Fortran and Macro programming languages. 1-3 years experience in using RMS systems services, and RTL. Additional experience with computer graphics, database, Pascal and data base management systems is desirable. Responsibilities will include systems and application programming. This position is in an innovative, creative environment working with a small group of fellow professionals. We offer a unique package of benefits and career growth options. Salary commensurate with background and experience. Qualified applicants may submit their resume and salary history/requirements in confidence to: The Valeron Corporation, Attn: Dwight Jonn, Personnel Department, P.O. Box 3600-P, Troy, MI 48007. An Affirmative Action Equal Opportunity Employer. Males and Females are encouraged to apply.

IMS AND MVS PROFESSIONALS/ BOSTON AREA

Zayre Corporation, a Fortune 500 company, is presently seeking three experienced individuals for its corporate staff to support its operating systems, IMS Data Base Systems and Applications Development Systems.

We are a state-of-the-art leader in Data Processing, located in Framingham, MA, just 25 minutes from downtown Boston. We are a growing company that has earned a reputation as both an innovator and a leader in the American Discount Industry (of which Data Processing has played a major part).

Senior IMS Software Specialist

Our Operating Systems Support Group (OSSG) is seeking an MVS System Programmer with a minimum of 4 years experience to provide technical guidance in the efficient use of our systems software and hardware. Successful candidates should have knowledge of the MVS operating systems software and performance tuning skills. A knowledge of IMS/DC internal is needed and knowledge of VTAM and NCP communications is helpful.

IMS Data Base Specialist

Our Data Base Systems Support Group (DBSG) is presently seeking an experienced individual who is ready to move into a new sphere of challenge that will enhance his or her career and creativity in the world of data base design and usage. To qualify you must possess at least 4 years of experience in the design, analysis and Technical Support of IMS/VS Data Base applications. Your duties will include IMS support in all application systems development, logical and physical DL/1 Data Base design and implementation, problem determination, on-line screen design using MFS and the use of various IMS utilities.

Technical Team Leader

Take an active role in our success through new innovative applications and new systems development with a leader in Data Processing. To qualify, you must have 4-6 years of experience on IBM hardware, knowledge of OS/JCL, Cobol and On-Line Systems. IMS preferred.

Interested?

Take a look at Zayre and what we are doing in your profession. For consideration, send a detailed letter to Zayre Corp., MIS Recruitment, Speen St., Framingham, MA 01701, or call 617-620-3021, 10:00am - 5:00pm EST. All inquiries will be held in UTMOST CONFIDENCE. We are an equal opportunity/affirmative action employer.

Zayre

SYSTEMS PROGRAMMERS

Saudi Arabia 40,000 - 50,000 US Dollars Paid Tax Free, Plus Usual Middle Eastern Benefits.

Additional Systems Programmers are now required for multi IBM CPU Data Centres comprising 3000's, 4300's and a number of minis and micros.

DB/DC SYSTEMS PROGRAMMER

To be responsible for the technical support and monitoring of the DB/DC product environment and to develop software interfaces and support utilities.

At least 2 years ADABAS and NATURAL experience is required in installation, technical support and trouble shooting with emphasis on performance analysis and investigation. Knowledge of at least one TP monitor, ideally complete or CICS, is also required.

OS/TP SYSTEMS PROGRAMMER

To be responsible for the OS generation and TP interfaces. Essential experience must include in-depth knowledge of MVS and VM ideally with ACF/NCP and ACF/VTAM.

Please send your resume to Ms. Jenny Dalrymple-Hay at Dalroth and Partners Ltd., 4 Half Moon Street, Mayfair, London W1Y 7R1, England or Contact on UK 1.493 2847 quoting Ref. 5037.

SYSTEMS PROGRAMMER. Senior Operating. Design and implement new operating systems and tools using micro-computer and Bell Unix system. Design systems to be more compatible with existing systems. Provide technical leadership of network computer services operating from Ann Arbor to customers in Italy, Germany, Hawaii, Poland. Add as technical liaison between London office and European clients. Must be knowledgeable of all communications and Bell Unix systems familiar with computer Time-Sharing and Real-Time environment and network computer operations, able to assume technical leadership role. $2000 per month, 40 hours per week. M.S. Computer Science + 1 yr. exp. Send resume to Mich. Employ. Sec. Com., 7310 Woodward Ave., Rm. 418, Detroit, Mich 48202. Ref. no. 34884.

COMPUTER SCIENCE FALL 1984 CREIGHTON UNIVERSITY

Applications are invited for a tenure-track faculty position. Strong background in Computer Science required, Ph.D. preferred. Salary and rank are dependent upon qualifications. Applicants should submit dossiers and three reference letters to Dr. John N. Mordeson, Dept. of Mathematics/Computer Science, Omaha, NB 68178 by March 1st, 1984. Equal Opportunity Affirmative Action Employer.

Micro Support Analyst

We are seeking an internal consultant to function as liaison between MIS and a diverse user community for a major East Coast manufacturing company. A degree and 2+ years experience with micro-computers (knowledge of IBM or compatible PC's desired) and associated software is required. This position will provide technical consulting on PC's to both MIS and user personnel and will evaluate new software, hardware and software for the Information Center. Forward resume to:

Hallowell & Co.
7927 Jones Branch Drive
McLean, Virginia 22102
(703) 448-6186

Systems Analysts

One of the South's largest banks is seeking experienced Analysts to join its staff. These positions will function in a "state-of-the-art" environment, and require experience with large IBM mainframe operating under OS/MVS, in COBOL. For most positions, banking experience is not required, but helpful. An ATM-SYSTEMS ANALYST is also needed, and will be involved in a unique "linked" ATM network development. This requires CICS and ASSEMBLER, exposure to the "Hunter" and "Diner" systems would be a plus. Your expertise, enthusiasm, and hard work will be rewarded with an excellent salary and benefits package, full relocation expenses to the Southeast, and PAID OVERTIME. Call JERRY WOLCOTTCK, (collect) at (404) 327-6574, or send resume to P.O. Box 70040, Atlanta, Georgia 30358.

SALES/MARKETING

Sales/Marketing representative for a dynamic national and multinational, leading edge telemarketing operation. Candidate must have minimum two years software sales experience and familiarity with the Digital VAX/VMS operating system and corresponding marketplace. Excellent opportunity with an INC-500 company in beautiful Santa Barbara, California. Rewarding compensation plan. Send resume to:

STI Signal Technology, Inc.
5951 Encina Road, Goleta, CA 93117/(805) 683-3771

TECHNICAL SUPPORT ANALYSTS

1100 DATA BASE

We are seeking several senior level data base support analysts to join the staff of our MIS department's Data Administration and Applications Support group.

Specific responsibilities will include data base design, implementation, and maintenance, creation of an applications testing environment, resolution of production software problems, technical training and providing task leadership for junior staff members.

Desirable candidates will have the following experience:

- At least five years Sperry 1100 series programming.
- Intensive knowledge of COBOL and DMS 1100; 1100 Assembler desired.
- Logical and physical design of data bases.
- Training and support of COBOL applications programmers in development and production environment.

Education must include a Bachelor's degree, preferably in Computer Science, or equivalent business experience.

Please forward resume, including salary history, in complete confidence to: TECHNICAL RECRUITER.

THE RIGHT DOOR?

CONSULTANT SYSTEMS, INC.

1984

For many the career path is a dark hallway with many doors. Some say ENTER, but should really say EXIT. Some say NOWHERE, though you can't see it at the time. Some say ALMOST EVERYTHING YOU EVER WANTED, but they are locked.

At CONSULTANT SYSTEMS we have an open door policy. We've taken the excellent compensation, good fringe benefits, job security, and added:

VARIETY	(in assignments, systems and applications)
ENHANCEMENT	(building upon existing skills)
ADVANCEMENT	(based strictly on performance)
RECOGNITION	(visibility on projects of prime importance)
ELIMINATION	(Of corporate red tape)
ENVIRONMENT	(professionalism and personal growth)

As specialists in commercial data processing services, CONSULTANT SYSTEMS advises and assists major corporations in the areas of systems planning, technical support, customized application development, hardware-software evaluation and educational/training support.

Openings in many areas of the Continental U.S. Skills with IBM S/34, 36, 38 RAPID or Honeywell DSNTP or CICS or IBM DL/DC or HP IMAGE/QUERY or NATURAL/ADABAS are a plus. Call COLLECT or drop us a line. We have a lot to talk about.

A Happy New Year is just through an open door...

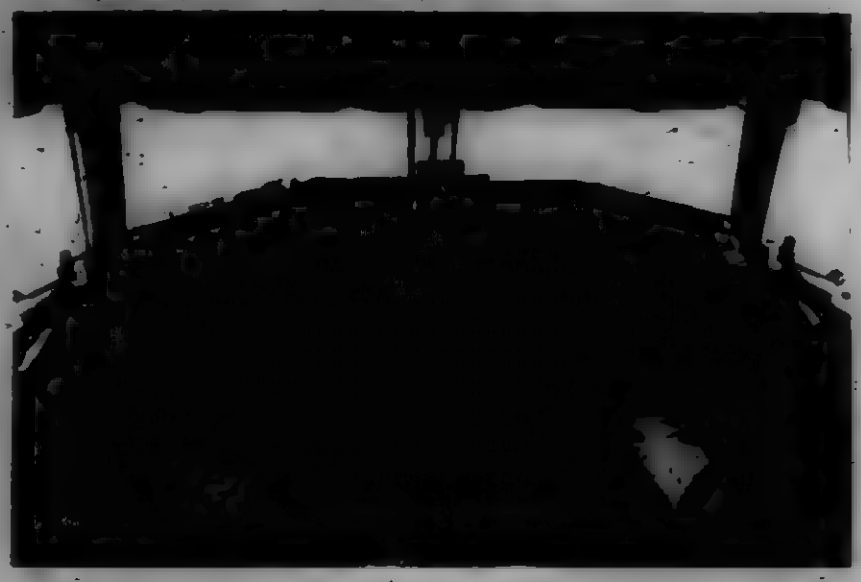
Good people making technology work.

Boeing helps systems programmers take control.



The cockpit of the Boeing 757/767 with digital instrumentation is the most advanced in the world. And software developed by Boeing Computer Services has been instrumental in helping assemble the thousands of parts necessary to give today's pilot complete control.

Boeing can help you take control of your career, too. As a systems programmer, you'll work for one of the world's leading software and communications services companies, and you'll take command of a wide range of challenging and exciting projects.

As you explore new hardware and software, you'll be backed by Boeing resources. Specially trained when necessary to operate emerging advanced systems. And allowed to implement and expand what you know.

We're currently seeking candidates with at least 3 years experience in one of the following:

- MVS systems programming
- VM (SP or 370) systems programming
- VTAM host support
- Dump directing
- IBM data communications
- IMS systems programming
- CICS systems programming

There are several opportunities available. The emphasis ranges from new product development to maintenance and enhancement of existing offerings. Some positions require technical documentation skills and customer interface abilities. Your contributions will be rewarded with a comprehensive benefits package and salary fully commensurate with the professional challenges you'll meet.

Take advantage of this outstanding opportunity for systems programmers. Send resume and salary history in confidence to:

Our client, a San Joaquin Valley newspaper, is seeking a data processing manager to join its management team.

The successful candidate will have 3 to 5 years data processing experience including 2 to 3 years in a supervisory role. Knowledge of the newspaper environment including typesetting and production desirable. Qualified applicants should also be knowledgeable in the IBM System 38 and 43XX series, and have the ability to supervise 5 to 7 staff members.

Attractive compensation package. For confidential consideration, please submit resume and salary history to: Executive Search, Dept. TBC, 400 South Hope Street, Los Angeles, CA 90071-2883. Equal Opportunity Employer.

Price Waterhouse

COMPUTING SERVICES MANAGEMENT

ARGONNE NATIONAL LABORATORY, one of the nation's leading R&D laboratories has three immediate, upper-level opportunities in its state-of-the-art Computing Services Division. Please join us for one of the following positions:

DEPUTY DIVISION DIRECTOR

High-visibility position will provide management and technical leadership support to the Division Director, serve as Director during absences, serve as spokesperson, lead selected projects and provide input on personnel and financial matters.

Position requires 4 or more years proven management level experience, plus successful experience at the technical working level in user services, design/maintenance of operating systems software, computer networking, or scientific applications software. Excellent decision-making, problem-solving and oral/written communication skills are essential. MS in computer science, engineering or related field preferred. Reply to Box J-CSD16819-21.

MANAGER OF SYSTEMS PROGRAMMING

This key position is responsible for management of complex systems programming functions for Argonne's central IBM complex, including supervision of technical and clerical staff in the installation/maintenance of IBM operating, interactive and accounting systems software, evaluation of new software applications, and review of system performance.

Position requires 5 or more years systems programming experience with proven expertise in management, budget control, and procurement procedures. Familiarity with MVS JES3 and VM/370 operating systems and Wylbur, CMS and CICS interactive systems is desirable. Must have excellent written/verbal communication, user interface and problem-solving skills. Degree in computer science, engineering or related area required. Reply to Box J-CSD19245-21.

MANAGER OF INFORMATION SYSTEMS

Position plays a leading role in determining the Laboratory's administrative information systems needs. This includes management of 20 + member staff responsible for information system design/implementation, preparation and update of annual budget and 3 year systems development/maintenance plan and administration of Laboratory and Division policies.

Position requires 10 or more years hands-on administrative data processing experience with increasing levels of responsibility, including both hands-on design and programming and management of these activities. Background must include in-depth knowledge of large system design methodology, database design, and strategic planning of information systems in a complex networked environment. Also requires strong planning and oral/written communication skills, and Master's degree in computer science, business administration or equivalent. Reply to Box J-CSD19244-21.

For prompt, confidential consideration, send letter or resume, indicating Box #, to:

EXPERIENCED DATA PROCESSING PROFESSIONALS

Dynamic Public Sector Organization has immediate openings for DP professionals. We offer a leading edge environment, utilizing large IBM installation, CICS/VSAM/COBOL/MVS/ IDMS.

MANAGER DATA BASE ADMINISTRATION

Experienced Data Base Administrator with a minimum of 6 years utilizing IDMS Data Base. Successful candidate will have full administrative and technical responsibility for planning and directing our new Office of Data Base Administration. This is a senior management position reporting directly to the DP department head. Salary range mid $30's depending upon experience.

SENIOR SYSTEMS PROGRAMMER - IDMS

Responsible for software development. Requires 3-5 years of systems programming experience with minimum of 1-2 years IDMS. Must be familiar with installation performance monitoring requirements, and problem determination/resolution. Experience in application development consulting and vendor interface a plus.

Opening also for Data Base Technician requires at least 2 years IDMS experience; Data Dictionary Administrator requires 1-2 years IDMS experience; Data Design Analyst requires 2 years IDMS experience.

Salary high $20's depending upon experience.

Extensive fringe benefits package includes liberal medical, dental, vision coverage. Four weeks vacation first year, 12 paid holidays, ongoing training program.

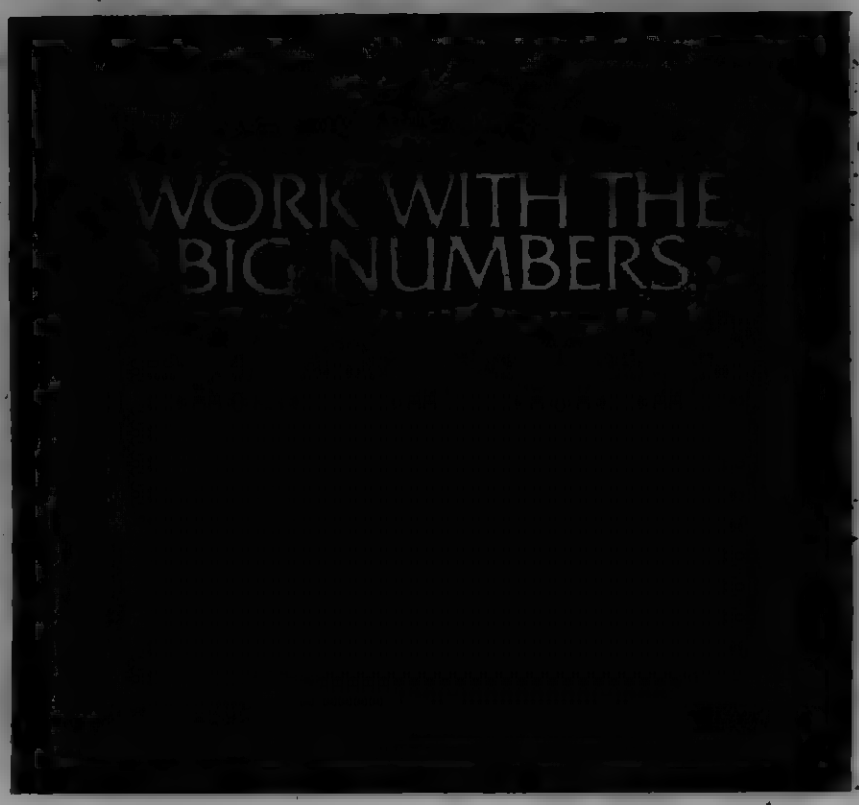
Your search leads to Sohio.

SOHIO



Seven years ago, DATAPOINT introduced the world's first local area network, ARC® (Attached Resource Computer), and ignited a revolution in business communications. Today DATAPOINT continues to lead the way in versatile hardware and advanced software designed to meet the needs of modern business.

ARC local area networks are integrated in businesses around the world, linking multifunction workstations, printers, display systems, and processors. Providing machine to machine communications, working together with systems so advanced, they could only be DATAPOINT.

Others have joined the revolution, but DATAPOINT is the undisputed leader with more than 5,000 ARC local area networks installed. More than IBM, Xerox, and Wang combined. We are a proven success that can provide a basis for your successful sales career.

We now have positions available in almost every major market across the country. If you are a degreed sales professional with a solid track record in computer sales, call our 24 hour career hotline to learn about the DATAPOINT success and how you can join this growing team of professionals.

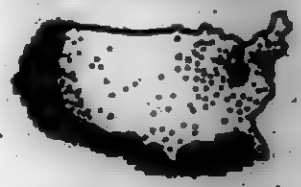
RANDOLPH'S APPROACH TO COMPUTER LEASING... AND WHY IT WORKS.

Started in 1964, Randolph has been saving its customers 30% to 70% of their DP hardware dollars . . .

And we *know* leasing is still the most financially attractive method of acquiring computer equipment at low cost without draining working capital.

But we learned early that the dollar-and-cents approach to computer leasing is only part of a company's concern. Equally important are: prompt installation . . . dependable servicing . . . flexible upgrade capabilities . . . and full support services. Our commitment to *this* approach is the key to satisfied customers . . . and our success.



RANDOLPH . . . COAST TO COAST

We presently serve customers in over 300 cities and towns from Maine to Hawaii.

EQUIPMENT ON THE MOVE

We have under management IBM computers with an original cost of over one-half billion dollars . . . and we're adding to this investment to meet the changing needs of our customers. Whether it's an IBM 3081 or 4300 system, additional tape drives, disk storage, printers or other peripherals, our equipment inventory is available to meet your company's requirements. Even hard-to-get machines are sought out and acquired for Randolph customers.

BUT . . . SERVICE MAKES THE DIFFERENCE

The real story behind Randolph's success is our approach to customer support services. To keep computer operations running smoothly and efficiently, these support services have proven to be valuable assets to our customers' D.P. operations.

Continuous IBM Maintenance Program
Manufacturer's service is available day or night, seven days a week, to insure optimal use of your system.

On-Going Technical Support
Randolph's technical staff is on call to help you reconfigure your system to meet changing data processing requirements.

Active Remarketing Division
We assure maximum return on your investment in computer equipment which you no longer use.

MEMBER OF THE FIRST NATIONAL BOSTON FAMILY

In 1972, The First National Bank of Boston purchased our S/360 leasing business, and we became a wholly-owned subsidiary.

With the Bank's financial capabilities behind us, Randolph customers benefit even more from the combined efforts of the best computer leasing and financing people in the United States.

HOW ABOUT YOU?

If your company is not presently leasing computer equipment from Randolph, you'll be interested in our new brochure outlining our special customer support services, and important facts on how we can reduce your computer costs. Call Joseph B. Kelly, Jr., Executive Vice President, 800-243-5307.

- BIDS AND PROPOSALS

It's easy to advertise in COMPUTERWORLD. If you don't have an advertising agency to supply us with copy, layout and order, or camera ready mechanical, stat or film negative of your ad, just call one of our ad-takers at 1-800-343-6474. They will be glad to take your ad and typeset it in available fonts at no extra charge. If you have lengthy ads that require logos and artwork, just send a clean typewritten copy of your ad to the classified advertising department at COMPUTERWORLD (telecopier service is available); note the ad size you want; and, if you want your company logo to appear in your ad, please be sure to include a camera-ready copy with your insertion order. You should also supply any special borders, headlines and artwork that you want in your ad. Our Art Department will follow your suggested layout as closely as possible if you wish to send one.

Ad closing is every Friday, 6 working days prior to issue date.

Rates: Open rate is $128.10 per column inch. Columns are 2" wide. Minimum ad size is 2 column inches (1 column wide by 2 inches deep), and costs $256.20 per insertion. Additional space is available in half inch increments. Some sample sizes and costs are shown.

1 col X 4" -$512.40
2 cols X 4" -$1024.80
2 cols X 5" -$1281.00
2 cols X 8" -$2049.60

Discounts are available when you run more than 35 column inches of advertising in a year anywhere in Computerworld. Box Numbers are available, $15 per insertion.

To reserve space for your ad, or if you'd like more information on Classified advertising in COMPUTERWORLD, call our office nearest you.

ORDER FORM
COMPUTERWORLD BULLETIN BOARD

Issue Date: Ads can be accepted up until the Monday preceding the issue desired. Computerworld comes out every Monday.

Classifications: Most ads will be classified according to the brand of equipment that is being bought or sold. These classifications include Burroughs, Data General, Digital/DEC, Hewlett Packard, Honeywell, IBM, NCR, Sperry Univac, Salvage, Terminals, Misc. Systems and Miscellaneous.

Copy: Copy sent in via the mail or telecopier (telecopier extensions are 416 and 461) should be clearly typewritten. Ads may be given over the phone to our team of ad takers. The standard size is 1 column by 1 inch deep. These units may be combined to form larger sized ads. Describe the equipment very briefly, give the price and the name of the person to contact. All ads will be set up using a standard format. No borders or logos are allowed.

Cost: The price for each standard unit is $130.00 (One unit minimum and no fractional units allowed.) There are no agency commissions and no quantity discounts.

Billing: Once you've written your ad, send (or call) it in with your name and address for billing purposes and we'll run it. (If your company has never advertised with us before, we request a check with your order.)

Date(s): _____
Signature: _____

SOFTWARE FOR SALE

Need general accounting software for IBM System/38?

We've simply solved your problem.

LAWSON ASSOCIATES has solved it with the first general accounting software specifically designed for IBM System/38. Not merely compatible, but state-of-the-art to fully utilize your computer's capabilities. Compare. You won't find a total software solution like it anywhere else.

DESIGN FEATURES: They include: on line systems using data base management; menu driven, user friendly programs written in RPGIII, the System/38 language; and integrated modules. Their benefits: ease of installation and use, plus maximum employee productivity.

INTEGRATED MODULES: Those available include: General Ledger and Report Writer/Accounts Payable/Accounts Receivable/Fixed Assets/Payroll/Personnel/Purchase Order/Order Entry/Inventory Control

SERVICE FEATURES: Fully documented and supported. Onsite training and implementation. One year warranty. Available now for immediate installation.

For more information, please call or write:

SECURITY

Protect sensitive information with *Ven-Tel's 212 SECURITY PLUS*. Password restrict any terminal to calling only the destinations and applications you authorize. Telephone numbers, passwords, account numbers, and log-in codes are concealed to prevent unauthorized disclosure or use.

Ven-Tel security is not limited to password protection. You are secure in the confidence that your Ven-Tel modem is the most reliable and dependable in the world.

Security is the assurance that Ven-Tel has committed the investment in research, development and production facilities necessary to continued industry leadership and provide off-the-shelf delivery.

Security is knowing that the modem you buy from Ven-Tel is the most modern, technologically advanced product available on the market today. It is knowing that when you need help, a Ven-Tel technical support specialist is as close as a telephone call. It is the confidence that Ven-Tel will be there with service and support for your equipment as long as you own it.

Candy maker, software firm in legal battle

By John Gantz
CW Washington Bureau

In a case that observers say could have a major effect on all software developers, Mars, Inc., the multibillion-dollar candy maker, is locked in a bitter legal battle on two continents with a flamboyant, high-flying Israeli software entrepreneur.

While the case involves such legal and technical esoterica as whether a certain software program was suited to production of shells of M&M candies but not the nougat centers of Mars Bars, the essence of the dispute is whether a software firm promised to develop software it knew it could not deliver.

According to documents from the federal court in New Haven, Conn., M&M/Mars, a Mars division, struck an agreement in May 1982 with an Israeli firm, Creative Output Ltd., to develop a Planned Order System, a software system for planning and executing customer orders for M&M/Mars products.

COL is run by Dr. Moshe Eliyahu Goldratt, an Israeli physicist, whose major claim to fame is an automated production process called Optimized Production Technology which, according to a recent article in *Fortune* magazine, he has pushed with messianic zeal and which has had great success in limited applications by a number of America's largest companies.

M&M/Mars had agreed in 1981 to license OPT for its nougat production through Creative Output, Inc., a Connecticut company

FCC affirms delay of some access fees

By Phil Hirsch
CW Washington Bureau

WASHINGTON, D.C. — It took the Federal Communications Commission less than five minutes last week to decide, finally, to defer the biggest part of its upcoming surcharge for access to the long-distance network.

Wednesday's abbreviated meeting followed one on Jan. 19 at which the commission tentatively decided to defer the residential and single-line business surcharges. Specifically, the commission decided last week that residential and single-line business customers of local telephone companies will not have to pay a monthly access charge of $2/line beginning April 3. Beginning on that date, however, multiline business users will have to pay a monthly charge of up to $6/line.

At last week's meeting, the FCC deferred final action on several access-related matters of special interest to business users — whether the fee will be imposed on each access line connecting a customer's premises with a Centrex central office system and whether some relief will be provided to Foreign Exchange users which, under tariffs recently filed by the regional telephone holding companies, would be hit with mammoth increases in their monthly rates. At a press conference following last week's meeting, Jack Smith, chief of the FCC's Common Carrier Bureau, said he expects the commission to issue a final order covering the Centrex-CO

FYI

Accident modeler takes on the tough cases

By John Gantz
CW Staff

In 1980, goalie Jim Craig stood draped in an American flag before wildly cheering fans following the U.S. Olympic hockey team's victory over the Soviets in Lake Placid, N.Y.

In September 1982, Craig stood before the judge in a Massachusetts courtroom awaiting a verdict in a vehicular homicide case that stemmed from a May 29 automobile accident in which one woman was killed and two others injured.

Craig was acquitted, and much of the credit for that acquittal went to a soft-spoken computer expert whose testimony shed clear light on a trial that produced evidence as twisted as the two cars that collided on Rt. 6 in Mattapoisett, Mass., that long Memorial Day weekend.

As the Olympic hero breathed a sigh of relief, the expert — Dr. Yau Wu — chalked up another victory.

A former Boston University professor, Wu is no stranger to the courtroom. Using computerized accident reconstruction models he developed for the U.S. Department of Transportation, Wu has produced evidence for about 300 criminal and civil cases involving automobile accidents. He has been called to testify as an expert witness in more than 30 of those cases, almost all of which involved fatalities or severe injuries.

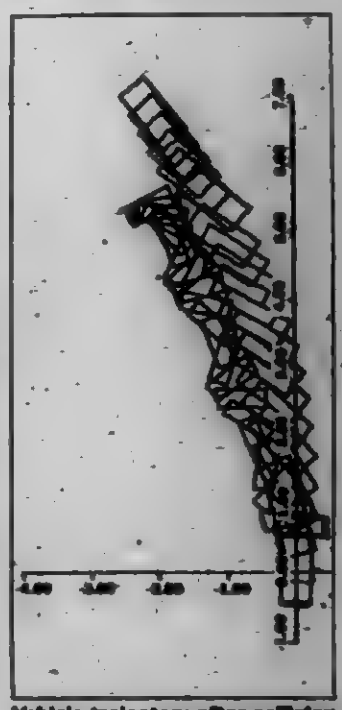
The president and sole employee of Dynamic Analysis Corp. in Concord, Mass., Wu has represented insurance companies, law firms, private citizens and most levels of the government in the legal arena. His rough, hand-drawn charts and graphs and the printouts from his Digital Equipment Corp. Decwriter are so convincing that the opposition usually decides to settle out of court rather than dispute Wu's version of events leading up to and following an accident.

In 1975, while Wu was teaching mechanical and aerospace engineering at Boston University, the U.S. Army asked him to develop a computer model that would predict the effect of a nuclear blast on Army vehicles, such as tanks and trucks.

On the basis of his success in that project, the DOT in 1976 gave Wu two years to upgrade the quality of its accident prediction model called Simulated Model of Automobile Collisions, developed by Calspan Technology Products, Inc.

"It took Calspan 10 years to develop Smac, but I didn't want to work with it. Mathematically, it was a very unstable model, and it was based on what I considered some very unsound assumptions," Wu explained in a recent interview in his Con-

See ACCIDENT page 4



Vehicle trajectory after collision

FCC from page 1

and Foreign Exchange questions next month.

Besides deferring residential and single-line business surcharges, the FCC made some other changes in its access charge decision last week. For business users, the most significant one concerns a $25/mo termination surcharge on private lines that bypass the local exchange network. The commission said that users certifying that their private lines do not interconnect with a local exchange will not have to pay the surcharge.

Effect on business users?

A bigger question, however, is what effect the deferral of the residential/small business surcharge will have on rates for business communications services.

The FCC said it deferred the residential and single-line business surcharges so it can study a number of related issues, such as the impact of the surcharge on bypass services. At the press conference, Common Carrier Bureau Chief Smith said his office has evidence of "widespread bypass."

That evidence includes data showing what percentage of business users in several states have already bypassed their local telephone networks and the impact on the revenues of the affected companies. Smith said a report containing this data and extrapolating the effects of additional bypass will be issued shortly.

FCC officials freely admitted that a big reason for deferring the residential/single-line business surcharges was political. It was widely believed that the commission was trying to forestall legislation which would bar the surcharges after June 1985, the date by which the commission expects to complete its study and have new "tariff arrangements . . . put in place," according to a commission press release.

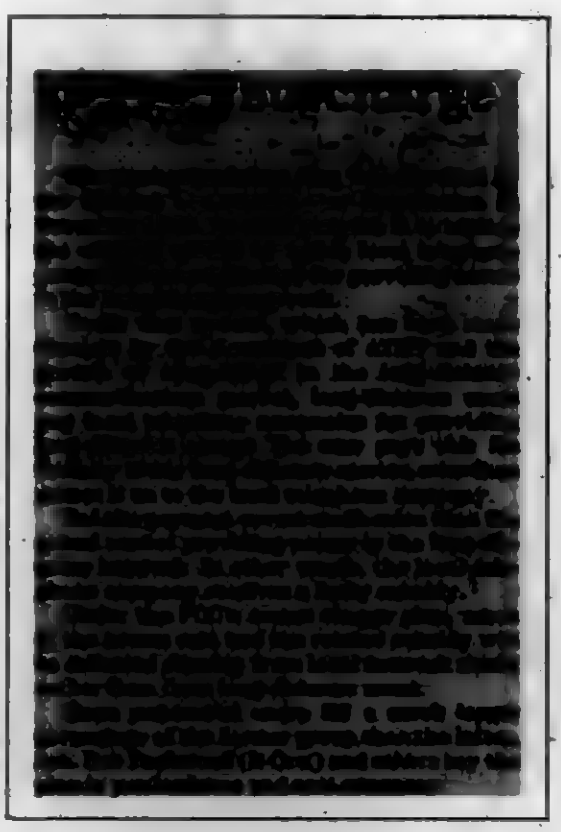
The effort to forestall legislation appeared to be successful.

Consideration of S. 1660

On Jan. 23, the Senate began considering S. 1660, a bill calling for a two-year deferral of the residential/single-line business surcharge. Authored largely by Sen. Bob Packwood (R-Ore.), a key Senate telecommunications policymaker, the bill is somewhat similar to H.R. 4102, the telecommunications legislation passed by the House of Representatives last year. The Senate bill is backed by state regulators, union and consumer groups but is opposed by business users, AT&T, the regional holding companies, the FCC and the Reagan administration.

As *Computerworld* went to press last week, the Senate was preparing to vote on a motion to table S. 1660.

According to a knowledgeable source, the motion will pass because "in an election year, no politician wants to deal with an issue that will alienate constituents or contributors. The FCC, by deferring the residential surcharge, has provided an acceptable way for senators to sidestep that choice."



Effect of decision on future rates?

WASHINGTON, D.C. — What effect will last week's decision by the Federal Communications Commission have on the rates that business users will pay in the future?

AT&T and the nation's local telephone companies filed tariffs reflecting the FCC's access charge plan last October. AT&T proposed an overall 10.5% reduction in long-distance dial-up Message Toll Service (MTS) rates, a 6.9% reduction in Wats charges and a 15.3% increase in private-line fees.

Earlier this month, the company said that based on a re-evaluation of its costs, MTS and Wats rates would be reduced more than promised earlier, while private-line charges would not rise as much [CW, Jan. 16].

AT&T stressed on both occasions that all estimates assume that a $2/mo access surcharge would be imposed on residential and small business users. When the FCC decided to defer those fees, FCC Chairman Mark Fowler admitted that "not much" of the promised reduction might be left as a result.

Under the original FCC access charge plan, an estimated $3.5 billion in costs now paid by long-distance users would have been shifted to local network users. Since virtually all of this "revenue requirement" was to be subtracted from AT&T's costs, the savings presumably were included in the promised rate reductions. Deferral of the residential/small business access surcharge reportedly will reduce the cost transfer to about $1 billion.

Centrex-CO issue focuses on lines

WASHINGTON, D.C. — The argument over whether the access surcharge proposed by the Federal Communications Commission should be imposed on each access line connecting a customer's premise with a Centrex central office (CO) system results from the greater number of access lines needed to connect users of this equipment to their telephone end offices than is required for on-premise private branch exchanges (PBX).

The FCC has received complaints about the surcharge not only from Centrex-CO users, but also from the former Bell operating companies that supply this equipment. The operating companies say that because of the higher access charges, they will lose business to competing PBX suppliers and will have to raise their local exchange rates to compensate for the loss of revenue.

When the commission considered this same basic issue last year, it ruled that users of Centrex-COs installed or ordered prior to July 27, 1983 would pay the residential access charge — $2/line per month — while the other Centrex-CO users would have to pay $6. The users and regional telephone holding companies are now asking the FCC to apply the $2 charge to all users and/or adopt a "PBX equivalency ratio" that would charge each user for a lesser number of access lines than the user actually has.

The FCC rejected both options last summer. It claimed that "if Centrex uses more lines, then Centrex necessarily creates more line costs."

Arinc anticipates surcharge troubles

WASHINGTON, D.C. — There are two basic problems with the upcoming access surcharges on Foreign Exchange users, according to Aeronautical Radio, Inc. (Arinc), which operates communications facilities for the nation's major airlines and is a major Foreign Exchange user:

- AT&T and, therefore, its customers will have to pay considerably more — 55% more — than other common carriers for local exchange access.

The justification for this differential is that the other common carriers will receive poorer quality access. But in the case of Foreign Exchange, Arinc said, the access provided to AT&T and the other common carriers is identical. As a result, the association has asked the Federal Communications Commission to make AT&T's Foreign Exchange access charge the same as the other common carriers' charge.

- Last October, most local telephone operating companies filed tariffs specifying what they wanted to charge for interconnecting their networks with the long-distance circuits of AT&T, MCI Communications Corp. and the other interexchange carriers. Charges for Foreign Exchange interconnections were raised as much as 1,800%, according to Arinc General Counsel John Bartlett. The present charge, on the average, is $30/mo for each local phone number assigned to the "open end" of a Foreign Exchange line, he explained, adding that under the pending local carrier tariffs, this charge would be $390.

Federal plan could save $29.5 billion in DP waste

By John Verity
CW Washington Bureau

WASHINGTON, D.C. — When it receives President Reagan's deficit-burdened federal budget this week, the U.S. Congress will also have before it a White House report recommending waste-reducing measures that in three years could save $424 billion, including $29.5 billion in DP and office automation expenses.

The recommendations are contained in a 656-page, two-volume study released in mid-January by the President's Private Sector Survey on Cost Control, better known as the Grace Commission after its chairman, J. Peter Grace, chief executive officer of W. R. Grace & Co. The DP/OA cost-cutting measures were prepared earlier by a special 44-member subcommittee of the Grace panel.

The subcommittee reported that "despite the fact that DP pervades the functioning of almost all aspects of the government, the estimate of federal DP expenditures is only $12 billion, about 1.6% of the total federal budget, but DP has the potential for savings far in excess of these annual expenditures."

A key finding of the DP/OA task force was that the government is not effectively managing its information technology resources. It recommended that the president appoint a federal information resource manager within a new White House Office of Federal Management.

The task force also said each agency should appoint a qualified top civil servant to oversee DP/OA within his agency who "should examine means of consolidating and enhancing the DP systems within the agency." This could lead to savings of $4.03 billion over the next three years. Noting that government teleprocessing costs are increasing by more than 25% a year, the panel said agency sharing of networks could save $517 million in three years.

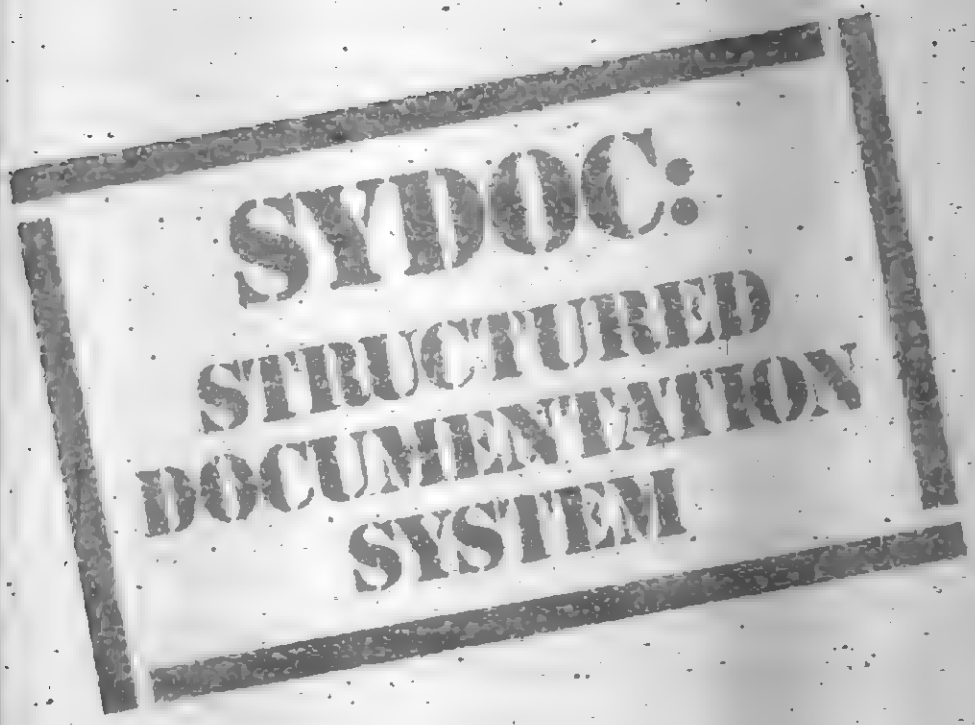
"SHOCKING!"

The Facts of Life About Maintenance and Documentation.

(And how SYDOC can change 'em!)

Call (201) 568-9700.

SYDOC:
Structured Documentation System



In keeping with our tradition of printing "all the DP news that fits," we present *Six Unexpurgated Facts About COBOL Maintenance and Documentation:*

1. Very few programmers—male of female—have ever established a meaningful relationship with documentation. What they produce is seldom very good—and it's almost never updated.

2. The result is a generation that might be called "Orphan COBOL Programs." They may have fathers. And they may have mothers. But birth certificates they have not got!

3. The rub comes when you try to update these orphans to meet the demands of the brave new world of DP. You can try to deduce the logic of such orphans by referring to the source code. But that's a slow and dangerous business. And your name had better be Sherlock Holmes.

4. Or you can simply ask the author of the program about the underlying logic. But guess what? He or she has just left for an exciting new job in Tahiti.

5. What you're probably left with is hand-drawn hierarchical charts—a long bus ride from structured programming techniques. And if you try to insert new code without understanding the logic, watch out. You'll probably introduce so many bugs you'll never be free of the exterminator!

6. The cost to society is high. It's been estimated that as much as 80% of your entire DP budget may be going into modifying complex COBOL programs!

WITH SYDOC YOU CAN SAY GOODBYE TO ALL THAT: SYDOC is not a sort but a new and exciting Structured Documentation System for OS/VS. It takes the responsibility for documentation out of the hands of programmers and puts it on the broad shoulders of the computer. SYDOC works three ways:

1. SYDOC IS GREAT FOR MAKING MODIFICATIONS: It works like an X-Ray. It analyzes existing programs and prints out charts that tell you everything you need to know about the program's logic, hierarchical structure, variables, and relationships between statements. You can quickly and safely pinpoint code to be changed. And you're far less likely to introduce bugs because you *know* the logic.

2. SYDOC IS GREAT FOR DOCUMENTING NEW BORNS: It tracks new programs and automatically produces first-rate structured documentation. You have an accurate and concise record of every program your staff develops. A record that can never be lured away by an executive recruiter.

3. SYDOC IS GREAT FOR MANAGERS: It permits you to establish uniform, structured-documentation standards and stick to them. You don't have to nag programmers about documentation. The ball is in the computer's court.

So if you'd like to reduce the size of your COBOL maintenance budget, give us a call. Dr. SYDOC will be glad to put you on his famous "Waste Watcher" diet!

IBM 4300 rivals reach 95 in number

Despite seeming vigor, market may be on the wane

By Tom Henshel
CW Staff

The excitement had mounted to near-fever pitch five years ago as the computer industry awaited the introduction of IBM's E series processor. When it was finally announced as the 4300 series, the mid-range machine spawned a rush of both compatible and noncompatible processors that offered basically the same performance characteristics.

Today, there are at least 95 processors from more than 25 vendors pitted against the 4300 series. They range from low-end mainframes manufactured by such entrenched vendors as Burroughs Corp., Sperry Corp. and Honeywell, Inc. to high-end, 32-bit superminis made by Digital Equipment Corp., Prime Computer, Inc. and Data General Corp.

IBM's 4300 line alone contains 11 systems: the 4321, 4331-11, 4331-2, 4341-9, 4341-10, 4341-1, 4341-11, 4341-2, 4341-12, 4361 and 4381.

But the market for such systems may be on the wane, and most industry watchers think a shakeout is in the cards.

The transitory nature of computer markets is certainly not new. The rise and demise of the 16-bit minicomputer market is a classic example of how computer companies can be sent scavenging for market niches to sell their products. But in the case of 4300-class machines, the market was born, matured and now appears to be waning in less than five years — the same time frame many DP shops use to reevaluate their processing needs.

For users, a shakeout in the 4300 market could mean one of two things:

- The new processor purchased three or four years ago may have reached its limit when it comes to general business applications.
- Some vendors may wind up going out of business or dramatically changing their marketing focus for mid-range systems, perhaps switching from the general business arena to more specialized market niches.

Is the market for mid-range processors doomed? Most analysts agree the market will not simply vanish. It will, instead, change shape over the next few years, with most growth stemming from new applications of the machines.

Five years ago, when the 4300 was announced, the popular buzzword in the computer industry was "distributed data processing" (DDP), recalls Frank Gens, an industry watcher with The Yankee Group in Boston. Everyone was convinced that large corporations would distribute mid-range processors that would communicate with larger, centrally located mainframe processors.

The idea had merit, Gens said, but the unexpected happened. Microcomputers burst on the scene, sending a shock wave through the DP community that is still reverberating.

What once appeared to be a great idea — DDP — suddenly seemed less plausible. Mid-range processors require trained people to run them; in the case of large 4300 machines and their counterparts, Gens pointed out, up to a dozen highly paid computer technicians might be required at each remote location.

Micros, on the other hand, are "user-friendly," today's most popular buzzword. While they tend to offer less functionality than superminis or low-end mainframes, micros are cheap, easy to use and provide almost instant gratification to application-starved users.

But micros cannot bear all the blame for the fate of the mid-range processor market. To some degree, the sheep-like dependence on IBM by some computer vendors has lead them to the edge of a cliff.

"Typically, 'me too' products don't sell. Some firms have mistaken an [IBM] product upgrade for a whole new market," said Neil DiGeronimo, manager of high-technology research at the Cleveland-based market research firm Predicasts, Inc.

But DiGeronimo claimed there is still an ample supply of users for some mid-range processors. For example, the five big mainframers often referred to as "the Bunch companies" — Burroughs, Sperry, NCR Corp., Control Data Corp. and Honeywell — offer mid-range processors as a growth path for smaller system users. And superminis geared toward scientific applications, such as DEC's VAX-11 line, and processors manufactured by Harris Corp. and Gould, Inc.'s SEL Computer Systems Division have succeeded in identifying specialized applications like computer-aided design and manufacturing.

Ironically, the salvation of the mid-range processors may be the microcomputers that have displaced so many of them. The Yankee Group's Gens maintained that mid-range processors will make dandy intelligent controllers for networks of microcomputers. For that reason, The Yankee Group predicted minis will hold their own over the next four years, with about 30% of the total installed base of computer systems.

But Gens also noted the applications for those systems will change dramatically in that time.

MODELER from page 1

cord office. "I told the department that I wanted to develop my own model, and they laughed because I only had a two-year commission."

With a project team of four programmers, Wu built a complex mathematical model — dubbed Impact for Improved Mathematical Prediction of Automobile Collision and Trajectory — that proved to be an extremely accurate tool for predicting the extent of damage resulting from a two-car collision. DOT embraced the model, which was developed in Fortran on the department's Control Data Corp. mainframe in Rockville, Md., for automobile safety testing and safety design research.

When Wu tackles a case, he begins painstaking research into the details of an accident, poring over police reports, skid marks and crumpled vehicles to unearth the data that is fed into a model. Currently, Wu accesses a portion of the Impact model known as Impact Speed Estimator (ISE) stored on an IBM 370 mainframe at Boston University. While the entire Impact model is used to predict the outcome of a hypothetical collision, ISE aids Wu in reconstructing the events in an accident case.

The model, in return, yields such information as a vehicle's speed before impact, speed during braking and the angle of impact; this information usually points to the party at fault. If an accident involves more than two vehicles, Wu uses ISE to analyze the initial two-car collision and pieces together the rest of the puzzle with manual calculations. Thus far, his evidence has been accepted without reservation by the courts.

Wu, who says he is "well paid" for his efforts.

Vista takes commute out of design firm's data

1ST USER

By John Gallant
CW Staff

ATLANTA — As if the task of inputting reams of numbers into a huge statistical model wasn't tedious enough, the employees of Dynaplan International Corp. faced another onerous chore — transporting that data some 35 miles by car each time the model had to be run.

After the 45-minute commute to United Information Services, Inc.'s (UIS) local service bureau here, one of Dynaplan's aircraft operation and air-control specialists would feed the data into a complex simulation model residing on the UIS mainframe.

But earlier this month, Dynaplan became the first user of UIS' Vista Service, which combines a Texas Instruments, Inc. microcomputer and UIS' communications and applications software. Since then, the consulting firm said, it has reaped time and money savings and gained access to a wealth of processing power.

Dynaplan is in the highly competitive field of airport design and airport terminal planning. In addition, the company does land-use modeling, financial feasibility analyses, heliport design and aircraft selection consulting for its clients.

Work involves INM

Much of Dynaplan's design and consulting work involves using the Federal Aviation Administration's Integrated Noise Model (INM), a program that simulates the noise levels generated at and around an airport by different types of aircraft. A copy of the INM program and a set of statistical data bases related to it are maintained on UIS' Atlanta mainframe.

In order to input the variety of statistics needed to run the model, Dynaplan, in the past, had to transport data physically to the UIS office, where the data was entered via a terminal or with punched cards. That often led to costly data entry errors.

"We had to send someone who knew how to operate the computer and who was familiar with the model. Unfortunately, that type of individual is not the best data entry clerk nor the best proofreader," noted Dynaplan President Gordon Jackson. "We would have the wrong number input in the wrong column, for example, and that would kill an entire run. That was a real problem because the model is horribly expensive to operate."

UIS' Vista Service has alleviated that problem, Jackson explained. The Vista Service is based on a TI Professional Computer with 256K bytes of main memory, two 360K-byte floppy disks and TI's Model 850 printer. UIS' Vistacom communications software allows the Professional Computer in Jackson's office to upload and download data from the Atlanta office's 16M-byte Cray Research, Inc. Cray-1/S supercomputer.

While the communications software enables the Professional Computer to emulate an asynchronous, Ascii-compatible terminal for interactive processing, Dynaplan's Jackson prefers a more cost-effective method of utilizing the Cray supercomputer's enormous power. Statistical data for the INM model is entered into the TI micro, then printed, checked for errors and uploaded to the mainframe for processing. The model's results are then downloaded to the micro for review.

"The ability to communicate with the mainframe from our offices has resulted in a great time savings for us," Jackson said. "But a greater benefit has been the improved accuracy with which we can set up our data base on the Professional. We are keeping errors to a minimum, and that accuracy cuts down the number of repeated processing runs, which are becoming even more expensive as the model is updated."

The Vista Service has also given Dynaplan the opportunity to utilize a variety of software packages written for the TI micro's operating system, Microsoft, Inc.'s MS-DOS. Dynaplan is currently running Management Science America, Inc.'s Peachtext word processing and Peachcalc spreadsheet packages. Jackson has chosen to maintain the data from those applications on the micro rather than uploading it to the UIS mainframe.

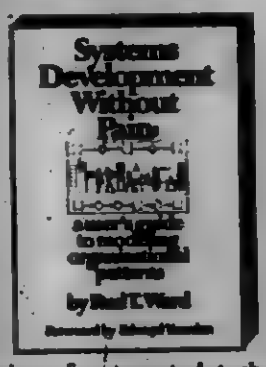
Dynaplan has yet to make use of applications developed for Vista by UIS, including its Vistaform data entry system and Multiplan modeling package.

Jackson chose the Vista Service after an extensive review of the microcomputers and remote computing services available. A similar service offered by Control Data Corp. was the only real competition in the selection process, he said, but Vista's micro-to-mainframe link feature and a comprehensive installation plan swayed the decision in UIS' favor. Moreover, the Vistacom software gave Dynaplan's staff the capability to access aviation data bases offered by other remote computing services.

ASML: Translated it means quality systems.

A user's guide to systems development from Yourdon Press.

Direct communication between DP professionals and users is crucial in developing a successful system. In *Systems Development Without Pain: A User's Guide to Modeling Organizational Patterns*, Paul Ward introduces A Systems Modeling Language (ASML), a step-by-step approach to defining systems requirements by identifying and modeling patterns in the work environment. ASML removes the usual language barriers between technical and nontechnical experts, enabling all users to effectively communicate their needs. The result is a system that finally fulfills the promise of automated technology, to enhance the user's productivity. Appropriate for both people experienced in systems development and novices, ASML builds on, but simplifies, the concepts of structured analysis. It is the first technique to integrate data modeling with process modeling, demonstrating the importance of their correlation. With ASML, a statement of requirements can be created quickly, since building a detailed model of a system to be modified is not necessary.



With nearly 200 diagrams and examples from everyday life, *Systems Development Without Pain* helps develop an open, trouble-free relationship among all the people involved in systems development.

Reformers argue '68 law leaves data vulnerable

By John Gallant
CW Staff

WASHINGTON, D.C. — Attempts to revise the 1968 federal wiretap law are raising questions about the confidentiality of data transmissions, which may be left unprotected by current legal safeguards.

A U.S. House of Representatives Judiciary subcommittee headed by Rep. Robert Kastenmeier (D-Wis.) began hearings last week to explore whether the 1968 wiretap statute should be rewritten to tighten what some telecommunications and civil liberties legal experts believe is a serious loophole. Other congressional panels, including a second House Judiciary subcommittee, this one headed by Rep. Don Edwards (D-Calif.), and a Senate Judiciary committee chaired by Sen. Charles Mathias Jr. (R-Md.), are also planning hearings on the topic.

The loophole, experts said, is that the 1968 law protects only aural (audible) telephone transmissions from unauthorized interception. The statute makes it a federal felony for a third party to tap into the conversations of others, with the exception of law enforcement officials who must first obtain a warrant for the wiretap.

The wording of the statute defines "intercept" as the "aural acquisition of information"; this leaves out digitized data transmissions because no "voice" sounds are generated.

Representatives on both sides of the issue admit that law enforcement authorities have not taken advantage of the loophole in criminal investigations, but revisionists are concerned that may change.

Because of the increasing importance of data communications, according to John Shattuck, director of the national office of the American Civil Liberties Union, the statute could give the federal government "greater search powers than it has ever had."

Shattuck believes "we need some sort of judicial warrant system. The law is clearly lagging behind our modern technology. This is a major concern for us and for many people in the communications industry."

A 1980 report drafted for the Senate by the U.S. General Accounting Office supports Shattuck's views. The study stated that "nonaural interception techniques" were being used more frequently and that data transmissions were "becoming less likely to be protected against unauthorized reception by current statutory provisions."

According to Kastenmeier, "the ability of new technology to go beyond such definitions and terms of invading personal privacy makes consideration of this issue most urgent."

Representatives on both sides of the issue admit that law enforcement authorities have not taken advantage of the loophole in criminal investigations.

U.S. Justice Department officials, however, are firmly opposed to any revisions to the 1968 wiretap law. Spokesman John Russell said the department is "comfortable" with the statute as it is written and added that it has "sufficient safeguards to protect individual rights."

Russell confirmed a recent statement by John Keeney, deputy attorney general in the criminal division, that the "current feeling [of the Justice Department] is that the 1968 wiretap law should not be changed. There would be simpler ways to take on computer crime," Keeney said.

When asked what those simpler methods are, Russell said that current federal wire fraud statutes provide sufficient protection against unauthorized data interception. Although federal law enforcement authorities are not required to obtain a warrant before tapping into data transmissions, it was the Justice Department's policy that "when in doubt, get a warrant," he maintained.

Panel chose not to include transmissions in statute

The U.S. Senate Judiciary Committee that drafted the 1968 wiretap statute made a conscious decision not to put data transmissions under the umbrella of protection afforded by that legislation, a key draftsman of the law said last week.

"The statute was only designed to deal with one problem — aural surveillance," G. Robert Blakey, former staff member of the Judiciary Committee, explained. "At that time, we had a consensus in Congress on the issue of wiretapping and bugging, and that was what we dealt with. We had no consensus on the interception of machine-based data or any other kind of surveillance."

Blakey, now a professor at Notre Dame Law School, thinks attempts by congressional panels and privacy groups to revise the 1968 statute may be misguided. "The loophole that they so solemnly announce simply does not exist. There is no loophole because the act was not intended to cover electronic data transmissions at all. That area brings up problems that are not at all related to wiretapping and bugging. We saw that as an issue to be taken up at a later point.

"Focusing on this 'loophole' is gimmickry," Blakey added. "It's a misfocused effort. People should really be talking about the privacy of computers against unauthorized access. They ought to address whether the current federal laws are adequate to deal with private or public access to machine-based data. That might help them to draft better legislation rather than simply revising the 1968 statute."

Protection of machine-based data, according to Blakey, was not a matter of public concern in the late 1960s.

"The problem today has nothing to do with the wiretap statute. Technological change is the problem. The rate of change has outstripped our legal system. That's a characteristic of a modern society."

In Blakey's view, there exists a body of federal statutes that is adequate to protect individuals and businesses from the unauthorized interception of data. He includes among those laws federal wire fraud statutes and the Civil Rights Act.

"There is no statute that deals specifically with the issue, but there is a group of federal laws that touch on it," he said.

Naisbitt to keynote users meet

RESTON, Va. — Software AG of North America, Inc. will hold its 13th Annual International Users Conference April 29 to May 3 in Anaheim, Calif. The keynote speaker will be John Naisbitt, chairman of the Naisbitt Group and author of *Megatrends: Ten New Directions Transforming Our Lives.*

Other speakers will include Thomas Blondi, Software AG vice-president of marketing, and Shaku Atre, president of Atre International, Inc.

In addition to general and technical sessions, the conference will feature education classes consisting of in-depth discussions between attendees and instructors. Classes will be offered on details of Software AG's Adabas, Natural and Complete products.

The registration fee is $595. Software AG is located at 11800 Sunrise Valley Drive, Reston, Va. 22091.

MANUFACTURING MANAGEMENT SOFTWARE FOR HP3000

The Solution.
Dial-Up 3270

LineMaster An intelligent device for dial-in access to your mainframe 3270 Bisync line. **LineMaster** is a communications watchdog which keeps a line in service until a user dials in.

- For any remote 3271/4/6 line—up to 19.2K baud
- Compatible with any 3270 BiSync emulator including microcomputers.
- Connects between modem and mainframe.
- Installs in minutes.

Panel on protecting data transmission urged

By John Hirshberg
CW Washington Bureau

WASHINGTON, D.C. — A special commission chartered by Congress may be needed to consider ways to protect communications privacy in the computer age, participants at House of Representatives hearings on the subject said last week.

"The essence of personal privacy protection is the assurance that private communications are protected," but in current congressional debate on computer security there is no common "moral or philosophical understanding" of how surveillance laws should protect competing interests in a technological era, Rep. Robert W. Kastenmeier (D-Wis.), chairman of the Judiciary Subcommittee on Courts, Civil Liberties and the Administration of Justice, said Tuesday.

The subcommittee is one of several in Congress concerned that existing laws, particularly the 1968 federal wiretap statute, do not adequately guard computer-based communications against electronic surveillance, from individuals and private and government organizations (see story on Page 6). While there is no widespread agreement that a new law is needed, there is general consensus that changing technology is raising new issues not covered under existing statutes.

Dr. Herman Schwartz, an American University Law professor, told Kastenmeier's subcommittee, "I have some difficulty understanding some of the current concern about loopholes" in the law. He argued that the wiretap law covers all verbal communications, whether analog or digital, and that all computer communications are protected under the Fourth Amendment, which provides protection from unreasonable searches and seizures.

Increased wiretapping

Schwartz, however, also said that "more people are being wiretapped today than ever before. . . . I think official electronic surveillance remains a distressing feature of modern America. Unfortunately, it will only get worse." He called interception of computer communications "a hard problem [which] should be faced directly as a special problem."

Other witnesses at the hearing said law enforcement abuses of wiretap law are to date minimal, particularly at the federal level, although there is more potential for abuse at the state level. It was also suggested that lack of manpower minimizes the amount of electronic surveillance conducted by state and local governments.

But privacy expert Dr. Willis H. Ware noted computers can be and are used to monitor digital communications, so lack of manpower will soon be no deterrent to widespread interception of computer communications. Ware, a member of the Corporate Research Staff of Rand Corp., said there is a need for a full understanding of the new technology, the problems it raises and their solutions.

Congress could rewrite the 1968 law or pass "a minimum patch . . . just to catch new technological developments," Ware said. But "my choice would be to do the whole job now, once and for all, and to get it off our minds. I do not see any risk attached to providing broad legal protection for any kind of information that is in transit on a communications channel, implemented in any technology and where the information can be represented in either analog or digital form."

Kastenmeier then proposed a "special, select commission to deal with the problems." Ware and Dr. Anthony G. Oettinger, chairman of Harvard University's Center for Information Policy Research, agreed a commission could be helpful. In particular, Oettinger said, it could develop an overall strategy for this issue, which could help individual congressional subcommittees in their deliberations on related issues.

In terms of protecting future modes of communications, however, Oettinger said "[protection] measures and countermeasures seem to keep pace with one another." He said we are entering an era when protection, particularly encryption, is available but will not be used because no one will take the initiative.

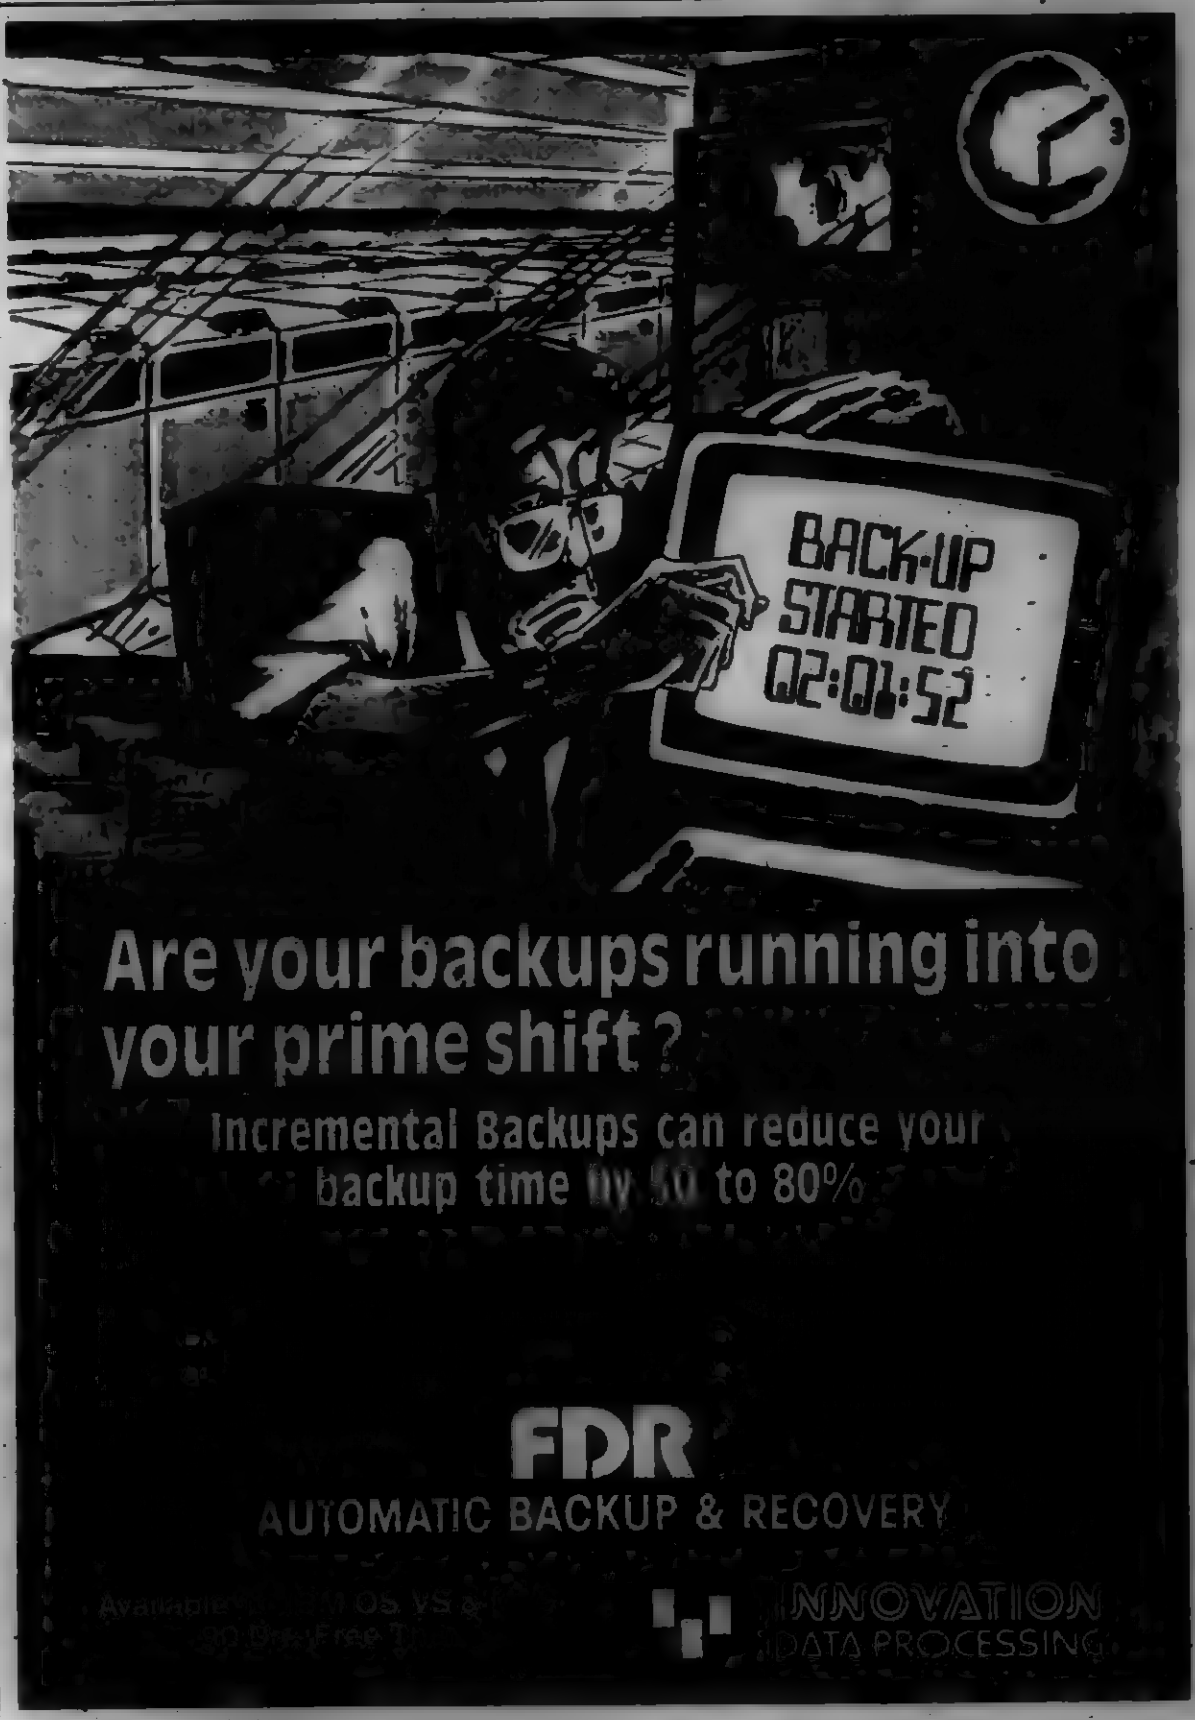
Before the breakup of AT&T, he added, the common carriers might have taken the responsibility to protect communications, but now the industry is too competitive for that, unless mandated by Congress.

Ware observed that it would be prohibitively expensive to retrofit existing communications channels to include adequate safeguards against interception.

But, he added, "the feasibility of gradually building in protection is there."

Kastenmeier said his main concern is for private citizens.

Ware agreed that "the computer people [can], if push comes to shove, take care of themselves. . . . It's the private citizen who is at risk" from electronic surveillance.



S.C. high court rules software tangible, taxable

By Bill Laberis
CW Staff

COLUMBIA, S.C. — For the third time in six months, a state high court has dealt a setback to software vendors and users, ruling that software is tangible personal property and, therefore, subject to state sales taxes.

In the latest ruling, handed down Jan. 10 by the Supreme Court of South Carolina, the DP department within a bank here lost its bid to overturn a lower court decision sustaining the bank's $2,376 sales tax payment for a personnel package bought in 1979. Citizens and Southern Systems, Inc. (CSS) had argued that it purchased knowledge and services — not tangible property — from Information Science, Inc. when it paid $59,000 for the personnel package. CSS is a subsidiary of Citizens and Southern National Bank here.

The high court ruled that the magnetic tape on which the program was delivered was "in a form which could be seen, weighed, measured, felt and touched and was, therefore, tangible personal property."

However, the court also said that had the program been delivered via phone lines or had a programmer or keypunch operator keyed in the code, the final product would not have been subject to the tax.

J. Christopher Henderson, legal counsel for CSS, said no appeal of the state ruling to the federal courts would be forthcoming. "The case as decided is wrong. I believe . . . but there are no grounds to bring this case to the federal level," he said in an interview last week.

The sales tax issue has gained prominence since last August, when high courts in both Vermont and Maryland issued definitive rulings on the application of sales taxes to software [CW, Aug. 22]. In both cases, the courts ruled against users who had contested their payment of sales taxes on mainframe software programs.

A month later, the high court in Michigan reversed a lower court ruling and upheld a user's claim that sales taxes should not be applied to custom mainframe software [CW, Sept. 26].

According to one legal specialist, the South Carolina ruling is indicative of a trend to tax software — all software — as a means of plumping state coffers. At present, more than a dozen states have tax codes that differentiate between custom and prewritten software, applying sales taxes only to the latter. But, the specialist said, users should beware that the definition of custom software can vary greatly from state to state.

"The fact that the price of a software package includes some service or maintenance, or just because it is a mainframe package that costs a lot, does not necessarily mean it's custom software," said L.J. Kutten, an attorney and author of *The Computer Buyer's Protection Guide*. "There are states where the definition of custom means the package was created specifically for one user."

Kutten said that court rulings from states like South Carolina and Vermont, which differentiate between programs delivered via tape and those delivered via telecommunications links, could promote more aggressive teledistribution of software.

Ronald Palenski, assistant general counsel for the Association of Data Processing Service Organizations, Inc., said he had hoped the more favorable Michigan decision would serve as a precedent for states grappling with the application of sales tax codes. The high court in South Carolina, he said, "took a somewhat simplified view of the matter, especially when you consider the state won't tax software delivered" by telephone but will if it comes on tape.

Link ties micro, DBMS

By Paul Gillin
CW Staff

MONTREAL — Micro Tempus, Inc., maker of the Tempus-Link micro-to-mainframe communications software, last week added a link between the IBM Personal Computer and most popular data base management systems (DBMS) and file structures.

Called Tempus-Data, the new software is said to allow users to retrieve selectively and reformat data from Vsam, Qsam, Isam and Bdam file structures for loading directly into microcomputer packages using Software Arts, Inc.'s Data Interchange Format (DIF). The vendor will also provide optional hooks into IBM's IMS/DL/1; Cullinet Software, Inc.'s IDMS; Intel Corp.'s System 2000; Cincom Systems, Inc.'s Total; Software AG of North America, Inc.'s Adabas; and Computer Corp. of America's Model 204 DBMS.

Tempus-Data relies on "virtual diskettes" that reside as Vsam files on the mainframe, according to Yvon Leveille, president of Micro Tempus. Each "diskette box" can contain up to 256 virtual diskettes, each having a storage capacity of 32K bytes to 15M bytes.

A Tempus-Data user can select information to the record and field level from the mainframe data base and extract it into new files on virtual diskettes. The extracted data can be rearranged in any order, the format and length of numeric fields can be modified and new fields may be created. Before reloading, a variety of optional operations can be performed on the extracted data.

Extracted data is loaded into the virtual diskettes in DIF format and can be copied or downloaded directly into the micro application. A list of 12 commands is used to perform all extracts and downloads, Leveille said. Tempus-Data is independent of communications methods. The product can be used with asynchronous and coaxial communications as well as with IBM 3274 and 3276 communications controllers and board-level coprocessors.

Tempus-Data, which requires Tempus-Link, was developed by Oceanic Information Systems, Inc. of Montreal. It is sold on a maximum concurrent user basis. This refers to the maximum number of users who can access the program at one time and is not related to the total number of Personal Computer users who have access to Tempus-Data.

The single-maximum concurrent user purchase price for Tempus-Data is $650 with volume discounts available. Access to Vsam, Isam, Qsam and Bdam file structures is standard with an additional 20% charge levied for access to each DBMS. The single-maximum concurrent user price for Tempus-Link is $995 with volume discounts available.

Micro Tempus is located at Suite 300, 440 Dorchester Blvd. W., Montreal, Quebec, Canada H2Z 1V7.

Tech acronym dictionary out

DETROIT — Gale Research Co. has published the "Dictionary of New Information Technology Acronyms," which defines more than 10,000 acronyms and abbreviations used in telecommunications, videotex, word processing, data processing and office automation.

Hardware, software, organizations and companies are included in the guide.

The manual is priced at $300 and is available from Gale Research, Book Tower, Detroit, Mich. 48226.

MARS from page 1

that markets the product and is owned by Goldratt and his brother, Israel Pengal, through a Dutch intermediary firm.

This agreement has also dissolved into a separate lawsuit in which M&M/Mars seeks $292,389.74 from COI for allegedly fraudulently assuring M&M/Mars that OPT, suited to "job shop" production like that of creating the sugar shell surrounding M&Ms — in which it proved extremely successful — would work on the "continuous flow" production of nougat, at which, M&M/Mars said, it was a dismal failure.

Denying the M&M/Mars allegations of nougat fraud, Robert Morris, an attorney for COI, noted the success of the system for M&M candy production and implied M&M/Mars has already received a greater than anticipated benefit from OPT. Lanny Davis, a Washington, D.C., attorney who specializes in computer law and is representing M&M/Mars, characterized Morris' comments as an interesting defense that has no basis in law.

In the Planned Order System case, M&M/Mars is seeking $998,623.14 which, it claimed, it lost in monies paid to COL and COI for the Planned Order System and in expenses for computer hardware supposedly necessary to implement the system which, M&M/Mars said, was never delivered, even after COL/COI was given several months of extra time. COL, for its part, has sued for payments due, breach of contract and damages to the tune of $17 million in a Tel Aviv court.

COI, in turn, claimed it had nothing to do with the Planned Order System and wants the money it said M&M/Mars owes for using OPT — more than $100,000 — and $1.5 million in damages. All sides are waiting for the New Haven court to rule on motions setting jurisdiction in the Planned Order System dispute and an attempt by M&M/Mars to attach COI assets so they cannot be transferred out of the country to the Israeli firm COL.

While the case is no doubt of interest to the candy industry, it has astounded the business world since Mars, a privately held McLean, Va.-based firm, is notoriously publicity shy and almost never pursues litigation. Industry observers can only guess at its annual revenues — perhaps in the neighborhood of $4 billion — and cannot remember the last time Mars representatives even spoke to the press.

Now Mars is talking to anyone who will listen. The reason, according to company spokesmen, is that the firm is "mad as hell," believing it was bamboozled by what one company representative called a "whiz kid software developer who promised the moon to get customers on the hook," only to ask for more time and money without ever delivering a usable product.

Should have known better

"This is happening all over the industry," a spokesman said, admitting that Mars, a huge multinational organization, perhaps should have known better. But, he added, "even the sophisticated [DP users] are mesmerized by whiz kids," although "very few have the resources or are willing to blow the whistle."

COL strongly denies the charges and insists it was right on target with the Planned Order System development. "We were most of the way toward solving the [Planned Order System] problems," Ira Grudberg, a New Haven attorney representing COL, claimed. Further, he said, the agreement was for a joint software development project involving personnel from both M&M/Mars and COL, who were acting as consultants, and was not a contract to deliver any specific product.

Grudberg added that M&M/Mars "contributed to the delay by changing specs . . . and in not getting a certain computer" necessary for the system.

Any precedent the case might set for the alleged promises of software developers could have a deep impact on the DP industry, but possibly the item of greatest interest to the industry is the motion by M&M/Mars that the OPT source code be examined by a court-appointed expert to determine if it could possibly have had any utility for nougat production. This is a motion the defendants understandably oppose vigorously.

This motion, with its potentially great repercussions for software developers, who guard nothing more zealously than the source code of their products, is now before court.

"IDMS/R is the perfect DBMS for the IBM 4300 user."

Frank Chisholm*

*Frank L. Chisholm is Cullinet's Executive Vice President. Frank has worked closely with Cullinet users and prospective users for more than six years. As a key member of Cullinet's management team, Frank has contributed heavily to Cullinet's database product development strategy.

Because IDMS/R, with its Automatic System Facility, makes your IBM 4300 as easy to use as a personal computer.

The Automatic System Facility (ASF) is so comprehensive and easy to use that all an IBM 4300 user need do to develop an application is to define a relational record. ASF then dynamically generates all necessary supporting structures including data definitions, screen formats, application processing logic, and documentation. In other words, the developer can witness the application being produced, literally, in seconds. This is what makes ASF a major advance over fourth generation languages. Thus IDMS/R is the perfect system for the IBM 4300 user with limited staff resources.

But suppose when you build a complex, high volume production application with IDMS/R, you desire outstanding performance. Typically, 5% of the data relationships (joins) in any application are accessed 95% of the time. With IDMS/R you can simply change these relationships to predefined joins and benefit from a dramatic boost in performance.

We call it Relational Fastpath. This is what makes IDMS/R a unique relational DBMS, and a perfect system with which to build production applications. In addition, IDMS/R has the most sophisticated back-up and recovery capability of any DBMS, a full integration with personal computers and a complete line of integrated financial and manufacturing applications.

In summary, IDMS/R was designed to satisfy the requirements of the IBM 4300 user who wants to develop both production and end user applications faster and easier.

For further information, attend a Cullinet Seminar. Mail the attached coupon or call the Cullinet Seminar Center at 1-800-225-9930 (in Massachusetts 617-329-7700).

College's computer pact under investigation

By James Connolly
CW Staff

DETROIT — A controversial computer pact was one of several contracts under scrutiny when the Michigan Department of Education recently sent an investigative team to Wayne County Community College here.

The contracts being examined at the 14-year-old school, which is suffering from declining enrollments and administrative turmoil, include one in which the college has paid more than $8 million since 1978 to Systems and Computer Technology Corp. (SCT) of Malvern, Pa., to upgrade and manage the college computer system. According to reports in *The Detroit News*, the college is committed to paying SCT another $3.8 million before SCT leaves in 1986. However, SCT spokesmen said the firm will collect no more than $1.2 million under the current extension.

The Detroit News also published reports in which school officials and consultants charged that SCT provided outdated software, assigned inexperienced employees to the college and repeatedly missed deadlines. But SCT officials and school officials who have dealt with the firm argued that the news reports were "biased" against SCT and that the Pennsylvania firm did the best job possible in an environment in which there were three college presidents in less than two years.

"I think we have done a fantastic job," SCT President Fred Gross said. "The point is that when we started work, there was practically zero computer support at the school."

The probe, ordered by the state legislature late last year, is headed by Phillip E. Runkel, state school superintendent, and will target various construction and service contracts. Runkel said of the SCT contract, "It is just too costly and a drain on needed funds from educational programs."

Runkel is investigating whether the 1978 award to SCT — contracted for $3.3 million — and subsequent contract extensions may have violated the state's competitive bidding policy. "If you haven't looked at the competition, you don't know what's available," he said.

SCT was hired in 1978 to develop a five-year plan for computer upgrading and rehired to manage the computer department, develop software programs and make recommendations for the purchase of a mainframe. That mainframe is a Honeywell, Inc. DPS-2, which the college uses for administrative purposes and as a host for various IBM minis used for computer training on the five college campuses.

The contract was most recently extended last October although, Gross said, SCT wanted to phase out the contract because of the "political environment" at the school.

Gross, who maintained that the SCT pact was exempt from any competitive bid regulations because it involved professional services provided by the sole qualified supplier, said he would give Runkel his "full support and cooperation." He said SCT has been a leading supplier of computer services to colleges for 16 years.

Meanwhile, Steven Racine, former director of budget and management for the college, said, "The taxpayers got cheated, but it wasn't SCT who cheated them. It was the management of the college and the trustees who failed to put pressure on their own people to be cost-effective."

Racine said the college administrations "wanted to go from nothing to state of the art in no time" and blamed missed deadlines on new administrations constantly changing priorities.

He also said the charges against SCT were undocumented and made by disgruntled or fired college officials who wanted to sabotage the computer program.

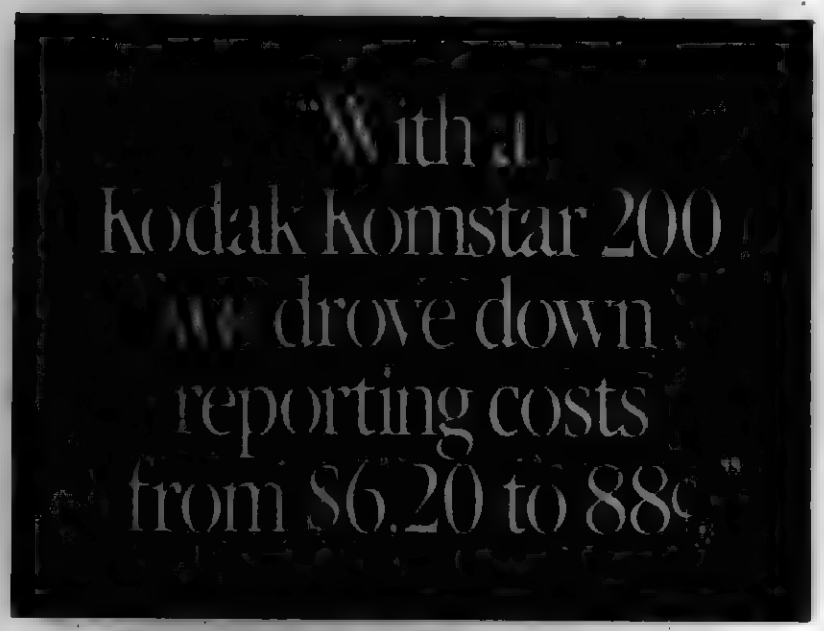
Meet to cover DP performance

PHOENIX — A four-day conference on "EDP Performance Management" is scheduled March 5-8 in the Holidome at the Metrocenter here.

Sponsored by Applied Computer Research, Inc. (ACR), publisher of *EDP Performance Review* and *EDP Performance Management*, the conference will explore management issues involved in improving data center performance and user service.

A preconference seminar, "Keeping the User Primary," will examine how users approach automation, how to achieve user consensus and how to recognize unstated goals of a user.

The cost of both the conference and preconference seminar is $525 to subscribers of *EDP Performance Review* or *EDP Performance Management* and $600 to nonsubscribers. The conference alone costs $450 to subscribers and $525 to nonsubscribers. ACR can be reached through P.O. Box 9280, Phoenix, Ariz. 85068.



When a major truck engine manufacturer needed to rev up output and reduce computer reporting costs, they turned to Kodak.

The Kodak Komstar 200 microimage processor did both. And offered a surprisingly fast payback.

Find out how it can work for you. Send in the coupon today. Or call toll-free: 1-800-44KODAK (1-800-445-6325), Ext. 302.

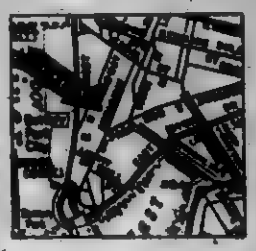
Shearson to build DP center in Manhattan

By David Myers
CW New York Bureau

NEW YORK — Lured by tax abatements and a promise of lower electrical costs, Shearson/American Express, Inc. has agreed to build its $120 million data processing center along with an office tower in lower Manhattan rather than in New Jersey.



Sale of the city-owned, 172,000-square-foot site in the Tribeca neighborhood six blocks north of the World Trade Center for $23.9 million must still be approved by the city Board of Estimates and the New York state legislature.

However, in announcing the letter of intent signed by both Shearson and the city, Mayor Edward I. Koch said he anticipated "no problem in getting either the city or the state to pass on the deal."

Shearson would move its $100 million worth of IBM computer equipment into the 10-story structure in early 1986, according to Richard F. Morrison, executive vice-president and director of information services for the financial concern. Shearson's computer resources are now scattered over five different locations, and the lower Manhattan computer center "will allow us to tie them back together into one organization again," Morrison said.

Morrison described the new complex, on which construction is scheduled to begin in August, as the hub of Shearson's worldwide financial processing operations.

While city officials crowed over a victory in their bidding war against Jersey City, where Shearson had originally planned to build the complex, Morrison said the most important reason behind Shearson's decision to choose a city location was that the Tribeca site will enable the company to build a data processing center without buildings on either side of it.

"It's a security issue," Morrison said. "We wanted to build a stand-alone facility so that we can control access to it. In the financial community, the whole world revolves around data processing. We had to be sure we could secure the facility."

The computer building, designed by New York architectural firm Skidmore, Owens and Merrill, will also give Shearson the freedom to expand its data processing facilities as needed, Morrison said. "It's designed in such a way that if we outgrow any of the data centers, we can move the communications facilities out," he explained.

The data complex will also house Shearson's purchasing and printing operations as well as its communications equipment, according to Morrison.

In a deal hammered out with Deputy Mayor Ken Lipper, Shearson was offered a two-year, tax-free construction period to keep its computer works in New York. In the third year Shearson will receive a 100% abatement from its assessed property taxes, according to the terms of the deal worked out with the city fathers.

After that the abatement will shrink by 20% a year for four years. Eight years after ground is broken on the complex, Shearson must begin to repay the abated taxes at 10% a year.

The financial services company will have repaid the city within 17 years after the start of construction.

But in addition to the tax incentives, Shearson was also offered a low-cost power deal. In a tentative agreement worked out with John S. Dyson, chairman of the New York Power Authority, the state will provide hydroelectric power to the complex, skirting the local power company, Consolidated Edison.

Morrison told *Computerworld* that Shearson also plans to bypass New York New England Telephone Co. (Nynex).

Shearson is the latest organization to announce its intention to bypass Nynex, following on the heels of The Port Authority of New York and New Jersey, which has set up its own private branch exchange at the Port Authority Bus Terminal here [CW, Jan. 16].

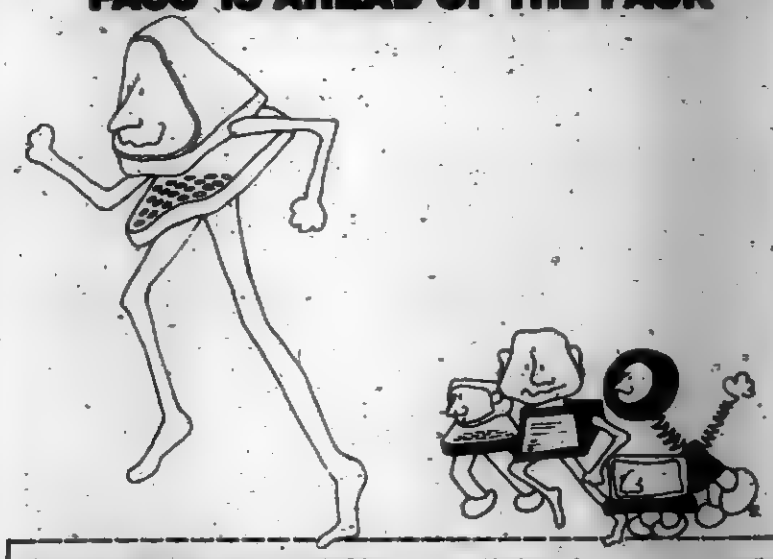
Directory lists 16,000 N.Y. Users

NEW YORK — A directory listing 16,000 computer users in the New York metropolitan area has been published by Computer Management Research, Inc.

The directory includes profiles of hardware, software, languages, data bases, consultants used, future plans, applications and DP executives' names, titles and telephone numbers.

The directory sells for $295 and is available from Computer Management Research, 20 Waterside Plaza, New York, N.Y. 10010.

FOR VAX™ RESOURCE ACCOUNTING, PACS™ IS AHEAD OF THE PACK



The competition isn't even close. PACS is so good, it's the only resource accounting package in DEC's™ EAS library. Here's why:

Customs seizes VAX cargo as contraband

By James Connolly
CW Staff

A shipment of computer equipment allegedly once bound for the Soviet Union has been impounded by U.S. Customs officials pending a possible criminal prosecution.

The three cargo containers were confiscated on arrival Jan. 14 at Andrews Air Force Base near Washington, D.C., after the equipment's manufacturer, Digital Equipment Corp., agreed to purchase the contents from the government of Sweden. The contents are said to include a sophisticated VAX-11/782 supermini computer.

The twisting trail of international intrigue and delicate negotiations broke into the open in November when Swedish Customs and West German officials confiscated a total of 15 containers of DEC equipment. According to earlier reports [CW, Nov. 21, Nov. 28, Jan. 9], the equipment had been purchased from DEC by an as yet unnamed New York export firm which had obtained an export license to ship the sophisticated system to a South African firm.

The equipment, according to U.S. officials, was never unloaded in South Africa; instead, it was diverted to West Germany and Sweden, bound ultimately for the Soviet Union.

The South African firm was later found to be controlled by Richard Mueller, reputedly an agent for the KGB, the Soviet secret police and intelligence agency. Mueller, a native West German, has been banned by the U.S. Commerce Department from trading with U.S. companies. He remains a fugitive from a 1979 federal indictment charging him with violating export regulations in a separate case.

"The equipment is back in the U.S. [DEC] purchased the computer, but U.S. Customs seized it as contraband because there is fraud involved," said Charles Powers, spokesman for the U.S. Treasury Department.

That fraud, according to Powers, involved the attempt to divert the equipment to the Soviet Union. U.S. defense officials have said a VAX-11 could help the Soviets with computer-aided design and manufacture of sophisticated weapons.

No information from DEC

DEC spokesman Joseph Nahil said he had no information about DEC trying to reclaim the equipment. "It is nothing that we have discussed," he stated.

DEC reportedly shipped the equipment from Sweden to the air base in cooperation with U.S. Customs authorities, knowing that the materials would be confiscated. Nahil declined to reveal what his company is paying for the equipment; a spokesman for the Swedish Embassy in Washington, D.C., said only that the sale is based on "customs value."

Sweden offered to sell the equipment back to DEC after nobody claimed it in the wake of the November seizure. Swedish law requires the government to offer the original manufacturer first option to buy materials that the neutral country classifies as "war materials."

West German officials earlier returned to U.S. custody a VAX-11/782 dual processor and other equipment seized from the Swedish ship Ilgaren shortly before the vessel left the port of Hamburg, West Germany. That ship, one week later, docked in Sweden with additional containers that are believed to be part of the same consignment. An inventory of the equipment seized in both countries has not yet been made public, and the Swedes have classified their inventory top secret.

The West Germans made the seizure after U.S. Customs officials relayed a tip that the equipment was being diverted to the Soviet Union from its listed destination in South Africa.

Powers said the original exportation was a fraud because there never was an intent to send the material to South Africa. In New York, a federal prosecutor declined comment on whether any evidence of criminal wrongdoing has been presented to a grand jury.

However, customs officials reported that they eventually will move the equipment from the Washington-area warehouse where it is now to New York "for use as evidence in the trial."

"If after the trial it is forfeited, it becomes property of the U.S. government and is up for grabs among various agencies," customs spokeswoman Christine Fraser said.

When asked whether DEC stands to lose money if it cannot recover the equipment, Nahil said, "I don't think it comes down to a question of finances. I think the real issue is trying to be responsible and responsive in this kind of international matter."

Swedish authorities said the shipment would have passed undetected to the Soviet Union but for a customs policy of inspecting all shipments from South Africa.

IEEE changes Infocom site

SAN FRANCISCO — The site for the Infocom '84 Conference, set for April 9-12 by the Institute of Electrical and Electronic Engineers, Inc. (IEEE), has been moved to the Hotel Meridien at 50 3rd St. in San Francisco.

The original conference hotel was damaged by fire, necessitating the move.

Further information can be obtained from Steven H. Richman, AT&T Bell Laboratories, Room HO-3L-631, Holmdelm, N.J. 07733.

DGA

Programming made more profitable with DGA

DGA offers you many unique time-saving features, all in an online interactive environment. Running under TSO, CICS, or VTAM in an OS/MVS system, consider the many advantages of DGA:

- COBOL DATA DISPLAY
  Dynamically maps COBOL layouts to file data. Browses, searches, updates, prints, selects and reproduces from screen display.
- VSAM & BSAM SUPPORT
  Creates, deletes, updates, compares, copies and prints records with no restrictions. All standard access methods supported with no file or record size restrictions.
- INTERACTIVE COMPARE
  Files, partial files, selected records or partial records are all accessible.
- SCREEN GENERATOR
  Uses screen painting to eliminate time-consuming CICS map coding.

If you'd like more information on how DGA will make your programming more profitable, write for our free brochure, or call 913-541-1502.

Pa. law to provide stiff penalties for hackers

By John Gallant
CW Staff

HARRISBURG, Pa. — February will usher in a colder climate for this state's computer criminals.

Calling it a "modern tool to combat modern crime," Gov. Richard Thornburgh last month signed into law a bill that provides stiff penalties for hackers and other high-technology bandits. Effective Feb. 2, the law calls for two levels of criminal penalties for those convicted of engaging in illegal computer activities.

The statute, sponsored by state Rep. Samuel Rappaport (D-Philadelphia), puts Pennsylvania among the minority of states that have some type of computer crime legislation. The other 16 that have done so are Alaska, Arizona, California, Colorado, Florida, Georgia, Illinois, Michigan, Minnesota, Missouri, Montana, New Mexico, North Carolina, Rhode Island, South Dakota and Utah.

One section of the Pennsylvania law makes "gaining access to, altering, damaging or destroying any computer, computer system, software, program or data base with criminal intent to interrupt the functioning of any organization, to defraud or to steal services or property" a third-degree felony, punishable by a maximum fine of $15,000 and up to seven years in prison, according to Terry Williamson, deputy press secretary for Gov. Thornburgh.

The law's second section makes the same computer misuse a first-degree misdemeanor if the individual convicted is not utilizing the technology to commit a more serious crime, such as embezzlement. Williamson said the second section is specifically targeted toward hackers and provides for "some very tough misdemeanor-level penalties," including a maximum fine of $10,000 and a prison sentence of up to five years.

'Strong message'

At the December bill-signing ceremony here, attended by state Attorney General LeRoy S. Zimmerman and supporters of the measure, Thornburgh said, "This legislation will send a strong message to those who would use the computer to engage in illegal activities — whether their nature be devious or frivolous — that Pennsylvania is committed to ensuring that an instrument crucial to our modern economy is not used to threaten individual privacy and undermine commercial activity. Those who exploit this technological resource for criminal purposes should know they will be prosecuted to the fullest extent of the law."

The bill faced little opposition in the state legislature, according to Bridget Whitley, chief counsel to the House Judiciary Committee chaired by Rappaport. It was backed by the state's business leaders and law enforcement agencies, including the Philadelphia district attorney's office and the Pennsylvania Crime Commission, a clearinghouse for information on organized crime.

Whitley said the most difficult task was drafting legislation that will remain useful as technology and computer crime evolve over time. "We tried very hard to make this a state-of-the-art bill so it wouldn't have to be revised in the future. It was really a challenge to draft something that will have to deal with this technology five or 10 years from now.

"We even included concepts like the organic transfer of data, on the advice of a computer consultant who told us that biological technology will be feasible soon," Whitley maintained.

Prior to passage of the Pennsylvania law, which Williamson called "one of the toughest" in the nation, no specific anticomputer crime statutes were available to state prosecutors. Illegal computer activity could only be dealt with through broader "theft-of-services" legislation, according to deputy press secretary Williamson.

CORRECTIONS

Wayne Smith, author of "Just what is quality, anyway?" [CW, Jan. 16], was identified as president, specializing in quality, at Applied Information Development, Inc. in Oak Brook, Ill. He is vice-president, quality, at that company.

The correct title of the conference being held this week in Washington, D.C., by the Professional Exposition Management Co. ["Calendar," CW, Jan. 9] is "Uniforum." The conference sponsor can be reached at Suite 205, 2400 E. Devon Ave., Des Plaines, Ill. 60018.

" 'PC Connection' Ties DG's Iris to IBM Micro" [CW, Dec. 5] incorrectly identified the Iris operating system as a product of Data General Corp. Iris is a product of Point 4 Data Corp. and runs on Point 4's Mark series of multiuser systems, DG Nova computers and other Nova-class minis.

In the Office Ware column of Dec. 5, an announcement of Keepit, a series of programs from Martin Marietta Data Systems, Inc. for the IBM Personal Computer, carried an incorrect price. The correct price for the program series is $450.

DP security on the rise

Expert attributes it to world tension

By Robert Ball
CW West Coast Bureau

LOS ANGELES — Heightened world tension and the much-publicized increase in security measures in the nation's capital are having a ripple effect among computer users and manufacturers, according to a security expert.

Bill Stark, president of Stanley/Wacker, Inc. and a director of the International Association of Professional Security Consultants, said that in the last six months there has been a huge increase in demand for computer security advice.

"The wave of terrorism around the world has started something close to paranoia in the computer industry. This is good because, in the past, computer users have not been sufficiently aware of the dangers of inadequate protection, both for their own companies and for the national interest," Stark asserted in an interview here following a recent meeting of the association.

The security consultant, who recently testified before the U.S. House of Representatives Subcommittee on General Oversight and the Economy, said awareness of and responsibility for computer security measures must start with top-level management if security concerns are to filter down throughout the rest of an organization.

"The computer security director must be put on a senior executive level within a company and must be a person who has a background in all areas of security rather than simply being an ex-law-enforcement agent," Stark added. The major vulnerability for most computer users, he asserted, lies with internal personnel. "You would be amazed at how easily people give away information to someone who shouldn't have it. Because of complacency and out of a desire to facilitate information flow within an organization, people get cleared with information they really shouldn't have, and that is where the security breaks down."

Bill Stark

In an attempt to reduce computer security breaches, Stark's company, based in Tampa Bay, Fla., is providing a service to computer users and vendors called covert vulnerability assessment. Using information available to a would-be assailant, the consultants carry out a fake attack on a client company's security procedures; knowledge of the attack is confined to senior management. The goal is to steal information without anyone else knowing that a security breach has occurred.

Security risks outlined

In assessing the security procedures of one of its clients, an electronic toy manufacturer, Stanley/Wacker, Inc., made a detailed checklist of the security risks involved and recommended security improvements where needed. Two areas in particular, the marketing function and manufacturing facilities, received close scrutiny.

Among the security enhancements recommended in the marketing area were:

■ A thorough screening of all personnel — from secretaries to vice-presidents — involved with any aspect of major product developments.

■ A review of personal computer use, including methods for encoding software, logging on procedures and the use of passwords. The security consultant suggested the installation of telephone modem interfaces, which require users to enter passwords when logging on to a system; the use of an incorrect password automatically blocks that user from entering into the system.

■ Improved security procedures for the storing of disks and computer printouts. Stanley/Wacker helped its client put together a program under which it can classify information along U.S. Department of Defense lines — confidential, secret and top secret — and then restrict access according to those classifications.

■ More controlled access to copying facilities in classified areas of a company. "The aim is to make copy machines off limits to people who are not supposed to have access to the information. Printouts should also not be copied, except by approved personnel," Bill Stark, president of Stanley/Wacker, noted.

In the manufacturing area, security recommendations included:

■ Multiple sourcing of key materials. If a company purchases from only one or two suppliers, a competitor can often accurately assess the company's projected output, Stark explained.

"We sometimes recommend underbuying or overbuying and then readjusting in order to keep competitors off track."

■ A review of physical security in manufacturing areas so that top-secret material is not easily seen.

■ Screening of personnel involved in strategic company projects. In particular, the toy manufacturer was warned to beware of white-collar employees who regularly change jobs within the company, thereby gaining access to a wide range of information that could be useful if they set up in businesses of their own or go to work for a competitor.

■ The securing of meeting rooms prior to vital discussions in order to deter activities such as bugging. In particular, the consultant stressed, it is important to protect pricing information from getting into the wrong hands.

The PC's are coming!

More professionals will attend FOSE '84 than any other office automation conference and expo in America.

FOSE, the largest and most comprehensive program in the nation, has over 3 acres of exhibits on everything pertaining to the total office environment. See the most extensive and in-depth showing of the latest in personal computers and microcomputer systems and software available anywhere.

A day-long PC hands-on session for all conference attendees will feature PC implementation, integration, software, and graphics. In addition, a two-day PC Center will give attendees the opportunity to see and operate dozens of PC systems.

Don't wait. Don't delay. No need to stand in line. New for FOSE '84 is preregistration. Send for details on conference sessions plus list of exhibitors or call toll-free

800-638-8510 or 301-459-8383

From AdaVISION

INTERACTIVE or LINEAR TRAINING in ADA: for as low as $4800?

HANDS ON ADA PROGRAMMING EXPERIENCE: for $2800?

ABSOLUTELY!!

Ada-VISION's superior modularity answers your Ada® Training needs! Ada-Vision's Series I Ada Linear Video Course consists of 16, 1-hour, Studio produced, Color Videotapes jammed full of real, running Ada programs, supported with line by line explanations. A 400-page Study Guide and the Military Standard, all for only $4800! At $360 per hour we are not only the most powerful Ada Videocourse training available, but also the most cost-effective!

Ada-VISION's SERIES I Ada INTERACTIVE VIDEOCOURSE consists of 40 Studio Produced Color Videotapes and Study Guide. In addition, we include a Color TV Monitor, an Industrial grade VCR Playback Unit, an Interactive Computer Interface, an 18-key Student Address Unit, and a Printer to document student performance and response time; all for the unprecedented price of $8400!

The Ada Series I Video Course is NOT a SEMINAR. It is an INTENSIVE...HIGH LEVEL COURSE, taught by the eminent Dr. Joseph T. Ryan. Former Science Adviser to the United Nations Command and a Charter Member of Sigplan. Dr. Ryan has taught every major compiler language on a worldwide basis for more than 20 years.

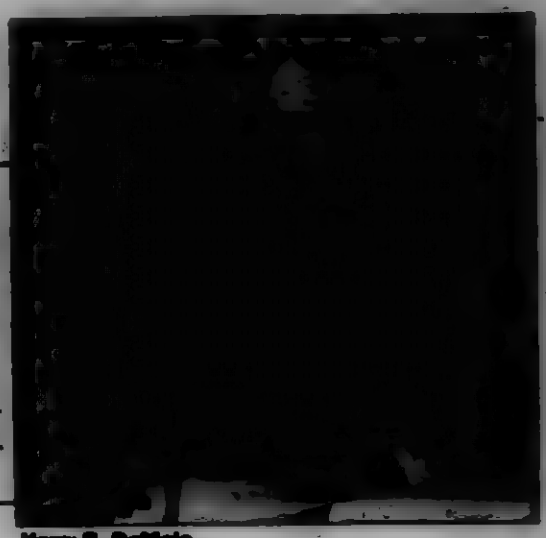
The interactive version continuously quizzes the student in a friendly television environment, and automatically reviews points of weakness, based on an incorrect response. The system combines the attention getting qualities of computer based quizzing and review with the superior and more flexible medium of videotape.

Two different, powerful Microcomputer configurations running in standard Ada syntax subsets, provide hands-on Ada programming experience to supplement each videolesson. Prices start at $2800!

A conversation with IBM's DeMaio

Commonsense approach to DP security

In any ranking of today's "hot" issues, computer system security is certainly one of the hottest. Boomin 1983 — the year of War Games and the hacker — served to point up just how vulnerable modern technology is to misuse and abuse, both from within and without. As director of data security programs for IBM, Harry B. DeMaio brings his own unique, commonsense approach to computer security. He has worldwide responsibility for coordinating IBM's representation to national governments, intergovernmental agencies, the media, industry and professional groups on the issues of security, auditability and systems management. He is also the industry giant's voice on the broader issues of privacy protection and international information regulation. In addition, DeMaio is charged with ensuring that all IBM divisions have the plans and products to support customer requirements for systems security. With stern visage and rumpled posture, DeMaio is a voice of authority in the area of data security. He was interviewed by Computerworld Staff Writer John Gallant.



Harry B. DeMaio

Is security technology — both in hardware and software — advancing fast enough to keep pace with the threats to data security?

Current security technology has some gaps in it. . . . We need, for example, to have personal identification capabilities more comprehensive than simply the password, which has some fundamental weaknesses inherent in it. There are technological approaches to that, which, at the moment, are not viable from a marketplace standpoint.

But I'm also concerned about whether the current technology is being used to its maximum. . . . There is a substantial amount of technology available in the area of access control, certainly in encryption, which is available in the market today and is not getting full usage.

In a ranking of threats to data security, you list external attack, or "hacking," as the least likely, yet that area has received the greatest publicity. Has that, perhaps misguided, emphasis on external attack shifted attention from more important concerns?

I don't think so. I don't think the average businessman has zeroed in exclusively on external attack. I think that to the extent it raises the awareness level on the security problem overall, it's had some beneficial effect. On the other hand, it's also raised the question in the public's eye of whether all telecommunications systems and all computing systems are susceptible to anybody who has a computer and a little bit of knowledge. That implies we've got a fundamental problem with anything that uses this modern technology, which is harmful.

According to a press release from your Armonk, N.Y., office, attention to data security has been a matter of company policy at IBM for some time. How is that policy evidenced?

In a variety of ways. We have made a number of contributions externally for studies in this area. Throughout IBM's history, we have also produced several thousand publications dedicated to this. At the moment, several hundred of those are actively useful. They range all the way from executive briefings right down to very detailed manuals on how to use a specific product.

That concern is also manifested in our product line. It's part of the fundamental design criteria for most of our products.

It's manifested in the number of classes and seminars we've run, both free of charge and for a fee. It's also manifested in our advertising. We've had a number of corporate advertising campaigns focusing on security; we plan to have another in the early part of this year.

We've worked in close harmony with governmental agencies, both

here and overseas, as to what should and should not be done to ensure that security is part of the social and political climate. We've talked to God knows how many members of the media on the topic, and we've tried to make ourselves as available as possible. We've trained our marketing organization in security issues and our support and development organizations as well.

You have said management must push security all the way back to the design stage. How can management in a user company affect the design of systems in a vendor firm?

What I meant was systems management, those people who have an affect on the development of applications. In the design stage, these people can ensure security in a number of ways. They can ensure it through quality assurance programs and by having people engaged in the specification process who can demand that, as part of the overall specifications for the application being developed, security will be a high-priority item.

Can they monitor that in any technical detail? That depends on the management involved. I know a fair number of managers who are not DP experts, but who can still ask some pretty intelligent questions when it comes to audit trails, when it comes to security, when it comes to whether information is protected or not. They also can be stubborn enough to say, "Show it to me, and show it to me in a way I can understand."

> ***"I know a fair number of managers who are not DP experts, but who can still ask some pretty intelligent questions when it comes to audit trails, when it comes to security, when it comes to whether information is protected or not. They also can be stubborn enough to say, 'Show it to me, and show it to me in a way I can understand.'"***
>
> **— Harry B. DeMaio, director of data security programs for IBM**

Can data be too secure?

Data can be too secure if there is more expense, both operationally and in terms of hardware and software being put on it, than it is really worth.

There is an economic aspect to this thing. If you're slowing down your operations, if you're making it impossible to do the job or if you're losing opportunities as a result of locking up information beyond its inherent value, the answer is yes, data can be too secure.

But, I want to make the point that that's a conclusion that should not be reached too glibly or too easily. If somebody says you have more security than you need, that ought to set off a few alarms before it is accepted.

What is the most important message you attempt to convey to users and users about data security?

I try to stress the importance of establishing some sort of evaluation scheme and developing a classification framework so they can build their security around the most important information items they have. That's not the easiest thing in the world to do. The problem with most large organizations is that if you regard all information as being in the same general class, that leaves you with a security task that's much too large to get your arms around. In the face of something that formidable, more often than not nothing happens.

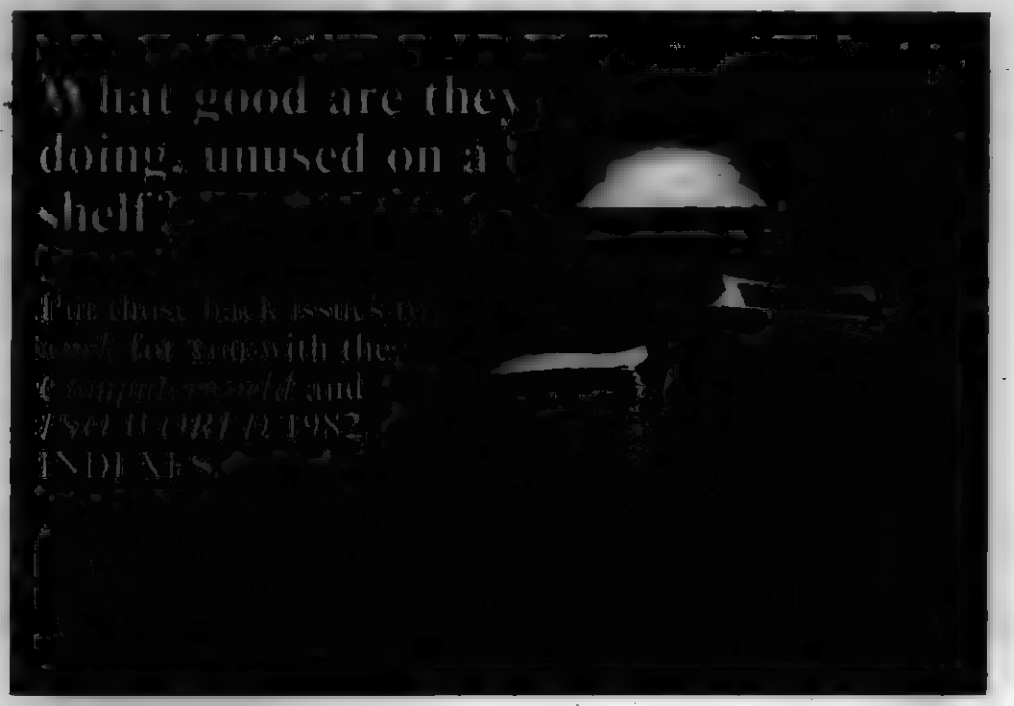
We try to persuade owners and users to develop, not in a highly scientific way or down to a dollars-and-cents detail, some general scheme for classifying that which you really regard as important. For example, if this data was lost or erroneously changed in some way, would it do significant damage to the corporation? You must do some ranking of data, even if it means listing the four or five most important items that would really sink the business if they were damaged or lost.

Is that something that is easily done?

First of all, it's not a data processing decision. It is a functional decision within the organization itself. It involves a certain amount of strategy, and it also involves a substantial amount of operational concern.

Without an awful lot of thought, you can arrive at least the first-round decisions, but then to prioritize in detail within that framework may get to be a problem. But there have to be some levels. For example: these things are important; these things I can do without; these are the things that we really, absolutely have got to have or we might as well pack up the business and turn this thing into a parking lot.

Too often there is a tendency to think just in terms of protecting the things you wouldn't want your competitor or outsiders to find out. It's the intelligence-community view of protecting state secrets. It's very important, but it's not the entire world. The other side is to determine those functional areas where susceptibility to fraud is a concern.



You'll get great material for reports, back-up material for purchase decisions, resource material for contracts, research results for long and short-range planning — in other words — a terrific reference library at your fingertips when you use one of our Indexes to access all the information that's stored in your back issues of *Computerworld*, *ISO WORLD*, and *Computer Business News*.

With the *Computerworld* Index, you get an easy reference (including page numbers and issue dates) to all the information that's packed into all 58 (including *Extra!* and *Computerworld OA*) 1982 issues — 2,636 pages of news, stories, In-Depths, Special Reports, interviews, applications stories, features and tutorials on everything from AFIPS to Zenith.

And in the *ISO WORLD* Index, you'll find entries from 3 issues of *ISO WORLD* and from 36 issues of *Computer Business News* — 913 pages of industry news and trends, features, new product announcements, marketing and distribution articles, perspectives, columns, and analyses; on everything from AB Dick to Zentec.

Whatever you're doing professionally — Changing systems and procedures, purchasing new equipment, drawing up a contract, doing salary reviews, looking for dealers, setting up a local area network, there'll be articles in back issues of *Computerworld* or *ISO WORLD* to help you. From government regulations, to current trends; from the phrases and misuses of an individual product to the pitfalls of OEM contracts — you've already got lots of professional research sitting on your shelf. Let the *Computerworld* Index or the *ISO WORLD* Index help you find it when you need it.

Take a look at just a few of the hundreds of entries listed in the *Computerworld* and *ISO WORLD* Indexes:

Index	Heading	# Entries
CW	Local Area Nets	70
CW	Microcomputers	81
CW	Graphics Systems	136
CW	Accounting Systems	101
CW	Disk Equipment	126
ISO	Dealers/Distributors	64
ISO	IBM-PC	84
ISO	Floppy Disks	81
ISO	Modems	45
CBN/ISO	Retail Stores	53

And that's a sample of just this year. We also have Indexes for *Computerworld* that go all the way back to 1976 and Indexes for CBN back to the first — (Nov. 1978-Dec. 1979)

If you don't have all the back issues of *Computerworld* and *ISO WORLD* that you need to get the articles you want, you can order back copies for the an entire year on 35mm microform from University Microfilm, Int., Periodical Entry Dept., 300 North Zeeb Road, Ann Arbor, MI 48106 —at very reasonable rates. Or you can simply take advantage of their reprint service for individual articles.

To get your Index, just fill out the coupon in this ad and send it with your check to Indexes/Marilyn Priante, Box 880, Framingham, MA 01701.

Dewar's career survey disputes 'popularly held' opinions of DP professionals

Computer professionals expressed great satisfaction with their career advancement and particular jobs when they were interviewed for Dewars "White Label." And while 75% majored in some kind of mathematical or technical field, many expressed a high regard for "English" and other creative skills

Surprises for many

By Patricia Keefe
CW Staff

NEW YORK — Dewar's "White Label," the company responsible for those career achiever profiles of scotch drinkers you see in magazines and newspapers, has released the results of a nationwide survey that it claims will "hold surprises for many" by contradicting "popularly held" opinions about computer professionals.

The survey suggests that among computer professionals, the intrinsic rewards — such as creativity and learning — predominate over the extrinsic. Among the key findings:

■ Job satisfaction is extremely high despite long hours and pressure-filled environments.

■ Ninety-four percent of those polled would not leave the field; 81% would not even change to another area of DP. Those considering change most frequently cited the pursuit of a managerial role as the reason.

Moreover, 74% of those interviewed work more than a 40-hour week, while 60% also work weekends. Only 6% expressed any kind of dissatisfaction at all.

■ A liberal arts background and English language skills are considered very valuable to success by 45% of the respondents, despite employment in a technical field.

■ "Computer professionals are nearly unanimous in recognizing that narrow training alone is not the only thing conducive to career achievement," Dewar's said in its survey report.

■ Creativity is perceived as the single most important aspect of the job.

■ The "most purely practical" aspects — money, security and status — appear to be the least important.

■ Paperwork was the chief complaint of 42% of those polled, a burden that computers have failed to eliminate.

■ Other complaints included pressure (12%) and salary (9%).

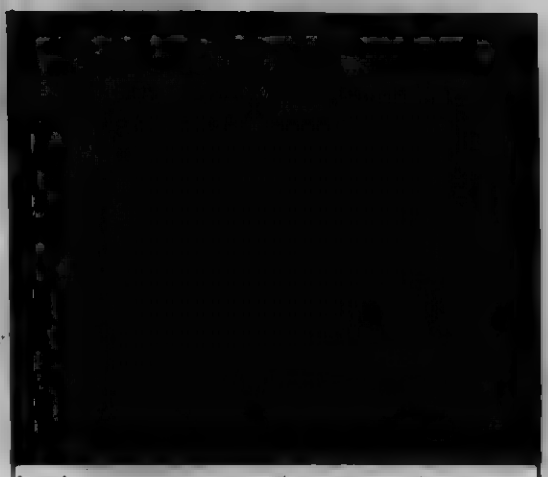
Designed and conducted for Dewar's by Research & Forecasts, Inc., the nationwide survey was conducted via random interviews held last January with over 300 employed computer professionals. The report on the survey's findings was recently published as a public service for college students and other job seekers.

After polling people representing a cross-section of six computer careers — educators, entrepreneurs, systems analysts, programmers, consultants and sales/marketing personnel — the survey concluded that computer professionals are "a highly satisfied and motivated group of hardworking individuals, who achieve a large measure of fulfillment through their work."

Said Dewar's: "Computer professionals' high level of satisfaction can be explained in part by their success in moving up the job ladder." More than half (54%) of those interviewed said they were as far along in their career as they thought they would be at that point five years ago. Another 28% found themselves further along their career path then they had anticipated.

Key to the successful pursuit of their careers

See CAREER page 18



DP job personalities

NEW YORK — Computer professionals can be broken down into three distinct categories determined by the degree of commitment they give to their jobs, in terms of both time and intensity, according to a survey sponsored by Dewar's "White Label."

The three working personalities identified in the survey are:

■ *Computerholics.* Comprising 22% of those computer professionals polled, they devote at least 50 hours a week to their jobs, frequently work weekends and function in "extremely hectic" work environments.

■ *Overtimers.* The majority (57%) of those polled, they work 41 to 50 hours a week.

■ *Nine-to-Fivers.* The remainder (21%) of the sample, they typically devote 40 hours a week or less to their jobs, rarely work weekends and work in a "generally steady or relaxed" work place.

The professionals in the three categories were found to be equally satisfied with their jobs and, with few exceptions, did not differ in terms of the goals they seek or the rewards they find in their work, according to the survey report.

Most of those interviewed worked either in small groups or independently. The exceptions, however, were "quite telling," Dewar's said.

For example, computerholics are nearly twice as likely as nine-to-fivers to seek personal growth in their careers — 55% ranked this nine or 10, on a scale of one to 10, compared with 41% of the overtimers and 29% of the nine-to-fivers. And computerholics are more likely to be motivated by strong personal interests in choosing their career path — 58% ranked this nine or 10, compared to 50% of overtimers and 43% of the nine-to-fivers.

In terms of work rewards, computerholics are far more likely to achieve satisfaction from helping others solve problems — 59% ranked this nine or 10, compared with 42% of overtimers and 36% of nine-to-fivers.

Moreover, the study found that computerholics bring an intensity to everything they do. They reportedly are better educated, valuing nonmath and non-computer-science courses more than their less driven colleagues. Also, they are twice as likely as the nine-to-fivers to believe that their careers are further along than they had expected they would be. Computerholics were found most prevalently among entrepreneurs and marketing personnel.

All charts from Dewar's Career Profile: Computer Professionals

Job mart explosion

NEW YORK — Don't be surprised if the next up-and-coming young hotshot bubbling over about his fast-track career in an advertisement for Dewar's "White Label" scotch turns out to be a computer professional. The explosion in the computer market has produced an accompanying explosion in the job market, according to the results of a nationwide survey recently released by Dewar's.

Careers in computer fields have expanded tremendously in the past few years, offering attractive positions and salaries in an otherwise depressed economy, the study said. The "gold-rush atmosphere" is spurred by tales of entrepreneurial wizards; classified sections are filled with ads for computer professionals; and courses that teach computer science and basic data processing skills represent one of the few educational fields showing any growth.

According to U.S. Department of Labor projections, the total number of people employed in the computer field is expected to reach 1.2 million to 1.3 million by the end of the decade, up from 750,000 in 1980, Dewar's said. The number of both programmers and systems analysts is expected to swell to about 350,000, yielding respective increases of one-half to two-thirds above 1980 levels.

Programming and software development offer by far the best job opportunities, according to two-thirds of the survey respondents. The second choice was computer applications, attracting the endorsement of a third of the sample. Only one in 10 polled cited entrepreneurship as offering the best job opportunity.

In terms of job opportunities for women and minorities, 96% of the survey sample strongly believes the DP field offers more to these groups than any other field; 48% declared DP offers

See JOBS page 18

Shop floor tech stories wanted

Computerworld's March 26 Special Report will take an in-depth look at computerized manufacturing systems and how they are altering production, planning, operations — and those delicate relationships between the traditional DP departments and the factory automation specialists.

The Special Report will focus on computer-aided manufacturing and engineering, manufacturing resource planning, robotics, inventory and shop floor control. More important, we will look at the impact of these technologies on traditional manufacturing operations.

If you would like to contribute a tutorial or application story to the report, send your three- to six-page double-spaced manuscript by Feb. 10 to Bill Laberis or Peter Bartolik, *Computerworld*, 375 Cochituate Road, Box 880, Framingham, Mass. 01701. Accompanying charts, photographs and other graphics are welcome.

CAREER from page 17

are traditional English language skills, according to 77% of those polled. The statistic is notable because 78% of those interviewed held college degrees in some kind of mathematics, science, engineering or computer-related field. Another 11% held degrees in other fields.

"While acknowledging the technical requirements of their field, computer professionals believe 'being creative' is the single most important aspect of their present jobs," according to Dewar's.

Job rewards

Another reason for the high level of job satisfaction is that the personal goals which led the survey respondents to seek a computer-related career have been fulfilled, according to the study. Strong personal interests, personal growth and employment opportunities play a major role; status and relocation possibilities are not strong incentives, the respondents said.

Topping the list of rewards gained from the work experience were the opportunities to be creative, learn new skills and solve problems. Working independently and socializing with colleagues also ranked high.

More information on the career reports is available through the Dewar's Center for Career Development, Suite 1100, 110 E. 59th St., New York, N.Y. 10022.

JOBS from page 17

"much more opportunity" to women and minorities. The report points to a recent National Science Foundation report, which estimates that the number of women in the computer field grew 44% between 1980 and 1982 alone.

However, the survey also quoted respondent Irene Anderson, an advisory systems engineer, whose enthusiasm was somewhat tempered. "There are opportunities for women — in a sense," she was quoted as saying in the booklet detailing the survey results. "There's a high percentage of women at the entry level. Women can get up to first- and second-level management, but after that the pyramid becomes very pointy, and the opportunities aren't there, except in theory. It's still a man's world."

One possible reason for this: Several survey findings concerning women DPers found that half the women, but only a fifth of the men, work 40 hours or less a week. At the other extreme, a third of the men, but only a tenth of the women, spend 51 hours a week or more working at their jobs.

In addition, survey results state that women in the field are "somewhat less likely" than men to have a college degree. This is broken down into 91% of 259 males and 76% of 42 females polled.

Survey respondents were also asked to advise people considering data processing as a career. The responses included:

- Get a broad education.
- Be sure you are really interested and capable.
- Get practical experience during college.

Now PCs and Mainframes Share the Workload. Datalex Software Gives PCs Data Entry Capability to Pass Clean Data to Your Host Computer.

Until Datalex you've had to turn personal computers into "dumb terminals" to communicate with a mainframe.

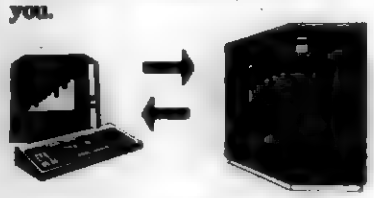
Now, data entry can be accomplished at the PC level. Then passed to a mainframe. Turning your PCs into integral units of your corporate data processing network. And freeing your host computer to work on the jobs it does best.

Get Up and Running with Entrypoint™ and Passport.™

Entrypoint is Datalex's high performance data entry software. It supports high volume, commercial grade data entry in a stand-alone or distributed environment.

Passport is our high quality, asynchronous remote communications program that provides error-free, bi-directional file transfer capabilities between most microcomputers and mini or mainframe hosts.

Together, they provide a communications link with your mainframe, batch management capabilities, high-volume capacity and an interactive screen. Which is more than any other system offers you.



And, like all Datalex software, they're available for personal computers from IBM, Digital Equipment Corporation, Hewlett-Packard, Sage, and others. And come with 90 days of installation and telephone hotline support.

All at a cost much lower than you'd expect.

For more information call Datalex at (800) 962-8888. In California, Alaska and Hawaii, call (415) 541-0780.

Yes, please put my corporation on the fast track to success. Send me more information on Entrypoint and Passport.

The personal computer courted the workplace with endless promises.

A new era of problems was delivered instead. As MIS manager, you have observed: too many different brands of computers. Too many types of software. Software that's difficult to learn, limited and inconsistent in quality, and poorly backed up by manufacturers.

More troubling: there has been no way to control the information flow. No way to make these machines communicate with one another, or with the company's mainframe. No way to customize software to meet specific company needs.

Microcomputer chaos is likely to persist unless someone can bring in an effective system for managing them all, and introduce a measure of standardization.

That logical someone is you.

The logical solution is Visi On.™

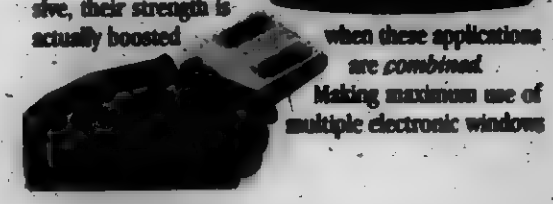
What's good for the user is even better for the MIS Department.

Visi On is not a new computer.

It is not a new computer program.

Visi On is a completely new generation of business software that harnesses the power of the personal computer; a microcomputer applications manager designed to work in tandem with the operating system of the pc, and integrate any number of application programs.

Initially, four applications are available: Visi On Word,™ Visi On Calc,™ Visi On Graph,™ and Visi On Query.™ Totally redefined for the Visi On environment, each application includes features and functions that have dramatically improved performance.

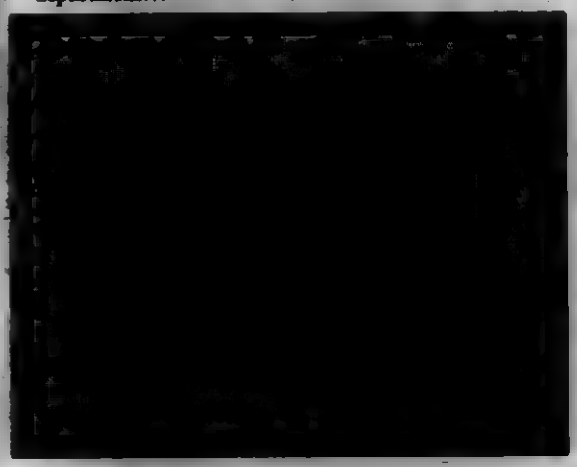


Even more impressive, their strength is actually boosted when these applications are *combined.*

Making maximum use of multiple electronic windows and a mouse, Visi On instantly transfers data between applications, demonstrating depth of integration to an unprecedented degree. Instead of doing just one job at a time, the user may move from project to project, backed up always by the full power of the machine.

And it's all remarkably simple. Visi On provides a single, sensible interface that makes every application easy to learn, and even easier to use.

There. Already it's getting quieter in your department...



ENTER VISI ON. Suddenly, every personal computer in your company becomes everything it ever promised to be.

Indeed, for MIS managers as well as for users, Visi On is a virtually instantaneous remedy for the problems experienced with personal computers.

Instantaneous? Yes. The system will work on most of the computers already in place. (Which also makes Visi On your simple-to-implement solution for standardizing systems and applications.)

On the off-chance a problem should befall a user, no problem. Each Visi On application program comes with the equivalent of 100 pages of help text users may call on when there is a question. The more help the user gets from Visi On, the fewer the calls for help that come into your department.

The Visi On system also provides the basis for a complete package of communications programs. With applications software soon available, Visi On will allow personal computers to emulate both asynchronous and synchronous terminals.

And, Visi On will allow integration into local networks.

And more. And more. And more.

Additionally, Visi On is open-ended. New applications, new capabilities, and new peripherals will be added. Plus, Visi On architecture is open to all developers, with a Visi On Toolkit to help you custom design your own applications programs.

And with all of the above, Visi On introduces a new generation of software support. It's the most comprehensive program ever executed for microsoftware. Backed up by VisiCorp,™ the number one name in business software.

Sit back. Be pleased with yourself. And if you're far too modest for that, simply rest assured that legions of formerly disgruntled users now have you to thank for an efficient, productive new partnership with their personal computers.

Your management thanks you, too.

You were, after all, the one who recommended Visi On.

DP director pockets fees for free service

By James Connolly
CW Staff

CLINTON, Miss. — City officials were disturbed but not outraged when the county data processing director pocketed the fees they paid to have their tax rolls processed on the Hinds County computer.

"It was the only way we could get it done," reasoned Mayor Walter Howell.

But the sheriff was called in when it was learned that the services for which Clinton reportedly paid Ray Palmertree almost $7,000 were provided free to other communities. Clinton and the county realized that Clinton, too, could have free service.

Address was clue

City and county officials said that since the early 1970s, Clinton paid Palmertree and his predecessor as much as $1,250 a year to run the city property tax bills on the county's computer. The arrangement came to light when Palmertree's $2,400 bill for his 1983 work carried his home address rather than the county courthouse in nearby Jackson.

The city and the county board of supervisors questioned why Palmertree, who is salaried at $33,500, was performing private work on the county's Sperry Corp. 90/40. The supervisors, noting that an assistant attorney general said it is illegal for public employees to use public property for personal gain, advised Clinton to pay the $2,400 to the county.

It was then that Clinton officials discovered that other small cities and towns that didn't have their own computers received similar services for free or for the cost of the tax forms. The city refused to pay, and the county supervisors agreed not to press for payment until an investigation is complete.

It also was revealed that Palmertree collected $75 and an assistant, Bob Flippen, collected $1,230 from the county school system for programming fees.

Some supervisors have demanded that Palmertree and Flippen, who also remains on the job, pay the county whatever they collected.

But Mayor Howell, in Palmertree's defense, said, "I think it reached a point where he couldn't do all of the required work in a 40-hour week. He was vastly understaffed. If he hadn't done it, then it wouldn't have gotten done, and we figured we were going to have to pay for the service wherever it was done."

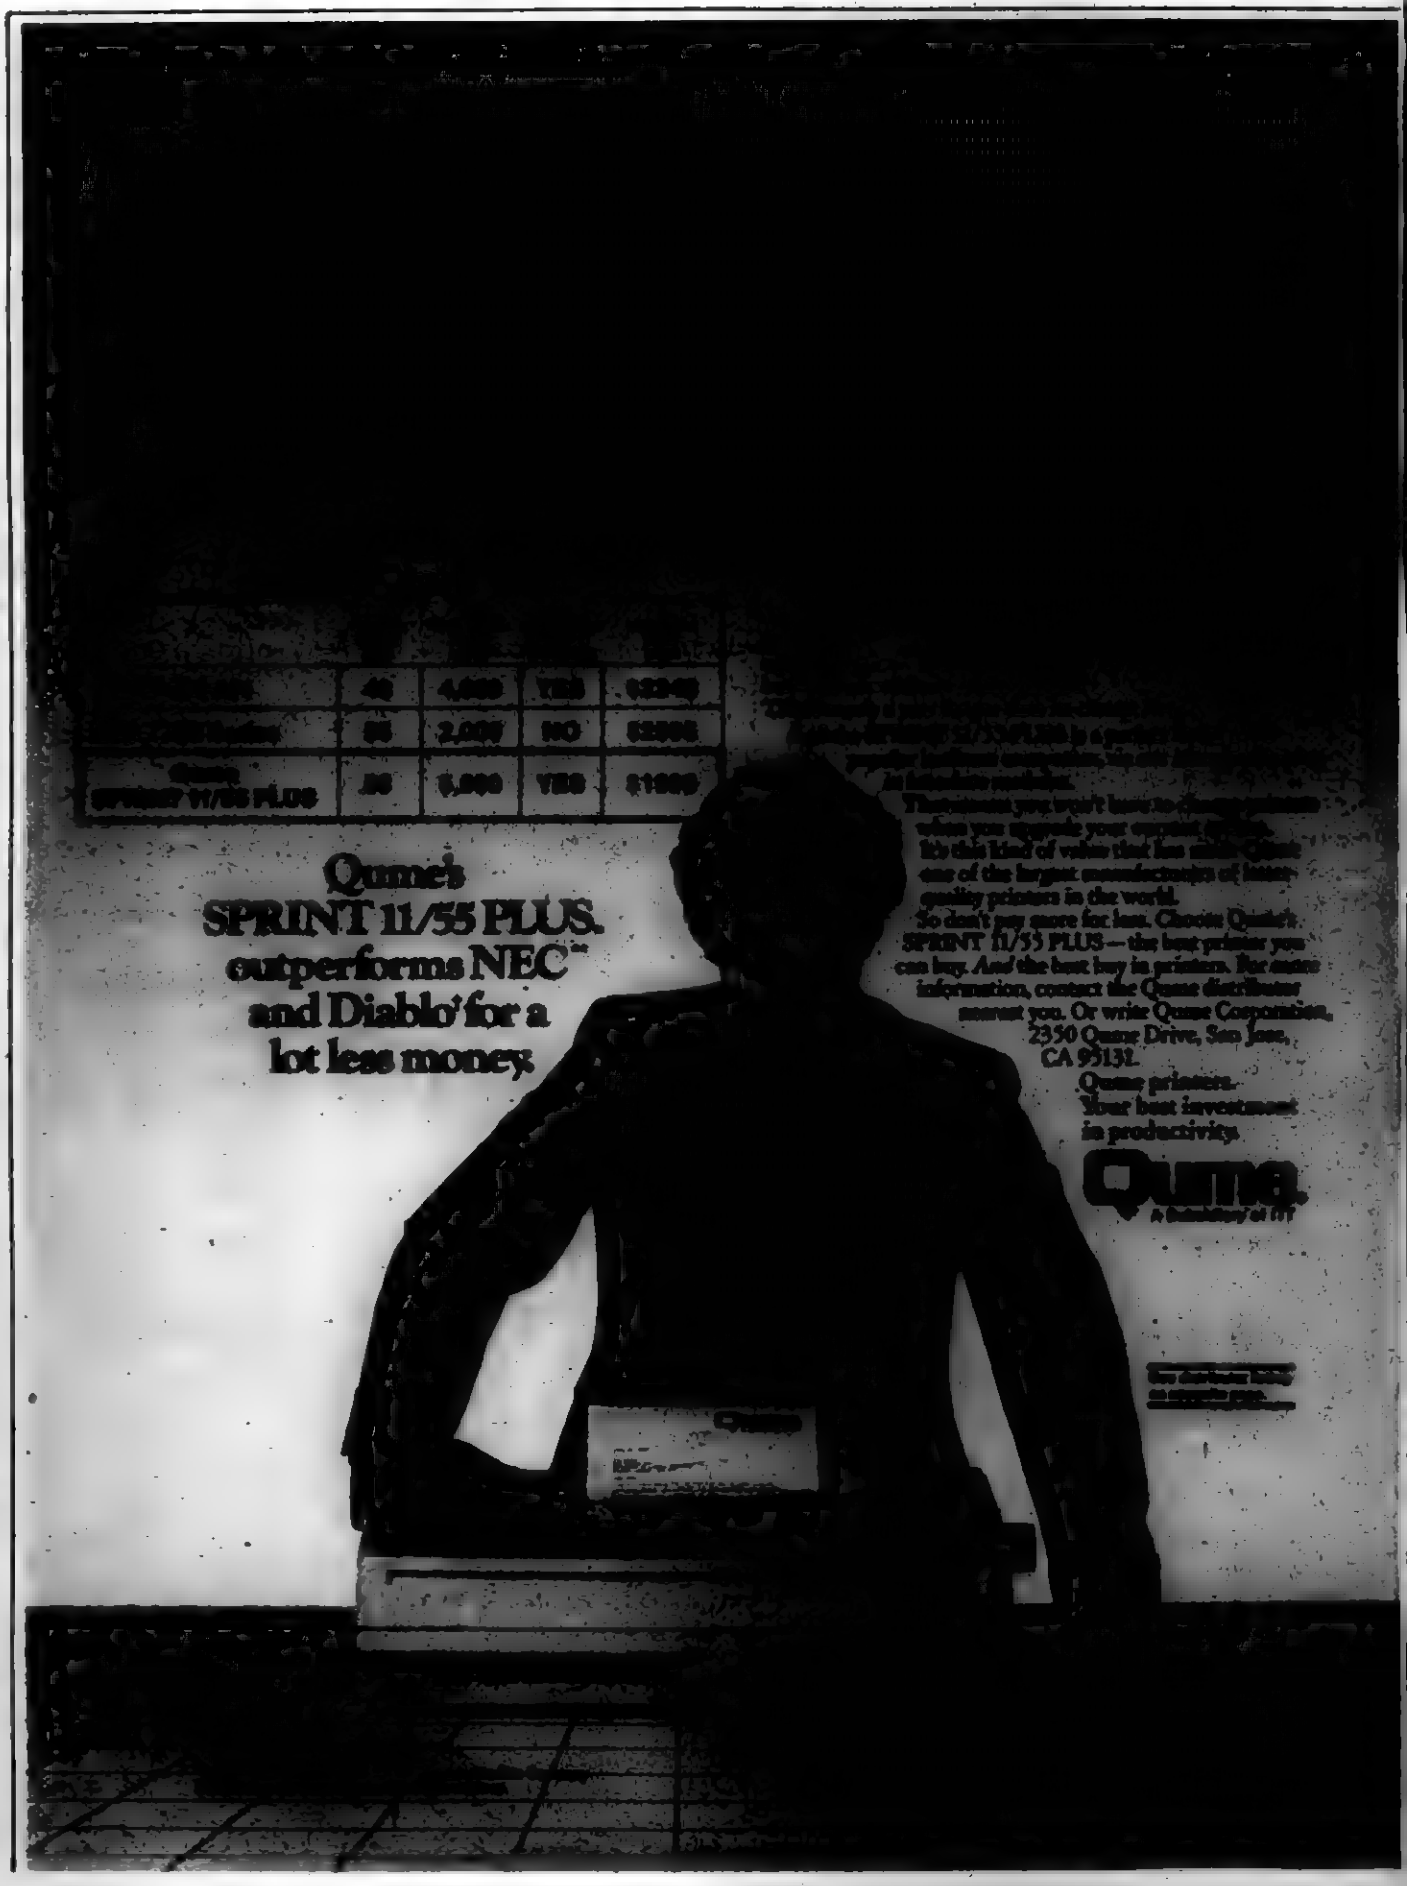
MANAGERS ON THE MOVE

MARVIN L. ZEICHNER has been promoted to head the newly created management information and software department at The Mitre Corp. in Bedford, Mass.

While at Mitre, which performs systems engineering for the U.S. Department of Defense and other government agencies at the federal, state and local levels, Zeichner has been a member of the technical staff and served as a group leader in several departments, including command and control systems, information distribution systems and bus network systems.

Zeichner has also been data processing manager for Albany Data Processing, Inc., vice-president of Computer Services, Inc. and an engineer for Raytheon Co., where he was a staff scholar.

He earned a bachelor's degree in electrical engineering from the City College of New York and an M.S. in mathematics and control systems from Harvard University.



IRS still depends on paper in computer age

By James Connolly
CW Staff

WALTHAM, Mass. — An estimated 96 million tax returns will pour into the Internal Revenue Service by April 15, piling onto a heap of more than 1.5 billion returns and other documents that the agency stores in a largely manual, hard-copy system.

Storing and retrieving those documents costs the IRS $35 million a year. It takes up to six weeks to retrieve a tax form, and there is almost no automated support — whether mainframe or micro — for IRS examiners and other personnel.

Decades into the computer age, the bureaucracy that is so much a part of the life of every American business and worker still relies on paper and the human hand, concedes the man in charge of IRS data processing.

"We really haven't supported our people the way we should. We have to get data to the people on the firing line. Now we hope to crank up something by the late 1980s," IRS Associate Commissioner M. Eddie Heironimus said at a recent tax seminar here.

For 1984, the IRS is stepping up its efforts to automate, particularly through the use of optical character recognition (OCR) equipment to process forms and laser disk storage to save storage costs and make data more readily available.

Employers have begun receiving OCR forms for use in making federal tax deposits to authorized banks. The forms, used in a pilot project in 1983 in the area served by the IRS' Cincinnati regional service center, are now being used nationwide.

The OCR forms replaced keypunch cards and were mailed to companies in December. Those forms are preprinted with taxpayer identifying information or are available blank in emergencies.

Employers may designate the forms for use in any tax quarter and for any of 10 different types of payments by blackening the appropriate boxes. In the past, specific cards were used for specific taxes in specific quarters. A slight mistake meant payments were improperly credited, and the taxpayer was judged delinquent.

"The OCR scanner can read, number and perform all other necessary processing of federal tax deposit cards at a rate of 10,000 an hour. In processing federal tax deposits alone, OCR has the potential for saving 20% of current processing costs and maybe more," reported Joseph H. Clooman, director of the IRS service center in Andover, Mass.

OCR equipment also will be used this year to process an expected 18 million individual returns on Form 1040EZ, the so-called short form. The 11-line form mailed to taxpayers Dec. 26 includes blocks for taxpayers to fill in appropriate numbers and instructions on how to fill in the form.

The 1040EZ form can be used by single taxpayers who earn less than $50,000 and have income only from wages, salaries, tips and interest.

The next form scheduled to be converted to OCR is Form 1099, the form banks use to report interest payments. However, 40% of the 1099 reports now go to the IRS on magnetic tape, ready to run.

In coming years, the IRS will install laser disk storage equipment at its 10 regional service centers. Those plans developed after the agency operated a pilot project at its Fresno, Calif., center last year.

"Right now we hope the centers can take all of their Form 941s [business returns] and put them on laser disk. Then if we need hard copy later, we can make it off the disk," he said.

"That means we could destroy the original hard copy, which, when we carry this out with other forms, could make the service centers virtually paperless," Heironimus said.

The goal is to give tax examiners the ability to call up a return on a display screen and conduct an audit without paper forms. Currently, less than 10% of the IRS examiners have access even to personal computers, and those people are using "Radio Shack-type home computers," noted Heironimus.

One area where the agency expects immediate success in several regional centers is with collections. On-line systems will allow collectors to call up delinquent accounts, have the system dial a telephone number and route it for the least expensive rates and make notations on whether the taxpayer promises payment.

But Heironimus said the biggest step the agency will take toward full automation will be when it goes on-line with a new system of mainframes, replacing its Honeywell, Inc. 2050A batch processing system and its Control Data Corp. 3500 on-line systems.

Those systems are programmed in assembler language, Heironimus said, while the IRS wants to use Cobol. The agency is in the process of rewriting its 2,400 programs, which already must be updated constantly as tax laws and regulations change.

When the Cobol system is ready, in two years, it will be used on Sperry Corp. 1100/80 series systems that are already in place in the service centers. The current system has been in place since 1962.

Controversial step

One of the more controversial IRS steps toward automation has been the experiment now under way in four districts, where the agency buys population-profile information from research firms, such as those that provide credit card companies with the names of prospective customers.

That data, according to IRS officials, gives the agency typical incomes for given neighborhoods. The information will let computers flag unusually low returns mailed from high-income neighborhoods and will let examiners decide whether those returns should be audited for fraud.

The agency met resistance to the program and found mailing list firms reluctant to sell the IRS the needed data. However, it found other firms willing to sell the data, and the pilot program is under way, despite objections from civil libertarians.

Apple announces University Consortium program

Dartmouth to install Macintoshes

By Patricia Keefe
CW Staff

HANOVER, N.H. — "An apple for the teacher" will be taking on a new meaning for faculty and students at 24 colleges and universities across the country as a result of Apple Computer, Inc.'s new Apple University Consortium program.

The consortium was announced last week when Apple introduced its 32-bit Macintosh microcomputer [CW, Jan. 23]. Apple anticipates that by the end of 1984, at least 50,000 Macintosh micros will have been placed on college campuses nationwide.

Major universities such as Yale, Stanford, Dartmouth, Brown and the University of Michigan each expect to purchase $2 million worth of Apple products — mainly Macintoshes — over a three-year period, the vendor said. More than $60 million in commitments reportedly has been made to date under the consortium program.

At least 2,000 Macintoshs have already been earmarked for Dartmouth College here, where officials are planning to greet faculty and incoming freshmen with an offer they hope won't be refused when school opens next fall: a turnkey package at a discount price for personal use at home, in the office or in the dormitory.

Long a technological trailblazer in the academic community, Dartmouth, the birthplace of the first online time-sharing system and the Basic computer language, is about to embark on yet another pioneering odyssey. It will extend its 20-year-old campus time-sharing system into dormitories by way of personal computers linked to a campuswide network, the latter scheduled for completion this summer.

The preferred personal computer here is the Macintosh. Part of the new Apple 32 Supermicro family, the Macintosh is based on the same technology developed for Apple's Lisa, which incorporates a 32-bit Motorola, Inc. 68000 microprocessor, high-resolution graphics, windows, a mouse and a graphics interface said to allow users to utilize the machine without having to learn difficult computer commands.

The Macintosh is transportable in its own carrying case and contains 64K bytes of read-only memory and 128K bytes of random-access memory. An extensive library of software packages and peripherals is being prepared for the machine, which is aimed not only at the college market but at business markets and other professionals, Apple said. The vendor estimates that more than 500 packages will be available for Macintosh and Lisa models by the end of 1984.

Photo by A. Haughey

Accessing Dartmouth's on-line catalog

Dartmouth's computer store will also carry a few other alternatives — such as IBM's Personal Computer XT and PCjr. The Macintosh was chosen because it is "extremely powerful and user friendly," according to William Arms, vice-provost for computing and planning. "It has very good graphics and an excellent [propri-

See APPLE page 28

Minimal problems expected

By Patricia Keefe
CW Staff

HANOVER, N.H. — A campuswide time-sharing network of the magnitude planned at Dartmouth College here is not without its planning problems. But thanks to the Ivy League school's 20 years of experience operating its own network, any problems are expected to be minimal, according to William Arms, vice-provost for computing and planning.

College officials are planning to offer students the opportunity to purchase at a discount, over their academic tenure, their own personal computer. Students will be able to use the computer for stand-alone word processing and graphics production and as a link to the Dartmouth College Time-Sharing system and the services it offers. The school will provide Apple Computer, Inc.'s Macintosh, as well as some IBM Personal Computers and possibly some Digital Equipment Corp. micros.

The details involved in an undertaking of this size are many, including system security, training, user resistance, technical specifications and equipment and system access to all student, faculty, academic and administrative functions. However, many of these details have been minimized by procedures and services already provided by the school's Kiewit Computing Center.

One big detail — system security — might appear to be most important. The recent wave of publicity concerning student hackers, also called systems violators, suggests that by opening up its computer system to the student population, Dartmouth could be unleashing a serious threat to its system security.

Not so, Arms said, for two reasons. "First, we have a remarkably honest student population. At the same time, we also have 20 years of experience operating a very widespread computing environment." He noted that the school's Kiewit Computing Center staff has worked out simple but secure methods of protecting data.

"We actively encourage students to break our security measures — and to let us know," Arms said. "Lots [of students] have tried to break in, but there have only been three serious break-ins over the past 20 years, each of which has led to an improvement in security procedures."

A sudden rise in the computing population can also threaten the system's health, but Arms does not expect a sudden rash of system crashes and prolonged downtime during the fall semester. Acknowledging that the impact of the new user population on the central computer will be difficult to predict, the vice-provost said the school usually incurs annual system growth of 25% and is increasing the system size accordingly.

Training is another area of concern. It is one thing to encourage widespread computer use and to provide the necessary equipment; it is another to meet a horde of potentially frustrated end users.

Again, Arms considers Dartmouth more than adequately prepared. Within the computing center is a department called Service to Academic Users, with a staff of 12 professionals and 30 to 40 students. The size of the support staff is proportional to the number of services provided, not the number of users, Arms explained.

During Freshmen Week, time will be allotted to introduce students to their new learning tools. Further, Arms claimed the Macintosh is so user-friendly that the student learning time is relatively short. Videotaped instructions scheduled during the first few weeks of school will also be available.

Grants from Apple, the Sloan Foundation and Carnegie Corp. will provide funds to develop instructional materials and to train the faculty.

Dartmouth will turn to another existing service to provide students and faculty with computer equipment: the computer store, located in the computing center.

Honeywell and IBM terminal emulation at prices that will blow the socks off the competition.

We began by designing the best protocol converter on the market, favored for years by discriminating buyers, including several FORTUNE 500 companies. They like our quality. But they love our prices. As much as 60% below the competition. Line for line, we've got the best

Number of Lines/ System	Suggested List Price*
4	$ 4,620.
8	$ 5,620.
12	$ 6,620.
16	$ 8,620.
20	$ 9,620.
24	$10,620.
28	$11,620.

*Plus a one-time software use license of $500 per system. Call or write for complete price list and discount schedule.

product at the lowest price you'll find. Our MZ-80 is a real workhorse in a remarkably compact cabinet. And at the heart of it all, the 6 Mhz Z-80B™, the fastest, most powerful 8-bit cpu available. It will run bi-sync to your IBM-compatible host using ASCII CRT's to emulate 3270 terminals. Printers and other devices are also supported. For slightly more, we can handle most other popular host protocols, including Honeywell VIP.

But that's not all. There's a whole range of other functions this little wonder can perform. Try it risk free for 30 days, and if you're not completely satisfied, we'll take it back.

What three letters represent the most powerful on-line computer in business today?

TX

The most powerful on-line

Time was, the answer to the previous page was as easy as ABC.

But that was yesterday.

Today, the world of business computing is being introduced to a system featuring over two-and-a-half times the performance and twice the price/performance of its nearest competitor.

A versatile system. Able to compile the information of the largest corporations into a single relational data base. Instantaneously updated and fully available across the entire system.

An expandable and compatible system. Allowing the simple addition of future programs and equipment, without sacrificing past investments.

And most importantly, a system that won't let you down. Because its fault-tolerant design won't let itself down. Even if a major component fails.

This system isn't from IBM.

It's from Tandem.

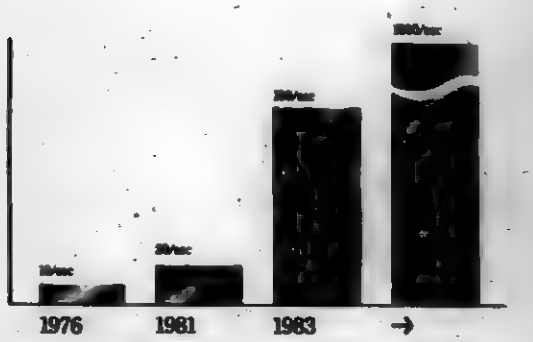
Introducing the NonStop TXP™ system.

TXP: 32-bit transaction processing.

The TXP system processes high volume loads faster and more economically than any other system. Executing over 100 transactions per second now and thousands of transactions in the near future.

It's built around multiple parallel 32-bit processors. Each addressing 16 MB of physical memory and over a gigabyte of virtual memory.

To help memory keep pace with that kind of processing, TXP pulls 64 bits on each memory access.



Our success can be summed up in a second. *Transactions per second. Numbers unsurpassed in the industry. On-line systems that fit your needs today. And tomorrow. With more processing power on the way.*

The TXP system also features parallel data paths. Manipulating 32 bits of information in a single cycle, two 16-bit operations in the same cycle.

And TXP incorporates extensive pipelining, to process multiple instructions simultaneously. Each processor overlaps instructions in three levels: Fetching one, while preprocessing a second, while executing a third.

While helping TXP deliver full 32-bit power, for less.

Cache memory pays off in faster response times.

Cache memory is a high-speed data storage area between the processor and main memory. It lets the processor store more frequently used information closer. So it can get to it faster.

And our tests have shown that the TXP cache memory has a 98% "hit rate." Which means the requested data is virtually always nearby for fast access.

The result? Larger volumes of work can be processed in shorter amounts of time. Helping TXP to be even more productive.

Making cache memory pay big dividends.

A system you'll expand, not disband.

Most computer systems have very limited expandability. So if a company outgrows its computer's capacity, it usually means starting again from scratch.

Selecting and buying a larger and more expensive system.

Then reprogramming.

Then re-training.

Plus all the chaotic disruption and

XP

computer in business today.

massive loss of revenue that's unavoidable during the switch-over.

Not so with the TXP system.

It can expand from two to 16 processors. Increasing its power by a factor of eight.

That's more power than any of the largest mainframes.

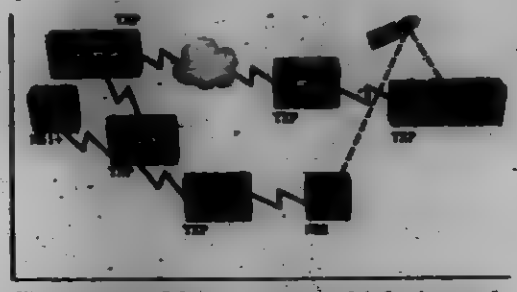
And the additional processors can be installed while TXP is running at full speed. No downtime. No reprogramming.

Still not enough power? Up to 14 TXP systems can be joined together by high-speed fiber optics. Linking the systems together as one computer with 224 processors.

But that still isn't the full potential of the TXP.

TXP systems at up to 255 sites can be joined in a worldwide network. Generating the power of over 4,000 processors.

And that gives TXP the most powerful on-line computer capacity in business.



The most powerful computer network in business today. *Users access a single unified global data base from any of thousands of terminals anywhere in the system.*

Expandability our competition wishes they could disband.

NonStop™ system compatibility from the people who started it all.

TXP can process more information and support more programs, users and devices than any other computer designed for on-line transaction processing.

Devices you most likely already have.

Even devices made by IBM.

But what if your company isn't quite ready for the TXP system's awesome power?

We suggest the Tandem NonStop II™ system. The second most powerful on-line computer in business today. The cost effective solution for medium to large corporations.

What if your company is somewhere between a Nonstop II and a TXP?

No problem. They can be combined. They can share the same data and programs. In fact, NonStop II and TXP processors can coexist in the same cabinets.

And what if your company needs even a smaller computer? We make a smaller computer. The Tandem NonStop 1+ system. Perfect for those low-volume sites where less processing power is needed.

Tandem literally wrote the book on NonStop™ transaction processing. That's because we introduced the first NonStop system.

Over eight years ago.

And for over eight straight years, despite attempts by others, we've continued to lead the industry.

Learn all about TXP, ASAP.

For complete literature, contact your local Tandem Sales Office.

Or write Tandem Computers Incorporated, 19333 Vallco Parkway, Cupertino, California 95014.

Or call us, toll-free. (800) 482-6336.

TXP is the most powerful on-line computer in business today.

Without question.

TANDEM

NonStop Transaction Processing.

©1983 Tandem Computers Incorporated

APPLE from page 24

otary] operating system designed around a user interface."

The private liberal arts school plans to purchase initially about 2,000 Macintoshes and to provide students with a package that includes the computer and some software at a significantly discounted price, about $1,250 (the Macintosh retails for $2,495). Payment will be spread out over the student's college career; when the student graduates, the computer will be his.

Both students and faculty will be strongly urged to use the computers, but no one will be forced, Arms said. "It is very important that [participation] be optional," the vice-provost explained, adding that it is not the school's job to tell the faculty how to teach, but rather to provide an environment to support it. Arms estimated that virtually 96% of the academic population has done some computing.

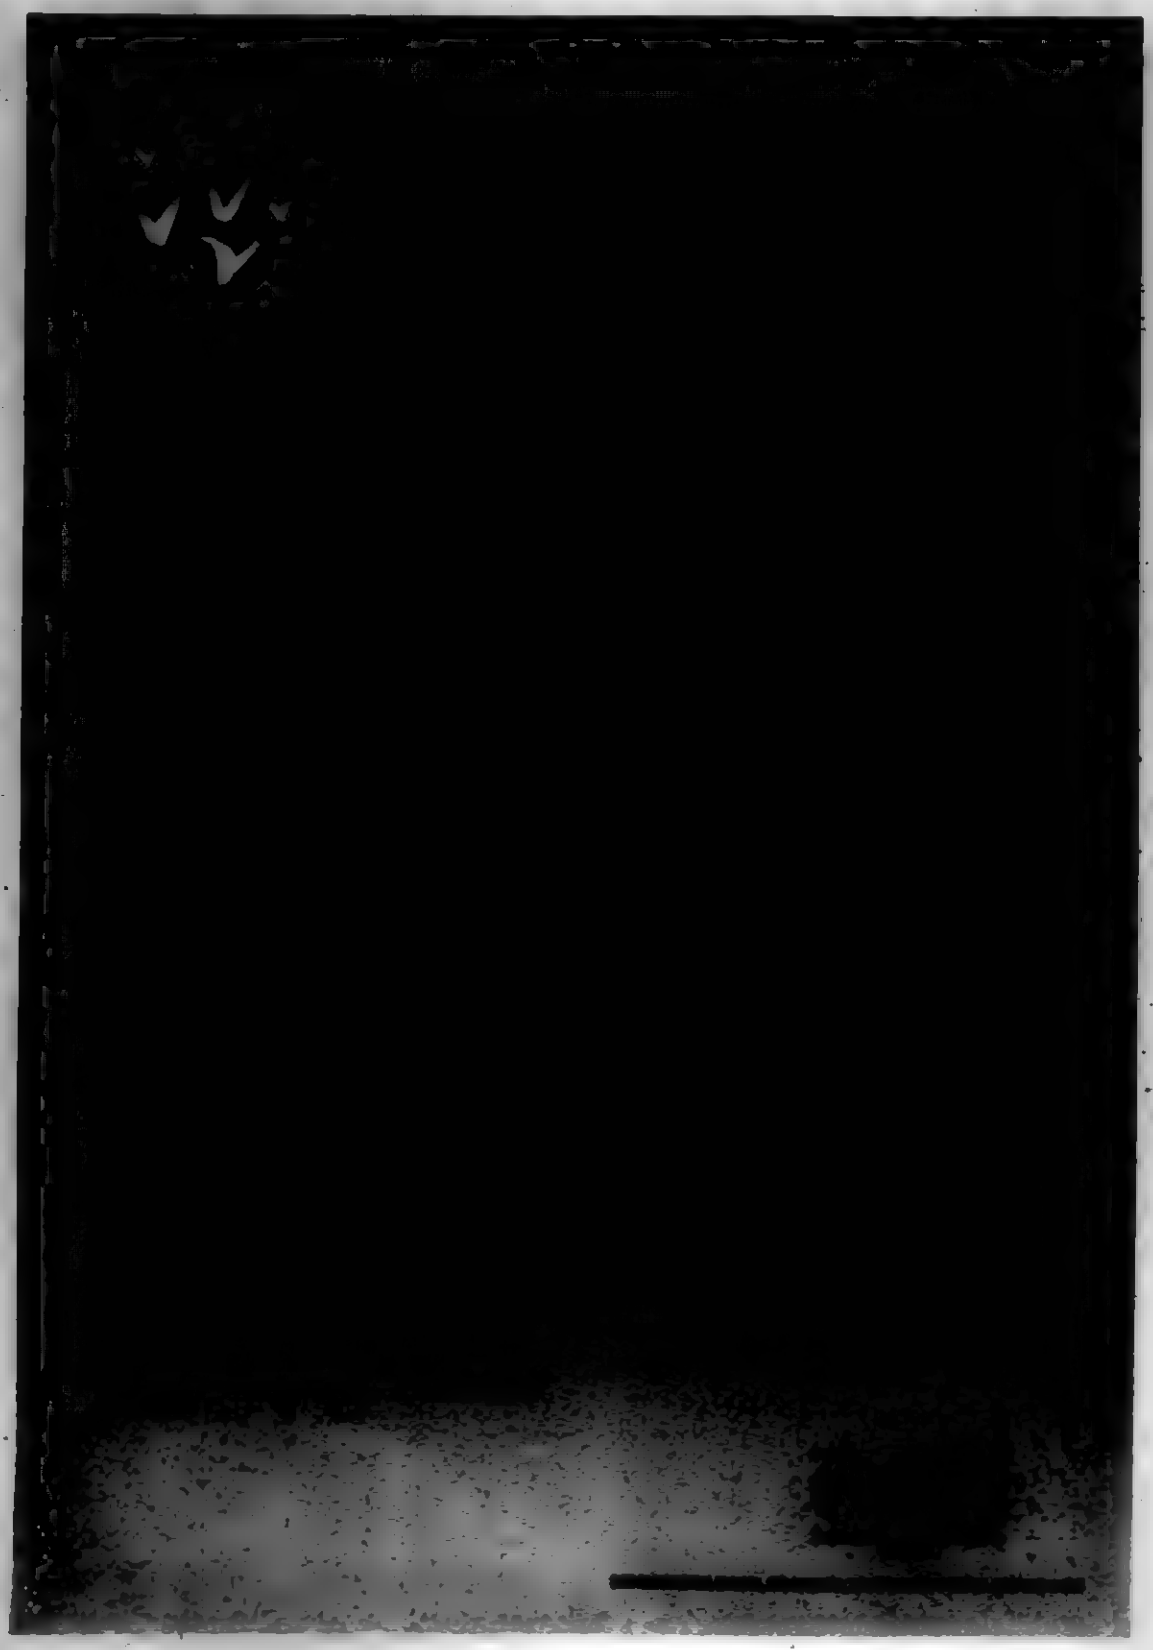
For students who do not want to buy the computer, Dartmouth will be adding a few personal computers to the "terminal clusters" now situated about the campus in public areas. However, Arms said the emphasis will be on private ownership. He noted that the personal computer has been priced so that it will be affordable by all students, including those receiving financial aid.

Students will be able to use their personal computers in either stand-alone mode or over the school network. In stand-alone mode, students can use their Macintosh to run a variety of graphics programs, avail themselves of word processing applications and write their own programs in Basic or Pascal. Using the campus time-sharing network, students can send electronic mail to faculty and friends, look up research materials in the library's computerized card catalog without leaving their rooms, perform statistical work and simulations and access the school data base.

For example, a student could write a term paper using word processing software in stand-alone mode and then link up to the time-sharing network to send the paper to a professor's electronic "address." Although the student will have a copy of the paper in his floppy disk library, getting a hard copy may be a little tricky. Nonetheless, the vice-provost said the school takes "full responsibility for providing enough public printers to meet demand." Placing printers in dorms is being considered.

Conference calls are another possibility through the time-sharing network, Arms added. Students will even be able to determine whether a book has been taken out before heading for the library, once circulation is input into the school's data base.

Course registration is computerized, as is student billing. Students present magnetic-striped identification cards when making purchases in the school's cafeterias and coffee shops, for example, and are billed accordingly. Once the network gets under way, these bills could be sent to students via electronic mail.



Dartmouth net subbing out terminals

HANOVER, N.H. — Personal computers are getting to the stage where they can be linked to function as efficiently as a mainframe-based time-sharing network, according to William Arms, vice-provost for computing and planning at Dartmouth College here.

"In the last 12 months, we have reached the crossover point where personal computers are good enough and cheap enough to [provide students with their own computers linked to the school's time-sharing system]," he said.

Dartmouth's plan to sell discounted personal computers for private student use next fall is "a big move from having [public] terminals in shared spaces," according to Arms, who believes today's powerful microcomputers have made such a move both possible and inevitable.

Moreover, Dartmouth views the insertion of computers in the academic environment as "a logical extension of what we've been doing in the past — a step forward on the curve of what we've been trying to do," the vice-provost added. Although some members of the academe believe computers are bigger than liberal arts, Arms holds that the reverse is true.

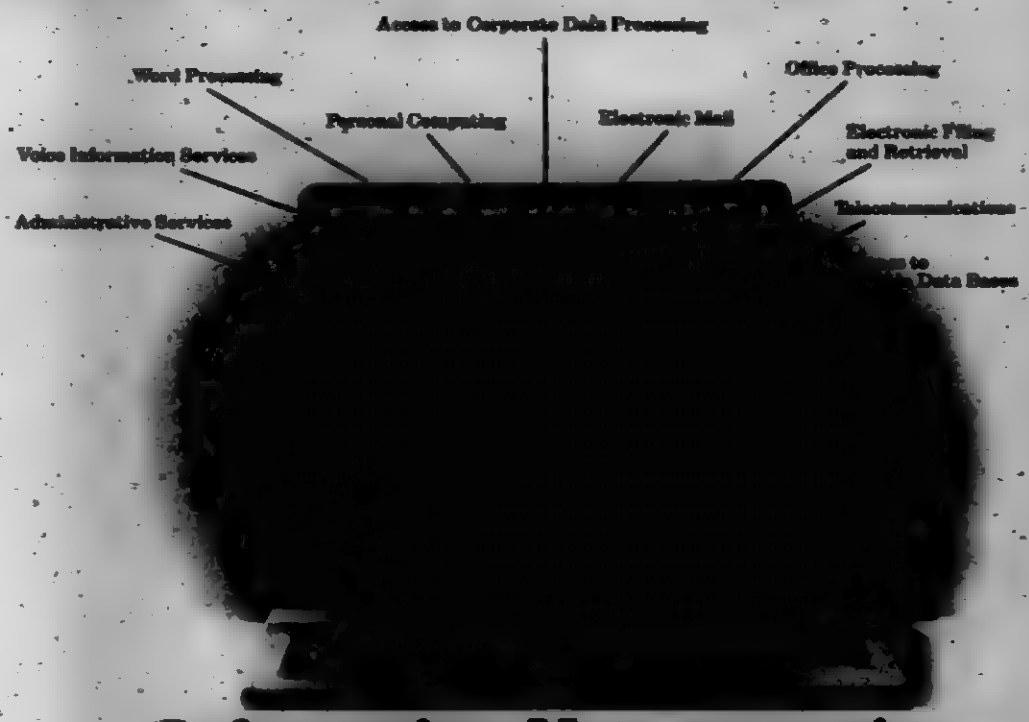
The growth of computing at Dartmouth has increased each year. In fact, Arms said, there has been no year when growth rose less than 10%. For example, the Amos Tuck School of Business Administration recently purchased 50 IBM Personal Computers [CW, May 16], resulting in a 1:7 ratio of computers to students. Reportedly, almost every course at Tuck requires the use of a computer in some way.

The school is beginning to see greater growth in this area, and as a result of its planned campuswide network of stand-alone/time-sharing personal computers, slated to take off this fall, it most certainly will experience a surge in computer use.

Currently, Dartmouth has a campuswide network that has been extended to all academic buildings except the medical school, a time-sharing system and support staff. All of the terminals within the network can talk to each other.

The school is also linked electronically to four or five colleges in the Northeast. "We had [most of this] for such a long time that a lot of things are routine," according to Arms.

SPERRYLINK™
OFFICE SYSTEM



Information. Not automation.

The office information system that puts the mainframe into the mainstream.

The SPERRYLINK Office System.

It's a personal computer. Time manager. Word processor. Data processor. Link to the corporation, and to the world outside. And it's a critical link to the wealth and immediacy of mainframe information, and the means to project it into the minute-by-minute business day.

And most importantly, any desk station can be any and all of these things, as intelligent as you want it to be—whenever and wherever the need arises.

When new needs arise, SPERRYLINK will rise to the challenge. Re-adapting as your company grows.

This is the SPERRYLINK System: built by people who see the mainframe not as a monolith, but as a readily accessible resource.

A system beyond conventional ideas of office automation. Beyond words and numbers, voice and image.

Because it doesn't just help people work better.

It helps people work together.

Booklet out for banks

WASHINGTON, D.C. — The American Bankers Association (ABA) has published a booklet featuring a checklist of factors to consider when choosing bank microcomputer software.

"What About Software? Selecting a Package for Your Bank's Microcomputer" is a three-part booklet covering a definition of the nature of software, an evaluation model to use in acquiring software and hands-on case studies in which the model is used in a banking context.

The authors of the publication are from Aurora Systems, Inc. of Madison, Wis.

Single copies of "What About Software" (No. 022600), which is part of the ABA's Competitech series of booklets, may be obtained for $20 by ABA members and $30 by others from Order Processing, ABA, 1120 Connecticut Ave. N.W., Washington, D.C. 20036.

An annual subscription to Competitech, published monthly and sponsored by 44 state banking associations, may be purchased by ABA members for $195 and by nonmembers for $275 from the ABA Accounting Department at the same address.

PC-World Expo starts Feb. 1

HOUSTON — PC-World Exposition, a three-day conference and exhibition on microcomputers, is scheduled at the Astrohall here beginning Feb. 1.

Richard Dalton, editor of *The Whole Earth Software Catalog*, will speak on "How I Became Compatible With My IBM PC." Other speakers and panelists include Rod Canion, president of Compaq Computer Corp.; *Infoworld* Consulting Editor John Dvorak; Harry Miller, Steve Cook and Andrew Fluegelman, editors of *PC World*; Esther Dyson, president of Rosen Research, Inc.; and Richard Rabins, president of Alpha Software, Inc.

Programs scheduled include sessions on hardware and software for professionals, networking, data base management and others.

Conference and exhibit admission is $30. More information is available from Mitch Hall Associates, P.O. Box 360, Westwood, Mass. 02090.

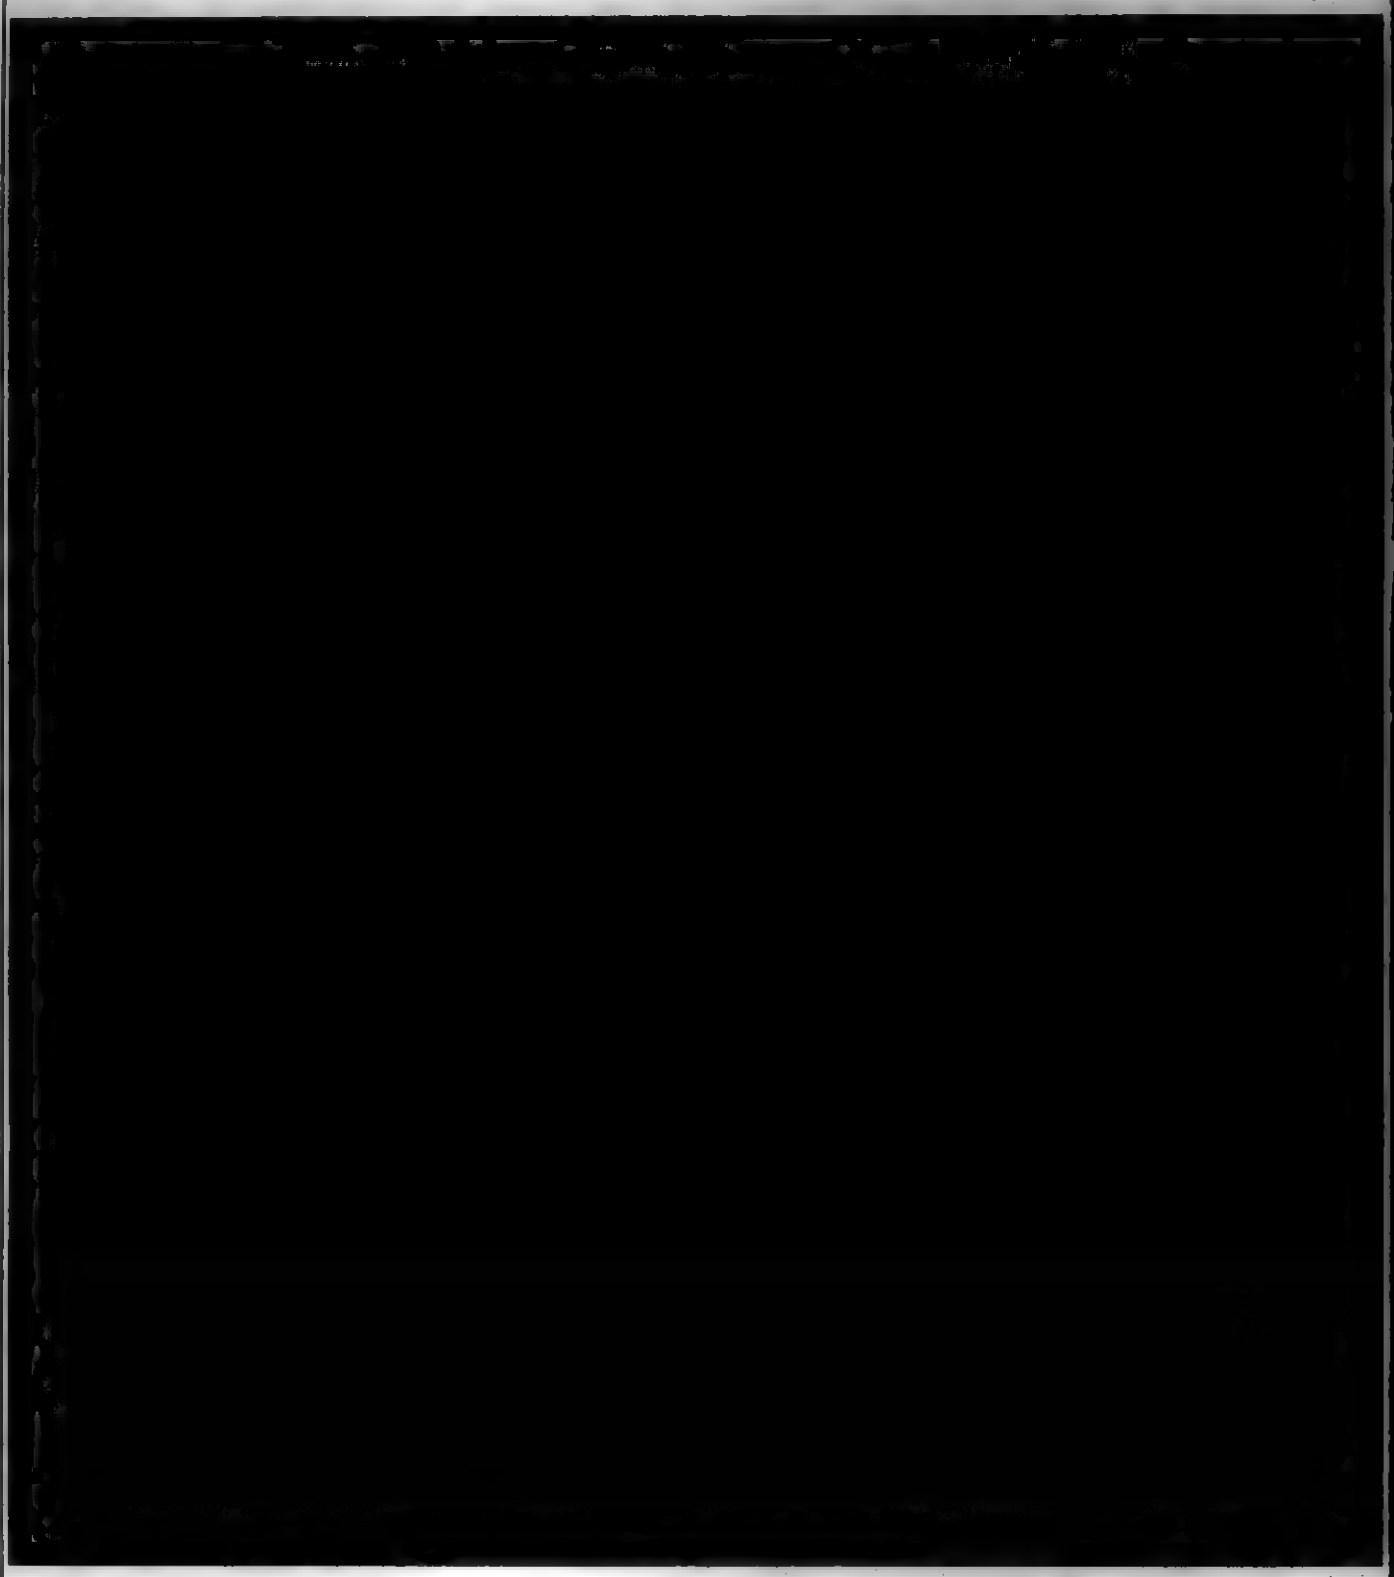
Siggraph accepting nominations

CHICAGO — The Association for Computing Machinery's Special Interest Group on Computer Graphics (Siggraph) is accepting nominations for the Computer Graphics Achievement Award, a $500 award that recognizes accomplishments in computer graphics. The award is given for development of algorithms, hardware design, innovative application of computer graphics and works of art.

Each nomination should include the name and address of the person nominated, a description of accomplishments, a statement by the nominator describing the significance of the accomplishment and the nominator's name, address and telephone number.

The award will be presented July 25 in Minneapolis during Siggraph '84, a five-day graphics conference.

Nominations can be sent to Siggraph '84 Conference Office, 111 E. Wacker Drive, Chicago, Ill. 60601.



Power. That's the key to CDI/100. It's a new concept in PC operating system environments so powerful, so personal and so remarkably flexible, that it can be tailored to the dimensions of any size operation.

We've integrated the best generic features of the minicomputer world with the convenience of Microsoft's MS-DOS.

The learning process is traversed as quickly and easily as an open door. What it brings to your IBM PC is a new generation of data base management capabilities in a system that becomes as personal as your fingerprint.

For virtually limitless application in a system that will

Symposia to cover fourth-generation tools

WAKEFIELD, Mass. — Data management and fourth-generation language products for mainframes, minicomputers and microcomputers will be the focus of the National Data Base and Fourth-Generation Language (DB&4GL) Symposia Series for 1984.

The sponsor, Digital Consulting Associates, Inc. here, announced that the series will highlight recent developments in high-level fourth-generation languages, distributed data base architectures, prototyping, relational data bases and user-oriented data base management systems.

The DB&4GL Symposia Series will be held on four occasions throughout 1984 at the following sites: Los Angeles, March 6-9; Washington, D.C., April 24-27; Chicago, May 15-18; and New York, June 18-21.

Digital Consulting Associates' President Dr. George Schussel is scheduled to lead the first day of the symposium in an intensive review of data management principles. He is also expected to speak on the topic of information centers.

The fee for the entire four-day National DB&4GL Symposia Series is $750 from Digital Consulting Associates, 330 Salem St., Wakefield, Mass. 01880.

Method/1 users group to meet

ATLANTA — The annual Method/1 Users Group Conference is scheduled at the Terrace Garden Inn here Feb. 22-24, with about 80 to 100 companies using Arthur Andersen & Co.'s project management and systems development methodology expected to participate.

Ronald L. Culhum, an associate director of Arthur Andersen's Data Management Systems, will speak on automating the work of programmers, analysts and project managers and on methodologies for using high-level, fourth-generation languages.

Registration fees are $250 for the first registrant from each firm and $150 for each additional registrant. More information is available from Arthur Andersen, 33 W. Munroe St., Chicago, Ill. 60603.

Osra to hold annual meet

LOS ANGELES — The third annual conference of the Office Systems Research Association (Osra) will be held Feb. 18-19 at the Los Angeles Hilton. The conference immediately precedes the American Federation of Information Processing Society, Inc.'s Office Automation Conference.

The Osra conference will include refereed paper sessions on technology and the office and personnel implications of office automation.

Attendance will be limited. Preregistration fees are $60 for Osra members, $85 for nonmembers. On-site registrations cost an additional $10. More information is available from Edward G. Thomas, 574 University Center, Cleveland State University, Cleveland, Ohio 44115.

INTERNATIONAL REPORT

CW INTERNATIONAL NEWS NETWORK

CHINA

SHANGHAI — The Shanghai Software Development Center opened here this month following the establishment of a similar center in Beijing. Since so much of China's computer activity is concentrated in the two cities, it is thought that the formation of these government-funded centers will make better use of China's resources. The charter of the centers is to undertake large software development projects for both domestic and foreign users.

BEIJING — Guangdong Computer Center has developed a Unix-based operating system said to run on a variety of large and small computer systems. While retaining the basic functions and features of Unix, the software also reportedly handles Chinese, Japanese, Russian and Greek character processing.

BEIJING — The TP series of microcomputers developed by the Beijing Polytechnical University is reportedly gaining in popularity in the U.S., Sweden, New Zealand and Africa. Industrial analysts here believe exports of the domestically produced single-board machine, based on the Zilog, Inc. Z80 microprocessor, will soar once an international distribution network is established.

JAPAN

TOKYO — Japan and the U.S. have agreed to extend for three more years a 1980 arrangement that enables Japan's Nippon Telegraph and Telephone Corp. to purchase American telephone equipment, according to a Japanese Foreign Ministry spokesman.

TOKYO — Mitsubishi Corp. has unveiled a videotex system called Mapservice that serves as a "town guide" to downtown Tokyo. Two of the Mapservice machines are set up in the Roppongi Information Center. They offer the user electronic information on a number of stores, restaurants, bars and discos in Tokyo. The system also provides hard copy. Now in its testing stage with an independent memory, Mapservice is expected to be on-line in March with daily news bulletins and a file of some 300 Tokyo stores.

KOREA

SEOUL — Samsung Electronics Co. and Hewlett-Packard Co. have signed an agreement to form a company to develop computer products and to sell and support HP products here. Called Samsung-Hewlett-Packard Ltd., the joint venture will be 55% controlled by the U.S. vendor. The agreement is subject to the approval of the Korean government.

SPAIN

MADRID — Some $600 million worth of government funds is reportedly being funneled into Spain's high-technology sector to spur the domestic market. The money is intended to expand Spain's production and reduce dependence on imports, according to Industry Minister Carlos Solchaga.

WEST GERMANY

COLOGNE — Honeywell Bull AG has introduced three additions to its Series 6 product line: Model 6/210, Model 6/290 and a microcomputer desktop system called Mikro 10. The Mikro 10 is said to be IBM-compatible and capable of emulating the IBM 3270 terminal. It runs under Honeywell's proprietary Gcos operating system and also runs Digital Research, Inc.'s CP/M and Microsoft, Inc.'s MS-DOS operating systems. A basic Mikro 10 configuration with 512K bytes of main memory and two 650K-byte floppy disk drives is priced at $5,720, with first shipments slated for April.

CONDOR
on-line programming that reaches new heights in productivity

To get the most from your IBM mainframe, you need CONDOR – a reliable, easy-to-use, high-performance system that soars above the rest through improved programmer productivity and low resource consumption. CONDOR's highly efficient processing methods and I/O facility improve system response time and can substantially expand the capacity of your CPU while minimizing personnel requirements.

You can write and edit programs with CONDOR and submit them for compile or execution. You can view and modify data from input and output queues, release or cancel jobs, and spool output to local and remote printers.

CONDOR's built-in library management system automatically reorganizes as you process for optimum conservation of disk space. In addition to offering stringent security against unauthorized access and supporting multiple versions, it provides detailed audit reports and program cross-referencing – both batch and on-line.

Boosting productivity even more, CONDOR's own high-level interactive programming language lets you create programs and JCL in a fraction of the time required with other languages. And a powerful set of interactive utilities makes system maintenance a breeze.

CONDOR operates standalone or as a task under CICS and the other major TP monitors to give you total flexibility, and it supports DOS/VS(E) and MVS operating systems for versatility and upgrading capabilities.

No wonder respondents to a recent Datapro survey rated CONDOR tops in reliability, efficiency, ease of use, ease of installation, support, and realized financial savings.

So for a system that out-performs the others and gives you complete control of all your data processing, choose CONDOR. Call for a free trial. You'll be glad you made the right choice.

For more information contact Phoenix Computer Corporation, 11949 Jefferson Boulevard, Culver City, California 90230. Toll-free (800) 255-5049 or (213) 827-4500 in California.

Teleconference set for April

PHILADELPHIA — The 1984 International Teleconference Symposium, which will examine the applications, techniques and benefits of teleconferencing and ongoing developments worldwide, will be held here April 3-5 at the Marriott Hotel.

The meet is cosponsored by Communications Satellite Corp. (Comsat); AT&T; ITT World Communications, Inc.; MCI International, Inc.; RCA Global Communications, Inc.; Satellite Business Systems; and TRT Telecommunications Corp. In cooperation with Intelsat, the symposium will be linked via satellite during portions of each day with Toronto, Tokyo, London and Sydney, Australia. On the second day of the symposium, the satellite will link with all these sites simultaneously, a spokesman said.

Prior to Feb. 1, registration is $495; after Feb. 1, registration is $595 from Comsat World Systems Division, Comsat, 950 L'Enfant Plaza S.W., Washington, D.C. 20024.

A WORD TO ANYONE LOOKING FOR UNIX™ TRAINING:

Guaranteed.

Introducing Vision. The first UNIX Interactive Videodisc Training Curriculum. And our 30-Day Money-Back Guarantee.

Simply lease any one of three Vision Courses: UNIX Overview, UNIX Fundamentals or 'C' Language Programming. If you're not satisfied, for any reason, return it for a full refund. No questions asked.

A Free IBM PC and Laser Discplayer.

Lease all three Vision Courses for one year. And we'll give you the use of a complete interactive videodisc system at no extra cost. You get an IBM PC, laser videodisc player, color monitor and Interactive Training System Controller. Absolutely Free.

Training in Action.

Interactive video training combines the power of the computer, the speed of a laser disc and the personality of classroom instruction. To involve, to motivate, to excite. To capture and hold a student's interest in a way no other medium can.

Students learn by doing, so they learn faster, comprehend better and retain information longer. Because training is targeted, they learn only what they need to know to do the job. Now.

What's more, Vision was developed by Interactive Training Systems, the acknowledged leader in interactive video training. And Computer Technology Group, a leader in UNIX training.

The result? UNIX training so fast, so effective and so affordable, we back it with a full 30-Day Money-Back Guarantee. (Frankly, it's one guarantee we're confident you'll never get to use.)

Send us the attached coupon. Or call us at 1-800-227-1127.

AFTER MARCH 31, 1984 OUR FREE INTRODUCTORY OFFER IS NO LONGER FREE!

☐ Please have a representative contact me immediately.

☐ Please send me more information about Vision, the UNIX Interactive Video Training Curriculum.

BE A HERO. BUY A HERO.

Heros were meant to rise above it all. So why is it you keep getting caught in the middle? Is it your fault that personal computers in every department are hoarding data? They won't even have a simple conversation with the mainframe.

Why should you be pestered by complaints when work is lost? Or duplicated? Even triplicated? Not to mention what happens to costs.

Your organization is a victim of Computer Shock. Badly in need of a HERO™.

HERO RESCUES COMPUTER WORLD FROM CHAOS.

MDS HERO is the intelligent, desktop Networked Personal Computer. It does everything a personal computer can do. And more. But most of all, our HERO is famous for interacting—it works beautifully with mainframes.

With the MDS SUPER 21™ Communications Processor, HERO can converse intelligently on IBM networks. HERO emulates IBM 3270 SNA and 3776 remote job-entry systems. Our SUPER SNA™ option gives you both on one communications link.

HERO also runs software under MS-DOS. Plus its own multi-tasking operating system.

HEROS OF THE WORLD UNITE.

With HERO and SUPER 21 on your side, there's no end to what you can conquer. You can draw on private, departmental, and corporate databases. Bring individual workstations out from their isolation. Thanks to you, information will be bound together, in a network of organization. All under your control.

What's more, if you take advantage of our own INTELLIGENT 3270™ (only MDS has it), your people can write their own programs, and integrate them with data in the mainframe. Using HERO, you can reach into the database and retrieve information. Then either return it, or store it at the workstation.

HEROISM GETS REWARDED.

With our HERO and SUPER 21, you'll have what's out-of-control under control, fast. Your current data processing investments will become part of a growing bank of knowledge. All of it cost-efficient.

Besides, old HEROS never die. Nor do they fade away. They're modular in design, so they manage to be immortal. They grow with you. All the way.

YOU CAN BE BIG WITHOUT BEING BLUE.

MDS is everywhere Big Blue is. We even stretch beyond the Blue horizon. And we grew big for one big reason: we've helped our customers to grow.

MDS can do the same for you, too. Wherever you are on this Big Blue planet, we'll give you more than mere office automation. We'll organize your organization. Our service people will be at your beck and call. Around the globe. Around the clock.

So be a hero. Buy a HERO. Ask our customers about us. And give us a call. Dial **800-MDS-HERO.**

You'll soon see that heroism has its rewards.

IEEE chief laments tech education

Dr. Richard J. Gowen

By John Gallese
CW Washington Bureau

WASHINGTON, D.C. — Declaring that American technological education "borders on a national disgrace," Dr. Richard J. Gowen, 1984 president of the Institute of Electrical and Electronics Engineers (IEEE), recently called for a national commitment to enhanced math and science education.

Gowen, vice-president and dean of engineering at the South Dakota School of Mines and Technology in Rapid City, told a press conference here that "as I look to the future, I am very concerned . . . about the technological literacy." He said schools are not adequately preparing students for a technological world and criticized what he sees as unsophisticated computer use in the classroom.

Gowen urged scientists and engineers to work with local school boards to design better math and science curricula and said there is a need to provide salary supplements for teachers in those disciplines.

The IEEE, with approximately 250,000 members in 120 countries, is in its centennial year, Gowen noted.

Discussing computers in the classroom, the IEEE president said, "we really haven't begun to use computers in education to their full capabilities."

Students must be prepared "so that they see a computer as you and I see a piece of paper . . . to take a computer and use it as an extension of their minds.

"The need today is for the engineers and scientists of this country to recognize the urgency of the need we have for math and science education in this country and to take action," Gowen said. Noting that the government is reluctant to initiate new programs and that bills to upgrade math and science education are stalled in Congress, Gowen urged technically trained people to become involved in local education programs.

On the national level, he called for special funds to support the education and salaries of math and science teachers. He also recommended financial support for teaching colleges. Salary supplements could keep qualified engineers and scientists from leaving schools for the private sector, he said.

Reiterating his concern that "we are falling behind [other countries] and unless we take action will fall further and further behind," Gowen described himself as optimistic that the U.S. will meet this challenge. "I believe that once we understand the problem, something will be done."

New edition out of IEEE guide

SILVER SPRING, Md. — The fourth edition of *Tutorial: Software Design Techniques* has been released by the Institute of Electrical and Electronics Engineers, Inc.'s (IEEE) Computer Society Press.

The fourth edition was edited by Peter Freeman of the University of California in Irvine and Peter I. Wasserman of the University of California in San Francisco.

The publication costs $20 ($32 for nonmembers) from the IEEE Computer Society, Suite 300, 1109 Spring St., Silver Spring, Md. 20910.

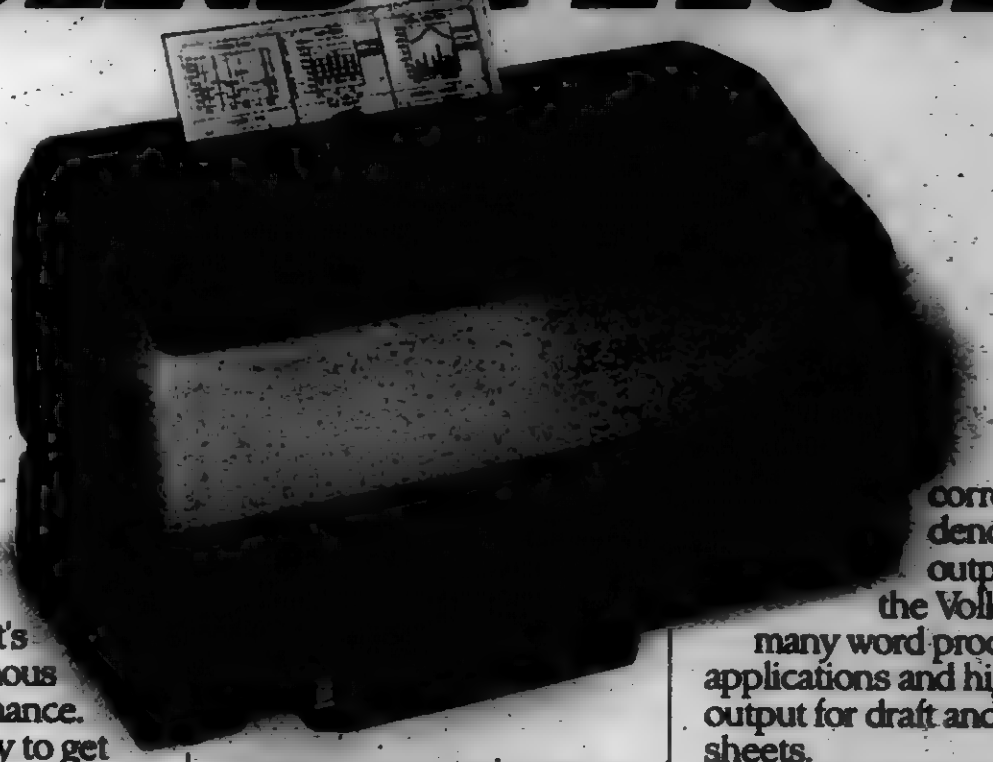
Soup up your Volkswriter.



Everybody knows Volkswriter,* the word processing software package that's become synonymous with high performance. Now, there's a way to get even higher mileage out of your Volkswriter. Hook it up to a Dataproducts P Series dot matrix color printer.

The versatile P Series translates the executive class, word processing capabilities of the Volkswriter into brilliant full color charts, graphs and text. It delivers a full page of text quality print in nothing flat while its sheet feeder automatically prevents loading hassles. And the P Series uses pin feed or plain paper and has the brains to fill every appropriate line with crisp, sharp copy, even if it has to justify to do it. And the P Series color printer has dual speed capability for correspondence quality output for the Volkswriter's many word processing applications and high speed output for draft and spreadsheets.

The Dataproducts P Series color printer. Think of us as a supercharger for your Volkswriter.

For more information go to your nearest computer store and ask about the Dataproducts P Series color printer, or call Dataproducts, 1-800-258-1386.

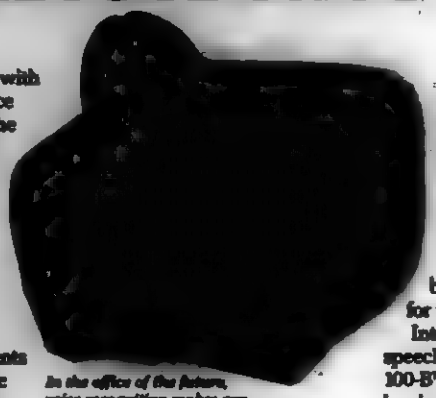
See Page, page 41

People talk. Interstate listens.



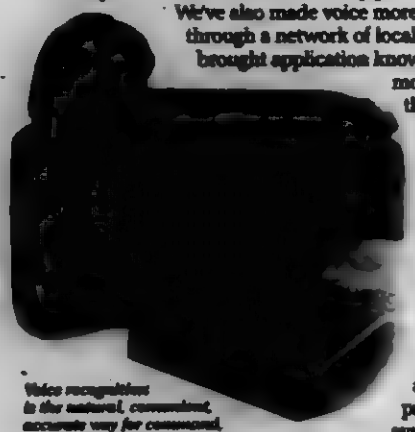
In the office of the future, voice recognition makes any telephone a computer input tool.

And we've responded with the broadest range of voice recognition products in the industry. Years of experience, a comprehensive product line, and price/performance leadership have firmly established Interstate Electronics as the largest U.S. supplier of voice recognition equipment.

We cover your requirements from evaluation hardware to volume production. On everything from chip-level recognizers to board-level products and complete systems.

Throughout our long-term commitment to voice, we've listened hard to meet your needs. As a result of widespread product acceptance, we've been able to drop prices dramatically.

We've also made voice more readily available through a network of local distributors. And brought application knowledge to more and more companies through in-depth Interstate workshops held across the country.



Voice recognition is the natural, convenient, accurate way for command, control and data entry when hands and eyes are busy.

We invite you to join with us in this healthy, growing market which is projected to hit $1-billion within the next ten years. And we'd like to give you a sampling of key products that are available now.

The first is a limited vocabulary, speaker-independent voice recognition component, priced below $6.00 in quantities. Designed for a wide variety of high-volume applications, Interstate's VRC008 puts voice control capabilities in the price range of appliances, games, and even toys.

In addition, we make and market a two-device NMOS chip set that recognizes up to 200 words or short phrases with 99 + % accuracy. This VRC100-2 can be easily incorporated into any computer peripheral manufacturer's product to create an extremely user-friendly interface.

The SYS300 is a complete speech recognition system with a vocabulary of 100 words or short phrases. Just plug it in to any RS-232C ASCII terminal and start talking. Interstate provides everything you need—recognition board, power supply, enclosure, cable, and microphone—for voice the easy way.

Interstate's board-level VRT300 is a high-accuracy, low-cost speech recognizer for DEC VT100™, C. Itoh CIT 101, Plessey PT 100-B™, and other compatible terminals. Interstate's complete hardware/software/firmware solution provides easy incorporation of voice input and is totally software-transparent. It offers recognition of 200 words with 99 + % accuracy.

Quality control inspectors stay in touch with the computer—without touching the terminal.

This is just a portion of our present line, and a host of new products is currently under development. We're adding to our past breakthroughs in voice by working in such areas as personal computers, speaker verification systems for security, connected word recognition, and speaker-independent digit recognizers for the telephone.

As more and more people talk, we'll continue to listen. And continue to support the expanding needs for voice technology by opening up new applications.

We invite you to grow with us in this intriguing technology. For details, write or call: Director of Business Development, Voice Systems, Interstate Electronics Corporation, P.O. Box 3117, Anaheim, CA 92803, Telephone (714) 635-7210, (800) 854-6979, in California (800) 422-4580, TWX 910-591-1197, Telex: 655419.

INTERSTATE ELECTRONICS CORPORATION
A Figgie International Company

Interstate. The voice of authority.

Presenting the Stratus Office Solution™ (SOS). It Will Integrate Your Collection of Information-hungry IBM PCs into a Fault Tolerant Office System.

Somehow the personal computer revolution has become your personal problem, hasn't it? They're lined up with their IBM™ PCs demanding access. . . access to the corporate data files . . . access to shared data and hardware. . .

To compound the problem, the IBM PCs represent, for many of these users, their very first relationship with a computer of any kind.

You need a solution right now and it has to be comprehensive and so easy to understand that even your neophytes will be in high gear on day one. And if they're going to depend on it, it should be fault tolerant. What you need is the Stratus Office Solution (SOS).

SOS Combines Comprehensive Software and Fault Tolerant Hardware

Stratus is the company that made its mark with its hardware-based fault tolerant super-mini. Now it is offering a turn-key software package built around this super-mini that is made to order for companies with an IBM host and from 20 to several thousand independent IBM PCs and/or 3270 and/or conventional terminals.

Here's a quick look at what you get with SOS (without having to write a single program):

- ❑ Controlled IBM PC access to mainframe data
- ❑ Data exchange between IBM PCs

- ❑ Data conversion to 1-2-3™ and VisiCalc™ formats
- ❑ Electronic mail at IBM PC, 3270, or ASCII terminals
- ❑ Word processing on IBM PCs using WordStar,™ or MultiMate™ (a Wang-like word processing package)
- ❑ Text conversion from WordStar and MultiMate formats
- ❑ Stratus Word processing
- ❑ Shared access to Stratus printers and disks
- ❑ Calendar management at IBM PC, 3270, or ASCII terminals

SOS lets your collection of isolated PCs become part of an integrated, electronic office system. And unlike any other office system in the world, it is based on fault tolerant Stratus/32 hardware that provides continuous availability and transparent networking. Not only can you count on it to work well, you can count on it to always work.

Call Stratus today. Ask for Keith Johnson: 1-800-255-1515 or in Massachusetts: 1-617-653-1466. Turn those "personal" problems into personal success stories... and instant company assets.

Stratus Office Solution and Continuous Processing are trademarks of Stratus Computer, Inc. IBM is a trademark of International Business Machines Corp. VisiCalc is a trademark of VisiCorp, Inc. 1-2-3 is a trademark of Lotus Development Corporation. WordStar is a trademark of MicroPro International. MultiMate is a trademark of SoftWord Systems, Inc.

Lease a Magnuson PCM for a short term at low, long term rates...

We'll give you long term rates. You give us a short term commitment. With more processing power to the dollar, the Magnuson M80 is the most cost-effective alternative to IBM's 4300 series. Now Phoenix Leasing sweetens the deal by offering low, two-year rates on a lease you can cancel after every 6 months—with no penalties! **Phoenix Leasing means inexpensive flexibility.** Meet your immediate processing needs, without tying yourself to projected long term hardware requirements.

Compare Magnuson with IBM

...and get guaranteed support.

We'll give you these bargain rates, and we'll guarantee support. Our Magnuson M80's are supported nationwide by a major national service organization, so you can be sure of receiving prompt service, no matter where you are in the country. **Complete support guaranteed.** If we ever fail to provide you with satisfactory support, you are under no obligation to keep the system. It's as simple as that. **Complete systems, immediate delivery.** Phoenix Leasing has Magnuson systems in inventory ready for immediate delivery. And we can provide a complete system, including peripherals, all in one flexible lease package. **Backed by a company that knows what it's doing.** We've been leasing data processing equipment for more than 11 years, and we have acquired more than $500 million worth of equipment. We currently have over 6000 leases helping companies meet their data processing needs. **Call Kirby Fiegel today.** Don't miss out. Call Kirby at (800) 227-2626. (In California, call (800) 772-4021.) The Seducer

Since the first of the new year:

■ Teradata Corp. announced an integrated data base computer.

■ IBM revamped its System/38 line.

■ IBM put a Unix-like operating system on the Personal Computer.

■ Digital Equipment Corp. put a Unix-like operating system on the VAX-11 supermini.

■ AT&T enhanced Unix System V.

■ Burroughs Corp. introduced the A 9, a new line of mid-range processors.

■ Apple Computer, Inc. finally introduced the Macintosh.

■ Cincom Systems, Inc. entered the decision support system market.

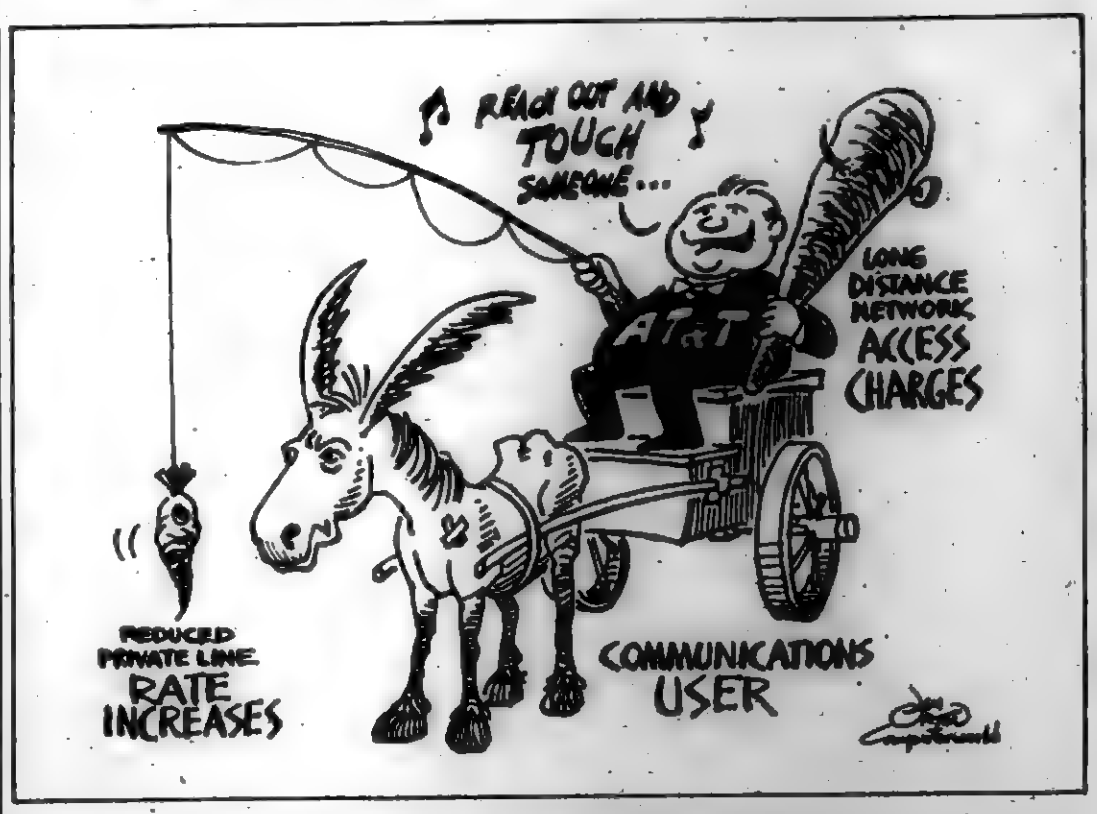
Those are just some of the significant computer industry developments that management information systems executives have had to absorb since Jan. 1. And they can expect many more as the recession continues to wind down and vendors respond to the loosening of user purse strings with ever more seductive displays of technology.

With this sort of temptation, it's understandable that the day-to-day reality of just getting the job done looks dull, especially in the middle of a long winter. It's hard to concentrate on the work at hand — implementing a new but predictable payroll package, updating a claims processing system, ironing out some problems in a receivables program — when tomorrow promises alluring technology.

But it's exactly that unrelenting, day-to-day reality that made us take notice of the results of a survey recently conducted for Robert Half International, Inc. The Half survey found that when data processing managers hire, they look for candidates with technical experience. After those candidates are hired, however, it is "personal attributes" — logic, receptiveness and communication skills — that become critical if they want to advance [CW, Jan. 23].

So we come thudding back to reality. We're reminded that it is the solution, not the machine — no matter how seductive — that is important. And it is the DPer who can explain that solution — not just code it — who will make the biggest mark on his user community.

The message? The coming year is certain to tantalize us with many technological enticements. But let's not be too dazzled by them. We've got a job to do.



LETTERS TO THE EDITOR

Another case for Mumps: running business operations

I was very pleased to see Casimiro Alonso's In Depth article "A case for Mumps" [CW, Jan. 9].

Mumps has, for years, suffered from a bad reputation. Many programmers view it as some sort of specialized language that can be used only in medical applications. As Alonso's article demonstrates, this lack of understanding is their loss.

We use Mumps to run all the business operations of our company. This includes order entry and inventory control, accounts receivable, general ledger and accounts payable, payroll, programming management, electronic mail and character and graphics generation through a VP-1 from Chyron Corp. We have one Digital Equipment Corp. PDP-11 at each of our three stations and another for our corporate headquarters. Response time is less than 1 sec, and our file storage efficiency is excellent.

I realize I am biased, but given the productivity and power, as demonstrated in the article, could *Computerworld* do more articles on this overlooked, but very useful, language?

View of key decision maker ignores other DP heads

Charan S. Lohara's article, "Communications manager to emerge from automation" [CW Jan. 9], was extremely biased and not carefully thought out.

The communications manager is certainly an important individual in the corporate structure; however, to indicate that he should be the "key decision maker in a company's information management process" is shortsighted, to say the least. Lohara completely ignores the data processing manager, who handles the mainframe activities, and the department heads, who handle their own office automation equipment. These individuals are also decision makers in their own right.

The key decision maker should be the individual who is appointed to integrate and direct the functions of the three groups: data processing, office automation and telecommunications. Effective coordination should be his main goal. He may be able to obtain some cost savings from elimination of duplicate facilities, better scheduling and use of equipment, standardization of services to all departments and tighter management controls.

I'm disappointed that Lohara doesn't understand this new technologies concept.

VIEWPOINT

Fourth-generation languages in client areas

THE DATA CENTER

JOHN P. MURRAY

The installation and effective operation of a sound data base management system (DBMS) can, if the DBMS provides a strong fourth-generation programming language, produce dramatic results in areas outside the management information services department. There is simply not any question, provided management information services handles the issue competently, that such a programming language will be both well received and heavily used by the client areas.

The result of such an effort can take at least some of the more immediate pressure off management information services, can increase client productivity and, perhaps most important, provides management information services clients with improved understanding of the management information services function and causes those clients to develop greater empathy for the function of information processing. There is nothing like having to do the job yourself to improve your understanding of the problems it presents.

Many installations go to great difficulties and considerable expense to install and operate a DBMS and then, for a variety of reasons, fail to reap many of the benefits of that system because the installation's management is unwilling to accept a reasonable amount of risk and to put forth a reasonable amount of effort to bring the benefits of the DBMS to the management information services clients. Such a circumstance is unfortunate. While much can be realized through even the restricted use of the DBMS, there are substantial benefits to be realized in the client areas if an aggressive effort is pursued to push that use out to those areas.

When I discuss this issue of increased client use of the fourth-generation languages with people in other management information services departments, I hear any number of reasons (none of which in my view is valid) why they are unwilling to expand the programming language to the client areas. The arguments range from "too heavy a use of the system resource" to "loss of management information services control" to "an unwillingness on the part of the clients to learn how to use the language."

'If the DBMS does, indeed, provide a good fourth-generation programming language (and some do not), every effort should be made to move as much of the programming, and later on, system design function, as possible to the client areas. This process has to be planned, it has to be managed and, most important, it has to be supported by management information services. If those criteria are followed, solid results can be obtained for all concerned.'

The right reason

I suspect that often the real reason has as much to do with management information services being fearful of relinquishing some of its areas of control and power as it has to do with any other reason. After all, if anyone with rather limited experience can write a program and obtain answers to their questions, what happens to management information services.

Regardless of personal concerns, if the DBMS does, indeed, provide a good fourth-generation programming language (and some do not), every effort should be made to move as much of the programming, and later on, system design function, as possible to the client areas. This process has to be planned, it has to be managed and, most important, it has to be supported by management information services. If those criteria are followed, solid results can be obtained for all concerned.

Of course there are inherent risks in such a process. The political considerations must be faced and handled. Hardware utilization will increase — the more being done, the more resource required — but much of this issue can be addressed through processing scheduling and system structure.

When the DBMS is in operation and the environment has stabilized, the next step is to begin an aggressive effort on the part of management information services to train clients in the use of the fourth-generation programming language. The goal here, which should be announced at the onset, should be to build an environment in which the clients can write and run their own programs and where, in time, they can accept increasing responsibility for the design and development of their own systems.

This training should be carried on by management information services on a formal basis. Training classes should be scheduled on a regular basis. These classes should be structured so that as clients obtain the basic programming skills, they can move to more advanced levels. The training should be followed up in order to determine its effectiveness and the degree to which those who have taken the training are using it to gain increased control of their particular areas.

Also, this training follow-up can be used to determine what changes should be made in the training program.

Opportunities to management

The ease of use of the good fourth-generation programming languages, combined with their effectiveness, present opportunities to management information services to begin to leverage the uses, and the ultimate benefits, of the technology to the organization at large.

Seeing the effort to provide expanded use of the fourth-generation languages through is, indeed, a time-consuming and often frustrating task for the management information services department. This is particularly the case in the typical management information services departments that already have more to do than they can handle; yet the results, if appropriately handled, outweigh the difficulties.

There are installations that have done a good job in this area. Anyone who has reservations about the effectiveness of such a program and its value to an organization should locate such an installation to find out how the job has been done. Our world is changing rapidly; if we do not remain ahead of our management information services clients, they will move ahead without us. We have a responsibility to make sure that what is being done is being done correctly. We may lose some of our control and authority as the technology improves, yet we still have the responsibility. We need to accept that responsibility.

Murray is director of management information services for Raycom Corp., Madison, Wis., and author of Management Information Systems as a Corporate Resource, *published by Dow Jones-Irwin.*

Where are the knowledgeable micro retailers?

HUMAN CONNECTION

JACK STONE

I'm willing to put aside, for the moment, my frustration, anxiety, depression and irritation with personal computer retailers to state that my preference is to work with the independents — those not directly owned, affiliated with the large chains or manufacturers — because the salesmen usually don't attempt to hide their ignorance. I laud these folks for their candor when they state, "I just can't keep up with every last detail on every machine we merchandise" even though many of them have no idea about what's involved with a machine system. The people I really fault are the managers who cannot produce even one representative in their outlets who has an operating knowledge of each machine on display, especially those in which I am personally interested.

If you haven't gone on the personal computer circuit lately, you have a big treat in store for you. The level of computer knowledge is so frighteningly shallow in most retail businesses that one is given to wonder why the majority of machines sold to new users aren't returned within the warranty period for "lack of performance," a nonbellicose expression that stands for "lack of use or understanding."

Nonconfiscatable machine

Take the case of my search for a nonconfiscatable machine, that is, one with a low profile, to take on my writing trips out of the country. After going round and round for weeks with the vendors, I finally decided the small lap type was the ticket simply because of its small body print, low weight and its price of $800. Its carryability is, far and away, the major feature since raw computer power, software support and LCD screen are shockingly limited when compared with the desktop machines at that price.

My systems strategy was this: I would type draft material into the machine while back-seating on the motor tour and dump random-access memory (RAM) onto a conventional tape cassette when its capacity is reached, about 10 double-spaced typewritten pages. Upon return, I would read the tapes directly into my Processor Technology Sol 20 "host" computer and transfer the files to disk. (I don't have the communicating software in my host).

Having evaluated demos of offerings from Tandy Corp., Epson America, Inc. and NEC Information Systems, Inc. at retail stores, I settled on the NEC because of its vast RAM — all of 16K bytes compared with Tandy's 8K bytes — and its huge display — all of 40 by 8 char., about twice that of the Epson. Naturally, before I purchased the machine, I wanted to validate that both the NEC and my host would read and write the same tapes.

After searching high and low in Washington, D.C., for dealers, I found only two. The salesman at the first store claimed that although he was heavily experienced in large mainframes, he was a little short of experience on the NEC.

The salesman at the second outlet — his colleagues identify him as the one who "really knows the machine" — wasn't much better, except that he was determined to solve the puzzle and took the machine and my tape recorder with him on a weekend retreat to resolve the matter.

Sensing that I was staring at a pending loss of an $800 investment, I exercised my right as a customer to drop out of the lap market and found a low-cost, guaranteed nonconfiscatable equivalent with a far better price: a spiral notebook and three ball-point pens.

VIEWPOINT

Electronic Peace Corps — an info exchange

READER'S PLATFORM

DAVID H. ROTHMAN

In a Boston suburb, an engineer earning $50,000 a year spends countless hours twiddling with his new IBM Personal Computer. The technology engrosses him, but he lacks a sense of purpose. In Southeast Asia, meanwhile, a young man is wrestling with calculations needed to build a hydroelectric dam. He thinks his figures are correct, but isn't certain, and thousands of people will die if the dam collapses.

Can the Massachusetts engineer somehow help his counterpart abroad?

There is a way, if politicians will for once appeal to the better instincts of technicians. An Electronic Peace Corps could bring the two people together and offer the Third World some of the best American technical expertise via computer networks.

Until recently, the idea would have been laughable. Computer terminals cost several thousand dollars each, and special lines to Asia all went for hundreds of dollars or more an hour. But now a lap-size computer from Radio Shack sells for around $1,000 in a version practical for short reports and electronic spreadsheets.

Much better, cheaper, simpler portables are on the way. What's more, thanks to satellites, international communications costs are plummeting to a fraction of earlier levels. MCI Communications Corp. has just started an electronic mail service with letters costing only $1 for about 1,000 words; and the service, although domestic, illustrates the decline in computer network prices.

Even today, a home computer user can send a four-page message over regular phone lines to an underdeveloped country in Asia for less than $20. Special computer lines and the right equipment could push the cost below $5.

So an Electronic Peace Corps wouldn't threaten the taxpayers. By exporting knowledge instead of people, it would give us more for our money.

Computer files

The U.S. government might keep computer files listing:

- Exact skills required in underdeveloped countries and teachable through computer links.
- People in underdeveloped countries who needed those skills and asked for Electronic Peace Corps help. Contrary to rumor, you don't have to be American or Japanese to benefit by way of computers. Even the mainland Chinese are building IBM-compatible micros for applications ranging from agriculture to water-power projects.
- American computer users, volunteers, who could teach Third World professionals via the networks.

Already an English teacher in Colorado has tutored students as far away as Australia via Source Telecomputing Corp.'s The Source, an electronic information service, and schools in the U.S. are going on-line. And there's no reason the Electronic Peace Corps couldn't use the same techniques Peace Corps-fashion. An expert in the U.S. might regularly correspond by computer with his less experienced counterpart abroad. Swapping complicated technical data, this could receive written answers either instantly or within a day. The Electronic Peace Corps' E-Mail could overcome time differences. The Massachusetts engineer could tap out his advice at night; his counterpart in Asia could read it during normal business hours.

Obviously, the Electronic Peace Corps wouldn't replace any Americans in the field; indeed it would help to install equipment and offer enough tutoring to get the communications links going.

Nor would the Electronic Peace Corps aid people directly at the village level. It would be elite-to-elite assistance, with the welfare of the nonelite mattering in the end, and its beneficiaries would write and read English or have access to translators. They would be a few, carefully chosen people, such as the young dam builder or:

- A public health administrator who wants to computerize his records so his people can spend more time in the field and less time being bureaucrats. Corpsmen might write programs specifically for that purpose. Also, the Electronic Peace Corps might contract with commercial firms to allow adaptation of existing software to Third World situations. Some programs might arrive by satellite.
- A doctor who wants to check diagnoses and determine drug dosages.
- A veterinarian baffled by an epidemic that is killing thousands of cattle in an already-impoverished area.
- A government administrator trying to establish a more efficient food distribution network.
- A civil engineer working on a

8 Good Reasons to Attend the James Martin Seminar

1. James Martin has been writing THE BOOK on the Computer Industry for over 3 decades.
2. He is the most sought after consultant in the Computer Industry.
3. His predictions and recognition of major computer developments are unsurpassed.
4. With over 31 top-selling books, Martin is the industry's #1 selling author of all time. His book, *Application Development without Programmers*, is the Computer Industry's #1 selling book of all time.
5. James Martin has the unchallenged reputation as the world's finest lecturer in his field. Over 20,000 individuals worldwide have attended the James Martin Seminars. Many return year after year.
6. James Martin "... can lay fair claim to being the most influential DP guru of all time." — *ICP Interface*
7. A fast-moving, high-density, interactive 5-day program packed with information for all DP designers, management, and staff. Quite honestly, the James Martin Seminar is the industry's best educational value for the money.
   - Attend the seminar designed to dramatically increase your DP capability.
   - A major increase in productivity is attainable through the methods taught in this seminar.
   - 5 days with James Martin will dramatically alter your approach to DP.

Many DP organizations are beginning to break the cycle of low productivity, poor responsiveness, and high application backlog of traditional DP. Now is the time for you to act. Attend the James Martin Seminar this spring. Learn the new technologies and their application to your organization. You'll discover why James Martin is ...

8. ... The Man the DP Experts Listen To!

Check the appropriate box on the coupon for more information on James Martin's 1-Day Seminar, THE END USER REVOLUTION for executives and professionals everywhere who ought to be using computers more effectively. This 1-day seminar will be held on the first day of the 5-day seminar.

Call (213) 394-8305 or mail the coupon today for a detailed brochure.

road or bridge for isolated villagers who hope to sell food to cities.

■ A communications specialist who wants to modernize his country's phone service.

In many countries, the Electronic Peace Corps might concentrate on communications at first for obvious reasons. Even nations with primitive phone systems, however, can already accommodate some use of computers for international communications.

With communications links established, some Third World computer students, and perhaps others, could tap into Electronic Peace Corps-sponsored data banks at American universities. Electronic mail tutors could guide them through the electronic mazes. The Electronic Peace Corps' emphasis, of course, wouldn't just be on solution of immediate problems, but also on instruction. The goal would be the same as the traditional Peace Corps: to promote self-sufficiency. In the future, Third World countries might still use American computer banks for technical data, but now they wouldn't need guides. In some cases, in fact, Third World technical people would make contributions of their own to the data bases without leaving their countries.

Instruction in culture

Lest the Ugly American be transported abroad electronically, the Electronic Peace Corps corpsmen would receive instruction in cultural differences and general information about the country they were helping. They might attend special training sessions for several weeks. Then, having demonstrated their commitment, they would work for the Electronic Peace Corps from their homes at nights and on weekends.

Also to reduce costs and the chance of misunderstandings, corpsmen and the people abroad might use written communications rather than voice most of the time. They might start out exchanging questions and answers within strict formats. Eventually, the contacts between the volunteers and the people in the Third World might turn informal.

The Electronic Peace Corps, moreover, would offer other benefits. It would encourage computerization in underdeveloped countries. What better way to dramatize the usefulness of the technology and to glamorize the technical skills that some prestige-minded Third World universities have slighted.

Americans, too, through the Electronic Peace Corps, would come out ahead. In solving problems halfway around the globe without leaving their homes except for a few weeks, they'd gain an appreciation of the possibilities of telecommuting. That might help mitigate the effects of any future energy crisis. And mass telecommuting would also lower highway construction costs and, by reducing lengthy commutes, make life more bearable. The more people with computers, the more firms would offer telecommuting.

Also, the Electronic Peace Corps would be good news for the domestic computer industry, which would find a larger market for its products both here and abroad. Forget about the dangers of high-tech giveaways. The Electronic Peace Corps wouldn't pass on the secrets of the latest generation of mainframes. Instead, using already-common micro technology, it would help Third World professionals solve their countries' everyday problems. Remember, too, that many people in the Electronic Peace Corps wouldn't even be computer experts. They would simply be using electronic mail to pass on their technical skills to the Third World.

Yet another benefit of the Electronic Peace Corps could be a domestic offshoot. Its focus might be different. Because of lower communications costs, the domestic version might take more chances helping nonexperts without credentials. A gifted high school writer in Harlem, N.Y., might tap out short stories on a school computer; a famous author across town might zip the files back, with comments easily inserted electronically. Likewise, a Beverly Hills, Calif., executive might volunteer help to a small businesswoman in Watts.

The most urgent need for Electronic Peace Corps-style assistance, however, is now in the Third World, where, because of technical backwardness, so many are starving. An excellent pilot site for the project might be Sri Lanka. Started with strong encouragement from Sri Lanka's president, the Arthur C. Clarke Centre for Modern Technologies is studying the use of telecommunications, computers and other high tech in the Third World.

A final question remains. Would enough American techies want to serve in the Electronic Peace Corps? Volunteerism is alive and well in scores of users groups that computer owners have formed to protect themselves against the wiles of salesmen and exchange technical information. American amateur radio operators have been sharing hints with their colleagues abroad for years. And without phone costs to worry about, many computer owners might be similarly helpful.

The Electronic Peace Corps, of course, should no more replace Volunteers for International Technical Assistance than it should compete with foreign-based groups such as the Arthur C. Clarke Centre. The Third World badly needs them all. Championing the Arthur C. Clarke Centre, a Sri Lankan diplomat quoted H.G. Wells' observation that human history was becoming "a race between communications and catastrophe." And the Electronic Peace Corps, in its own small way, could help to give the former a head start. $

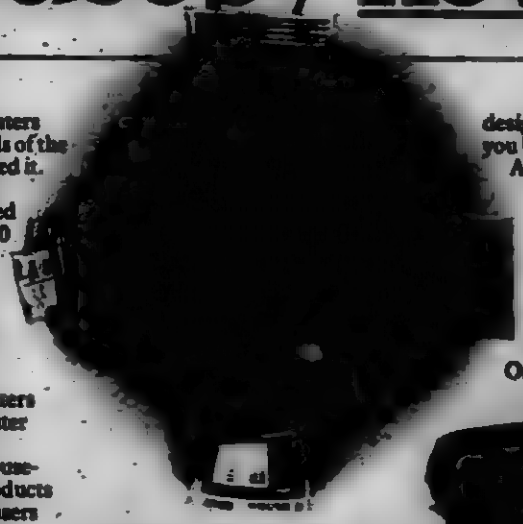
The printer for the people who need hardcopy now.



Dataproducts B-Series line printers help you put the paper in the hands of the people who need it. When they need it.

The family of three, the B-300, B-600 and the B-1000, was designed to whisk out the printout, from 300 lines per minute to as much as 1100 LPM. And to operate at those speeds day after day.

How could we build 160,000 line printers and not make an impression?

We've produced more line printers than all other independent computer printer makers combined.

So why isn't Dataproducts a household word? Because most Dataproducts line printers are delivered to end users with somebody else's name on them.

Virtually every major OEM in the business has selected our B-Series printers for the systems they sell. Each has made that selection after months, sometimes a year, of intensive evaluation.

More than anything else, they look for a machine that can perform reliably over a long period of time. Their reputations are at stake.

Which is why the safest choice for your company may be a printer you've never heard of.

The best printers are the easiest to use.

Dataproducts probably knows more about the people who use computer printers than anybody. We know how they slam cabinets. How they jam paper. How they smear ink on their pants.

We conceived the B-Series for the operator. Extensive diagnostics help the operator locate and correct troubles fast. Long-life ribbon cartridges are quick and clean to load. The machines open wide so all controls are easy to see and easy to reach.

In less than a minute, the operator can even change the print band—to a different typeface, a different language.

The best printers are the least expensive to own.

90% parts commonality within the family minimizes spares inventories and training. Power consumption is low.

Operators fix most problems. When they can't, the B-Series is designed to help service people get you back on-line quickly.

And because we make so many of these printers, we don't have to charge a lot of money for yours. You get low initial cost. And low cost of ownership.

If you'd like to know more about our B-Series printers, or the name of our distributor in your area, call (213) 887-3924. Or send the coupon below.

Figure $50 a line for programming.

When people look at business computers, they sometimes overlook a crucial consideration: the price of writing and maintaining software.

But we didn't. When we designed the HP 3000 family, we created special productivity tools to reduce the high price of developing applications software. With dramatic results.

Many HP 3000 customers now use 1/5th the amount of code writing these programs, compared with using high-level applications language. Since the average program costs you about $50 a line to develop, you can see why EDP budgets go so much further on an HP 3000.

You can use our development tools with the entire HP 3000 family. And, as all four systems are fully compatible, you can run the same, identical programs on your small branch office computer and on the big system in your regional headquarters. Without spending a penny to rewrite code or recompile.

Now divide by five.

Features like these have helped many of our customers recoup the entire price of the hardware by cutting the time and effort involved in developing and maintaining the software.

So if you're looking for ways to lower your computing costs, take a look at the HP 3000. Call your local sales office listed in the white pages and ask a Business Computer Specialist about the HP 3000. Or write for more information to Tom Rappath, Hewlett-Packard, Dept. 03185, 19447 Pruneridge Avenue, Cupertino, CA 95014. In Europe, write to Henk van Lammeren, Hewlett-Packard Nederland B.V., Dept. 03185, P.O. Box 529, 1180 AM Amstelveen, The Netherlands.

How To Get A Better Grip On Your 3270 Network.

With More Flexibility Than Ever Before.
Getting a grip on your 3270 applications is a real challenge. You've got to find the best way to bring IBM host applications to non-3270 terminals and personal computers. Without a lot of fuss and bother.

Fortunately, Datastream has a flexible solution. One that won't cost you an arm and a leg.

With our 3270 SNA or BSC Cluster Controllers, you can attach personal computers, ASCII terminals and printers to IBM hosts, giving more people 3270 functionality. And giving you more control of the computing activities in your company.

Our Multi-Path Controller allows personal computers and ASCII terminals to communicate not only with multiple IBM mainframes, but with minicomputers (including DEC®) and time-sharing hosts as well. It even allows personal computers and terminals in the network to talk to each other.

All Datastream controllers feature security, dial-in or direct-connect access, remote dial-in diagnostics and more.

To extend your 3270 investment even more, use our controllers with Datastream's low-cost Display Stations. They offer 3278 functionality keystroke-for-keystroke. Plus features even IBM doesn't have. Like DEC VT100 emulation. Remote dial-in. Additional soft keys. And other 3290-type keyboard features like 24 PF keys.

All this makes for a very tidy, secure, economical way to expand your network.

And put 3270 within everyone's reach.

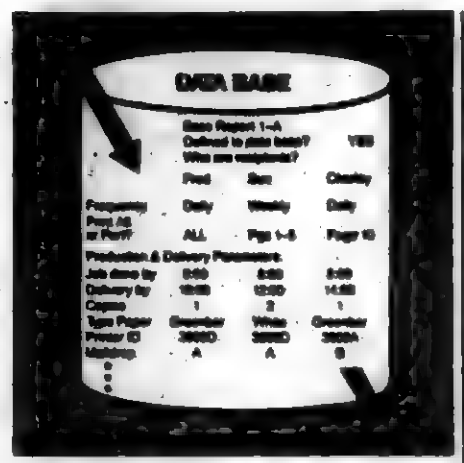
SOFTWARE & SERVICES



On-line package supports MVS

CHERRY HILL, N.J. — Value Computing, Inc. has announced an on-line software package that is said to allow IBM MVS sites to control better the format, length, routing and distribution of reports.

Called the Data Center Distribution System (DCDS), the product includes a data base that allows on-line forecasts to be generated of report production and availability. Before reports are printed out, they are matched with "customizing parameters" contained in the data base and broken up and individualized for each recipient. Parameters include paper, printer identification and delivery location. Only the Sysout DD JCL statement needs to be changed, according to a spokesman.

Recipients receive only the pages of each report that are specified in the data base. All reports that are to be printed on the same printers, in the same time frame and destined for the same mail drop location are printed together in an unbroken sequence to form a bundle. The bundle contains one job with one set of job separator pages. Each bundle is delivered whole to its preassigned mail drop where distribution takes place.

DCDS prints only the parts of a report for which a recipient asks. In beta test, the product has saved the average MVS installation between five and 10 boxes of paper per day, the spokesman said.

The product can be interfaced with the company's Data Center Management System, Comput-a-Charge, Valu-Lib and SMF Express, all of which share a common data base.

DCDS is priced from $40,000 and will be available in April.

Value Computing, 496 N. Kings Highway, Cherry Hill, N.J. 08034.

AT&T keynoter lauds Unix
Porting capability called revolution

By John Gallant
CW Staff

WASHINGTON, D.C. — Calling it one of the most important revolutions in the computer industry for the 1980s, a top executive of AT&T said the Unix operating system will "finally end the long tyranny of hardware" through its unique porting capabilities.

During his keynote address at the recent Uniforum International Conference of Unix Users here, Jack Scanlon, vice-president of computer systems for AT&T, said the expanding acceptance of Unix as an industry-standard operating system — in commercial applications as well as in its traditional role in scientific and engineering environments — will allow users to marry hardware and software in the system most applicable to their needs. "Unix has moved from an interesting research tool to a major force in the industry," Scanlon said.

Scanlon labeled IBM's foray into the Unix market with its PC/IX operating system as a positive step toward wider acceptance. He also maintained that Unix has become a "significant force within the government," having been utilized by the Departments of Defense, Energy and Commerce. In addition, Unix is gaining favor in several other agencies, including Agriculture, Transportation, Health and Human Services and the Interior, he said.

Scanlon said that he expects the total number of Unix installations to triple in 1984 and that revenues from Unix products sales and support will increase by a factor of five to more than $6 billion by 1986. He added that attendance at the Uniforum conference, which was expected to draw more than 8,000 visitors, was a sign of the increasing acceptance of and commercial interest in the operating system.

"Over 90% of our computer science graduates have had experience in using Unix," Scanlon said. "They have recognized the importance of the system's incredible versatility and its portability across a wide range of processors. All of these factors have increased the acceptance of Unix. What we are witnessing is a natural evolution of Unix into the commercial world."

The AT&T executive said a major problem in promoting Unix has been the lack of an industrywide standard. Scanlon said AT&T is working to overcome that obstacle by providing application packages and support for System V, which the industry giant has touted as the new Unix standard since licensing began last year. "We initially developed System V to maximize the synergy of our own programming staff. This system has withstood the test of one of the toughest agencies in the world, namely, AT&T," he said.

According to Scanlon, Unix represents a "classic match" between emerging market needs and advancing technology. Unix's porting and multitasking capabilities, he added, are crucial to the future proliferation of all levels of processors. "The software transparency between machines provided by Unix is critical. This system plays well on a whole range of hardware, allowing the networking of diverse capabilities," Scanlon said.

Unix also has proved a boon to indepen-

ADR/Roscoe release backs IBM OS

PRINCETON, N.J. — Applied Data Research, Inc. has announced Release 5.3 of its ADR/Roscoe on-line programming system for IBM OS environments.

According to the company, enhancements include more flexible communications support, reduced terminal transmission for faster response times on remote terminals, an expanded and more efficient editing work area and an interactive user profiling system with new library security.

It also is said to feature IBM 3270 color graphics support for ADR's extended timesharing option (Etso), designed to let users execute applications in an interactive environment, the company said.

The enhanced version also features new structured programming constructs and enhanced memory management in the Roscoe programming facility, new system interface support and a message-switching facility, ADR said.

Permanent license prices for Roscoe are $49,700 for IBM MVS sites and $42,400 for non-MVS sites.

The permanent license price for Etso is $14,000.

Leases are also available, the vendor said.

ADR, CN-8, Rt. 206 & Orchard Road, Princeton, N.J. 08540.

SYSTEMS SOFTWARE

AMALGAMATED SOFTWARE OF NORTH AMERICA, INC.
Acceler8

Amalgamated Software of North America, Inc. has introduced Release 2 of its disk management system for the IBM System/34.

The product, Acceler8, speeds disk accesses and reduces the need for key sorts and overflow indexes, the vendor said.

Two new procedures, Savefile and Retrfile allow users of Acceler8 to save and restore the index portion of a file along with the data, the vendor said.

In addition, the System/34's speed of random access is increased, while the amount of required storage is reduced with Acceler8.

The system can be leased for $150/mo per installation or purchased for a one-time license fee of $3,300.

Amalgamated Software of North America, P.O. Box 1068, Malibu, Calif. 90265.

BRITX PUBLISHING, INC.
Quicklib

Britx Publishing, Inc. has announced Quicklib, a library of public domain software for the IBM System/34 and 36 series computers.

The initial selection, consisting of approximately 50 entries, includes operator and programmer utilities, such as programs to change uppercase letters to lowercase letters, duplicate data files, index files and change record lengths or file sizes, according to the vendor.

The software was written by Britx Publishing personnel, and the company is soliciting public domain software from other sources for inclusion in the Britx library. Anyone who sends software that is accepted in the library will receive a free copy of the public domain software, the vendor said.

A copy of the public domain software is available for $10 from the publisher.

Britx Publishing, 1814 Capital Towers, Jackson, Miss. 39201.

DATANEX, INC.
General-purpose workstation package

Datanex, Inc. announced that its general-purpose workstation software, which uses the Hasp communications protocol, now supports Digital Equipment Corp.'s DMF 32 and DPV11 communications boards.

The package allows DEC's PDP-11 and VAX-11 minicomputers to communicate with other computers and networks, such as IBM mainframes and Control Data Corp.'s Cybernet networks, the vendor claimed.

Transmission speeds range from 2K bit/sec to 56K bit/sec, according to the vendor.

A single CPU license for VAX-11 systems is priced at $5,500. For PDP-11 systems, a single CPU source-code license ranges from $1,995 to $5,000, the vendor said.

An annual support and upgrade fee is priced at 15% of the purchase price.

Datanex, P.O. Box 1726, Eugene, Ore. 97440.

MASSCOMP; CREARE RESEARCH & DEVELOPMENT, INC.
Mc/link; Mc/hasp

Masscomp has announced a joint development venture with Creare Research & Development, Inc. of Hanover, N.H., for two software programs for Masscomp's MC-500 and Workstation 500 32-bit computer system under the Unix operating system.

Mc/link provides a communications facility between Masscomp systems and Digital Equipment Corp.'s VAX-11 series minicomputer running under DEC's VMS operating system.

The Mc/link program provides up to 63 virtual communications channels.

The Mc/hasp package is said to allow both Masscomp systems a complete batch job preparation and entry and postprocessing system for IBM, Control Data Corp. and other mainframe computers, the vendor said.

The package emulates a Remote Job Entry (RJE) station, and RJE can be accomplished over dial-up or leased telephone lines using synchronous modems, which typically operate at 4,800 or 9,600 bit/sec.

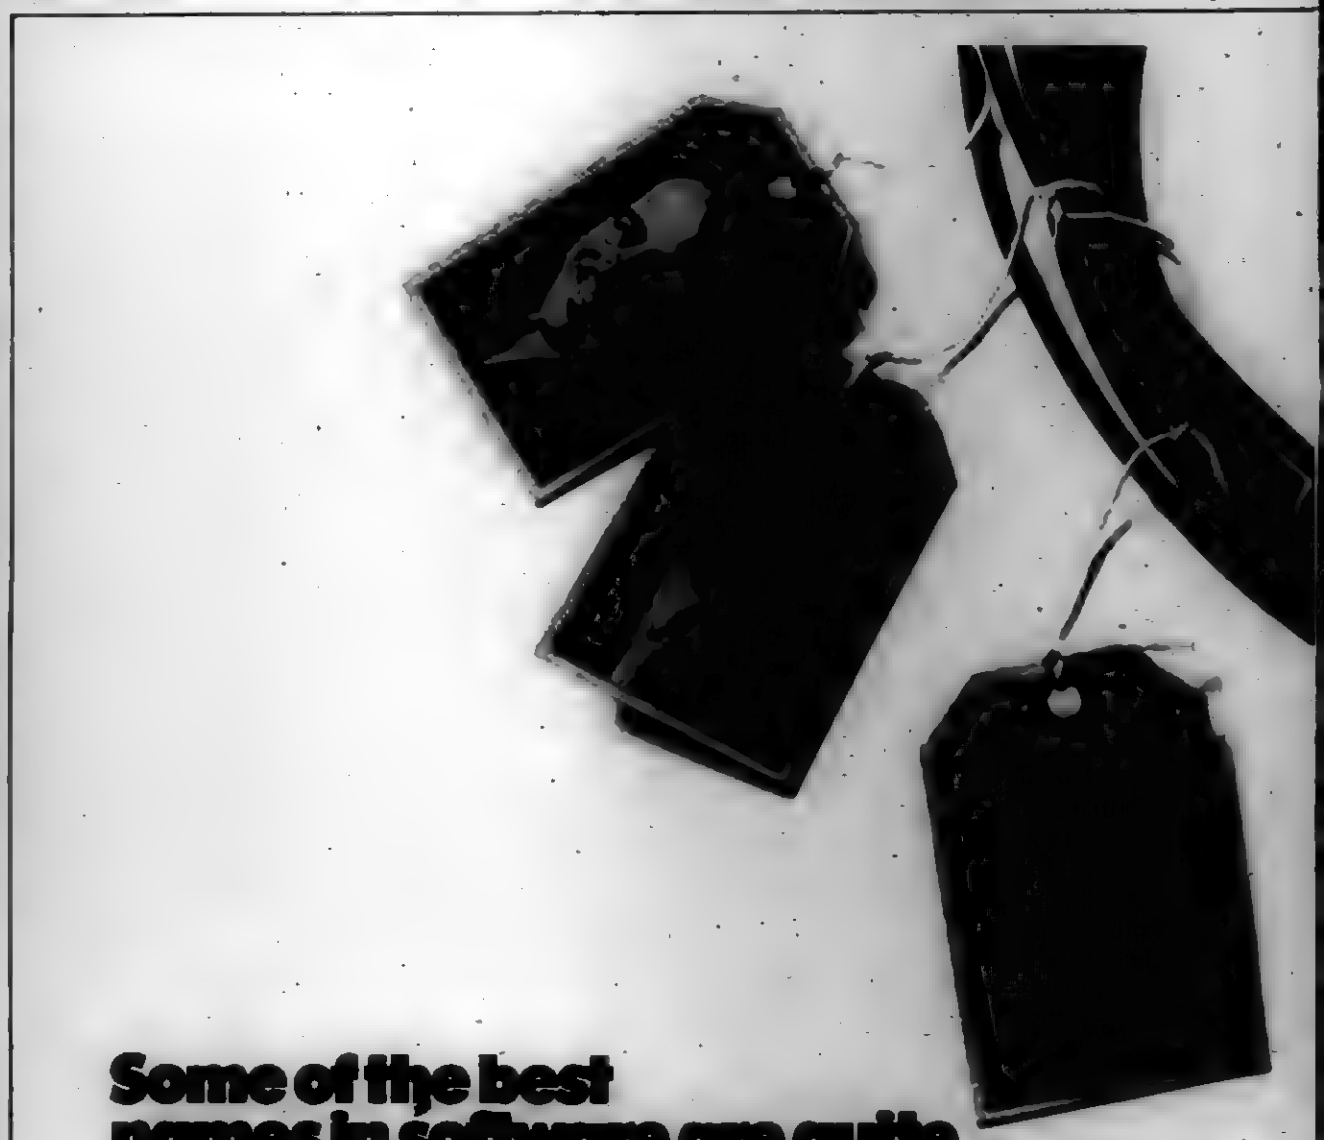
Each package costs $5,000.

Creare Research & Development, Great Hollow Road, P.O. Box 71, Hanover, N.H. 03755.

UNIX from page 40

dent software developers, Scanlon said, allowing them to offer their products in a greatly expanded market. More important, he added, acceptance of Unix means the elusive goal of programmer productivity may finally be within reach. "Programmer productivity will gear up at last," Scanlon said. "We will also be able to end the wasted effort of rewriting applications for new hardware or operating system environments. That means a savings of 20% to 50% of each programmer's time."

What's more, Unix will foster a "renaissance in computer architecture," Scanlon said. "Systems designers have been hamstrung for 20 years. Designers were only allowed to replicate old architecture because marketing insisted that the new system run the old software. It was a case of throwing new technology at old architecture. Unix has begun to change all that, allowing designers to utilize the system's high-level language and compilers."



Some of the best names in software are quite attached to our network.

These people know PCs. They also know a good idea when they see one. That's why they're building future networking software around today's networking standard — Ethernet. And why they chose our PC networking system to help them do it. EtherSeries from 3Com.

What EtherSeries is doing for them.

"3 large, growing, and diverse Ethernets are at the heart of our software development activities. Our 3Com hardware has been very reliable — it has never failed us."
— Bill Gates, Chairman, Microsoft (Bellevue, Washington)

"We want to develop our popular dBase II® to a multiuser networked database environment. To meet the demands of our customers we chose the high-performance 3Com EtherSeries."
— David Clayton Cole, Chairman, Ashton-Tate (Culver City, California)

"The ease of sharing information and printers led our 1-2-3® advanced development team to choose 3Com's EtherSeries® over all of the alternatives."
— Mitch Kapor, President, Lotus Development (Cambridge, Massachusetts)

"We wanted network software transparency. Our PFS:® software runs without ANY change on 3Com's EtherSeries® — it protects our user's software investment."
— Fred Gibbons, President, Software Publishing (Mountain View, California)

"The Ethernet standard and 3Com's EtherSeries® will be an important part of our in-house networking strategy. It provides the connectivity we require for our growing organization."
— Bob Frankston, President, Software Arts (Wellesley, Massachusetts)

"Our mainframe link software and Peachtree software ran perfectly in the 3Com environment. We dropped

SOFTWARE & SERVICES

PRODUCTIVITY AIDS

M. BRYCE & ASSOCIATES, INC.
Interface to Pride Automated Systems Design Methodology

M. Bryce & Associates, Inc. has announced an interface package for its Pride Automated Systems Design Methodology (ASDM) and Software House, Inc.'s System-1022 Data Base Management System (DBMS) software.

According to the vendor, the interface uses the logical data base design specifications generated from Pride ASDM to produce automatically the necessary physical file statements for System-1022. The bridge is said to be a productivity aid for users of the two products.

Pride ASDM is described as an integrated and automated approach for engineering and manufacturing information systems. System-1022 is described as a DBMS operating on the Digital Equipment Corp. Decsystem-10 and Decsystem-20 mainframes.

The interface is sold as a $7,000 option to Pride ASDM, which is priced at $80,000.

M. Bryce & Associates, 1248 Springfield Pike, Cincinnati, Ohio 45215.

IMSL, INC.
IMSL Library Edition 9.1

IMSL, Inc. has announced that its IMSL Library of mathematical applications is now available for use with the Gould, Inc. Concept/32 supermainicomputer.

According to a vendor spokesman, the IMSL Library contains 540 Fortran subroutines for a broad range of mathematical and statistical applications.

The software was designed to reduce the time and cost involved in developing application programs by allowing the programmer to select complete, fully tested subroutines from the library rather than writing them.

Dubbed Edition 9.1, the IMSL Library system is compatible with Concept/32 superminis using the Fortran 77+ compiler.

The spokesman said the library is useful in applications such as simulation, oil and gas exploration, communications, engineering and research and development.

A one-year license for the IMSL Library is priced at $2,500 or $1,700 for universities and colleges, the vendor said.

IMSL, NBC Building, 7500 Bellaire Blvd., Houston, Texas 77036.

APPLICATION PACKAGES

INTEGRATED SOFTWARE SYSTEMS CORP.
Configurator 8

Integrated Software Systems Corp. (Issco) recently announced expanded output device capabilities for its interface to its computer graphics software packages, Disspla and Tell-a-graf.

Additional devices supported by Configurator 8, the eighth release in a series of software device interface libraries, reportedly include the entire Seiko Instruments USA, Inc. D-Scan terminal family; Digital Engineering Corp.'s Gen II graphics retrofit board; the Benson, Inc. 9000 series electrostatic plotters; two C. Itoh Electronics, Inc. graphics terminals and Datagraph VTC 8001; and Jupiter Systems, Inc.'s Jupiter 7 and Modgraph GX 100 terminals.

A company spokesman said Issco's software packages run on popular mainframes and minicomputers from Apollo Computer, Inc., Burroughs Corp., Control Data Corp., Cray Research, Inc., Digital Equipment Corp., Hewlett-Packard Co., Honeywell, Inc., IBM, Perkin-Elmer Corp., Prime Computer, Inc. and Sperry Corp.

The announced release will be provided at no charge to existing customers. Disspla is priced from $9,500 to $61,000; Tell-a-graf is priced from $9,500 to $52,000.

Issco, 10505 Sorrento Valley Road, San Diego, Calif. 92121.

GARY BROWN ASSOCIATES, INC.
Fama/OL

Gary Brown Associates, Inc. has announced the Fixed Assets Management System/On-Line (Fama/OL) for the IBM System/36, which is said to utilize that hardware's ability to track data through variable access paths.

Fama/OL offers users an automated tool for complete asset accounting and property reporting and is easy to use, the vendor claimed. It is also available for the IBM System/34.

The system features extensive asset data designed to give the user a single source of reference control and analysis and management for assets, the vendor said.

Other features include the ability to parallel three modes of depreciation per asset, a choice of nine depreciation methods, 16 optional reports and the ability to handle multiple companies and divisions.

A complete On-Line Tax Reference Guide is provided, and data is said to be edited on-line for syntax and compliance with established tax regulations.

The system profile is easily modified to establish summarization levels and reporting control, the vendor said.

The Fama/OL package is priced at $3,200.

Gary Brown Associates, 322-B Edwardia Drive, Greensboro, N.C. 27409.

See WORLD page 52

EtherSeries" right into our IBM Information Center and can now share disks and printers."
—Dennis Vohs, Executive Vice President, MSA (Atlanta, Georgia)

"We wanted the expandability of 3Com's Ethernet as a base for our networked products. VisiSeries" for EtherSeries" is the beginning of a family which will include VisiOn.""
—Dan Fylstra, Chairman, VisiCorp (San Jose, California)

What EtherSeries will do for you.

Tying into 3Com EtherSeries was a smart business move for these PC software experts. And it can be for you too. You'll maximize office efficiency, now. Cut operating costs, now. And you'll realize the full potential of your IBM PCs using software that is readily available off-the-shelf, now. All for the low price of $950 per link.

And until January 31, 1984, we'll give you our award-winning EtherMail—a $750 value—with the purchase of EtherSeries and three PC links.

EtherSeries is available at leading computer stores. Call or write Cory Randall at 3Com for more details.

SOFTWARE & SERVICES

TOOLS from page 51

INFORMATICS GENERAL CORP.
Claim Receiver

Informatics General Corp. has announced a software product designed to speed movement of medical claims information from the National Electronic Information Corp. (Neic) clearinghouse to insurance companies.

Claim Receiver reportedly expedites claims as they are submitted to Neic by hospitals and transfers information to insurance companies that are Neic subscribers according to the UB-82 claim form recently approved by the federal government.

Claim Receiver operates in batch mode with IBM OS and DOS. It is said to feature a history file to provide a permanent audit trail and a file-control report.

The product is available at a price of $10,000.

Group Insurance Systems Sales, Informatics General, 9441 LBJ Freeway, Dallas, Texas 75243.

LEHIGH UNIVERSITY
Ecomacts; DSS/2; ODE/PDE

Lehigh University has announced three software systems for mathematical modeling, which are said to be designed for use with a variety of mainframe systems.

The systems are the Educational Computer-Based Models for Socioeconomic Technological Situations (Ecomacts) package, the Differential Systems Simulator, Version 2 (DSS/2) package and the Mathematical Software for Ordinary and Partial Differential Equations (ODE/PDE) package. A spokesman said the packages can be run on mainframes from manufacturers, including IBM; Amdahl Corp.; Burroughs Corp.; Control Data Corp.; Digital Equipment Corp.; Honeywell, Inc.; Prime Computer, Inc.; and Sperry Corp.

The spokesman said the underlying mathematics within the systems contain ordinary and/or partial differential equations, and all coding is in standard, transportable Fortran IV. All three systems are available on 9-track tape and range in size from 15,000 to 18,000 lines of Fortran IV.

The Ecomacts system is priced at $100, the DSS/2 system at $1,000 and the ODE/PDE system at $1,000.

Lehigh University, Whitaker No. 5, Bethlehem, Pa. 18015.

HEALTH INFORMATION SYSTEMS, INC.
Materials Management System

Health Information Systems, Inc. (HIS), has announced an on-line module for IBM mainframe systems that is designed for tracking inventory items used by the health care industry.

The Materials Management System reportedly is interfaced to other HIS systems, such as Accounts Payable and General Ledger. It is said to feature an English-language conversational mode with a "help" key feature and functions that include creating, editing and canceling purchase orders on-line and tracking inventory items requisitioned and dispensed to all hospital departments.

Available now, the system is priced at $45,000 as an additional module for HIS Accounts Receivable.

Health Information Systems, 4522 Hamilton, Brooklyn, N.Y. 11219.

COLLIER-JACKSON, INC.
CJ/Fixed Assets

Collier-Jackson, Inc. has announced CJ/Fixed Assets, an on-line, data base-oriented fixed assets accounting system for the Hewlett-Packard Co. HP 3000 that provides property depreciation and control for medium-size to large corporations.

At company, division and department levels, CJ/Fixed Assets is said to track property and create separate or consolidated reports. CJ/Fixed Assets is also said to allow users to define parameters to determine specific types of assets and sorting sequences for these reports.

The system can keep an unlimited number of books, the vendor said, allowing users to set up test books as well as standard accounting books.

CJ/Fixed Assets supports a variety of depreciation methods. The system automatically interfaces to CJ/Advanced General Ledger and can adapt to other automated general ledger systems. CJ/Report Writer is available as an add-on feature. The license fee is $18,000.

Collier-Jackson, 5709 Jetton Ave., Tampa, Fla. 33629.

THE FASBE GROUP, INC.
Version 3.4.6 of IBMS

The Fasbe Group, Inc. has enhanced its Interactive Business Management System (IBMS), a financial application package for Digital Equipment Corp.'s VAX-11, Decsystem-10 and Decsystem-20 computers.

The new release (Version 3.4.6) features on-line, interactive processing and increased throughput, according to the vendor. An allocation module which provides the user with fixed-amount, fixed-percentage and variable-percentage allocations in either update or nonupdate mode has been added to the general ledger subsystem.

The accounts payable system now includes multiple bank, recurring payment and one-time vendor processing capabilities. The security module provides encryption techniques for internal control, and a new report writer module uses English statements for report writing, according to the vendor.

A one-time CPU licensing fee for IBMS costs between $5,000 and $20,000.

The Fasbe Group, P.O. Box G, Nashua, N.H. 03061.

AGS MANAGEMENT SYSTEMS, INC.
PAC III

AGS Management Systems, Inc. recently announced that its Project Analysis and Control (PAC III) project management system is now available for use on the IBM System/36 running under IBM's CPF-BC operating system.

PAC III reportedly combines networking, resource scheduling, estimating and accounting functions in a single project management system that may be used by many groups within one company to provide a single standard for project management within the organization.

A company spokesman said new options for the package include management graphics in color to display schedules and budgets; network color graphics to provide a picture of network and critical activities; and an earned value option to help locate variances by comparing scheduled vs. actual performance in work effort and budget.

The package is priced from $40,000 to $56,000.

AGS Management Systems, Department MS, 320 Walnut St., Philadelphia, Pa. 19106.

SHIRLEY SOFTWARE SYSTEMS, INC.
Mister for DEC VAX-11s

Shirley Software Systems, Inc. has announced that its Management Information System for Time, Expenses and Resources (Mister) Project Management system is now available for use with Digital Equipment Corp.'s VAX-11 series of processors.

The Mister package consists of nine modules that are said to assist managers in planning, scheduling and monitoring work. The vendor said the package is useful in applications such as engineering design, construction, software development, public utilities planning, research and development and shipbuilding and repair.

Mister reportedly utilizes Critical Path Method techniques to schedule multiple projects with numerous activities per project. Network graphics are available on all standard plotters and many dot matrix printers, according to the vendor. The system reportedly offers more than 50 standard reports, and an on-line report generator feature creates customized output.

The Mister system also includes an interactive data entry module that asks users simple questions to assist in defining a schedule. The system was designed to operate on the VAX-11/730, the VAX-11/750 and the VAX-11/780 under the VMS operating system. Mister is priced

MicroAge®

"BECAUSE WE COULDN'T AFFORD MISTAKES!"

"They guided us over the rough parts when we needed it"

"During September of 1982, we started our MicroAge Computer Store in Tulsa, Oklahoma with 3 people. Today we have 21 people working for us and two stores. By following MicroAge's advice and marketing strategy when we started in business, we were able to reach Tulsa's business computer buyers in a much shorter time than we could have on our own."

"Both of us had technical backgrounds in computers but lacked the marketing experience necessary to reach our goals. We used MicroAge's experience and leadership to guide us through the rough spots and boost our sales and marketing potential."

"MicroAge . . . they helped us build a sales organization to reach the Oklahoma businessman."

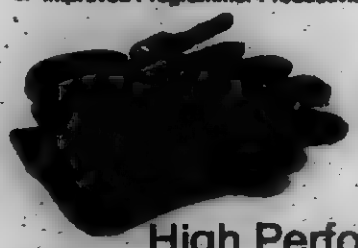
HIGH PERFORMANCE HANDLING

File-AID Puts You in the Driver's Seat to Access Data without Programming.

File-AID gives you high performance handling benefits.

- ☐ Immediate Data Access Without Programming
- ☐ Improved Testing Effectiveness
- ☐ Lower Conversion Costs
- ☐ Better Use of VSAM
- ☐ Reduced Production Delays
- ☐ Increased Security
- ☐ Improved Programmer Productivity



File-AID the Key to High Performance.

File-AID speeds up the utility functions associated with record and file handling.

File-AID is a dependable and reliable tool. And it is supported by a crew of professionals at Compuware, a company with over 2,000 users worldwide.

File-AID is flexible and able to respond in all situations: test and production; regular and special functions.

File-AID is efficient. It combines many utilities into one inexpensive, easy-to-use productivity tool.

File-AID gives the professional greater control over his data environment.

File-AID can put you in the driver's seat fast. It is easy to use and requires virtually no training. The menus, panels, tutorials and control information make it a natural extension of your current environment.

File-AID/SPF

All Access Methods.

File-AID/SPF supports BROWSE, EDIT & UTILITY functions for all standard IBM access methods.

Record/Member Selection.

File-AID/SPF provides expanded IF, AND, and OR logic for record or member selection and processing.

Logical JCL Processing.

File-AID/SPF recognizes JCL as a special format and JCL is treated as logical statements.

Improved Edit.

File-AID/SPF provides a record editor for all access methods with no record or file length restrictions.

New SPF Utility Functions.

File-AID/SPF provides many new utility functions including:

- ☐ Load module CSECT and directory entry mapping
- ☐ Selective COPY functions for records/members.
- ☐ New full function VTOC utility.
- ☐ Full VSAM cluster, alternate index and path support (display, delete, etc.) without the IDCAMS utility.

Ease of Use.

File-AID/SPF requires no training.

File-AID/BATCH

All Access Methods.

File-AID supports all standard IBM OS or VS access methods and device types.

Multi-Function Utility.

File-AID/BATCH is a parameter-driven utility which combines the most often used file and record handling functions.

- ☐ Print, list or dump whole records or portions of records.
- ☐ Copy up to 99 datasets without control cards while mixing any file organization or record format.

File-AID is a comprehensive, easy-to-use data manipulation utility.

- ☐ Selective retrieval or sampling from any file based on record position, or data contents to the bit level.
- ☐ Altering data format or record structure.
- ☐ Access multiple datasets.
- ☐ Accumulate data in any format.

Additional Information.

File-AID/BATCH provides complete audit trail information as well as concise control card error messages.

Flexibility.

The flexibility of File-AID/BATCH is demonstrated by its ability to combine data from different sources or to copy data from or to unlike devices or access methods or record formats.

Test Drive File-AID with a FREE PRODUCT EVALUATION TIME TRIAL

Get behind the wheel. Try File-AID's High Performance Handling with your own drivers and crew. For your FREE 30-day evaluation call 800-521-8353 (in Michigan or Canada: 313-540-0400).

between $26,000 and $75,000 depending on the number of modules selected.

Shirley Software Systems, Suite 202, 1936 Huntington Drive, South Pasadena, Calif. 91030.

DATA PROCESSING SERVICES, INC.
Distribution Processing System/38

Data Processing Services, Inc. has announced an integrated inquiry software system for distribution processing on the IBM System/38.

Distribution Processing System/38 consists of order processing, invoicing, inventory and accounts receivable programs, a spokeswoman said.

It reportedly fully integrates the inquiry system as a separate subsystem to give users ready accessibility to all levels of data. Access is gained through one "door" to save time, according to the vendor.

The system stores up to 20 inquiries for each user session, permitting review of previously selected data without reentry of selection criteria, the vendor said.

Other features include multicompany and multidivision processing, custom menus for each user and flexible pricing.

Distributed Processing System/38 pricing starts at $60,000 for a one-time license fee.

Data Processing Services, 8604 Allisonville Road, Indianapolis, Ind. 46250.

NATIONAL INFORMATION SYSTEMS, INC.
Version 4 of VUE

National Information Systems, Inc. has announced Version 4 of its VUE software, which it described as a computerized project management system.

The vendor said Version 4 features on-line Help messages, redesigned menus, a new command mode, expanded resource capabilities, a new time-schedule network and the incorporation of all processing into a single module.

VUE is said to accommodate the entering and reporting of information for planning, scheduling and tracking project activities.

The redesigned menus, Help messages and command mode reportedly combine to make the system easier to use, and the organization of the menus has been changed to improve the logical flow of information.

With the expanded resource capabilities, the user can now specify up to 100 resources for a project, as opposed to 10 resources in earlier versions, according to a spokesman for the vendor.

The time-schedule network report is said to provide bar chart information and precedence relationships of activities.

VUE runs on Digital Equipment Corp.'s VAX-11, PDP-11, Decsystem-10 and Decsystem-20, Hewlett-Packard Co.'s HP 3000, most Honeywell, Inc. computers and all Perkin-Elmer Corp. processors, according to the vendor.

It is priced between $5,000 and $22,500, depending on the operating environment and the options chosen, according to the vendor spokesman.

National Information Systems, 20370 Town Center Lane, Cupertino, Calif. 95014.

COMMUNICATIONS ANALYSIS CORP.
Moste

Communications Analysis Corp. has announced that its Management of System Telephone Expenses (Moste) system is now available for Digital Equipment Corp.'s VAX-11 series of superminicomputers and PDP-11 series of minicomputers.

Moste runs under DEC's VMS and RSTS/E operating systems. The software package processes telephone call detail records from the output of any private branch exchange or Centrex system. A series of telecommunications management and traffic analysis reports can be generated for control over telephone expenses.

According to the vendor, each call is identified by its precise city and state destination and is priced using appropriate rates. Calls are summarized at extension, department, cost-center, division and company levels.

Calls can also be organized by account codes for billing back charges to clients or tenants. Exception reports can be produced, listing all calls in excess of a predesignated threshold of minutes and/or cost.

According to the vendor, management reports allow calls to be accounted for at every level of an organization and allocated to justifiable budgets. Wats usage is also broken down, call by call, for internal control.

According to the vendor, Moste is fully documented and supported. Ongoing maintenance and updates are available to reflect rate, tariff and central office changes. Performance-critical portions of the program are implemented in assembly language, and reports are processed using DEC's VAX Basic.

The one-time license fee for the Moste system is $17,000. For companies with multiple locations, each additional switch location can be incorporated under the license for $3,500.

Communications Analysis, 100 Fountain St., Framingham, Mass. 01701.

MASSCOMP
KIC

Masscomp has announced the addition of the Kellers Integrated Circuit (KIC) application software program to the standard software library running on its 32-bit Unix-based MC500 series and Workstation

SOFTWARE & SERVICES

500 computer systems.

According to the vendor, KIC is an interactive color graphics program developed at the University of California at Berkeley for the mask-level design of integrated circuits. The program's color graphics editor can work with Nmos, Cmos and bipolar integrated circuit technologies, and it has symbolic layout and split-screen capabilities that reportedly provide a design tool for layout engineers, according to the vendor.

The KIC screen is said to incorporate both a coarse viewport and a fine-positioning viewport called a magnifying glass. The user creates geometries on a two-dimensional mask-coordinate system with integer coordinates.

The package reportedly supports several types of layout geometries, including boxes, polygons, wires, labels, lines, flashes, arcs and doughnuts. KIC supports layouts of up to 25 layers and can be recompiled to increase this standard maximum number of layers.

The MC500 series and the Workstation 500 processors reportedly both feature the high-performance computational and graphics display power needed for computer-aided design and engineering and other sophisticated tasks.

The KIC application software is free of charge to existing users. A typical configuration of the Workstation 500, including the standard software library with the KIC application program, is priced at $43,000, the vendor said.

Masscomp, One Technology Park, Westford, Mass. 01886.

HOURGLASS SYSTEMS, INC.
Calc Master

Hourglass Systems, Inc. has introduced a spreadsheet program for users of the Wang Laboratories, Inc. 2200 MVP, LVP, SVP and VP computer systems. Called Calc Master, the program incorporates consolidation, window access to other spreadsheets, alphanumeric sorting and logic comparison.

A typical Calc Master module contains a data capacity of up to 64 columns and 999 rows, the vendor said. For larger spreadsheets, the package has consolidation and file look-up features to transfer data among spreadsheets. In addition, Calc Master can be bridged to other programs such as accounting, sales records and inventory.

According to Hourglass Systems, Calc Master is designed around the concept of a cell which contains the data at the intersection of a column and a row. Any cells may contain text or numeric data. In addition, the program allows the user to vary column widths individually, control decimal and comma formats and use prefix characters such as the "$" sign, the company noted.

Other features of the package include global editing, data block moves, "if-then" logic, on-screen Help, sorting, regression analysis, curve fitting, random number generation for simulation and trigonometric and logarithmic functions.

Pricing for Calc Master begins at $495.

Hourglass Systems, P.O. Box 212, Glen Ellyn, Ill. 60138.

AGS MANAGEMENT SYSTEMS, INC.
PAC II; PAC III

AGS Management Systems, Inc. has announced that its PAC II and PAC III project management systems are now available for the Digital Equipment Corp. VAX-11 systems.

The VAX-11 versions of PAC II and PAC III have been improved with network and management graphics, the vendor said. The packages' network graphics are in color and are said to provide a clear picture of network and critical activities. Management graphics, also in color, displays schedules and budget information in pie charts designed for management presentations, the vendor said.

PAC II can plan, monitor, cost and analyze projects, the vendor said. In addition, it is said to simulate, schedule, allocate resources, evaluate networks, develop float, provide target scheduling and offer standard and custom reports.

PAC III is a network scheduler and cost processor and can direct and tract multitask projects across functional lines, the vendor said. It can be used by more than one group in an organization to provide an economical single standard for project management.

The VAX-11 version of PAC II is priced at $42,000, and the VAX-11 version of PAC III is priced at $56,000.

AGS Management Systems, Department MS, 230 Walnut St., Philadelphia, Pa. 19106.

STEEL HEDDLE MANUFACTURING CO.
AIM

Steel Heddle Manufacturing Co. has announced Application Integration Module (AIM), an enhancement to its Wizard Mail IBM mainframe electronic mail system.

The enhancement allows electronic messages to be integrated into in-house applications, according to the vendor.

Whenever a message is sent, an audible alarm is sent to a user's terminal, and a message appears on the screen, the vendor said. Wizard runs under CICS, BMS or VM operating system environments, the vendor said.

The program costs $395 without the new option, $495 with it. After March 1, the prices will rise to $895 and $995, respectively.

Steel Heddle Manufacturing Co., P.O. Box 1967, Greenville, S.C. 29602.

Introducing software for the IBM® PC with a $350 bonus!

Now's the time to invest in the business software you've wanted for your IBM PC.

Because for a limited time, if you buy any two of the famous business programs in the CP/M Applications Library,™ we'll give you the highly-acclaimed Concurrent CP/M™ operating system for your IBM PC—absolutely free. That's a bonus worth $350.*

Introducing SpeedStart™—the exclusive load-&-go software system.

The CP/M Applications Library offers more than just the best name-brand IBM PC software in the business. Each of our applications delivers the unmatched convenience of our exclusive SpeedStart single disk system.

SpeedStart is a special version of the powerful CP/M-86® operating system that's built into each of our software disks.

When you're ready to work, just load the disk, turn on your IBM PC and go!

SpeedStart eliminates the time-consuming task of loading a separate operating disk and then "installing" the software.

In fact, the SpeedStart system gets you to work faster and easier than any other software available today.

Best of all, it's yours at no extra cost.

What's more, SpeedStart can be by-passed to run software under the IBM PC operating system of the future—the remarkable, multi-tasking Concurrent CP/M.

The operating system of the future can be yours—free!

There's a good reason why Concurrent CP/M is receiving rave reviews by industry experts. It enables your IBM PC to run up to four separate jobs at the same time.

You can load all of your applications at once, and instantly switch from one program to the next with the touch of a key!

For example, by using WordStar® and SuperCalc®2 simultaneously, you can print documents while working on your budget. You can even exchange data from one application to another. The time-saving possibilities are endless.

Best of all, this $350 operating system is yours for the asking when you buy any two IBM PC business software packages from the CP/M Applications Library at your computer store.

But hurry, this special offer ends March 1, 1984! For the name of the nearest participating dealer call toll free:
800-227-1617, ext. 404
(in California, 800-772-3545, ext. 404).

DIGITAL RESEARCH™

Buy any two applications and get Concurrent CP/M FREE!

SOFTWARE & SERVICES

REMOTE COMPUTING SERVICES

INTERACTIVE DATA SERVICES, INC.
OID Data Base

Interactive Data Services, Inc. has announced a data base designed to compute the tax liability of buyers and sellers of original issue discount (OID) bonds.

The OID Data Base is available on magnetic tape sent monthly to banks, brokerage houses, insurance companies and other firms. It is based on an Internal Revenue Service (IRS) list of corporate and government obligations and is designed to reduce the amount of time needed to prepare IRS Form 1099-OID.

The service is priced at $1,800 per year.

Interactive Data Services, 22 Cortlandt St., New York, N.Y. 10007.

AUTOMATIC DATA PROCESSING, INC.
Automatic Price/Cost Updating

Automatic Data Processing, Inc. (ADP) has announced a price and cost inventory updating service for wholesalers and distributors.

Automatic Price/Cost Updating reportedly is available now on tapes fed into ADP clients' computers or as one of the series of on-line accounting services provided to clients using ADP printer terminals.

The service, used with ADP's order entry or inventory system, is designed to eliminate manual price recording by automatically updating inventory item prices through magnetic price tapes. The tapes are provided by third-party pricing companies.

According to ADP, prices for Automatic Price/Cost Updating are flexible, beginning at $50 per month.

Automatic Data Processing, One ADP Blvd., Roseland, N.J. 07068.

ON-LINE DATA BASES

LOTUS DEVELOPMENT CORP. INTERACTIVE DATA CORP.
Lotus-Interactive Data link

Lotus Development Corp. and Interactive Data Corp. have announced an agreement under which the Lotus 1-2-3 microcomputer spreadsheet system can be integrated with Interactive Data's family of micro-mainframe business products and data bases.

According to the firms, Lotus 1-2-3 is available to Interactive Data clients who use the IBM Personal Computer or Personal Computer XT to link to Interactive Data's worldwide micro-mainframe network of financial and economic data and business software. The firms said Lotus 1-2-3 can be linked to Interactive Data's proprietary analysis language, Xsim, and its data management language, XDMS.

The Lotus-Interactive Data link will also reportedly enable clients to communicate with the Chase Econometrics Division's data bases directly through 1-2-3. Clients will be able to access and download data directly into 1-2-3, manipulate the data without being connected to the mainframe and then upload the data to the mainframe. Under the agreement with Lotus, Interactive Data will become a value-added reseller of 1-2-3.

Lotus 1-2-3 can also be linked to Interactive Data's PC Screen, an investment industry package that enables an analyst to scan more than 5,000 companies to identify those meeting his financial criteria. As an example of pricing information, the vendor said Lotus 1-2-3 is available for $435 if purchased with PC Screen, which is licensed for $4,000 monthly.

Interactive Data, 486 Totten Pond Road, Waltham, Mass. 02154.

ITT DIALCOM, INC.
Compmail+

The Computer Society of the Institute of Electronic and Electrical Engineers (IEEE) has announced that electronic mail and information services are now available for use by its 80,000 members. The services, called Compmail+, are provided by ITT Dialcom, Inc.

Compmail+ subscribers will be able to communicate with each other via terminals and also order IEEE Computer Society publications electronically from an on-line catalog, IEEE said.

Other features will include on-line registration for IEEE conferences, seminars and meetings and electronic calls for papers in conjunction with those conferences, according to an IEEE spokesman.

A group bulletin board where members can post notices for all Compmail+ subscribers is also available. Access to the full range of ITT Dialcom information services is also available.

Compmail+ can be used with any Ascii-compatible terminal, personal computer or telex terminal. Each user will be responsible for his personal usage at charges of $16/hour.

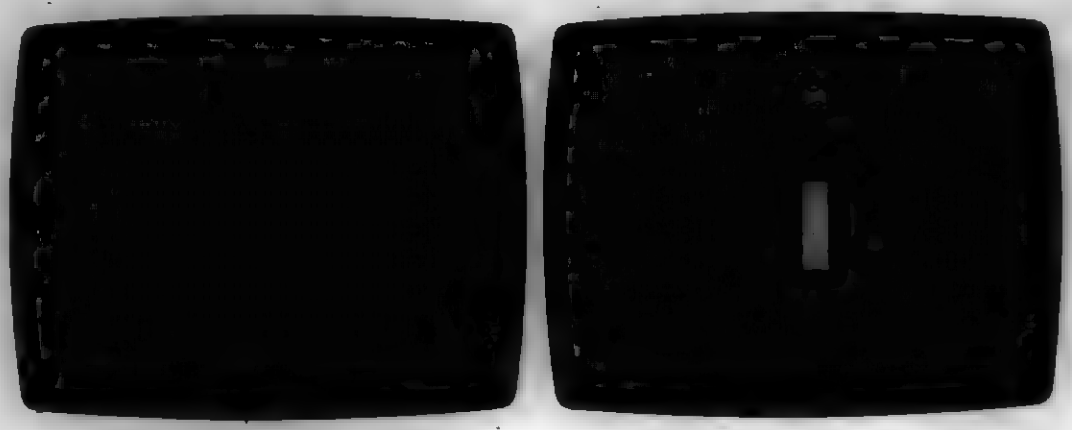
There are no start-up fees, enrollment fees or minimum charges except for direct billing clients who will have a $25 monthly minimum. IEEE members have credit card or direct-billing options.

Credit card billing, using either Visa or Mastercard, will be handled through the Maryland National Bank, the IEEE spokesman said.

A special introductory offer of a $30 credit against usage, excluding external data base fees, is available to IEEE members.

IEEE Computer Society, 1109 Spring St., Silver Spring, Md. 20910.

INTELLECT.™
NO SOONER SAID THAN DONE.



To use INTELLECT, the natural language query system, all you have to do is ask—in everyday conversational English—and you'll retrieve. Immediately, in either text or full-color graphics.

INTELLECT, the world's only successful true natural-language query system, is an ideal tool for your information center. INTELLECT's powerful information retrieval capabilities are so advanced that it understands questions and responds with answers as if you were talking to a knowledgeable colleague. Executives access data themselves—more easily than ever before—without learning any technical jargon or "computerese." It's so easy to use, it doesn't even have a training manual!

Whether you use INTELLECT as a retrieval system or as an effective data analysis tool, it transforms raw data in the data base into information and presents it in finished color graphics in a matter of seconds. It's a live dynamic interface that fully integrates your existing database and graphic systems.

Already hard at work in hundreds of organizations, INTELLECT is ideal for marketing, finance, personnel, manufacturing, and banking applications.

INTELLECT is an important technological breakthrough. You can learn more about it by attending one of our nationwide seminars. Or put its amazing power at your fingertips in minutes with one of our demonstration tapes.

Call or send coupon for more details. Look into INTELLECT, and be an eyewitness to the future of computing.

Tell me more about INTELLECT.

How to put 640 square feet of computer disk storage in a 7′x 3′ space.

There's no way to store that much data in that little space if you're using disk drives. Even 3380 class. But Masstor Systems' M860 Mass Storage System — a different kind of data storage technology — can solve the problem.

The entry-level M860 stores 55 billion bytes of data on-line and can be expanded to 440 billion bytes. At one-quarter the cost of disk. And less than 4% of the floor space. It also automates tape operations, making processing much faster and more economical.

The M860 is a third storage alternative for your IBM and other plug compatible mainframes. One that offers more on-line storage capacity for your new applications and requires no conversion of your existing programs. Masstor has an M860 solution for Sperry, Honeywell, DEC/VAX and CDC mainframes, too. As well as a way to hook them together in a network: MASSNET.

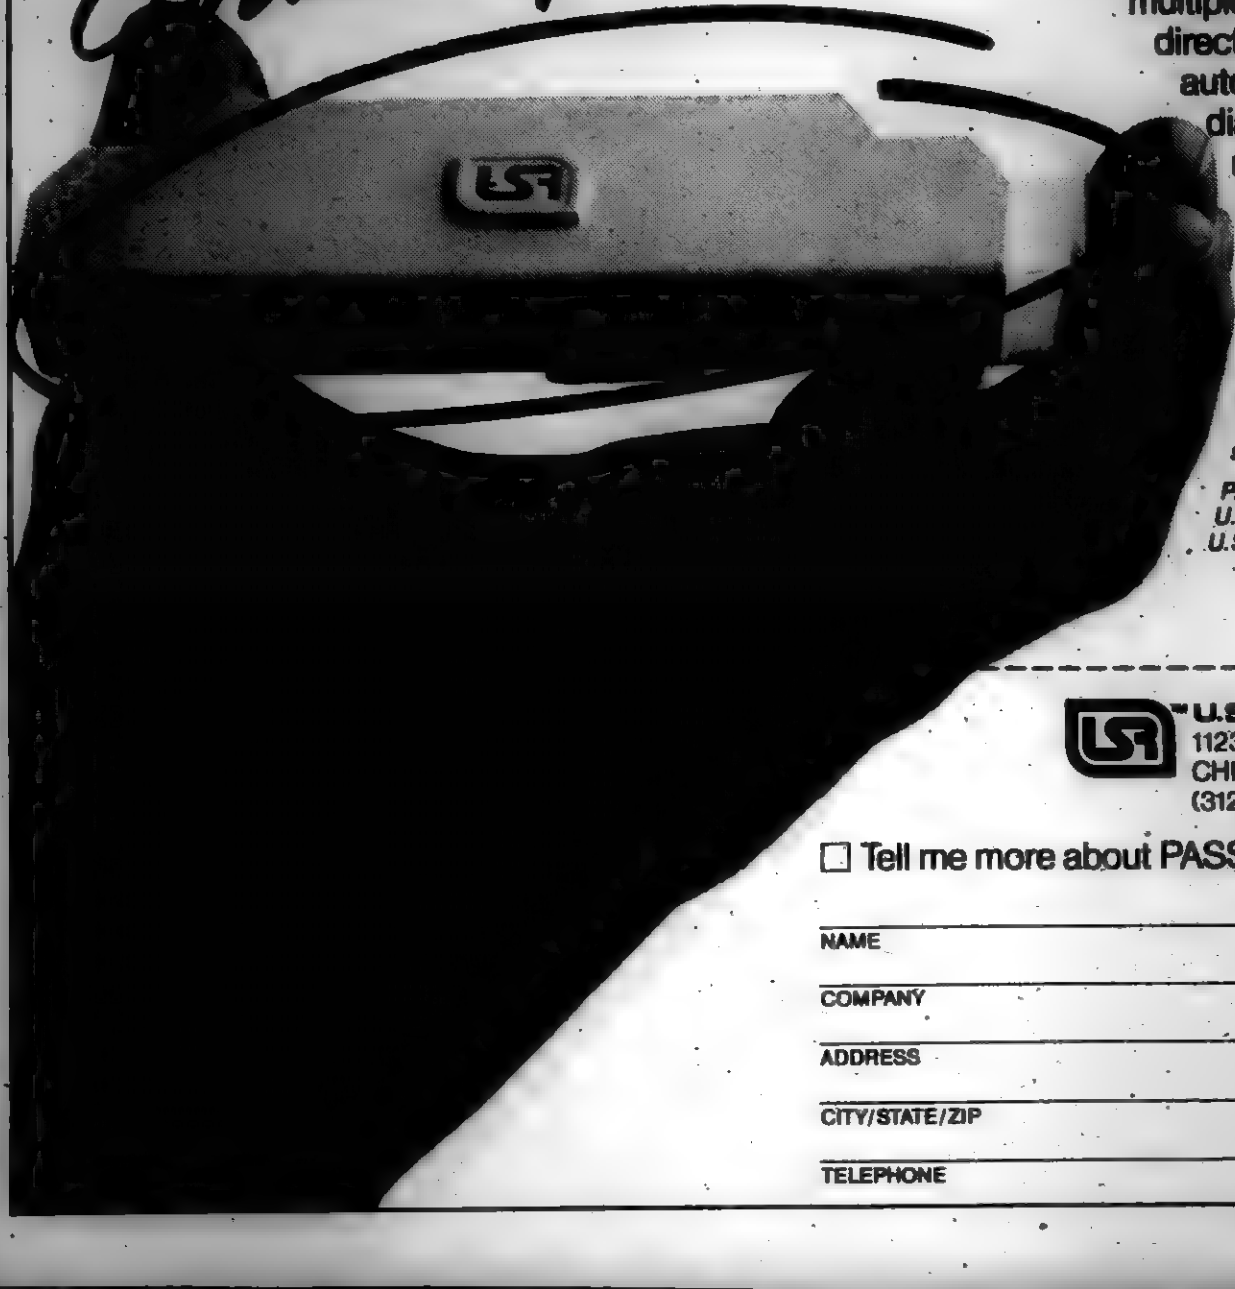
The M860 and MASSNET are two of a family of Masstor Systems' strategic products that allow you to move, store and share data efficiently and economically.

To find out more, contact Dave Ball at Masstor Systems Corporation, 5200 Great America Parkway, Santa Clara, California 95050. (408) 988-1008. And cut your data storage problems down to size.

MASSTOR SYSTEMS

Strategic solutions to moving, storing and sharing data.

Our Password™ modem's sophisticated new control panel



THE BUSIER YOU ARE, THE BETTER YOU LIKE IT.

PASSWORD™ is a modem so efficient and convenient there is little to do but turn it on to transmit at 300/1200 baud. Operating features include auto dial/answer, auto mode/speed select, full/half duplex. PASSWORD has all this, plus a two-year limited warranty, at a price of just $449.*

TELPAC™ telecommunications software (optional) programs PASSWORD to transfer files, in terminal or host mode, with multiple error checks. Phone directory gives choice of timed automatic or one-touch dial and logon. Command mode includes file display and update, menus and help, and much more. Write or call for complete specifications.

**Suggested list for PASSWORD complete with power, phone, RS232 interface cables. TELPAC software optional extra, $79.*

Recruiting fires stoked
In telecommunications industry

NEW YORK — Hiring and recruiting in the telecommunications industry have started to heat up again. During 1983 the recession in hiring in the industry gradually ended, and the job market became markedly tighter, but the industry is still not up to prerecession hiring-activity levels, according to a survey recently released here.

The "15th Annual Telecommunications Salary Survey," by Personnel Resources International, Inc., also reported that prevailing industry salary rates have continued their climb, especially in telecommunications specialties experiencing tight supply conditions such as junior- and intermediate-level technicians in private branch exchange and data communications areas as well as design and systems engineers, advanced network planners and telecommunications software development personnel, according to the report.

> *"In the telecommunications manager, they're looking for someone with a more technical background . . . Ten years ago they just wanted somebody that knew something about phones. — Jay Jacobson, president of Personnel Resources.*

In order to fill the shortages in these job areas, Jay Jacobson, president of Personal Resources, said he anticipates retraining programs and a relaxation of degree requirements. "Some of these jobs will be filled with people from the military, and there will be some coming out of the telephone companies, but not many. Companies will relax their degree requirements, and they'll train technicians to be so-called engineers."

The first effects of the AT&T breakup to be seen in the manpower market are among independent suppliers, who hope to compete against Western Electric Co. in improving their sales to the regional telephone holding companies, the survey said. Jacobson has had requests from them for sales personnel and for systems, development and product-support engineers with experience with Bell or other suppliers.

According to the survey, Personnel Resources has had a number of requisitions from independent telephone companies for planning engineers and managers, both in engineering and marketing, with a preference for candidates with a B.S. in electrical engineering and an MBA for both functions. Some telephone companies sought sales and technical personnel for their unregulated sectors in the radio, interconnect, supply and consulting businesses.

Cellular radio has created demand for a large number of radio systems engineers, coordinators, technicians and salesmen. Manufacturers of cellular radio hardware also are seeking design and development technical personnel.

They especially are interested in technical personnel who can integrate telephone and radio equipment.

Specialized common carriers did not seem to be affected much by the recession and continued to look for all types of personnel. Some data carriers had special needs for engineers with backgrounds in packet switching, fiber optics and other new technologies. The demand from resale common carriers has been uneven, as some have experienced financial ups and downs. Satellite carriers listed fewer openings than in 1981.

Telephone interconnect companies continued to look for experienced marketing and installation personnel, but refined their needs and specifications, as their industry has reached a point of maturity.

Large telecommunications users, such as banks, insurance companies, general energy and manufacturing firms, started looking for analysts and telecommunications managers in late 1983 after a general hiatus, the survey said.

"In the telecommunications manager, they're looking for someone with a more technical background," Jacobson said. "Ten years ago they just wanted somebody that knew something about phones or someone who was a salesman for the telephone company. But now they want much more experience in networking and certain state-of-the-art equipment, and they want an engineering background or computer science background, where at one point a liberal arts or business degree seemed adequate."

According to Jacobson, telecommunications salaries increased an average of 8% to 9% last year, and he expects the market to pick up with the improving economy.

The survey is free.

Personnel Resources, 342 Madison Ave., New York, N.Y. 10173.

Tymshare service integrates nets

Tymshare, Inc. has announced a value-added data communications service called Edi-Net, which allows direct computer-to-computer transmission of business documents between different organizations with dissimilar computers and document formats.

The Edi-Net service integrates use of Tymshare's public packet data communications network, Tymnet, with a collection of processing capabilities to identify, process and deliver documents electronically, the company claimed.

Edi-Net delivers a highly formatted message that can be directly processed by the recipient's computer, Tymshare said.

For an organization capable of generating a standard message, Edi-Net provides a store-and-forward service for message distribution.

The service is capable of handling any standard message, including the Uniform Communication Standard, now used by the grocery industry, and the Ansi X12 standard.

The price for Edi-Net service ranges from 35 cents to 80 cents per 1,000 characters transmitted.

According to Tymshare, pricing is dependent upon communications options, time of day transmitted and total character volume.

Tymshare, 20705 Valley Green Drive, Cupertino, Calif. 95014.

E-Mail expected to precipitate major changes

PARSIPPANY, N.J. — The burgeoning acceptance of electronic mail as a viable messaging conduit spells major changes for both business and industry, according to a study recently released here.

By the close of 1983, 18% of all U.S. businesses used some form of computer-based electronic mail. And with close to 20% actively planning to implement electronic mail in the near future, a clear message in dollars and cents is beginning to get through to vendors, according to "The Report on Electronic Mail" by The Eastern Management Group.

Larger companies, as measured by the number of employees, have been the first to apply comprehensive electronic mail systems. The report states that 38% of all companies employing over 50,000 employees presently use electronic mail. Conversely, of companies with fewer than 1,000 employees, only 11% have considered the sometimes prohibitive expenses as justifiable.

Upward turn expected

According to John Malone, president of The Eastern Management Group, those figures are expected to take a turn upwards. "It's not surprising to find that of those organizations with over 50,000 employees that currently do not utilize electronic mail, close to 100% are either planning or considering its future use," he said. "What is somewhat startling is that well over 50% of businesses with less than 1,000 employees have similar intentions."

Aggregate revenues in 1983 from electronic mail technologies (excluding computer-based message systems) approached $1.5 billion, according to the study. Contributing to these revenues were monies from teleprinters (56%), store-and-forward voice systems and services (6%), intelligent copiers (11%) and facsimile units (27%).

"The next handful of years will be pivotal," Malone said. "Industry match-ups and conflicts which have been developing recently will intensify. Revenues from one technology will shift to another. Users, who have themselves become increasingly sophisticated, are not fond of redundancy — not in today's corporate environment where each dollar invested must be justified.

"A natural result of close technological scrutiny will be a reduction in consumption of overlapping instruments," Malone continued.

"Why sink money into telex, intelligent copiers and facsimile? Some industries are bound to suffer erosion as others prosper. The trick will be to anticipate in which direction the trends are heading," he said.

The report indicates that by 1987 electronic mail aggregate revenues will have more than doubled the 1983 total, as users pour close to $3.2 billion into the different technologies.

The report, which forecasts the spreading of electronic mail through 1991 for technologies such as computer-based message systems, telex, store and forward voice, facsimile and intelligent copiers, predicts a good deal of interindustry casualties. But, despite such casualties, the market as a whole will prosper.

The report costs $1,500.

The Eastern Management Group, 4 Century Drive, Parsippany, N.J. 07054.

Fenon brings out a full-duplex modem for use on a DDD network or two-wire private line/81

BRIEFS

■ Alaskan will get its first public packet-switched network. The $2 million network supplied by Tymnet will provide statewide access/82

■ The IBM Personal Computer and Personal Computer XT can now emulate the functions of an IBM 3780 or 2780 with terminal emulation products from Software Dynamics/81

■ A file controller for point-of-sale terminals debuts/81

■ A local-area network for Kaypro portable computers was brought out by Adevco. Up to 100 machines can connect/82

■ A fiber-optic video link providing four channels of color or black-and-white video was introduced by Anaconda/82

COMMUNICATIONS CONTROLLERS

TRANSACTION MANAGEMENT, INC.
TMI-9110 Advanced File Controller

Transaction Management, Inc. has announced the TMI-9110 Advanced File Controller for its TMI-2100 point-of-sale terminals.

When the TMI-9110 is connected to the terminals through a high-speed communications link, it supports Universal Product Code symbol scanning for up to 50,000 items, according to the vendor.

Software specially written for drug stores is part of the system. Other components of the package include a 16M-byte, Winchester-style, fixed head disk; a 365K-byte, removable flexible diskette; data communications hardware; a CRT terminal; a keyboard; and a printer. The price for the TMI-9110 Advanced File Controller is $4,995.

Transaction Management, 100 Keystone Road, Montgomeryville, Pa. 18936.

PROTOCOL CONVERTERS

SOFTWARE DYNAMICS, INC.
SDI3780; SDI2780

Software Dynamics, Inc., has announced two communications emulators for the IBM Personal Computer and the Personal Computer XT.

The SDI3780 is designed to emulate the IBM 3780 RJE workstation. It is said to emulate all functions except Home Mode and On-Line Test Mode. The SDI2780 is said to emulate all functions of the IBM 2780, except Six-Bit Transcode, Synchronous Clock and Off-Line Operation.

According to the company, reading, printing and punching are simulated via disk or diskette and IBM PC-DOS-supported printers on both products. The software emulators require an expansion slot resident in a binary synchronous communications adapter board. Now available, the SDI2780 and SDI3780 are priced at $599.

Software Dynamics, P.O. Box 247, Dunedin, Fla. 34296.

MULTIPLEXERS/ MODEMS

INTERNATIONAL DATA SCIENCES, INC.
Models 6220; 6240

International Data Sciences, Inc. has announced the Model 6220 and the Model 6240 limited-distance modems.

The Model 6220 was designed for asynchronous operation over private or leased, two- or four-wire, nonloaded, metallic (twisted-pair) lines at speeds up to 9,600 bit/sec, the vendor said.

It can be used in both point-to-point and multidrop network configurations and is suited for local data distribution up to 16 miles, according to the vendor.

The Model 6240 can be used in both point-to-point and multidrop network configurations and is suited for short-haul data transmission.

It provides asynchronous operation at data rates of up to 4,800 bit/sec over loaded lines and up to 9,600 bit/sec over nonloaded lines, according to the vendor spokesman.

The Model 6220 is priced at $800, and the Model 6240 costs $400.

International Data Sciences, 7 Wellington Road, Lincoln, R.I. 02865.

ANCHOR AUTOMATION, INC.
Volksmodem

Anchor Automation, Inc. has announced the Volksmodem, which interfaces with most personal computers.

The modem features a 300-bit/sec operation, plug compatibility with any wall phone jack, full/half duplex switch, voice and data switch for phone use without modem disconnection, advanced Cmos low-power circuitry and standard 9V battery power with automatic selection of originate/answer mode, according to a vendor spokesman.

Volksmodem is priced at $79.95.

Anchor Automation, 6913 Valjean Ave., Van Nuys, Calif. 91406.

RIXON, INC.
R2424

Rixon, Inc. has introduced the R2424, a microprocessor-based full-duplex modem that operates over the direct distance dialing (DDD) network or two-wire private lines.

The modem operates synchronously or character asynchronously at speeds of 2,400 or 1,200 bit/sec.

For alternate voice and data operation, a front-panel talk/data switch is included to allow calls to be answered manually with the telephone or automatically under the control of the data terminal equipment, according to a spokesman for the vendor.

The R2424 is priced at $1,195, the vendor said.

Rixon, 2120 Industrial Pkwy., Silver Spring, Md. 20904.

LOCAL-AREA NETWORKS

ADEVCO, INC.
Web

Adevco, Inc. has announced the Web, a local-area network system for Kaypro Corp.'s Kaypro computers.

Continued on page 62

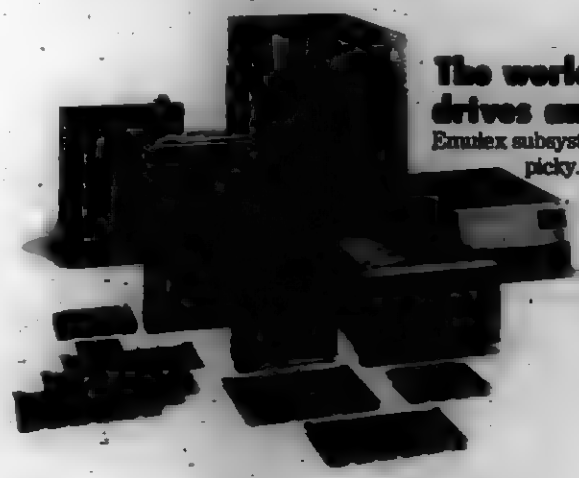
Everything a VAX user could ask for in a storage subsystem.

The Emulex package deal.

Software transparency, low prices, rental/purchase option plans, a trade-in program and a service security blanket. Included are pretested drives and controllers; direct factory installations; fulltime hardware/software applications assistance; and nationwide service through Control Data, General Electric and Tymshare.

Emulex innovation—introducing our Eagle disk/Keystone tape combination.

Where else can you get a unit that optimizes the Fujitsu Eagle's 1.8 MB/sec transfer rate and provides backup, archiving, journaling, and the media interchangeability of ½-inch tape? All in one 42-inch cabinet. Best yet, the PXD-51 is available in six DEC-emulating models for PDP and VAX users on the CMI, SBI or Unibus.



The world's best drives and controllers.

Emulex subsystems let you be very picky. You select proven tape drives and disk drives from 80 to 675 MBytes. Plus you can mix and match fixed and removable disk drives of varying sizes and configurations. At the heart of the subsystem is an Emulex controller designed specifically for your particular DEC CPU.

Emulex has been and continues to be the pioneer in DEC-compatible subsystems. And in each product our objective is clear: to make your DEC system faster, more efficient and capable of processing larger, more complex programs more reliably than any other alternative.

Find out more about the total Emulex package. Phone toll free: (800) 854-7112. In California: (714) 662-5600. Or write: Emulex Corporation, 3545 Harbor Blvd., Costa Mesa, CA 92626.

EMULEX

The genuine alternative.

COMMUNICATIONS

Continued from page 61

The system consists of hardware modification and networking software. Connected by ordinary wire, each computer can communicate with every other computer on the network, the vendor said.

Up to 100 machines can plug into the net in any combination of Kaypro II, 4 or 10 computers. The system can operate over a distance of up to 2,000 ft. The product costs $350.

Adevco, P.O. Box 606, Camp Hill, Pa. 17011.

DATA LINK
Models 310, 310A; Model 310SC

Data Link has developed a family of local-area network products that utilizes existing twisted pair phone lines to form local data communications networks.

The Model 310 asynchronous line interface adapter was designed to operate in point-to-point, multipoint or switched user-routing networks. As many as eight simultaneous, full-duplex, 9,600 bit/sec data transmissions may take place over a single twisted pair, according to the vendor.

The 310A line interface adapter and a companion supervisory controller, the Model 310SC, were designed for local-area networks with as many as 999 addresses. With the Model 310 and a 310SC, over 30 users may operate on a single eight-channel bus.

Prices for the line interface adapters start at $350 for the Model 310 and $525 for the Model 310A.

Data Link, Suite D-1, 1035 N.W. 12th, Issaquah, Wash. 98027.

PERSONAL COMPUTER GATEWAY, INC.
Data Pouch

Personal Computer Gateway, Inc. has introduced Data Pouch, a personal computer networking system.

Some of the product's features include an RS-232 interconnect to virtually all personal computers, 80M bytes of disk storage and a star network rather than a ring network. Designed to be used by up to 16 users simultaneously, the product allows transmission speeds up to 9,600 bit/sec and direct-line or dial-up interfacing. It also lets users take advantage of existing in-house telephone wire or install standard four-wire lines, the vendor said.

The price for the 20M-byte model is $13,000; the 80M-byte model costs $18,000.

Personal Computer Gateway, 22 Daniel Road, Fairfield, N.J. 07006.

TEST EQUIPMENT

ANDERSON JACOBSON, INC.
EDR option board

Anderson Jacobson, Inc. has announced an error detection and retransmission (EDR) option board for the company's AJ 4048 full-duplex modem.

The board provides data transfer at 4,800 bit/sec in full-duplex, asynchronous data transmission.

Data flow from the terminal continues uninterrupted during the retransmission. A high-level data link control-like protocol eliminates delay by allowing the EDR to transmit new frames while waiting for old ones to be acknowledged, the vendor said. The price is $495.

Anderson Jacobson, 521 Charcot Ave., San Jose, Calif. 95131.

AUXILIARY EQUIPMENT

3M CORP.
API kit; BPI kit

The 3M Corp. has introduced an asynchronous protocol interface (API) kit designed for use with computers using serial communications, including many micros and minicomputers, and its biphase interface (BPI) kit, designed for operation with IBM 3278, 3276 and 3178 terminals.

The API kit can also be used to link the company's 900-page Search to its Micropoint II index processor, an electronic file-management system. The API kit operates at bit/sec rates from 50 to 19,200, using RS-232C ports and the Ascii code set, the vendor said. Each kit costs $2,495.

3M, P.O. Box 33600, St. Paul, Minn. 55133.

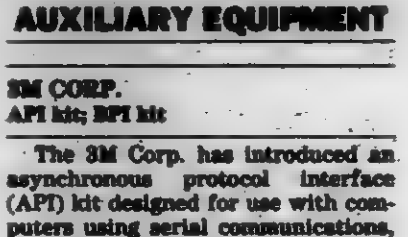
ANACONDA WIRE & CABLE CO.
Ericsson's ZAV 101 fiber-optic video link

Anaconda Wire & Cable Co., a member of the Ericsson Group, has announced Ericsson's ZAV 101 fiber-optic video link, which provides transmission of up to four channels of black-and-white or color video.

The link permits a transmission distance of 3 km (1.8 miles), which can be expanded to 8 km (5 miles) when several links are used in a series as repeaters. Signal bandwidth is 50Hz to 6 MHz. The price for a one-channel system is $1,790.

Anaconda Wire & Cable, 11200 W. 93rd St., Overland Park, Kan. 66204.

See AUXILIARY page 63



Has your most productive asset been working at half speed?

Look at it this way.

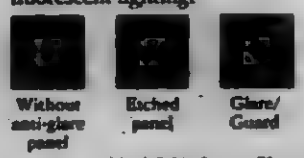
If you had to shade screen glare with one hand, enter data with the other. Hour after hour. Just how efficient would you be?

The fact is, CRT glare takes its toll. On your terminal users. And on department productivity.

But now there's a sensible solution.

Introducing Glare/Guard® anti-glare panels.

Glare/Guard instantly eliminates up to 94 percent of all CRT glare. Resolution is always sharp. And image brightness and clarity are dramatically enhanced—even under bright, fluorescent lighting.



Without anti-glare panel | Etched panel | Glare/Guard

The result? No screen washout.

Glare/Guard's secret is HEA®—a special High-Efficiency Antireflection coating we applied to the windows of NASA's Space Shuttle. And only Glare/Guard has it.

Glare/Guard's durable, laminated-glass design lasts indefinitely. It quickly retrofits to virtually every leading display terminal—no tools required. Its smooth surface is easily cleaned. And Glare/Guard sells for $99, regardless of display size.

Of course, there are less expensive anti-glare products available. But the nylon strands of mesh screens cause fuzzy images. While etched panels merely spread glare around and blur resolution.

Only Glare/Guard does exactly what an anti-glare panel is supposed to do. And that's getting your terminal user's attention out of the glare, and back onto the screen.

Glare/Guard panels cut glare 94%.

Call 800-447-4700 for free brochure.

Glare/Guard anti-glare panels are another quality product manufactured by OCLI. Just call us toll free and we'll send your free brochure, including our helpful sizing guide. Or write Glare/Guard, OCLI, Dept. 109D, 2789 Northpoint Parkway, Santa Rosa, CA 95407-7397.

OCLI

Better yet, place a trial order with your dealer and install Glare/Guard panels on your busiest terminals. You'll see the difference, instantly.

Glare/Guard® and HEA® are registered trademarks of OCLI—Optical Coating Laboratory, Inc. ©1983 OCLI—Optical Coating Laboratory, Inc. All rights reserved.

Glare/Guard®

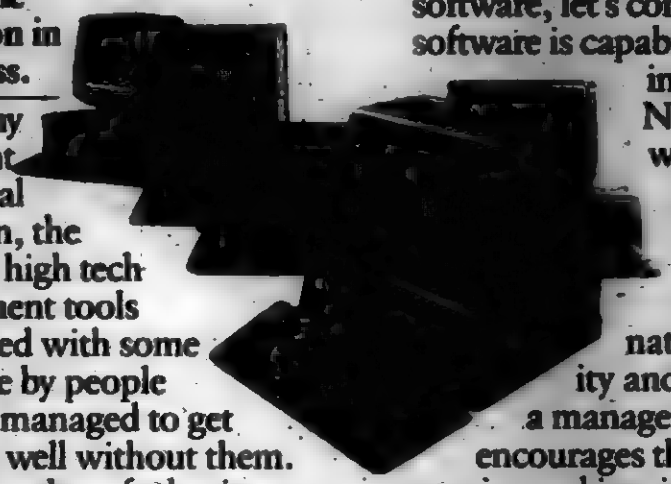
A difference you can see.

Let your people go.

Let's begin by giving you the credit you deserve.

You're part of an organization that's rushing past today's goals and is poised to boldly attack the future. You and people around you are capable of greatness and eager to prove it. The minds you need are in place. Now, set them free.

Join the revolution in progress.



Like any significant intellectual revolution, the arrival of high tech management tools was greeted with some reluctance by people who had managed to get on rather well without them.

But the value of a business person's time and the pressure of competition have made the personal computer a partner in our business life.

Given that as a fact, the question is, how do you make the talents of this new partner work to your advantage?

You have probably already made a decision—or you may be making it now—about the personal computer you'll employ.

But as you discover more about what this technology can accomplish, you'll find it essential to learn more about the software that drives the hardware.

Your next great decision.

Now that we've discussed the necessity of working with software, let's consider which software is capable of working with you.

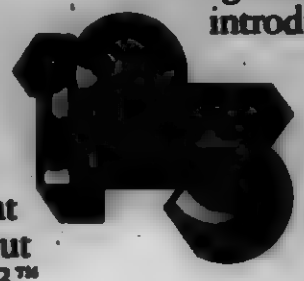
Naturally, we're somewhat prejudiced, but frankly, 1-2-3™ from Lotus™ is a classic combination of simplicity and sophistication; a management tool that encourages the computer novice and inspires the computer expert. That's why many people consider 1-2-3 from Lotus to be the most productive software in the world.

The fact is, while the phrase 'integrated software' has been tossed about by many software companies, 1-2-3 from Lotus made it a reality by combining spreadsheet, information management and graphic functions into one powerful, easy to use program.

Moreover, this program works at a pace up to five times faster than anyone else's.

Now we can't promise that you'll work five times faster. But we will guarantee that with 1-2-3 from Lotus, you'll be inspired to try.

The Lotus position.



Long before the world was introduced to 1-2-3 from Lotus, the lotus position referred to a posture of thoughtful repose, where the body was relaxed and the mind was set free to travel as far as it could.

And that concept of letting human intelligence seek its potential is the essence of Lotus today.

1-2-3 from Lotus is the first software that's truly compatible with the most incredible personal computer ever created—the human mind.

For we believe the best thing we could ever offer decision makers is the chance to discover how much they really can accomplish.

Let your people go.

For more information, call 1-800-343-5414 (In Massachusetts call 617-492-7870) and find out more about 1-2-3 from Lotus.

Lotus

The hardest working software in the world.

WITH DATA GENERAL, YOU WON'T BE A PRISONER OF YOUR IN-BOX.

DATA GENERAL INTEGRATED OFFICE AUTOMATION

Burying information under a ton of mail at the bottom of your in-box is not the best way to get it when it's critical to a decision.

ELECTRONIC MAIL

With Data General's CEO® Comprehensive Electronic Office, information is delivered electronically. Instantly. Unerringly.

But that's only the beginning.

TOTAL OFFICE AUTOMATION

The CEO system automates just about everything in your office. CEO electronic filing files the way you do. Its electronic calendar keeps tabs on trips, appointments, and meetings—even confirming them all.

Of course, CEO includes easy-to-use word processing. And all this is integrated with data processing for total decision support.

DON'T DUMP YOUR EXISTING EQUIPMENT

Best of all, instead of having to dump your existing equipment to automate your office, you can build the CEO system around it.

Because it not only ties in with other Data General computers, but it also ties in with the most widely-used mainframe and word processor.

Instead of just a series of personal computers, each CEO workstation becomes part of a global network, with access to data from IBM mainframes.

AS LITTLE AS $5,000 A WORKSTATION

And with the CEO system, the cost per workstation can be as low as $5,000, depending on application.

CALL NOW

For more information on office automation that's a generation ahead, call: **1-800-554-4343, Operator 05A** or write Data General, M.S. CEO 05A, 4400 Computer Drive, Westboro, MA 01580.

COMMUNICATIONS

AUXILIARY from page 82

RAPICOM, INC.
CCITT Group 3

Rapicom, Inc. has introduced the 5000 microprocessor-controlled CCITT Group 3 facsimile device, which provides a built-in 9,600 bit/sec step-down modem for a document transmission speed of 15 sec/page.

The product is a desktop digital facsimile transceiver that incorporates automatic broadcast functions via programmable memory.

Some features include memory storage of up to 100 telephone numbers for autodialing; an assigned three-digit code for accessing stored telephone numbers; and a redialing sequence if a remote terminal fails to accept a telephone call from the transmitting facility, the vendor said. The price is $6,200.

Rapicom, 7 Kingsbridge Road, Fairfield, N.J 07006.

DATA SWITCH CORP.
Model 600

Data Switch Corp. has introduced the Model 600 data processing switch designed for the one- or two-IBM or compatible CPU environment.

The Model 600 handles data throughput speeds of up to 8M byte/sec and supports data streaming. Synchronous switching allows switching onto and off of an active channel without interrupting CPU operations, the vendor said.

All equipment interconnections are displayed on the Model 600 control panel. Key-and-lock security is provided to prevent unauthorized configuration changes. The product also has a diagnostic display and built-in signal generator for monitoring signals passing through attached channels, according to the vendor. Its price is $25,700.

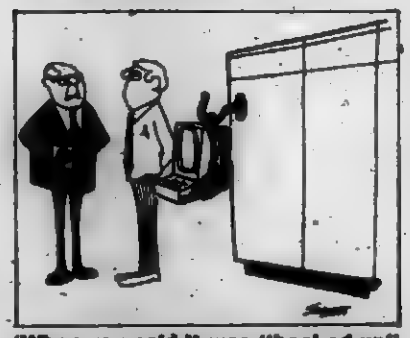
Data Switch, 444 Westport Ave., Norwalk, Conn. 06851.

WICAT SYSTEMS, INC.
ICI board

Wicat Systems, Inc. has announced an intelligent communications interface (ICI) board for use with the company's multibus product line (Systems 150, 155 and 169).

The ICI board features a local Motorola, Inc. 68000 processor dedicated to handling character I/O and contains 16K bytes of random-access memory for local program and data storage. It can support a maximum of eight RS-232 asynchronous I/O ports and performs data I/O at 9,600 bit/sec on all ports simultaneously, the vendor said. Prices range from $1,295 to $2,870.

Wicat Systems, P.O. Box 539, 1875 South State, Orem, Utah 84057.



"When you said it was "hooked up" to the mainframe, I thought you meant . . .

ADVANCED SYSTEMS CONCEPTS, INC.
AMI

Advanced Systems Concepts, Inc. has announced the AMI set of devices that allow from eight to 32 RS-232 data lines on a demand basis to transmit to one RS-232 output port.

The units can be used with bar code readers, optical character readers, hand-held terminals, word processing workstations or production line monitors.

Units simultaneously monitor all input lines. Transmission is bidirectional, and rates from 150 to 19.2K bit/sec are supported, the vendor said. Prices range from $1,843 to $2,643.

Advanced Systems Concepts, 385 N. Lake Ave., Pasadena, Calif. 91101.

Alaskanet now operational

ANCHORAGE, Alaska — Alaskanet, the first Alaska-based public packet data communications network, became operational in early January.

Supplied by Tymnet, Inc., the $2 million network provides statewide access through sites in Anchorage, Fairbanks, Juneau and Prudhoe Bay. An additional location in Seattle gives direct access from the 48 continental states.

Alaskanet is owned by Alascom, the operator of telecommunications services in Alaska. It was installed in seven months and consists of 17 interconnected nodes.

The network nodes provide host computer and terminal interfaces, switching, data flow and error control, user access and routing, remote monitoring and control and the recording of accounting information and other functions.

The primary "supervisor," a computer that selects the most efficient path from data source to destination, together with the network monitor and control system make up the network control center in Anchorage. A backup supervisor is located in Fairbanks. The system includes a remote monitor, control-diagnostic capabilities of the node and modem systems and 24-hour staffing at the control facility.

How to load your 38 for maximum MRP performance

Not many System/38 users know how. Perhaps you already found that out by using another system. If this is your first time, check out the features that are important to you. Our users enjoy the benefits of a closed-loop MRP II system that allows direct access for anyone to all the information stored. We have a query facility that lets you generate user reports. And we utilize an advanced data base architecture which increases programmer productivity, making changes needed for expansion simple and economical. We even have a PC link which lets you transfer information to your IBM Personal Computer for interaction with popular planning micro products such as 1-2-3® from Lotus.®

Loaded with RMS/38 the potent IBM System/38 can make your business hum with the precision these economic times demand. Loaded with anything else you may have to settle for second best. In the fiercely competitive arena for manufacturing management efficiency, where survival depends on increased productivity—and profits—the software system you use can spell the difference between satisfaction or frustration, maybe even success or failure.

Only RMS/38 has 15 powerful applications to provide you with all the ammunition you'll ever need for total control: Control not only of manufacturing but all those vital support functions as well, including distribution and finance. Total software...RMS/38!

Reduce inventory; eliminate parts shortages: acquire time for skillful buying; schedule production based on demand, not parts availability; determine whether to buy or build needed components; improve part number, inventory, and routing accuracy; and order in time for delivery on time. You can with RMS/38.

If your present MRP system, whether manual or automated, represents something less than a total integration of business and manufacturing systems; if it doesn't offer the distribution and financial support of closed-loop MRP II; if it doesn't offer you control in an unpredictable environment, then maybe it's time you investigated the building block software of RMS/38.

For a free demonstration or more information, contact PCR, Professional Computer Resources, 2021 Midwest Road, Oak Brook, IL 60521 (near Chicago). Also in New York, San Francisco and Los Angeles.

SPECIAL REPORT

Avoiding the 'package trap': caution advised

By Howard Lee Bloom
and Richard Schneider
Special to CW

A lot has been written lately about the advantages of using packaged application software. Unfortunately, not enough attention has been given to the problems inherent in applying a generalized application design to a specific organization's unique set of objectives and constraints.

The "package trap" is the idea that the package itself solves the business problem. Its greatest danger is that once an application has been identified as amenable to a package-based solution, too little emphasis will be put on the analysis of the business problems that dictate the need for the system. Some symptoms of the package trap are:

- Users who are not willing to commit time on the front end to discuss their business problems.
- Unwillingness of management information systems staff to discuss the functionality of existing systems to be replaced by the new system and/or those with which it will interface.
- Users, in general, who do not really want to know how the package works.

Adaptations must be made to the systems development life cycle to facilitate a package-based solution. Some of the ideas expressed here are broadly applicable to all package-based implementations, while some are more narrowly focused on those systems that require a significant amount of package customization.

The first and probably most important step is to select a project team whose members have previously implemented large-scale application packages. The team can be nearly invaluable, particularly if the system requires a significant degree of customization.

Another benefit of using people with specific package experience is their knowledge of the vendor's support organization and the degree and kind of technical support the vendor is able to provide.

During the project's concept definition phase, the recognition and understanding of the business problem is paramount. Guard against "analysis on the periphery," where analysis is only performed on those business functions that appear to be outside the functionality of the package. Recognize that with a less-than-complete understanding of the business purpose of the system, any subsequent need for increased or modified functionality will prove difficult to implement.

'The "package trap" is the idea that the package itself solves the business problem. Its greatest danger is that once an application has been identified as amenable to a package-based solution, too little emphasis will be put on the analysis of the business problems that dictate the need for the system.'

It is never too early in the project to begin the fight against describing the package as a "black box." This syndrome holds that the user puts data into the package and gets results out — how the package works is of no importance. In a situation in which some customization is necessary, the black box approach immediately falls apart. How can a package be modified to accommodate a business function outside the package's scope if the package's structure is not analyzed and understood?

Even beyond the consideration of package modifications in the near term, it is important to look at the package as the basis of future system enhancements. The user must understand what functionality the system will support immediately and what functions the system may be modified to support in the future. The user must also recognize that the relative difficulty of accommodating new features will depend heavily on the package's technical architecture.

One significant opportunity presented by a package-based implementation is the ability to get some software up almost immediately. The vendor's "vanilla" software should be installed as soon as possible on the user's equipment. Once in place, this baseline software can be used to perform a wide array of functions, from modeling the production environment for hardware and communications analyses to prototyping user interfaces.

A corollary benefit of installing the package sooner is that it may be tested sooner. Do not assume that since a particular piece of software is in operation at several sites it will not contain bugs or undocumented features. A healthy dose of skepticism pays dividends. Develop a set of representative test data, and subject the "vanilla" package to thorough testing.

Structure the project's development plan so as to keep the software vendor off the critical path. Experience shows that vendors often cannot respond to subtle software problems without significant lead time. You also cannot rely on the vendor to describe the business implications of his software architecture. The project team members with previous experience with the vendor's package will be the best insurance against mismatches here.

When designing modifications and enhancements to software packages, there are a few subtleties to keep in mind. To achieve the true cost/benefit of a package-based application, efforts should be made to minimize the amount of modification. This approach will frequently require the user to choose between restructuring existing procedures to work with the package and customizing the package to work with existing procedures. Your efforts will be rewarded with substantially reduced development risk and long-term reliability and maintainability. During the system design phase, provision should be made for the way in which future vendor releases will be incorporated into the system.

Extensive testing is just as necessary for package-based applications as for custom systems. While the classic unit- or module-level test is not truly applicable to unchanged portions of the software package, it is appropriate for modules containing new or modified code. Consequently, a test plan should be developed during the system design phase which addresses the modular design of the new system as well as the business function it is meant to serve. It is crucial that the user participate heavily in all phases of testing.

Generally, vendor-supplied packages come equipped with some manner of user-oriented documentation. Significant savings may be achieved by incorporating that documentation into the system's user manual.

Structured walk-throughs are also a necessity; even more so when they address modifications to the package. These design walk-throughs should include not only the project development team, but also the system's immediate users and those in the DP organization who will be charged with maintaining the new system. Accelerate the development of modules that are to interface with existing systems.

Because it is prudent to keep the vendor and his product support staff off the project's critical path, it is also important to establish an error-analysis approach that exhausts all other possible sources for an error before turning to the vendor.

Bloom is a senior principal and Schneider is a principal with American Management Systems, Inc., in Arlington, Va.

SPECIAL REPORT

Analyze needs before selecting packages

Requirements analysis valuable to modeling business functions

By A. E. Popek
Special to CW

Correctly defining and analyzing current and future business requirements is the best way to identify, select and implement application software packages effectively.

Although requirements analysis technology has been used traditionally for system and application development, the technology's methods for modeling business functions and data requirements are equally valuable for identifying or evaluating application software solutions.

Unfortunately, in many cases, packages are purchased to solve symptoms of much greater, unrecognized business problems. Data processing departments are now finding it necessary to follow a disciplined set of analytical procedures before and during the selection process. This procedure should include analyzing the functional and informational requirements that the package will address, identifying available packages that suit these needs, comparing the packages' capabilities with the defined requirements, identifying the costs for modifying the best-suited software, if necessary, and comparing the software's benefits to its cost.

The goal of requirements analysis is to create guidelines. These are derived by analyzing both the business area needing a solution and the application software candidates. The results of this analysis process can be used to compare the ability of the packaged software to solve the problem at hand. The guidelines also can be used to form an information base for computer applications solutions not yet existing.

The data processing department should begin to determine business requirements by conducting a systematic series of interviews with users. Following extensive interviewing, six tools can be used to model and analyze the functional and data requirements. These tools include global and detailed hierarchical models, information flow diagrams, a function/data matrix, data structure diagrams and a relational model.

Each model and each diagram builds on the analysis conducted with the previous model. The new models, created in proper sequence, verify the accuracy of previous models.

The first step in this analysis process is to create a hierarchical model that represents an overview of the business area or software package being studied. The hierarchical model reduces the area being studied to the functions it performs and depicts these functions graphically.

For example, in analyzing a warehouse's processes, the functions associated with buying parts and tracking vendors are organized graphically with the subfunctions of each process listed in a hierarchical model (Figure 1).

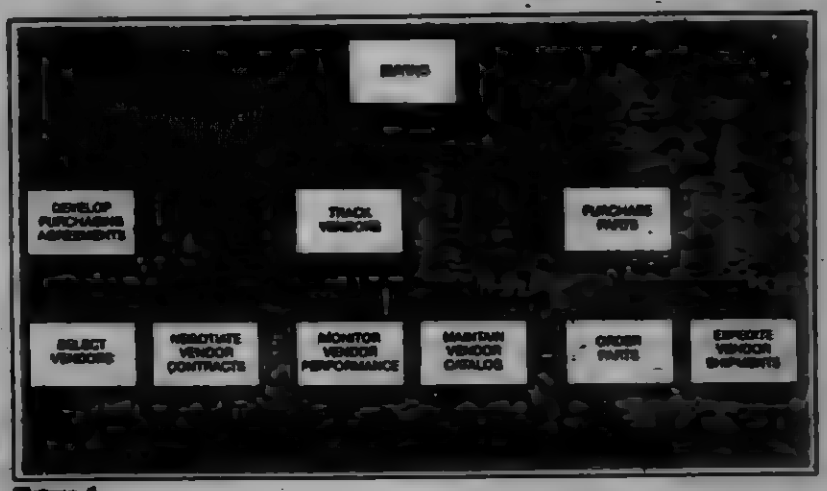

Figure 1

'The goal of requirements analysis is to create guidelines. These are derived by analyzing both the business area needing a solution and the application software candidates. The results of this analysis process can be used to compare the ability of the packaged software to solve the problem at hand.'

The functional components described in the hierarchical model are now used to create an information flow diagram. The information flow diagram graphically illustrates the relationships between business functions, the information, materials and data these functions use and internal and outside agents affecting that information.

For example, in purchasing parts, a purchase order for a vendor is one piece of information. The vendor order file is listed as an information stock. An information flow diagram graphically labels the function and stores it and both inside and outside agents to show the flow of information among them.

The information flow diagram is also useful in describing the relationship between the functions that computer applications should support and the information used by the functions to generate outputs. Guidelines for evaluating software packages can thus be established.

The requirements analysis process includes detailed steps for analyzing the models and diagrams once they are created. This procedure includes checking for problem areas such as functional overlapping and informational bottlenecks. If a problem is found in a diagram or model, the correction is then incorporated into all previous models.

Next, the information in the first two models is summarized in the function/data matrix that shows how each function creates or uses the identified data (Figure 2). For example, in analyzing the buying model, taking orders creates a customer order document, while answering customer inquiries uses this customer order document. In a correctly organized business, if a function creates data, another should use it. If there is a different situation, this is a sign that a problem exists.

To understand further the operation of a function, the detailed hierarchical model selects one functional component and reduces that to detailed procedures, events, conditions and decisions associated with that activity.

For example, to order parts, all the processes associated with this activity, such as getting parts for reordering, setting shipping instructions and filing purchasing orders, are represented in a hierarchical model. This detailed activity model thus creates precise specifications that can be used as criteria for comparing available software.

To take a more detailed look at the information the functions use, the data structure diagram takes actual data items, such as a vendor purchase order, and describes all their contents, such as vendor name, buyer name, purchase order number and purchase order date. As with the detailed activity model, this information is then depicted in a hierarchical model.

These data structure diagrams are then used to form a relational model, which is organized in table form. A relational model, such as one for all vendor information, consists of information that relates to each data item and illustrates the relationships between this data.

In application development projects, these detail-level models are a prerequisite for computer application design and, therefore, serve as an effective comparison tool. They also provide a base for sharing data between applications.

Once this modeling and analysis procedure is completed, a business in search of an appropriate software package knows exactly what functions the software must satisfy, what data is involved, how those functions relate to the data and how that data relates to other data within the business. In a broader sense, the business knows more about itself, about its problems and about how an application package can both help with those problems and operate with other existing computerized applications.

After the appropriate software candidates have been chosen, they are analyzed again using the same procedures. The specific requirements that each satisfies now can be compared and the best candidates chosen. The cost of modification is also calculated if that application package cannot solve all the problems in a designated area.

Developing an application software solution is greatly simplified using the technique of analyzing the business according to its detailed functional and informational needs. On the other hand, a business may discover after completing this comprehensive requirements analysis that a computerized solution is not necessary and that the problem can be rectified by other means.

Popek is executive vice-president of Technology Information Products Corp.

Applications shopping: Don't buy until it fits

Software should enhance, not revamp, operations

By Harvey H. Boyle
Special to CW!

When you are in the market for software, it seems that everywhere you turn you are barraged with advertisements.

The trade magazines are full of them; professional newsletters abound with new product releases; your mailbox is overflowing with unsolicited advertisements; and salesmen call you on the telephone to convince you of the merits of software you have never heard of and will probably never use. How do you wade through the reams of material available to come up with the software package most suitable to your application?

Researching software packages can be a time-consuming project that could ultimately wear you down to the point of accepting a package that only slightly resembles your original specifications. More than one highly competent decision maker has been reduced to babbling-idiot status after spending time in the software maze.

The main concept behind computerizing a specific area of your operation is to take advantage of the speed and efficiency the computer can provide.

Even the best package on the market is not going to improve a sloppy or misdirected procedure. Only you are capable of doing that. Prepackaged or off-the-shelf software should enhance your current operational procedures.

It should not cause you to revamp an entire department to fit the program more readily. If your current way of doing things is working well, don't stop searching until you find a software package capable of complementing your everyday business transactions.

Software-hardware compatibility

Keep in mind from the start that not all software is compatible with all hardware. This point alone could save you hours of valuable time. To begin, find out if the product that caught your eye is going to run on your present hardware system.

Next, find out how many packages have been sold and installed to date. Most new programs inevitably contain some bugs, so you are usually better off with a time-tested package. Ask for customers' names and phone numbers, and talk to these users. No one is going to give you a better idea of how the software actually works in a real-life situation, and no one is going to tell you more honestly about support, enhancements and overall performance. If you are refused access to present customers, keep looking.

Third, take a careful look at the documentation. If it in any way resembles instructions to the astronauts from National Aeronautics and Space Administration Control, change your mind about the package, unless the end users of the system thrive on highly technical jargon. Never be embarrassed by the fact that you do not understand the documentation.

It is the software vendor's responsibility to provide you with clear, concise and easy-to-understand directions. Don't let your lack of technical expertise be intimidating. Rather, demand documentation that accommodates all levels of computer understanding.

As more and more users voice their displeasure over documentation written for electronics engineers and computer science graduates, more vendors will finally admit that what has been done in the past is no longer acceptable. The price of your software program must include helpful, easy-to-use documentation, or you can eliminate another package from the pack.

Many software packages are available with enhancements at little or no cost to the user. If you are looking at one of them, make sure you have a clear understanding of what type of change is included in the price. Once you deviate from this standard, the cost to you can skyrocket. Before you buy, find out exactly what constitutes an enhancement vs. a more costly modification.

Source code availability

Will the software package you are considering provide you with the source code, or at least the file structure, so that minor changes can be handled by your technical people? If the source code is not provided, can it be purchased separately? Is there any software maintenance contract required, or is free customer support included on an ongoing basis? Is training necessary and if so, where is the training to take place. Who pays for the cost of training — is it included in the price?

If you are looking at one or more software packages and hoping to tie one to another, as is often the case with word processing packages, will they interface with one another? Can interface compatibility be designed by one of the vendors. How much will it cost?

Only by answering these questions can you find the solution to your specific software problems.

Boyle is a marketing representative for Whelan Associates, Inc., a computer systems consulting firm located in Spring House, Pa.

See Why Crwth Leads End User Training

1. COMPLETE CURRICULUM

Offering the only full curriculum of CBT courses for the End User, Crwth's product line ranges from computer literacy through fourth generation language courses. Crwth supports their material with continual updates and is backed by a knowledgeable team of professionals.

2. AUTHORED BY GARY DeWARD BROWN

Crwth provides the most experienced writing staff in the industry. Gary DeWard Brown, whose books include System/370 JCL, Beyond COBOL, and Surviving with Financial Application Packages, directs the Crwth writing staff and authors many of the courses.

3. SATISFACTION GUARANTEED

Crwth offers all its courses on a FREE TRIAL basis. Crwth is happy to make this guaranteed satisfaction offer because of confidence in their product. Each new course is tested extensively before it is made available to the public. If you are not 100% satisfied, just return to Crwth—NO CHARGE.

4. THE INFORMATION CENTER PEOPLE

As the Info Center has grown from concept to reality, Crwth has been there with support, guidance and quality courseware. Facilitating this phenomenal growth with computer based training, Crwth has earned its nickname—The Information Center People.

SPECIAL REPORT

Don't expect magic from packaged software

By John R. Wiek
Special to CW3

Applications packages have overcome one bad reputation — the not-invented-here syndrome — only to get another bad rap: Sometimes they fail, and worse. Sometimes they fail and use up a lot of time, money and people in the process.

There are many reasons for the failure of package solutions, but the reasons boil down to one simple truth: Packages are sometimes used to relieve an organization of its responsibility to do some aspect of the job of implementing an information system. But packages are not magic; they do not implement themselves, and they are not free from problems.

Many organizations find that applications packages are a valid solution to their information processing needs.

However, packages are not a panacea for the array of data processing problems to which they're often applied, such as multiple-year applications backlogs, shortages of skilled developers, long development lead times and the high cost of in-house development.

The following rules may help you avoid many of the mistakes and false assumptions that organizations make when choosing an applications package.

Analyze problem

Don't decide to buy a package until the problem has been analyzed. If you haven't gone through the analysis phase of the development cycle, how do you really know what kind of application needs to be developed? You can't solve any problem effectively until you know what problem you're solving.

There is a corollary to this rule: Don't assume the package vendor has done the analysis for you. It can be very comforting to think that the vendor has analyzed the problem. How else could the package have been created?

But the vendor has not analyzed *your* organization. You must answer these important operational questions: What procedures do you follow? How do you intend to modify them? What data do you use to operate your business? How do you define that data? You must know the answers if you are to make a good decision on which, if any, package is appropriate.

Make vs. buy

After this phase has been completed, you are ready to perform a make-vs.-buy analysis, and a third rule comes into play. Don't decide which package to buy until you are sure you need a package.

All too often a premature decision to buy a package is coupled with a decision to buy a specific package.

Consider all options, and perform a complete make-vs.-buy analysis, which will result in two decisions: That buying a package is either better or worse than in-house development and that, if buying is better, a specific package is better than the others and should be selected.

Wrong package

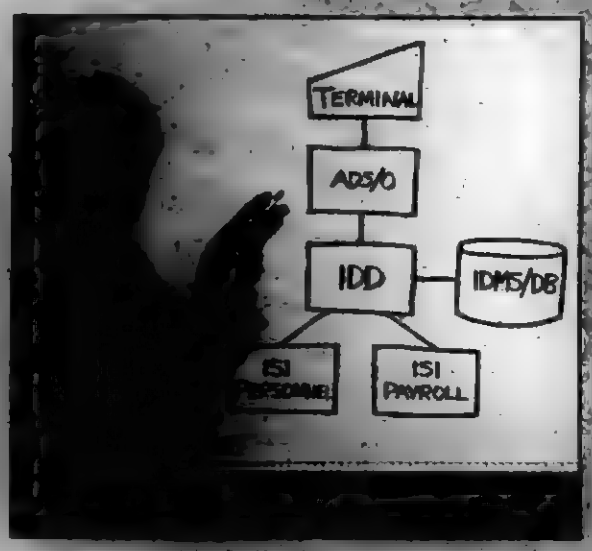
Don't assume a package will take less time, cost less money or require fewer resources. The wrong package, applied to the wrong problem, can waste enormous amounts of time and cost huge sums of money. Applications vendors can present any number of horror stories in which companies spend enormous sums of money and extended periods of time trying to implement the wrong package.

Also, don't assume buying a package relieves you of the responsibility to learn an application. Package acquisition is often viewed as a way

See ANALYSIS SR/8

No waiting.
No kidding.

"Today we are installing the industry's only native IDMS Payroll/Personnel System using ADS/O."
Bob Tinnon, IST Vice President of Product Management



Finally. The one and only completely native IDMS human resource solution. All of the dialogue screens, schemas and files reside on IDD. The entire on-line system has been developed using ADS/O exclusively. And there are no interface programs.

Now, you can receive it. Just like Ford Motor Company, Harvard University, TRW-ESL, Fluor Engineers, Inc. and the City University of New York. And these are many more.

We have the industry's most advanced system architecture. We offer more on-line (real-time) payroll/personnel expertise than any other vendor. We deliver the best system documentation in the business. We're committed to customer service and we're ready and willing to be on-site to help clients with any aspect of their installation. In addition to IDMS, our products run under IMS, NATURAL/ADABAS, CICS/VSAM and others. We'll be glad to tell you more. Just call.

Setting the standards for excellence.

SPECIAL REPORT

Application myths hinder implemention

By Ravi Nayar,
Gary Silvera and John Ward
Special to CW

In recent years, organizations have frequently turned to packaged software as a solution to their business systems needs, and industry experts predict this trend will continue well into the future.

While packaged software may offer significant benefits over custom-developed systems, organizations frequently encounter unique types of implementation challenges. The following are 10 common myths that have often hindered the implementation of packaged software.

Myth No. 1: Detailed implementation planning is a waste of time.

Organizations justify this belief by asserting that planning is unnecessary since the programs are already written. This is simply not true. Although the programs are written, all other tasks normally associated with systems development and implementation remain.

Further, the package implementation plan should be developed as more than just a checklist. It should include tasks, measurable goals, responsibilities and due dates. The implementation plan assists in measuring progress and is especially useful when specific tasks are not completed on time and revised target dates need to be established.

Myth No. 2: Support provided by the vendor will be sufficient to implement the system within the required time frame.

Vendors generally support their products well. However, unless the organization has contracted for a complete solution, where the vendor performs all aspects of systems implementation, the responsibility for implementing a successful system rests with the customer. This result cannot be achieved solely with vendor support because most vendors simply do not maintain the resources to support numerous implementations. User and DP involvement are required elements for a successful package implementation.

Myth No. 3: Since the programs are already written, nothing can go wrong.

Because packaged programs are usually written with optional features, everything can go wrong. Thus, many decisions must be made regarding utilization of these optional features. These decisions include developing classification schemes, reporting relationships, using report writers and screen generators, processing options, processing error rejections and ensuring security. User procedures should also be developed. The conversion effort itself involves many key elements, including building or converting files and developing data processing operating procedures.

Myth No. 4: If the package doesn't fit, modify it.

Before any decision is made to modify the package code, the organization should first determine whether the modification is truly necessary or is not implemented merely to install a nice feature that the old system happened to provide. If it is determined that a particular feature is required and would satisfy a legitimate business need, two alternatives to modifying the package should first be considered.

First, attempt to effect the modification through manipulation of the package's parameters and switches. Most packages have been designed to incorporate considerable flexibility through parameters, tables, switches and tools such as report writers and screen generators. If the requirements cannot be met with this approach, then consider a front-end or back-end approach as an alternative. This involves developing programs to perform the needed function external to the software package. The custom-developed programs either feed data to the software package or extract data from the software package.

Myth No. 5: Since a computer will be used, the DP department must be responsible for the project.

While active participation by the DP department is important, user involvement is more important. The user must feel comfortable with the package and all the related implementation decisions, because, in the final analysis, the package will become the user's system.

Myth No. 6: Since the programs are already written, only junior-level personnel need be assigned to the implementation project.

Junior-level personnel may be least suited for the implementation project. Typically these packages perform functions critical to the successful operation of the organization. Thus, decisions made throughout a package implementation will affect the way the business operates well into the future. It is important that supervisory-level personnel be actively involved throughout the implementation.

Myth No. 7: A project manager is not necessary.

A project manager, preferably from the user side, is an essential in-

See MYTH SR/8

We just made WORD-11 a native of VAX.

That's right. At Data Processing Design, we've just upgraded our popular WORD-11™ word processing package for DEC™ systems to native mode for VAX.™

Now users of DEC systems can enjoy even faster, more efficient operation. The Version 3.0 WORD-11 package provides easier, expanded system management, and supports new output devices—including laser printers.

By converting WORD-11 from Macro-11™ to full native Macro-32™ mode, we increased its efficiency and made it possible for you to optimize your system resources.

There are more enhancements, too. The new package includes scientific character set support for VT100™ terminals and the Diablo 630 ECS™ printer. Journaling. Military-style paragraph numbering to extend the existing standard outline paragraph numbering system. An advanced system management utility. And support for the Xerox 2700™ laser printer.

And, of course, Version 3.0 still has all the features that over 1500 computer installations worldwide depend on. Such as list processing, built-in dictionaries, automatic table of contents and footnoting, grammatical editing keys, and more.

For more information about WORD-11 Version 3.0, contact us at DPD. We'll be happy to provide complete details.

And point out the benefits of going native.

ANALYSIS from SR/6

to cope with an inexperienced DP staff. Successful package implementation requires DP expertise in the applications area on how the package works and how it meets the needs of the organization.

Buying a package sometimes aggravates the problem of applications knowledge. You must not only learn how the organization works in the analysis phase, but also how the package works and how it can be adapted to the organization.

The problem of adaptation raises another issue. Don't over-modify a package. If you have to make significant changes to a package, it's probably the wrong package. Try to find a package that doesn't need to be heavily modified to meet your needs. Over-modification has many problems, including the cost of the modifications. Make sure you take this into account in your make-vs.-buy analysis.

Another important issue is who will make the modifications. If you modify the package at your organization, remember the cost of your time. If the vendor modifies it, make sure you add not only the cost for modification, but also the assignment of your staff to present your applications needs to the vendor.

Take into account the effect that changes have on vendor documentation. Also, be sure you understand the effect modifications have on vendor-supplied package maintenance and enhancements. If you are going to modify a system to the extent that vendor-supplied maintenance is no longer useful, that additional cost must be considered in your analysis also. Be sure you have carefully considered the implications of assuming the responsibility for all future package maintenance.

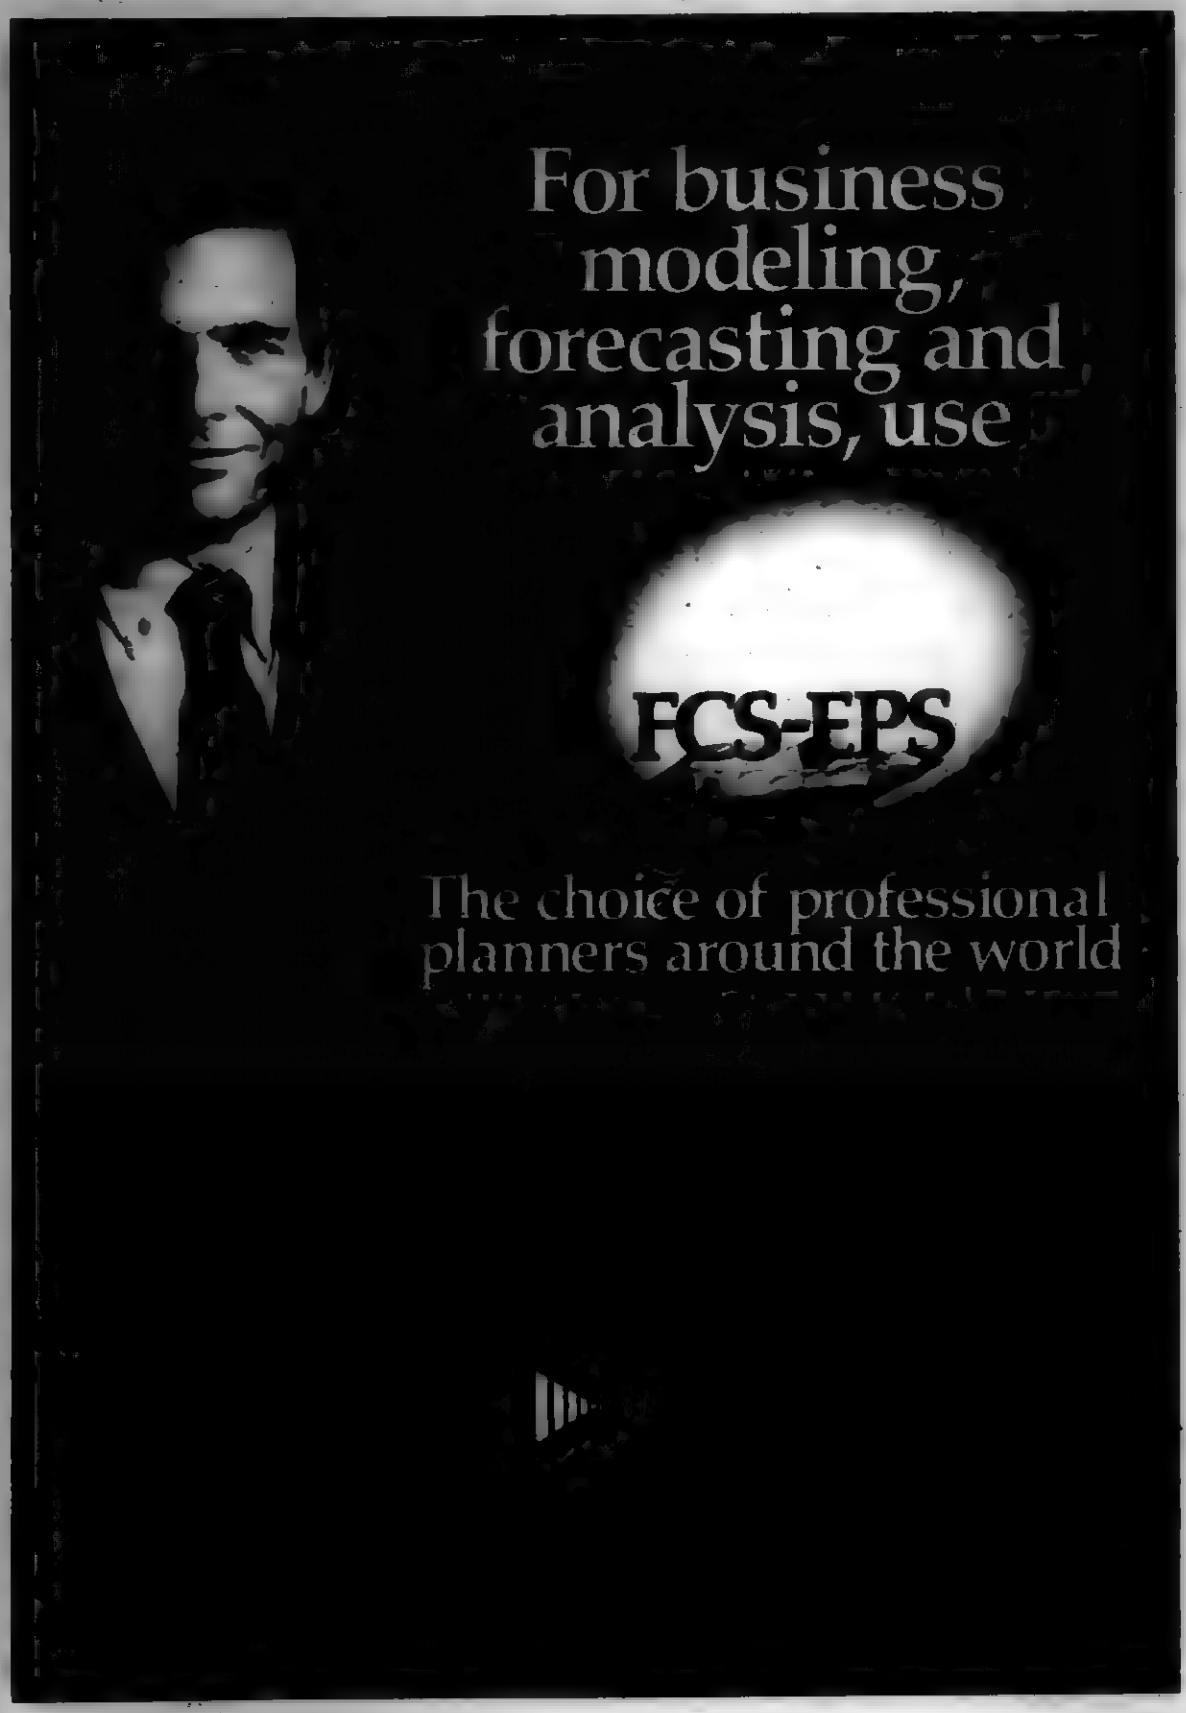
Don't ignore or underestimate the cost and time associated with education of users and the DP staff. Don't ignore education; you will pay the price eventually.

There can be other hidden package impacts that might not be immediately obvious. What effect does package acquisition have on data administration and efforts to build an integrated data base? The effects here may be subtle and the costs difficult to assess. However, you will pay a price down the road if a portion of corporate data is managed using tools that are incompatible with your other data bases.

Further, the data may not be controlled and secured consistently with your other data. Data from a key application may not be available through the set of tools you have provided to your users in your corporate information center. What price do you pay for not being able to integrate information easily from different vendors' packages to meet new business requirements?

The decision to buy a package involves hard work, careful analysis, an understanding of your organization and consideration of both short- and long-term effects. If approached correctly, a package can be a good solution to your organization's information processing needs. If approached incorrectly, a package can create problems as bad as or worse than the crisis it was intended to avert.

Wurk is vice-president for technology and co-founder of DRMS, Inc. of Naperville, Ill.



MYTH from SR/7

gredient for a successful package implementation. The project manager should, at a minimum, serve as an overall coordinator for the project, providing a single point of focus to direct and monitor the project resources.

Myth No. 8: Vendor training is not necessary.

Organizations often wrongly assume that the personnel assigned to the project are experienced in systems implementation and thus don't need any additional training or that vendor-supplied documentation can be used effectively on a self-study basis. As a result, vendor training is sometimes sacrificed in the contract negotiation process.

While vendor-supplied documentation is generally complete and accurate, it is normally intended to serve as a reference tool, supplementing the education available from the vendor. Documentation should not be viewed as a substitute for education. Project team members should receive vendor training, preferably at the vendor's education center.

Myth No. 9: Since the package is installed at hundreds of other companies, a systems test is not necessary.

A systems test is the test performed when the software is physically installed or loaded onto the computer. It should be performed because there are often installation-dependent factors that may make the DP environment unique. The vendor should be present at the time the systems test results are reviewed in order to help validate the results. Don't assume the system will install clean just because it is a package.

Myth No. 10: Since a systems test with vendor-supplied data has been performed, additional user-defined acceptance tests are not necessary.

User-defined acceptance tests are also a crucial ingredient for successful package implementation. The acceptance tests should be conducted after all parameters have been determined and installed. This will ensure that the package will perform the required functions in a manner acceptable to the organization.

SPECIAL REPORT

Use business sense when evaluating packages

By Arthur Wilmer
Special to CW

Application software packages exist to enhance, expedite and automate the processing needs of end users.

The reasons to buy and use an application package are time, money and effectiveness. Compared to the chief alternative, a custom-developed system, an application package can be up and running much sooner at a lower cost than a large development effort. The drawbacks are doubts about satisfying the company's particular needs, adaptability and the unknown factors that lie between promise and reality. These are all pragmatic considerations, but packages are often evaluated, selected and implemented in non-business-like ways that obscure their purposes.

Users typically go through a number of stages, including frustration and incapacity with their current system, justification and persuasion for a new system, hard work at coping with the old while contributing to the new and lots of waiting and placation while waiting for the shiny new system. Excessively high expectations can't help but lead to dissatisfaction and disappointment.

Rigorous efforts

The rigorous efforts involved in identifying and defining system requirements portend a product that will answer all of those needs. Packages are often sought because the scope and complexity of the needed system cannot be developed and delivered by in-house DP within a tolerable time frame. However, to expect a package to meet all requirements is folly. Packages are generalized software adaptable to many users, environments and needs. Because they are marketed widely, they are inherently less functional than in-house systems. They represent a compromise wherein a company foregoes some of its requirements to get a functioning system operational sooner.

Determining how much to forego with a package is an individual decision. As a yardstick, though, a good package should meet 90% to 95% of a company's requirements. An additional problem concerns the speed of implementation. In the back of most users' minds is the expectation that a package will be up and running immediately. This is unrealistic considering the time-consuming labors of loading data, learning the product, establishing procedures and controls and acclimating the staff to the product.

The decision to buy or investigate packages often breeds long, drawn-out analyses replete with committees and meetings. Vendors are analyzed, scrutinized and visited, the charter being to find the one and only package that's best for the company. Evaluation is a vital task and needs to be done well. If one package is clearly superior, that should be evident. Packages compare like most products in that they usually have contrasting advantages and disadvantages, so there often is no one package that is just right — yet many that will be suitable.

Prolonging evaluation exemplifies the law of diminishing returns in regard to time, the most precious commodity. This is time management, pure and simple. Don't forget the cost in labor of all those people at all those meetings. In cases where the choice is to build or buy rather than which to buy, the same warning applies with an added guideline: In-house development should be chosen only when the requirements are highly specialized.

Price is often an issue, not so much because of the expense itself but as a justifica-

IBM System 34/36 business software: 9,000 companies choose Para Research

In just three years Para Research has become the world's largest supplier of IBM System 34/36 software. The quality and reliability that's built into our software has made it a standard among IBM users. It's proven in 9,000 companies ranging from the Fortune 500 to companies with 50 employees.

Our software is backed by comprehensive documentation and responsive customer support. And it's surprisingly inexpensive. Each system is user friendly, and provides the quick response and accurate reports you need to improve every part of your business.

New Technology – IBM/36

IBM's new System/36 offers a powerful, versatile alternative to other minicomputers or even the IBM personal computer. It's designed as a small business system, but can support up to 30 terminals. The key to the System/36 is advanced technology. For example, multiple internal processors control specific system components and functions – such as work stations, printers, communication lines, disk and tape drives.

A single computer processor can do only one thing at a time. With the multiple processor design of the System/36, all processors can work concurrently on their own specific tasks. This means that the entire system can do more than one internal processor managing all operations. A 2-byte data path speeds data retrieval from memory. Built-in error checking and recovery provide maximum reliability. Extensive self-diagnostic and problem solving features help users troubleshoot and diagnose problems on their own. It all adds up to one of the most thoroughly tested and reliable IBM systems ever.

Word Processing

Easy Text is an easy-to-use system with on-line documentation. "How to Use Easy Text", a self-instructional feature, provides on-screen instructions. Users with little or no experience can generate letters, memos, reports, mass mailings almost immediately.

Create documents up to 99,000 lines or 2,200 paragraphs of text. Create page designs up to 132 print positions wide. Scan for key words and phrases, move text within a document, include text from one document in another. Tabbing, automatic centering, manual hyphenation, boldface printing, underlines, long-line entry, optional new page printing and delete option safeguards. With Easy Text, every work station on your computer can function as a word processor. $750. Free demonstration diskette available for 30 days.

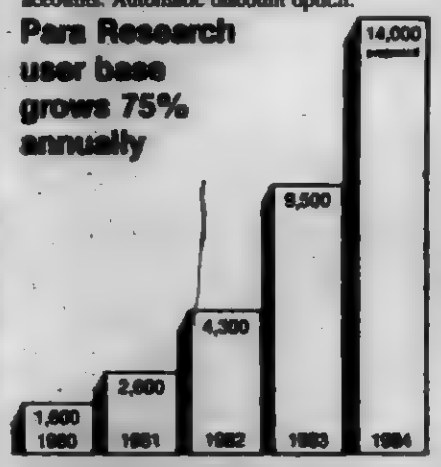
Financial Modeling

Easy Calc combines the best features of the best electronic worksheets. Use it for budgeting, cash flow analysis and sales forecasting with improved ease and power. Includes return on investment, depreciation and amortization. Create a spreadsheet in only 15 minutes. Create a format once, and then store it for future use.

Build formulas of up to 96 characters. Create worksheets with 52 columns and 999 rows. Columns vary from 8 to 14 characters. Consolidate 998 worksheets into one. Print up to nine integers to the left of the decimal. That's $999,999,999.99! Built-in error detection pinpoints exact error position. Designed for multi-work station environments. Choice of on-line or batch calculations. Learn to use Easy Calc in only a few short hours. $1,200. Free demonstration diskette available for 30 days.

Accounts Payable

Handles every facet of accounts payable – from invoicing through issuance of checks. Management reports provide up-to-date information on all payables. New features allow you to: take a discount amount after discount date, select a single batch of vouchers for updating to open payables file; report status of every vendor on a vendor analysis report. Multiple line distribution for up to 19 accounts. Automatic discount optio.n.



Full reporting for audit trails and processing of multiple accounting periods. System flags vouchers for payment. $1,500.

General Ledger

A multi-company system that can accommodate up to 99 companies and departments. Enables you to run different periods and different accounting years concurrently. Offers a variety of reporting options. Strategic Ratio, an added menu option, creates 30 different financial ratios to analyze assets, liabilities and equity. New features include: Run each company in the GL independently. Create a unique chart of accounts, run different year-end closings, print financial statements and reports for each company.

Design your own report formats. Maintain a file, run proof list from the same menu. New error message program locates and describes any problems. New reports include balance sheets and income statements broken down by department with percents and comparisons. $1,500.

Payroll

Payroll provides up-to-date costs of specific tasks for every department in your company. Employee master files for salary, hours and other payroll items are easy to maintain. User-friendly prompts provide complete instructions for each procedure. Up to 9 deduction types for each employee.

Multiple payroll data reports including check register, QTD 941s and 10 other reports. Runs payroll for 99 companies and any combination of companies. $2,000.

Fixed Assets

A complete depreciation scheduling program that produces two-year projections. Figures depreciation over user-specified fiscal periods based on the 1982 Economic Recovery Act using the Accelerated Cost Recovery System, the 1983 Reduced Basis ACRS or eight other standard depreciation methods. Separate depreciation for tax and book. Automatically produces general ledger entries. Accepts fully expensed or non-depreciable items for asset inventory control. A series of management reports tracks depreciation schedules, reports changes in those schedules, gives projections over a two-year period and reports assets subject to investment credit. $1,500.

Accounts Receivable

Available in open item or balance forward methods. For both methods, the system has cycle billing capability, allows printing of all statements on file or statements for specific customers. Provides up-to-date status of customer records, including current balance, aging, credit checking. Many report formats. Maintains a rolling 12- or 13-period history of customer activity. $1,500.

Billing

Includes order entry and invoicing as well as analysis of inventory and sale of items within your company. You can generate picking ticket listings by warehouse or item number and maintain data on orders before shipping and invoicing. The system places order quantities in reserve until you confirm the order, then reduces the quantity on hand. This allows you to enter freight charges before the invoice is sent. $1,500.

Inventory

Gives your company complete control over inventory, both on hand and on order. It provides nine reports to let you know the status of every item at any time. Inventory costs based on four methods: LIFO, FIFO, average cost and replacement cost. Up to 999 cost levels to value your inventory on a FIFO and LIFO basis. Standard unit price plus five alternate prices per item. $1,500.

FREE Documentation

For any program you're interested in, we'll send you a perfect bound book of documentation. These books are printed on high quality paper and contain between 100 and 300 pages. Each book is filled with detailed file layouts, flow charts, screens and reports that take you through each program step-by-step. All Para Research software comes with a 30-day money-back guarantee.

To get your free manuals for information on our line of IBM/36 accounting systems, call or write: Software Sales, Dept. CW17, Para Research Inc., 85 Eastern Avenue, Gloucester, MA 01930 (617) 283-3438.

SPECIAL REPORT

System helps valve maker control inventory

Percentage of orders filled on time skyrocketed

ROGERS, Ark. — Inventory accuracy and the percentage of customer orders filled on time have increased dramatically, while the dollar volume of aggregate finished goods and component inventory has plummeted since the Crane Co. implemented a new manufacturing system in its plant here.

Crane, a division of the Valves and Fittings Division of Crane USA, manufactures bronze, stainless steel and iron valves. Before Crane implemented the new software package, all of its manufacturing records were kept on cards and updated by hand. Workers pulling parts for a rush order sometimes forgot to account for them on the card file. And if a card was lost, the entire record was lost.

Mistakes caused huge inventory buildups at Crane. Often the purchasing department reordered an item simply because a vendor was giving a price break. "The inventory was unreal," Miriam Von Struble, purchasing manager, explained. "There was a 64-year supply on some things. And there were always missing items. We had no control."

In addition, she said, parts were not inspected as they were received from vendors. "We spent many hours just retooling parts so we could use them," said Bill Wells, machine shop general foreman.

In 1979 Crane-USA approved a plan to implement a Material Requirements Planning II system at the plant here. In December 1979, Management Science America, Inc.'s Manufacturing System was selected.

"We wanted it straight off the shelf — plain vanilla," said Robert Holiman, who was responsible for evaluating and selecting the software. "We also wanted every module they had to sell."

Once the system was chosen, Crane created a steering committee to establish business procedures compatible with the new software. One of its most important tasks was to create ironclad operating procedures and controls.

Under the new procedures, products would no longer be built without an engineering bill of material and specific manufacturing standards. "We can now provide accurate bills of material that truly represent the way the product is supposed to be built," Joe Weber, engineering manager, maintained.

The parts stockroom was another department where new procedures were implemented. "Now, there's only one way to put the inventory in and one way to take it out," Holiman said.

The receiving department also made changes. Employees are now issued drawings of each part ordered, and parts that do not match specifications are quickly rejected. As a result, suppliers no longer send unsatisfactory parts, Holiman said.

Plant Manager Russell Dutton said the change has had a ripple effect on the rest of the company. "In the assembly department, there are always matched sets of parts when they begin assembling a product," he said.

And in purchasing, according to Von Struble, "We're able to respond to the needs of production much faster now."

Crane's inventory has shot up to 96% accuracy, and the percentage of customer orders filled on time has doubled. Holiman, who became materials manager for Crane when implementation was complete, said Crane reduced its aggregate finished goods and component inventory from $8.5 million to less than $5.1 million in two years.

He attributed part of this improvement to Crane's review of its product line. With the new system, management was able to spot inventory that was not moving, and some of the products were either consolidated or discontinued.

Holiman said it is also simpler to maintain inventory with the new system. Stock receipts, for example, have been reduced from four documents to one.

The final challenge was to communicate the information to Crane's other divisions in different parts of the U.S. "Because the new system makes problems visible, we now use the information it provides in monthly planning meetings with the divisions," said James Pool, the plant's master scheduler. "Each division knows what inventory the other has on hand and plans accordingly."

Now, he said, Crane stays within 10% deviation from the master schedule, predicted production hours and sales forecasts.

Moreover, Holiman said the company is no longer caught by surprise with unexpected problems. "We can see problems ahead of time, and we can actually do something about them," he said.

June Wesley accounts for storeroom contents. Source: Crane Co.

EVALUATE from SR/9

tion for spending cash vs. authorizing in-house labor on applications software. Most companies are not accustomed to buying application software, and management often requires greater justification for what seems to be a large cost item. But when compared with mainframe hardware costs and the alternative of in-house development, application packages are often a good buy. Cost analysis is a key management task, yet basic business management often is forgotten when dealing with the new concept of buying application software.

Packages should be evaluated for functionality and effectiveness. Technical considerations, state-of-the-art factors and efficiency are not unimportant considerations, but they are secondary. What a system does is far more important than how it's done. Users often turn to DP for guidance in evaluation and selection and get an inverted prioritization — technical over functional. The tail is wagging the dog in such cases. User departments are responsible for the data in a system and, therefore, should be responsible for the means of processing that data.

The problems described above are not common to all package users, yet they are typical and frequent. What is common to all of them is that they can and should be dealt with as management problems. The newness of buying application software or the seemingly esoteric complexities of a computer product should not be an obstacle to exercising pragmatic judgment, common sense and sound business management. As users become more proficient in managing data and computerized systems, they will find they have made room for whatever new business problems are out there awaiting them.

Wittner is vice-president for development for Genesys Software Systems, Inc. in Lawrence, Mass.

More and more, personal computers in large organizations are dramatically improving productivity. But there's also a problem involved with this improvement. People are using many different, often incompatible microcomputers, yet they still need to share information, programs, and peripherals.

It's as if everyone had an automobile, but no highways leading to their destination. No traffic signs to follow. No rules of the road. The result? Mass confusion.

Until now, that is. Until Liaison from SofTech Microsystems.

Based on the p-System,™ the Universal Operating System,™ Liaison is a family of network software products that lets you establish a workable, efficient personal computer network. It allows personal computers and users to co-operate and work together so that your organization is altogether more effective. Liaison includes systems software products, such as an operating system, print servers and disk servers as well as development tools. And, a collection of network applications, including a database management package, electronic mail, and more.

Liaison lets you unite many different personal computers in an effective network. 8 and 16-bit machines from virtually all personal computer manufacturers (including IBM,® TI,® Corvus,® and Apple®) can all share programs, all work together, all co-operate.

So if you're tired of your different personal computers driving you to the brink of insanity, give us a call at SofTech Microsystems.

We'll show you how Liaison can get you back on the road to recovery.

SOFTECH MICROSYSTEMS

SPECIAL REPORT

System spices up restaurant's info exchange

With financial software, micro-to-mainframe link

PLEASANTVILLE, N.Y. — Application integration with microcomputer-to-mainframe linking capability was the answer for the daily corporate information requirements of Pizza Hut, Inc.

Pizza Hut, a leading pizza restaurant chain, recently upgraded its existing line of McCormack & Dodge Corp. on-line products to include McCormack & Dodge's recently released Millennium series.

Millennium offers an on-line, integrated systems application environment that incorporates uniform structure and consistent features across all applications, according to a spokesman. This common structure, based on generically defined program functions and reusable code, provides borderless query across all applications, real-time design and update of screens, on-line security to the field level and the optional interactive PC Link, allowing IBM Personal Computer-to-mainframe information exchange.

Now in its 26th year, Pizza Hut has shown healthy growth rates. The chain has restaurants in all 50 states and in 16 foreign markets, and management predicts the company and its franchisees will build a minimum of 200 restaurants per year for the next five years.

In 1979, Pizza Hut replaced all financial systems and accounting functions for its 2,000 company-owned restaurants with McCormack & Dodge software. Beginning with the G/L Plus general ledger system in 1979, Pizza Hut has purchased the A/P Plus accounts payable system, F/A Plus fixed assets system, CPA Plus, capital projects accounting system, H/R Plus human resource system and P/O Plus purchasing information system.

DP requirements

To accommodate data processing requirements that include up to 700,000 journals and 450,000 general ledger master file records, Pizza Hut maintains an IBM 158 and an IBM 3033 running under IBM's OS/MVS operating system. It is now awaiting delivery of an IBM 3081.

Ed Dreher, senior financial project leader for Pizza Hut, reports the company first became interested in the Millennium technology at the 1982 McCormack & Dodge User Conference in New Orleans.

In April 1983, Dreher went to McCormack & Dodge's headquarters in Natick, Mass., for a Millennium demonstration. "From that point on, we wanted to get up on the system as soon as we could," Dreher said.

Millennium's on-line capabilities, borderless query and PC Link were primary considerations for Pizza Hut, Dreher said. "With Millennium, we plan to decrease our closing schedule, partially because of the on-line posting feature," he said. "But also, because of the flexibility of the borderless query, we anticipate not having to run as many batch reports for closing.

"Millennium provides more accurate financial data," he added. "With the on-line, real-time update and query, we are able to see where we are now, as opposed to using data from the batch reports, which may have run the prior week."

Daily reporting requirements also will be reduced, Dreher noted. "For example, we run on-request Auditor [report writer] reports with our G/L Plus system, as well as daily requests for accounts payable, fixed asset and capital project information. Most of these requests should go away with Millennium's on-line inquiry," Dreher said. "We estimated that we spend a fair percentage of time researching one-time inquiries from our field offices. With on-line inquiry, they can look into it themselves."

Millennium's on-line Help documentation was another selling point, Dreher said. "It really talks you through the system. Also, Secure, the multilevel security system provided with the package, gives us the extra security to let us send a lot of functions out to the field offices. Previously, we didn't have the security to let our offices get into that information." With the PC Link, Pizza Hut's field offices can use the microcomputer as a terminal and can do spreadsheet and budgeting at the regional level.

Interacting with non-McCormack & Dodge files is another important facet of Millennium for Pizza Hut, Dreher said. "For example, in our internal systems, we have a hierarchy of Pizza Hut reporting relationships," he noted. "With the foreign file feature of Millennium, we can give our people access to this data without having to write a special on-line inquiry system."

Pizza Hut plans to use a delivery scheduling system using the PC Link to access its order file. After downloading restaurant order information to the Personal Computer, the data can be used for order delivery. Another tentative plan is to use the system to bring in time sheets electronically from the field offices, he said.

"We also can see using the [PC] Link for consolidations," Dreher said. "We download the financial data to the [Personal Computer] and perform the consolidations there. Currently, consolidations are a man-

Before ISSCO

Time is too short to wade through mountains of data. Management wants you to cut the number of printouts without cutting key information.

Fortunately, there's ISSCO. Our graphics software makes it easy to turn a large stack of numbers, in any data format, into concise artist-quality charts and graphs.

But condensing facts and figures is only part of what you can do. ISSCO software is also valuable for presentations. It lets you take data directly from your computers and reproduce it on paper, overhead transparencies or 35mm slides.

And don't think you'll be getting those frazzled images and fuzzy

Single-vendor purchases can lead to horror stories

By Woodrow W. Chamberlain
Special to CW

There is really no need to document the advantages of using packaged software solutions.

In addition to the reduced time factor and cost considerations, the introduction of packaged software often helps to prevent new systems from being introduced which simply automate "business as usual."

However, a dangerous syndrome has been slowly developing within the DP organization relative to application software. It is the feeling that the best option available to a company is to "get the complete solution" from a particular vendor.

More than applications

To support this notion, a variety of vendors exist in the software business today that provide not only application packages such as financial and manufacturing systems, but also complete data bases, decision support systems and micro-to-mainframe links.

The clear-cut message of these vendors and the people who select them is that the up-front integration of a variety of software packages is of more value to the business than the individual functional excellence often provided by independent and separate software application vendors.

This reasoning is both specious and dangerous, since it shortchanges the decision makers in regard to the richness of information that can be provided by purchasing the best functional package available.

Problem is minimal

In truth, the problem of integrating a variety of today's packaged software is minimal. A DP organization that subscribes to the "purchase from one vendor" philosophy is reliving past horror stories about package integration that are no longer valid.

The one-vendor selection provides a more modern horror story. Specifically, it denies user functionality and organizational flexibility in the future because the marriage to a major vendor often results in a continuing erosion of reasonable alternatives.

This loss of flexibility, which is vital to the success of most businesses, cannot be overlooked. DP managers should always make selections based on maintaining maximum flexibility in the event that new technological developments occur. The single-vendor alternative commits a company to the fortunes of a single vendor and suggests that one vendor will be capable of maintaining state-of-the-art knowledge in all areas — an unreasonable supposition at best.

See VENDOR 59/14

New acquisition criteria spurring software changes

By John Connolly Jr.
Special to CW

The most dramatic change in applications software packages in two decades has occurred recently with the emergence of new acquisition criteria. Functional comprehensiveness and degree of functional fit with the acquiring company had been, in many cases, the sole determining factors.

The new criteria are related to the software technology used to implement the system. Senior management will no longer tolerate applications systems that are incompatible, non-integrated, expensive to maintain and difficult to enhance.

Management is looking beyond functional capabilities at any one time to an information strategy that allows applications to work together as a single system, to be tailored to meet unique requirements, to be implemented separately and to access application data for decision support. Above all, this strategy allows one set of software code to satisfy the diverse requirements of all operating departments and all levels of management.

Some of the specific criteria are as follows:

■ *On-line real-time* — The application must be built on advanced data base performance terminal networks and automatic backup and recovery for data integrity.

■ *Horizontal Integration* — All applications systems must work together automatically and be driven by one common data base. The order entry and accounts receivable systems use a single customer data base. The purchasing and accounts payable systems use a single vendor data base. Cash disbursements in accounts payable automatically generate the journal entries for the general ledger.

■ *Vertical Integration* — All applications systems are driven by a user-controlled application dictionary and developed using advance data base tools, such as a fourth-generation language, a report writer, a query language and information network methodologies.

■ *Information Center* — Application end users must have information center capabilities so they can generate their own reports, perform their own ad hoc queries and download summary or detail trend data directly from the application data base to a personal computer.

■ *Decision support systems* — Applications systems must be integrated with an intelligent personal computer-to-mainframe link. End users must have the ability to access the application data base directly and then perform analysis and modeling without having to enter any

VENDOR from SR/13

Carried to its logical extreme, if every manufacturer was to select all its application and operating software from a single vendor, then we could expect the world in the future to have one computer vendor, one software vendor, one car manufacturer and so on.

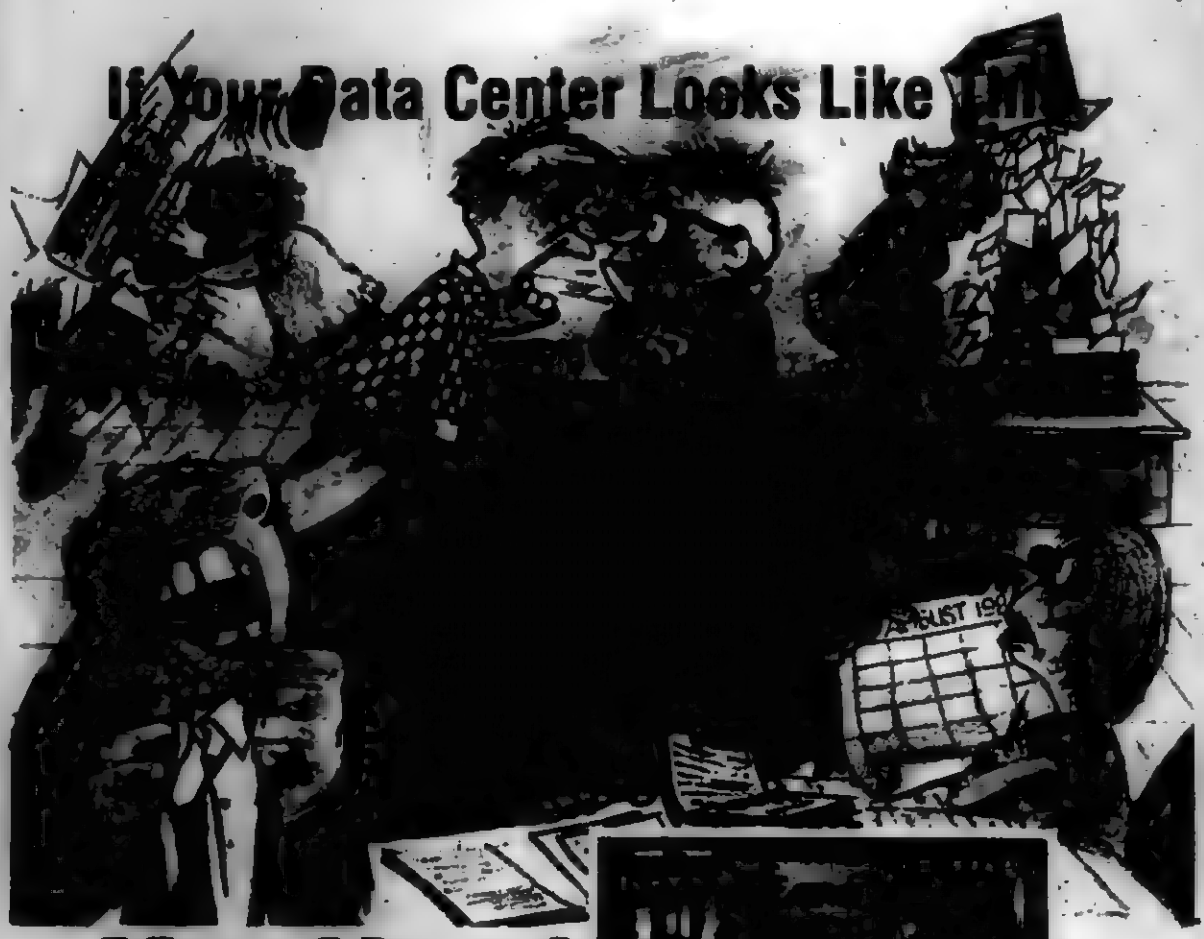
The nurturing of new developments and new products can only be realized by farsighted managers capable of making a decision to select the best products available on the market, forcing the industry to provide state-of-the-art products while allowing a maximum competitive posture in the international business scene.

The key question is why should data processing managers looking at application software behave any differently from their counterparts in computer operations?

They shouldn't, unless they want to be remembered as lacking the vision and the competence to select the right product at the right time, while constantly maintaining the maximum number of options for their organization.

Chamberlain is president of Ruth & Strong Systems Products, Inc.

'This loss of [organizational] flexibility, which is vital to the success of most businesses, cannot be overlooked. DP managers should always make selections based on maintaining maximum flexibility in the event that new technological developments occur. The single-vendor alternative commits a company to the fortunes of a single vendor and suggests that one vendor will be capable of maintaining state-of-the-art knowledge in all areas — an unreasonable supposition at best.'



APEX—Automated Production Control System. APEX is the most comprehensive production planning and workload management system available in today's market. APEX eliminates card handling and reruns due to setup errors, assures correct job sequencing, allows viewing of output before its printed, and provides immediate up-to-date status of all production processing. Some of APEX's powerful features include . . . Flexible Scheduling • Interactive Job Setup • Automatic Job Submission • Automated Restart/Recovery • Online Output Review • Management Reporting • Single Source of Production Information for IBM 370, 303X, 43XX and all PCM's, MVS, VS1 Environments.

If you're looking for ways to avoid the turmoil in production processing, then put APEX to work for you.

CRITERIA from SR/13

data redundantly or learn programming syntax and file structures.

Evolutionary — The applications system must be structured so that new capabilities can be added without conversion of existing code. Future applications must be integrated horizontally without disruption.

Technology integration — The software foundation supporting the application must be built on an architecture that will embrace any new technology. For example, a manufacturing control system must be architecturally structured to allow future integration of bar code scanning, computer-assisted design and manufacturing, automatic testing equipment and so on.

Results — Senior management is demanding cost-effective information systems that generate measurable results. Application systems must be able to show quantifiable productivity gains, improved operations, market penetration and financial performance.

The best example of applications software that is being acquired based on the new criteria is manufacturing software packages. The manufacturing industry has found that there is much common functionality across companies within a particular industry segment and even across industry segments.

The recognition that computerized manufacturing information systems can be used to plan material requirements, control material movement, control production orders, reduce manufacturing lead times, reduce inventory and define common functionality has provided the basis for the manufacturing software packages that are now available. Today there are over 100 manufacturing software packages on the market. The problem is that very few of these packages measure up to the new criteria.

In the past there was a general perception that all manufacturing software systems were similar in design, development and technique of implementation from a software technology standpoint. If a package met all requirements, it was assumed the package would provide the tools necessary to achieve benefits.

Based largely on the disappointing results of the older systems software, evaluation teams have started considering the software technology that drives the manufacturing functionality. Manufacturing management realizes that manufacturing applications software is not limited to reporting on what has happened, but rather is capable of planning and controlling the tactical and strategic operations of the company.

ual effort."

Pizza Hut will be using Millennium's inquiry to access balance sheet information, Dreher explained. "We review our financial data at the end of the period. The type of information we want is basically exception reports. We used batch variance reports before; now it's on-line and real-time." Dreher noted that with Millennium, he expects to reduce processing by 15% to 20% across the total financial systems.

SPECIAL REPORT

Package implementation commands planning

By K. J. McElhenny
Special to CW

The lack of understanding of how long it takes to implement a software package successfully and of the kinds of resources needed to complete an implementation is a major problem many companies experience.

This lack of understanding has resulted in packaged software that has never gotten off the ground and packages that are implemented poorly, allowing them to operate to only one-tenth of their capabilities — sometimes with even less functionality than the system they replaced. It has also resulted in unfair criticism of the packages and their vendors.

Today's packaged systems are much more "user driven," meaning that people who use the application are actually designing and operating the systems. The benefit here is that one package can be general enough to satisfy the needs of many different companies, while it can be tailored by each company to meet specific requirements without programming changes.

Factors considered

When systems were developed in-house, people became aware of how much time and effort it took to design, build and implement a major system. Thus, these factors were considered in their planning. It was because of this awareness that people began to look for alternatives.

Software packages are sold as a fast and easy alternative to in-house development. That impression is aided by the claims of software vendors that their packages can be installed and running in three days. For your own protection, you must clarify the important difference between "installed" and "implemented."

"Installed" means that the software programs will reside on your computer, awaiting the information to make them functioning systems.

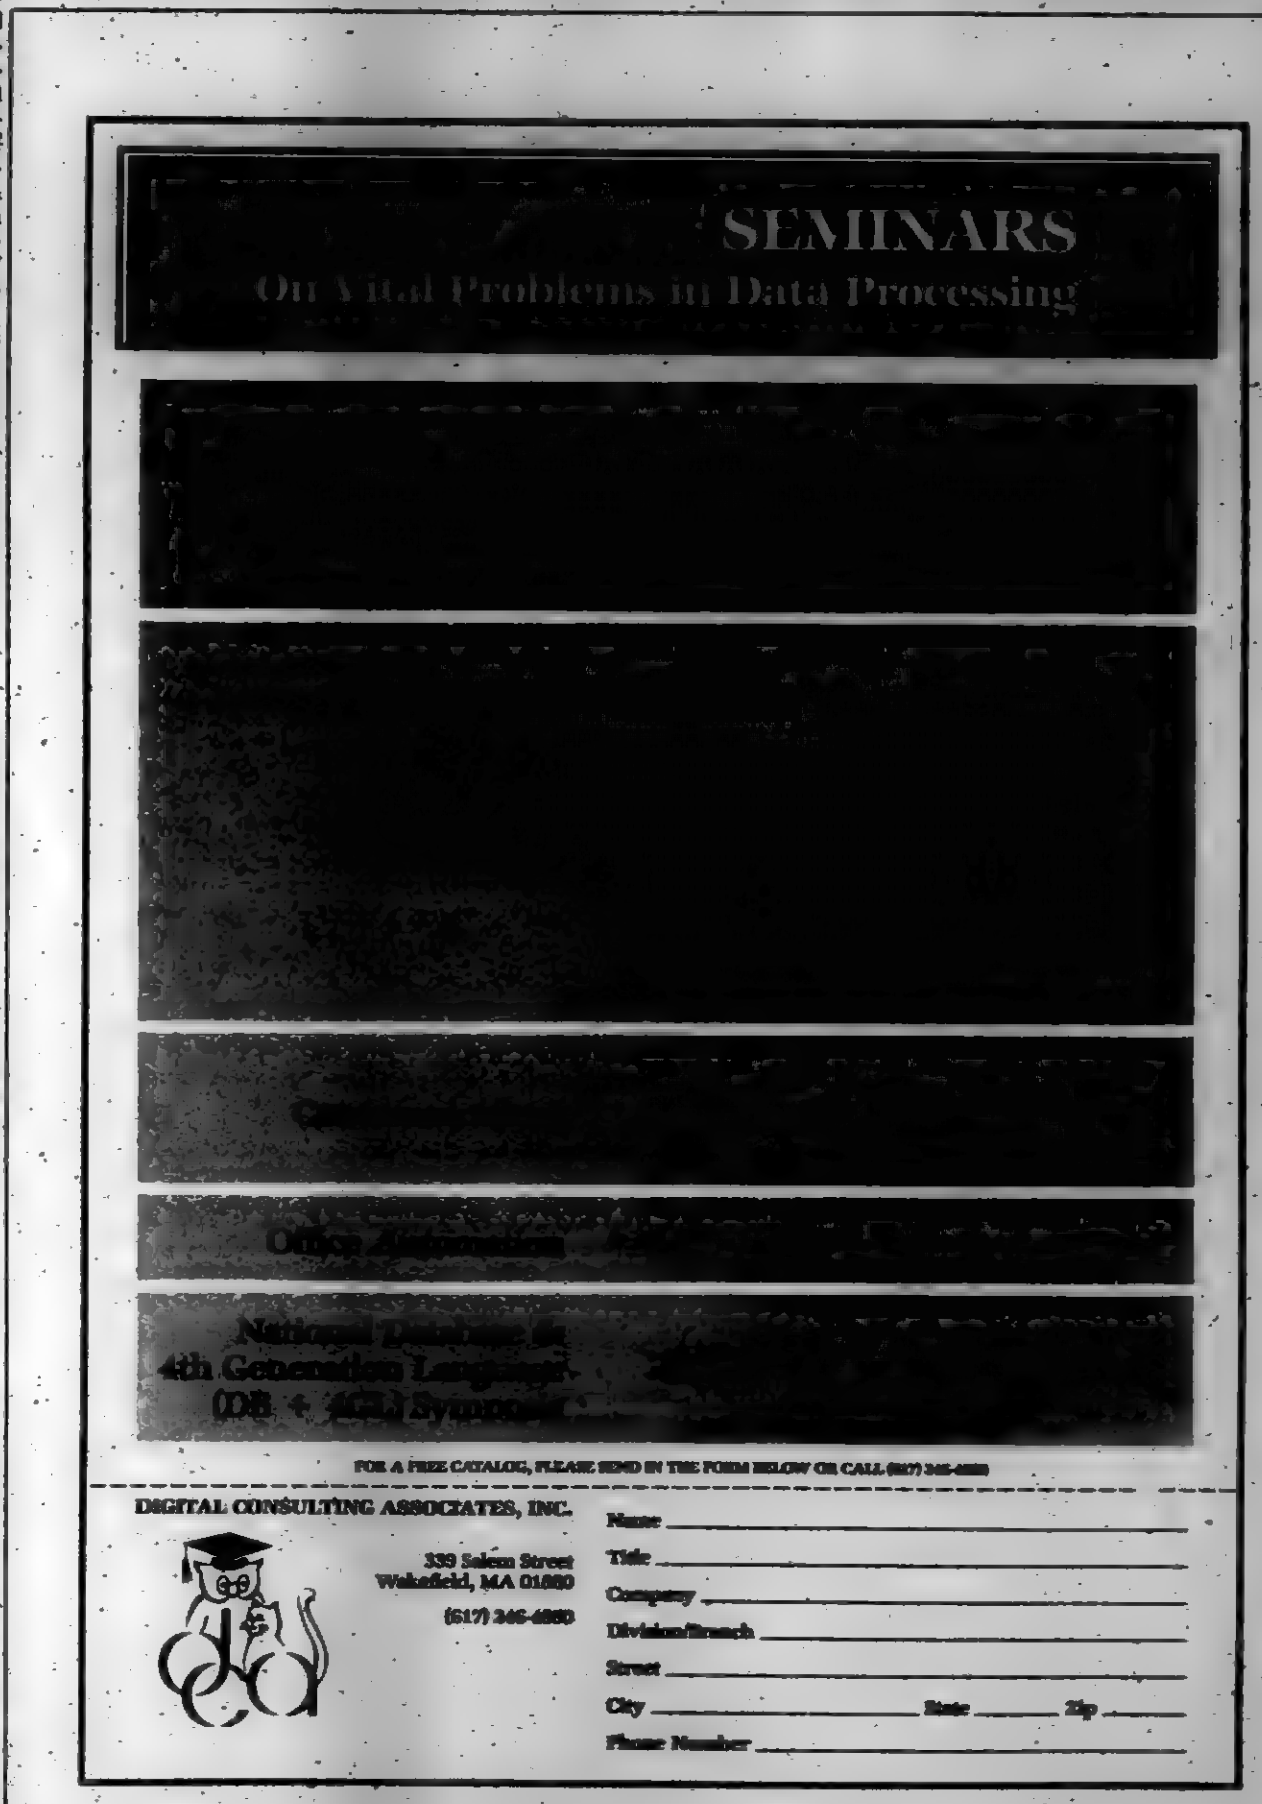
In other words, the programming and debugging are done. "Implemented" means that all information is loaded, all necessary interfaces have been programmed and tested, all systems and user personnel are competent in operating the system, all documentation is completed and the system has paralleled the old system to prove the validity of the functions and information.

As you can see, the terms are very different in their definition and, more importantly, in their impact on the purchaser. Therefore, it would be better to think of a software package as a means of eliminating only the time spent on initial systems design and programming, remembering that mass amounts of information must still be entered into the system.

Some suggestions that may help in planning for the implementation of a software package include:

- Prepare an implementation plan with realistic times, resources and targets.
- Have both data processing and application user resources dedicated to the project.
- The roles of individuals on the project team must be clearly defined, and regular meetings must be held to monitor progress.
- Make certain that the design is well thought out and documented and that everyone is in agreement before beginning.
- Know your application package. Get training and hands-on experience up front.
- Get outside help if it is needed, but never give up control of the project.

McElhenny is president of Kelon & Co., Inc., a Canadian firm specializing in financial systems software.



SPECIAL REPORT

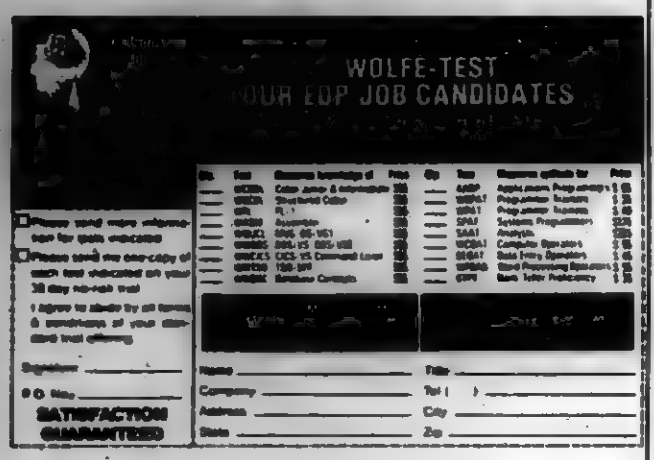
Poor training renders packages worthless

By Kathy Czech
And Kathy Telban
Special to CW

The software package met all criteria to solve the company's business problems. It was purchased and installed, but no one used it. Could it be that no one was properly trained?

When packaged software is chosen, a criteria list is usually developed, and the software is evaluated against it. Buried somewhere in that list is training. A software package must be able to solve the business problems of a company, but without proper training it could be ineffectively used and worthless. To avoid this, training must be a primary concern in the evaluation process.

In order to evaluate training, you must know what your training needs are and what the vendor will supply. To determine needs, examine the way the package will be implemented in the organization. Who and what jobs will the package impact? A list of those affected might be very limited in scope for a programmer productivity tool or very diverse with an information center package. Not everyone will require the same training.



Once you are aware of the various types of training required, determine how the training is to be achieved. Some training may be provided through an in-house training department. If you do not have an in-house training department, consult the vendor or an outside consultant.

What vendor supplies

In either case, it is important to be aware of exactly what the vendor can and will supply.

Training supplied by the vendor is usually of the "one course fits all" variety. For noncustomized courses, it is imperative that you examine the course material and carefully consider factors such as the training media employed, the location at which the training will take place, the availability and scheduling of training, course objectives and costs.

If the vendor provides customized courses, your homework has been done for you. You are now prepared to discuss the impact of the product and what you perceive to be the training needs.

Training programs, like every good program or software package, have design documentation. This documentation should consist of a course outline, course objectives, prerequisites and the target audience. The outline will provide an idea of the topics to be covered, and the objectives should point to what the student will be able to do after completing the training. Objectives should be stated as measurable actions. If there are no course objectives, be wary of the vendor's claims. Further investigation may be needed.

Ask if the course contains hands-on workshops. Surprisingly, most micro training does, but few mainframe vendors include this. Check to see if the workshop will be relevant to the student's on-the-job use of the product. An insurance company employee won't benefit from solving a hands-on problem designed for the manufacturing industry.

Unique audiences

The training analysis may have revealed that the software package will be utilized by different types of employees. Make certain the course addresses each of those unique audiences. Some vendors have separate courses for each audience, in other cases the course has been modularized to accommodate them.

The content of the training program is important, but just as important is the way in which the material is presented. Ask the vendor which medium is used in training — overhead transparencies, video disks, videotapes or computer-based training (CBT).

Which materials are provided with the software package, and which represent extra costs? The vendor may supply initial training with an instructor on-site at no cost and then sell you a video or CBT package for retraining. Some vendors will even sell their overhead transparencies with instructor notes and guidelines. When considering CBT, video disk or videotape, make sure the medium can be run on your current equipment.

If free training is provided, ask what the limitations are. There may be only one free class. Ask about the class size: Is there a limit on the number of students allowed before a charge is added on a per-head basis? Also, if purchasing multiple copies of the software, ask if the initial training will be provided for each copy purchased.

If there are other sites that will be accessing the software at a central location, determine how remote training will be coordinated.

Training site

Ask where the training is conducted. Is it at your site, the vendor's education center or a hotel? There is a real trade-off between travel costs and a productive environment. An employee cannot be learning if he is constantly being pulled out of class to solve daily problems. Also remember that training conducted far in advance of the product installation is often wasted.

Remember that training costs money. Always figure this into the initial cost of product implementation. In fact, training can sometimes cost as much as the software package itself. If the average programmer earns $26,100 and there are 261 working days in a year, that programmer costs the company $100 per day.

For 15 programmers to be in training for five days the cost will be $7,500, a figure that does not include the additional cost of employee benefits.

Added to that sum may be the cost of vendor training itself, which can vary between $500 and $1,000 a day plus travel expenses if the vendor is not local. For five days, that amount could be between $3,000 and $6,000. This brings the grand total for training to between $10,500 and $13,500 — for just one course.

National Database and 4th Generation Language Symposium

DAY 1

The first day of THE NATIONAL DATABASE AND 4TH GENERATION LANGUAGE SYMPOSIUM (DB+4GL) will feature an accelerated class covering the important concepts of data management technology in the 1960s. This class will highlight the key tools necessary to develop modern software.

Symposium Chairman

Dr. George Schussel, *President, Digital Consulting Associates, Inc.* Dr. Schussel will lead the first day of the symposium, an intensive session covering fifty top data management products. Dr. Schussel is one of the best known and most widely respected lecturers on DBMS and 4th Generation Languages, having lectured before 12,000 professionals worldwide.

SOFTWARE PRODUCT PRESENTATIONS

DAYS 2 3 4

On Days 2, 3, and 4, the Symposium features one hour presentations on outstanding software products (partial list below):

VENDOR	(DB + 4GL PACKAGES)

SPECIAL REPORT

Tool lets insurer cancel costly time-sharing

BOSTON — In the highly competitive insurance industry, sound planning and successful customer service are integral to a company's success.

So when Commercial Union Insurance Co. (CU) here replaced outside time-sharing services with an in-house, interactive computing facility, the company sought to reduce costs and respond more effectively to changing business requirements.

CU's goal was to find a product that would assimilate data for on-demand reporting, make projections for financial planning and perform sensitivity analyses to evaluate business alternatives and improve organizational performance.

After a careful evaluation, CU found that the ADR/Empire package from Applied Data Research, Inc. met its needs. "We were constantly having to constrain our analyses because of the cost of using a time-sharing service," said Steven Silva, manager of office information services for CU.

"With Empire, we can perform all the analysis required in-house, and we have a much more sophisticated tool than was available to us in the past. We still use external time-sharing, but only to supply us with external economic data which we bring in-house for analysis," Silva explained.

> *"Our organization requires an integrated approach to modeling that can only be achieved from a mainframe system.* — Steven Sparrow, manager of corporate planning systems.

CU has developed some 700 Empire models, which run on CU's Digital Equipment Corp. VAX-11 processors. More than 200 models are used by the Financial Reporting Department for financial statements and statutory reporting.

Models are also used for corporate planning, special risks, insurance plans, life insurance, R&D, telecommunications, tax, corporate accounting, analysis, expense budgeting, cost and expense, financial controls and financial systems. Financial planning reports that used to take seven people up to three weeks to perform are now done in a matter of days.

The first user of Empire at CU was the Corporate Planning Department. In one application, the department constructed a premium-and-loss model with a matrix of 1,100 rows by 130 columns.

The model uses data from offices across the U.S. and is designed to develop five-year plans to submit to CU's international headquarters in London. Output from the planning model is passed to a receivables model, which provides analysis of cash flow, income statements and balance sheets.

Models networked

The results are then passed to a policyholders surplus model. By networking the models, CU no longer has to gather and refine the information separately.

"To develop management plans requires a thorough review of the alternatives," said Steven Sparrow, manager of corporate planning systems. "Currently, we have 25 alternatives that we evaluate through the model using Empire's extensive "what-if" analysis tools. Using conventional programming methods or even microcomputers, we couldn't provide the same level of analysis to our management.

"The size and complexity of our organization requires an integrated approach to modeling that can only be achieved from a mainframe system," Sparrow contended.

In addition to using Empire in planning areas, the company is also using the package in its investment operation. Taking input from its investment brokers, CU can examine the effects of varying assumptions on the yields from its portfolio. With Empire's sensitivity analysis, the company can evaluate its exposure if earnings are not at the planned level.

"We know the data is correct with Empire because it is input on the terminal instead of being written down by someone in the home office," said Ron Breen, financial analyst in the Insurance Plans Department. "Calculations that use these numbers can be used in the models without fear of transcription error. This has saved my time and that of our managers and field people. Our expense allocation, which used to take a day and a half, is now completed in 24 minutes."

With the time saved by Empire, CU people are producing additional reports that aid management decision making by providing more intensive analyses.

"CU people who use Empire are becoming more creative," Silva said. "The bottom line is that, thanks to Empire, we are better able to assist users in identifying their business problems."

is the problem...

Software is the solution
Software is the problem

Most software suppliers think they can meet your critical financial needs by selling you a tape in a box. Not Software International! Sure, we offer an outstanding collection of proven application software. But each Software International product also comes with a unique added feature: total on-going service and support. And that's one solution you can't get off the shelf.

Software International brings you high performance solutions.

variety Choose from a full range of application software, from our General Ledger and Financial Reporting System—the industry standard—to Payroll/Human Resources, Accounts Payable, Accounts Receivable and Fixed Asset Accounting. **accessibility** Software International products are ON-LINE and REAL-TIME, so your people have instant access to critical information. **adaptability** As business needs change, the robust feature contents and powerful tools inherent to Software International products let you react quickly. And a stream of product enhancements and up-dates keep you current. **support** For your complete peace of mind, each Software International product is installed on-site by our own skilled professionals. And followed up with on-site training which can be tailored especially for your requirements. Innovative and easy-to-use documentation is provided for DP professionals and end users. **compatibility** Our products perform on a wide variety of mainframes and minicomputers, so various corporate divisions can use functionally equivalent financial software. Unlike many vendors, our products run well because each is designed for the individual architectures of the hardware, not scaled down from a single mainframe product. **reliability** What's most important, we provide reliable, responsive service including a 12-hour a day telephone hotline, and continuing education by the most knowledgeable applications experts you can find. Put it all together, and you'll **discover** what over 5,000 successful corporations the world over have already found: Software International is the solution.

SOFTWARE INTERNATIONAL

Software International provides solutions to many of the world's leading corporations, including...

13 leading computer manufacturers
7 of the world's largest automobile manufacturers
7 major airlines · 11 financial service firms
5 international consulting companies
12 large insurance companies

And more than 3000 other installations large and small, worldwide. Some current customers include:

SPECIAL REPORT

Prototyping slashes insurance firm's backlog

Exploiting nontechnical personnel's creativity

NEW YORK — When Equitable Life Assurance found that it had a tremendous programming backlog, a productivity team began looking for something that would not only reduce the logjam, but enable nontechnical people to participate in applications software development and maintenance.

The company decided that a four- to five-year commitment was the only way to improve productivity in applications development and maintenance. And the only way to achieve sustained productivity would be through an integrated data processing environment, said Joe Esposito, project manager of Equitable's Applications Productivity Group.

Equitable's decision to go integrated led them to look at prototyping. "We wanted a single-window approach, where people could get into a lot of different things quickly and easily and where learning was very fast," Esposito said. "We found that a lot of programming aids were addressing only one particular aspect or another. We figured the least productive thing we could do was to get together a whole bunch of so-called productivity tools that were all totally different from each other."

Equitable chose Hogan Systems, Inc.'s Umbrella integrated applications systems for very large banking and savings institutions. "With Umbrella, we have the ability to develop a program with a layer in between so that we can manipulate the layer and not have to change the program when the data in the layer changes," Esposito said.

Umbrella is an on-line, transaction-driven active "process and data dictionary" for both batch and on-line processing, Esposito explained. It makes available an extensive catalog of software modules. "We can have one team of people writing Cobol code, another team using some of the Umbrella functions — such as editing processes — and a third team doing error codes," Esposito said. "They don't have to know what each other is doing, and they don't have to know Umbrella to use Cobol or know Cobol to use Umbrella."

System development

Development of a system becomes a matter of choosing the proper components, supplying parameters to tailor the components to the application, then integrating into the final system any programming that is unique to the application, he said.

The Umbrella system has three major components: the Processing Environment Manager (PEM); the Production Support (PS); and the Application Support (AS).

PEM isolates the application software from the hardware and the operating system so that applications are independent of the operating environment. It also directs the processing mode and functions to maintain and control the processing dictionary that stores transaction definitions, programs, work to be accomplished, data groups, data bases, logic flow, variable data and screen formats.

PS is a series of systems that provide services to the applications and control the processing of exceptions, centralized applications and cyclical transactions. It also provides audit control totals.

AS accomplishes four interrelated tasks: elimination of redundant programming, simplification of program maintenance, creation of application systems and reduction of the training requirements and skill levels necessary to create and maintain application system software, Esposito said.

"Our nontechnical people can put up all their own tables, their own edited format abilities and all their own error messages and maintain them," he said.

A by-product of Equitable's use of Umbrella has been increased creativity, he added. Umbrella has permitted Equitable to go ahead with new applications programs by off-loading some of the nontechnical work to users and concentrating the efforts of the technical staff on the new programs. What might have taken five years under the old programming methodology may take half as much time now, he said.

There has been some resistance to Umbrella by the technical staff, particularly from those programmers who want to increase their marketability by learning IBM's IMS, Esposito said. With Umbrella, however, IMS and CICS skills may not be needed, a factor many systems people don't like to hear.

"What they haven't come to understand yet is that the thinking process, the human logic behind the real skill, can never be replaced by Umbrella" he said. "But Umbrella has freed them from those nontechnical tasks.

"The integration of telecommunications and data base through this one system — to be able to get into the technical environments as well as straight sequential files — will be the most important task facing programmers in the future," Esposito said. "Prototyping will enable the user to have input into systems design. And if a programmer or user has spent a week working on a prototype, it won't be thrown away."

4th Generation Language for the Personal Computer

NPL® The ~~NonProcedural~~ NonProgrammers Language

The NPL Information Management System lets an end user build applications without becoming a programmer.

In less than one day, you will:
- create database files of your own
- specify edit and validation tests
- 'paint' data entry screens
- select, sort and merge data records, and
- print simple and formatted reports

NPL is available on the following microcomputers:
IBM-PC® & IBM-XT®, Apple® II & III,
DEC Professional® 350 & Rainbow® and the Sage II
...soon on Victor® 9000, Burroughs B20,
Hewlett Packard 9816.

If you like RAMIS II®, FOCUS® or NOMAD2® on big mainframe computers, you'll love NPL on a microcomputer..., the strong language similarity means zero training time.
The NPL System is an essential tool for your company's INFORMATION CENTER.

All for only $9501

System tracks utility's construction needs

By keeping tabs on unusual materials requests

SAN DIEGO — Engineers at the San Diego Gas & Electric Co. (SDG&E) are organizing and budgeting transmission-line projects more efficiently with the assistance of a materials tracking system.

Designed with SAS Institute, Inc.'s SAS and SAS/FSP software, the tracking system helps ensure the availability of supplies in the right quantities for complex transmission-line projects. The system works toward reducing project delays and ensuring sufficient energy transmission.

Transmission-line projects often require large quantities of unusual materials. Engineers at SDG&E thus named their SAS-based tracking system the RUM System, an acronym for requests for unusual materials. Using the RUM System, users can document and track material requests and immediately identify the status of materials necessary for transmission projects prior to the construction phase.

Developed in three stages

The automated materials tracking system was developed in three stages. The first stage involved defining the data requirements for the system. These requirements were identified from the company's existing manual materials systems.

The second stage focused on the design of the data entry forms. The third stage was devoted to developing the software and procedures for updating and maintaining the data base. The computer language for the materials tracking system was also selected during the third stage.

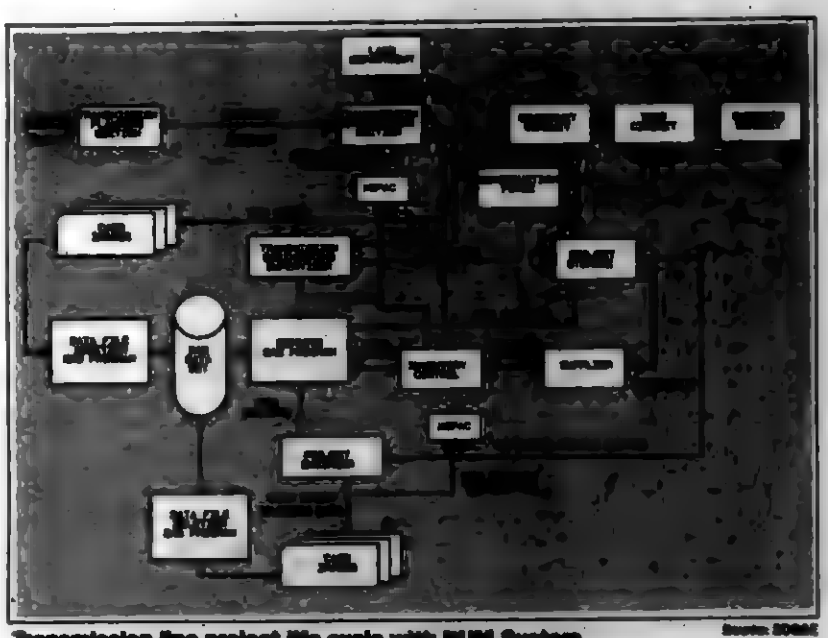
SAS was chosen as the development tool for the RUM System because of its high-level language capability and its comprehensive file-handling and report-writing facilities, according to Dr. Roger B. Glaser, senior management analyst at SDG&E.

Designed with SAS Institute, Inc.'s SAS and SAS/FSP software, the tracking system helps ensure the availability of supplies in the right quantities for complex transmission-line projects. The system works toward reducing project delays and ensuring sufficient energy transmission.

SAS/FSP and the addition of the Relational Algebraic Query Language (RAQL), developed for SAS at McGill University, add flexibility to the RUM System.

With SAS/FSP, users can edit and query the RUM data base in full screen mode. RAQL was initially used in the delete step, replacing a SAS Merge with a Minus operation.

The RUM data base is currently being reviewed to determine if it would be feasible to restructure it in a relational format, thus allowing greater query flexibility with RAQL.



Transmission-line project life cycle with RUM System. Source: SDG&E

Prototype model

SAS enabled the modeling of the prototype system in a timely and cost-effective manner, according to Glaser. Card images of the material data from the RUM forms are stored as an OS file for input into a SAS program.

This program adds the new materials data to the SAS data set, which serves as the data base for the RUM System. A second SAS program uses formatted output and Macro definitions to produce the RUM System's customized reports. These reports display the source data sorted according to the information needs of the report recipients.

"The RUM System was developed easily with SAS, and it exemplified the language's potential to increase productivity," Glaser stated. Consequently, a SAS training program was developed at SDG&E to encourage further employee productivity in many SAS applications.

"The SAS-based materials tracking system has also promoted communication between the diverse segments of SDG&E that coptribute to the successful completion of a transmission-line project," Glaser said.

"Reports from the RUM System have encouraged use of a common vocabulary, which in turn has reduced the possibility of misunderstandings between project participants," he said. "Other groups within the company with similar project responsibility are recognizing the RUM System as useful for their own materials tracking requirements," Glaser added.

At this time, SDG&E is purchasing a companywide material management information system. The company plans to use the graphics and statistical analysis capabilities in SAS for the new automated system.

Talking to the French computer world is now easier than you think...

...with our sister publication Le Monde Informatique.

France's rapidly growing market for computers and data processing systems is one of the largest in the world. Currently, the installed value of general purpose computer systems is more than $11.1 billion, and a tremendous continuing demand for data processing equipment will cause outside spending on computer-related equipment to increase at an annual rate of 16%, between 1981 and 1985.

When choosing new equipment and keeping up-to-date with this ever-changing industry, top systems executives will read *Le Monde Informatique*. *Le Monde Informatique* is a weekly tabloid newspaper with a uniquely targeted circulation of 22,000 copies. The circulation profile was developed by International Data Corporation, the world's leading EDP market research firm, to reach the decision-makers and buying influences at the most important DP facilities in France.

CW International Marketing Services Department can give you one-stop advertising service in countries around the world. For more information about *Le Monde Informatique* or any of our other foreign publications, just fill out the coupon below.

UMBRELLA from SR/23

Umbrella also affects maintenance, Esposito said, since it enables the rewriting of systems that might not have been economical or practical in the past. And it will have an impact on development center technology where the considerations of hardware, software and people come to bear.

"You're putting your technical programmers where they're most needed — on the technical jobs," Esposito said.

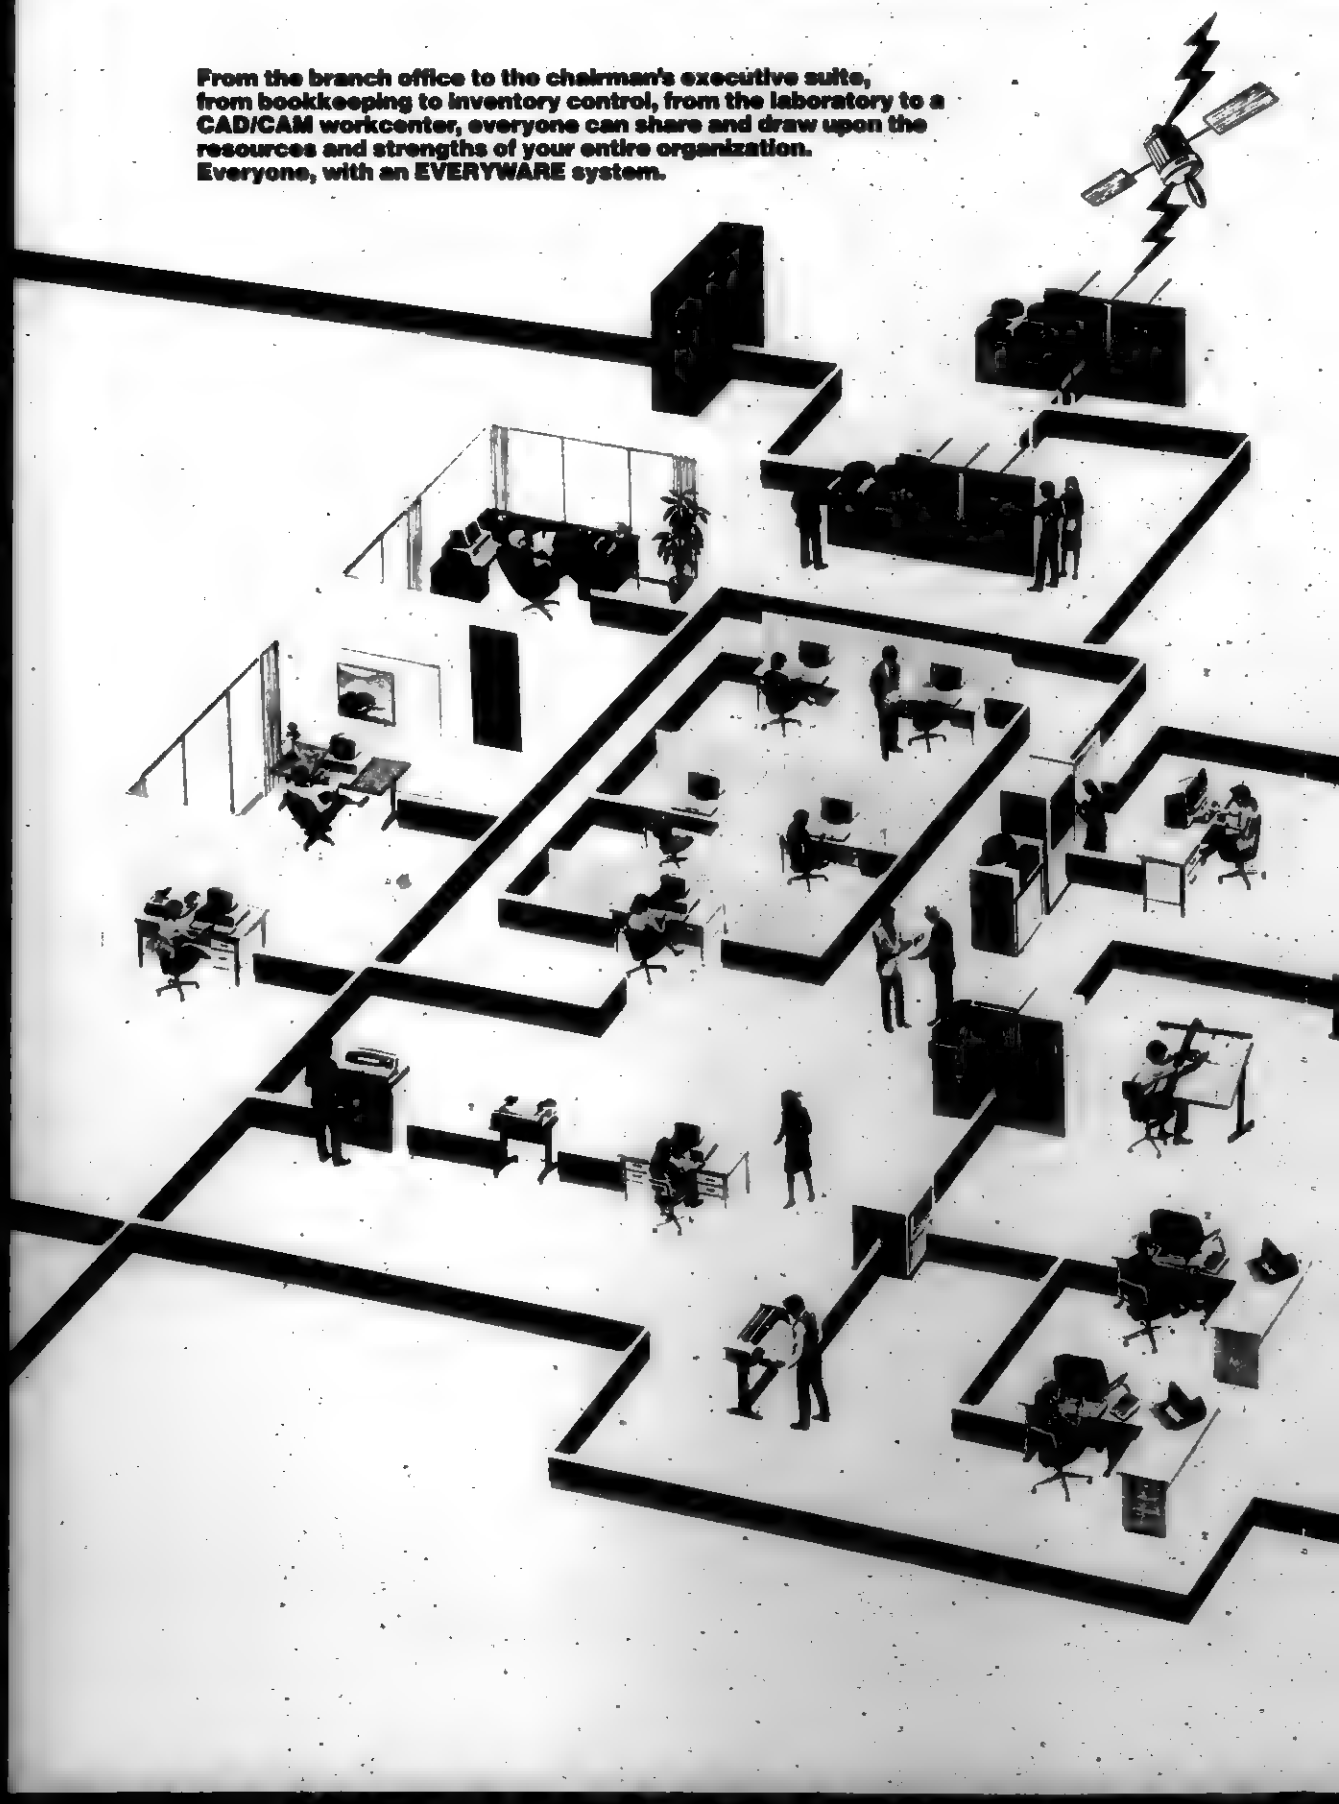
"You're writing programs that are easily maintained or changed when necessary, and when they're changed, the alterations are across the whole system."

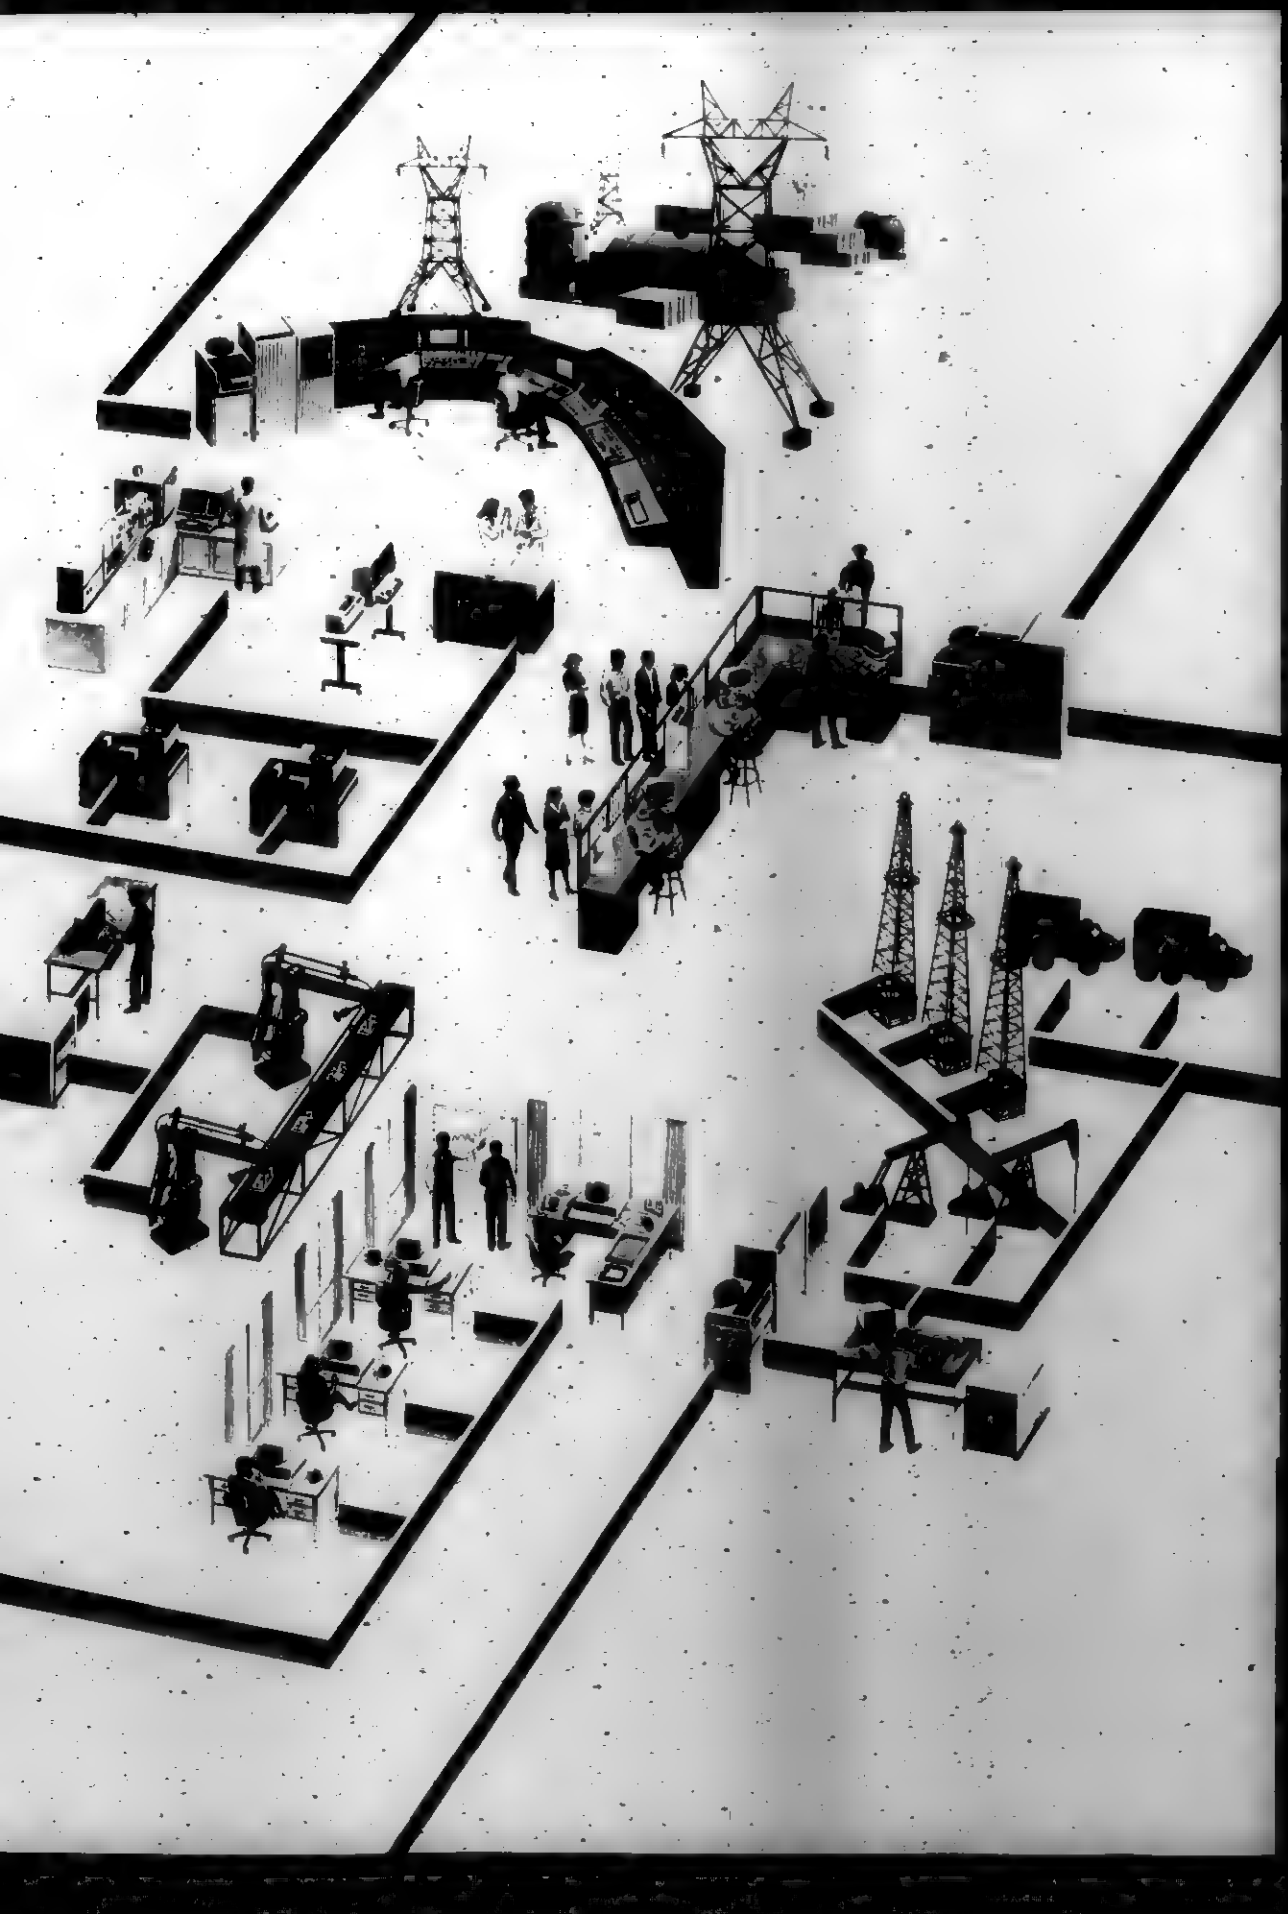
Where can you find the solutions to your compatibility, connectivity, portability, and expansion problems?

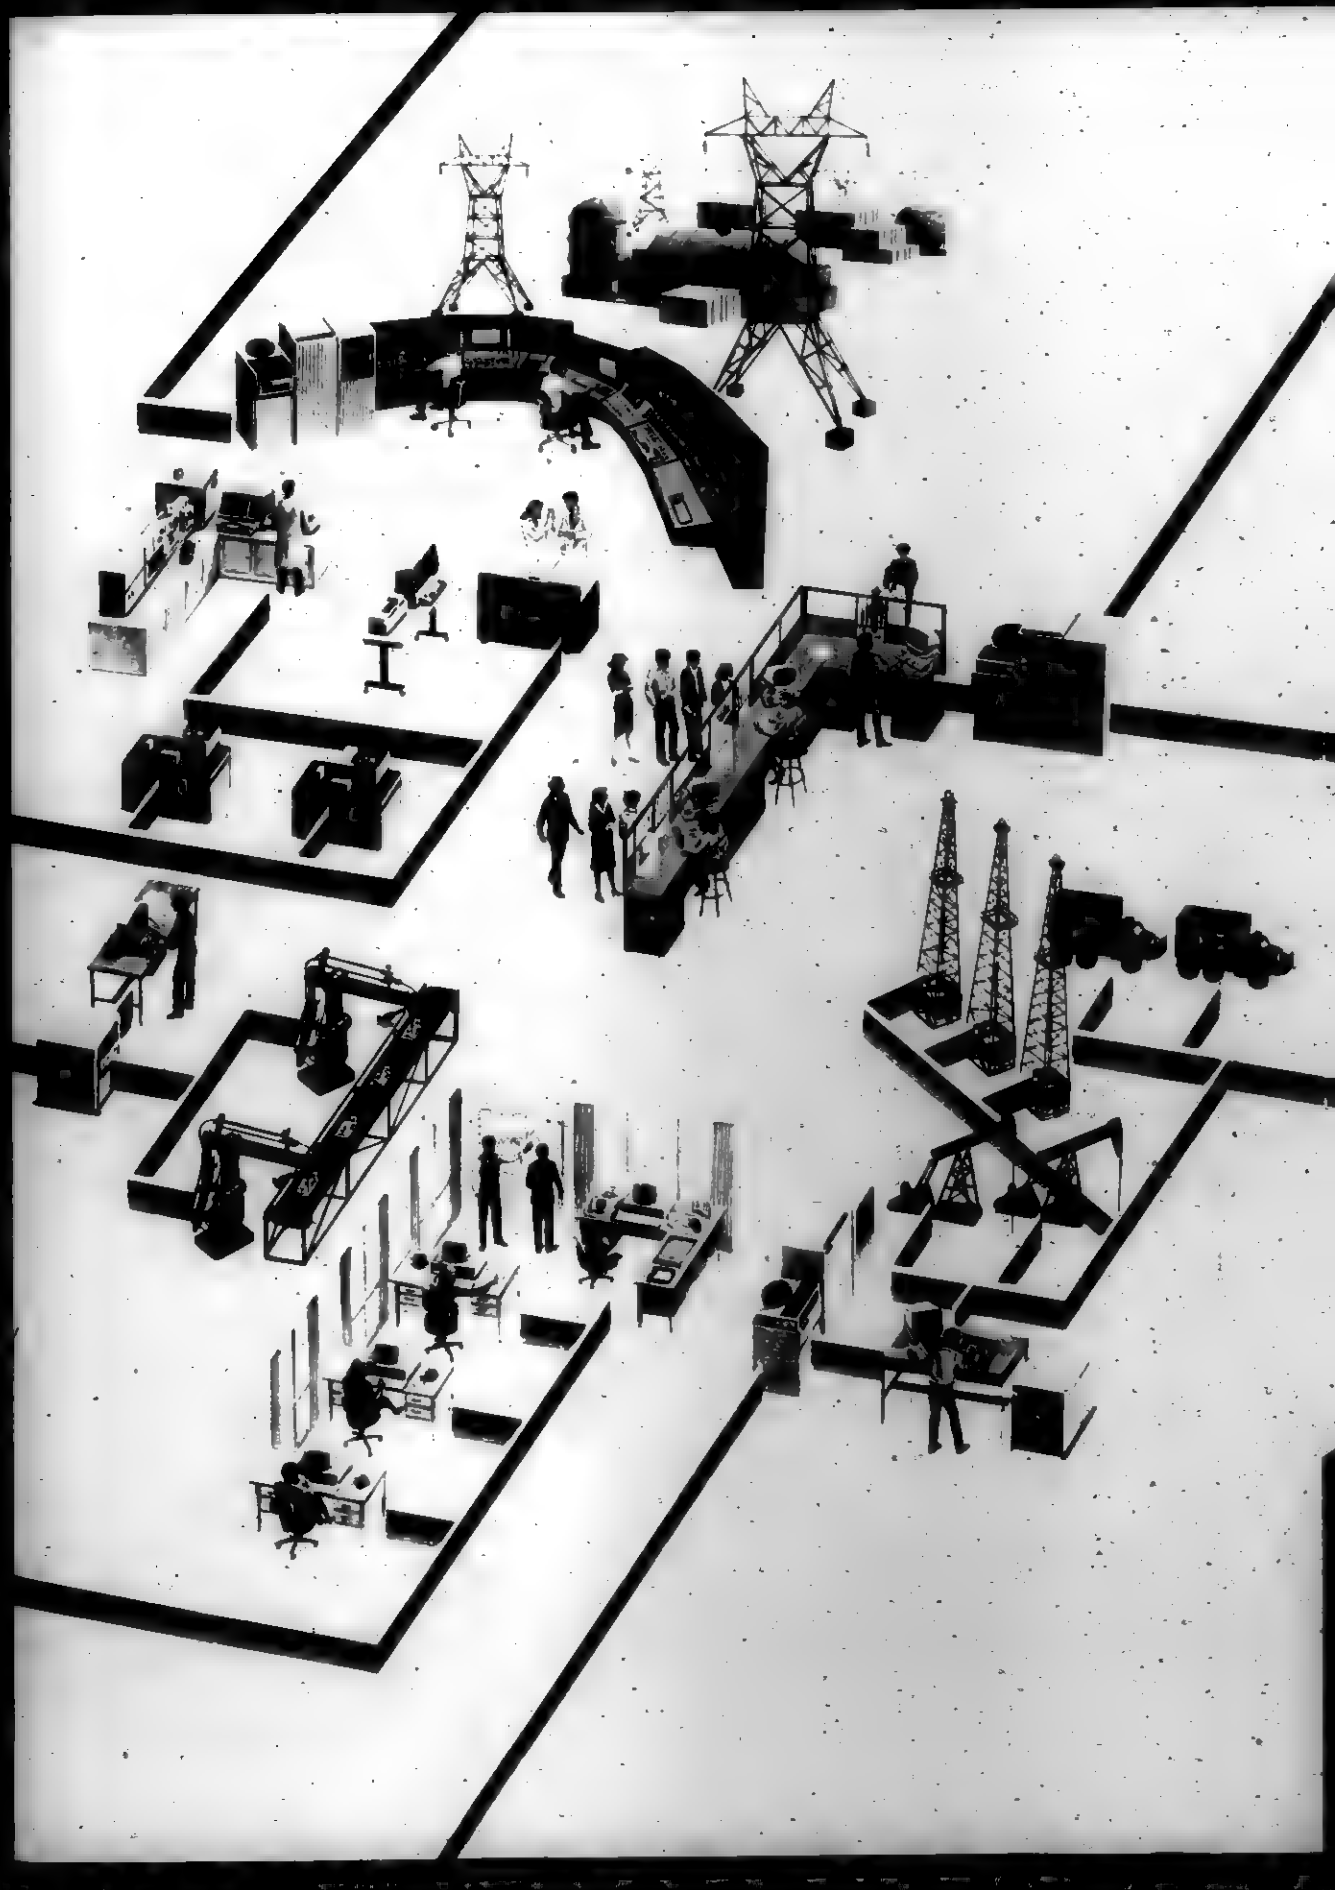
EVERYWARE™

from Perkin-Elmer.

From the branch office to the chairman's executive suite, from bookkeeping to inventory control, from the laboratory to a CAD/CAM workcenter, everyone can share and draw upon the resources and strengths of your entire organization. Everyone, with an EVERYWARE system.







EVERYWARE™ products from Perkin-Elmer.

Everything you need for the systems you want.

EVERYWARE hardware: a comprehensive selection.

Our computers range from the Series 3200 superminis—including the economical 3205 and the incredibly fast and powerful 3250XP—to the Series 7000 desktop professional computers, built around the powerful M68000 microprocessor. Since EVERYWARE hardware is based on a distributed processing architecture, it lets you bring the right amount of computing power right where you need it.

EVERYWARE software: unparalleled flexibility.

Since software is your biggest long-term investment, we set out to protect it with several key features. First, we offer a common operating system that spans our entire line of products. Derived from a UNIX* operating system, this common operating system offers programming productivity advantages. And, all our computers speak the same languages, FORTRAN and C. These languages are bridging tools that link this common operating system and our proprietary OS/32 operating system to give you both developmental advantages and real-time capability.

EVERYWARE software is more than operating systems and languages. It includes Reliance PLUS, a proven relational DBMS that shows how user-friendly a powerful transaction processing system can be. And there is the Resilient System, which links dual Series 3200 computers for high availability processing.

Finally, our operating systems allow you access to the huge library of existing third party software. For example, you can run a word processing package like VisiWord,™ or a spreadsheet like Supercomp-Twenty,™ and many other popular applications packages.

EVERYWARE communications: a commitment to standards.

EVERYWARE systems can share information with IBM environments via SNA or BSC using emulators for such products as IBM 3270, 3770, HASP and 2780/3780. You can form a local network or join one using Ethernet. And through Perkin-Elmer's PENnet-Plus you can use all the global facilities of the CCITT X.25/X.29 Packet Switching Network. EVERYWARE products conform to the ISO-OSI Reference Model, assuring long-term connectivity.

Perkin-Elmer introduces EVERYWARE™

At last, a comprehensive application of the world's major hardware, software and communications standards. For your present and next-generation information systems.

You've devoted a lot of time and money developing software programs to meet the needs of your organization. What happens when it's time to upgrade your hardware? Will your software make the transition smoothly? Especially now when the cost of writing and maintaining software continues to climb. How do you protect your existing investment and make all the right moves for the future?

The heart of the problem is the lack of universally applied hardware, software and communications standards. Now Perkin-Elmer has done something about it. Our EVERYWARE product family offers you proven, established and widely supported industry standards. You can live with them now. And tomorrow.

The compatibility and connectivity problem. The Perkin-Elmer solution: EVERYWARE products.

You face the challenge of developing new systems and software every day. Frequently, these systems have to become part of your existing processing environment. EVERYWARE products offer the ability to coexist with systems from other manufacturers. This has been achieved in three ways. First, by Perkin-Elmer's commitment to an industry standard operating system. Second, through our commitment to compatible languages. And finally, by our support of all of today's and tomorrow's major communications protocols. As a result, EVERYWARE computers can share information with other systems desk-to-desk, room-to-room, across town and across continents.

The portability problem. The Perkin-Elmer solution: EVERYWARE products.

The capability to efficiently port your software is another benefit of EVERYWARE products. From computer to computer, department to department, your programs retain their value, protecting your investment. You can develop software on an EVERYWARE computer in one system and port it to other EVERYWARE computers anywhere in your organization. For example, you can write software on a desktop microcomputer and run it on a supermini. And because EVERYWARE hardware supports an industry standard operating system, you have access to a vast library of third party software.

The expansion problem. The Perkin-Elmer solution: EVERYWARE products.

Perkin-Elmer offers one of the broadest ranges of computers in the world. It extends from 32-bit superminis to desktop workstations. So you can expand at your own speed, adding the power you need, whenever you need it. As more capacity is required, you simply connect additional processors. You can grow board-by-board, or by adding complete computer systems. Because of the built-in compatibility, there is no need to re-write your applications software. Existing programs continue to run without major alteration.

EVERYWARE™ systems

EVERYWARE systems. In finance and insurance.

Today a major nationwide financial network uses Perkin-Elmer computers to flash over 500,000 updates a day to over 11,000 terminals.

EVERYWARE systems. In flight simulation.

Perhaps the most graphic demonstration of Perkin-Elmer computer strength and real-time capability is in the re-creation of flight conditions for the training of pilots and astronauts in the United States and around the world.

EVERYWARE systems. In science.

Perkin-Elmer is the acknowledged leader in the computerization of the lab. We provide the same leadership in computers for seismic exploration and many other fields of science and research.

EVERYWARE systems. Everything you need from one respected source.

Perkin-Elmer is a major manufacturer of advanced computers. Our 32-bit supermini was the first of its kind and our supermini family is the broadest in the business. Computers from Perkin-Elmer are particularly sought after for use in demanding, high availability environments.

EVERYWARE software provides the flexibility to develop, port or purchase programming.

EVERYWARE communications products comprise the most comprehensive collection of protocols available from a single vendor.

These are decided advantages for those of you already using Perkin-Elmer computers. And exciting considerations for those now planning the evolution of information processing centers.

SPECIAL REPORT

Tips on shopping for software

By Helen R. Schlatt
Special to CW

Using purchased software packages will almost always be less expensive, take less time to get into operation and entail fewer risks than a development effort — assuming that the right package is obtained from the right vendor.

The steps involved in selecting specific software packages vary with each situation, but a general procedure is applicable in almost all cases. The basic features to look for and questions to ask are listed in the accompanying chart.

Once you have asked yourself these questions, the software you buy will at least be satisfactory for your purposes. The steps to be followed in selecting software packages include:

Classifying needs. If the computer must accommodate several different applications, decide which application is most important and choose the software for it first. Then check to see what good software is available to handle the less important applications on the same computer. If two or more applications have equal priority, you may have to compromise by selecting software to handle both applications adequately.

It is also useful to decide how essential the requirements are. Requirements may be categorized as fixed, flexible and optional. A fixed requirement means that certain functions must be performed in a specific way. For instance, a tax program should print the results in a form acceptable to the government.

A flexible requirement must also accomplish certain functions, but there is some freedom in how it does so. A payroll system, for example, must be able to calculate overtime hours, but it may not matter if straight-time pay and overtime pay are combined on a single check. An optional requirement is one that you could easily live without.

After defining and classifying requirements, write them down so that they can serve as a guide in evaluating software packages.

Make a requirements chart. You can make a requirements chart by using the specifications already developed, paying particular attention to fixed requirements. The result of this step will be a uniform means of evaluating products.

Define software capacity. The amount of data you expect the software to handle needs to be added to the requirements chart. Software capacity limits are set by the software author to ensure that the program can run in the memory available on the computer configuration for which it was designed. The present and anticipated data capacity for the next year or two should be estimated, and these numbers should be added to the requirements chart.

Given that a particular system can perform all the functions required for an application, determine how much data must be stored. Capacity is as much a question of hardware characteristics as it is of software limitations. Software product documentation should relate what kind of hardware char-

Fill in your IBM micro/mainframe communications picture.

AST Research, the leader in IBM PC enhancement products, brightens your micro/mainframe communications picture with a full palette of economical, integrated hardware/software masterpieces. With AST Products, you can emulate IBM terminals or create PC-based Local Area Networks.

AST improves your office operating cost picture.

AST communications products give your IBM PC the flexibility to act as a terminal for your host system, or as a stand-alone computer for smaller tasks. Your PC won't bog down the mainframe with unnecessary small jobs and local computing on the PC eliminates phone line charges too. Get the power of a mainframe when you need it and personal computer convenience right at your fingertips.

Application solutions that ease shortage of qualified.

AST keeps pace with your ever-changing applications requirements with reliable, high quality, cost effective communications products. AST products provide support for Bisync and SDLC/HDLC communications protocols as well as networking multiple PCs for sharing resources.

Choose AST products — by the numbers.

These AST communications packages are currently available:

1. AST-PCS™ emulates a 3274/3276 controller and 3278 or 3279 display terminal using SDLC protocol.
2. AST-BSC™ emulates 2770 batch RJE and remote 3270 display terminals using 3270 Bisync protocol.
3. AST-PCOX™ allows your PC to connect to an IBM 3274/3276 cluster controller via coax cable and emulates a 3278 or 3279 display terminal.
4. AST-5780™ emulates 2770, 2780, 3741, and 3780 RJE workstations using Bisync protocol.
5. AST-5251™ emulates a IBM Model 12 remote workstation connected to an IBM System 34, 36 or 38.
6. PCnet™ is the first Local Area Network designed specifically for the IBM PC or XT and the PC-DOS 1.1 or 2.0 operating system.
7. PC-3287™ is a user-programmable dual-port card capable of communicating in Async, Bisync, SDLC or HDLC protocols.

Discover how well AST can fill in your micro/mainframe communications picture. For descriptive data sheets, write or call: AST Research Inc., 2121 Alton Ave., Irvine, CA 92714. (714) 863-1333. TWX: 910-595-1215

Number One Add-Ons for IBM PC.

Fuel parts maker speeds operations via MRP

WINDSOR, Conn. — A rapidly growing manufacturing company, Stanadyne Diesel Systems, discovered that its operations and administrative staff didn't have time to wait for information.

The company needed timely production data if it was going to achieve minimum inventories and delivery objectives. Based here, Stanadyne manufactures diesel fuel-injection pumps, nozzles and fuel filters for automotive, agricultural and industrial OEMs.

In 1977, the company began producing larger volumes of automotive products, moving from a job shop environment to that of a repetitive manufacturer. The company has also grown from a single- to a multiplant operation by building several manufacturing facilities in North Carolina.

It became obvious that Stanadyne had outgrown the Production and Inventory Control System (Pics) that had been in operation for more than 10 years. "It operated by processing manufacturing orders. We needed an 'orderless' system which would explode a master production schedule through bills of material, netting inventory as it went," said Jeff Anderson, manufacturing systems manager at Stanadyne.

"We also needed a material requirements planning [MRP] system which would net on-hand and in-process material, instead of on-hand and on-order," he said.

"Another problem we had to solve was that Pics ran once a week in a regenerative mode, forcing us to throw out our MRP each week and create another from scratch. We needed an MRP system which would run once a day and offer exception reporting."

To find the MRP system that answered all of these needs, Anderson and his committee evaluated 11 software packages. The group selected Pios, the manufacturing control system from On-Line Software International (OSI) of Fort Lee, N.J. Stanadyne installed the master production scheduling, bills of material, inventory and MRP modules of Pios.

"Pios was selected because it is compatible with the CICS/DL/1 environment running on our IBM Model 4341 mainframe," Anderson said.

"Pios also had a multiplant master production scheduling module, multiplant bills of material, which can be used for both MRP and production costing, and it provided inventory control by plant."

At Stanadyne, users design the changes they want for the system, and the data processing staff executes them. The staff has altered Pios to net inventory in-process as opposed to on-order and has masked order numbers from the shop floor and inventory staff.

Inventory module

Alterations also were made to the inventory module of Pios. "We don't move parts in and out of storage areas," Anderson said. "We now take inventory counts from the shop floor and backflush through the bill of material for each assembly to account for the pieces consumed. We altered the basic product to operate as a flow inventory."

Anderson added that the master production scheduling module was another factor in the decision to purchase Pios from OSI. "Although we assemble to customer orders, master production scheduling allows us to decouple MRP from those customer orders, providing a uniform load to the plant," he said. This module allows the planning staff to do online maintenance, simulation and capacity planning with graphics to portray resource loading.

SPECIAL **REPORT**

Hasty hardware decision plagues furniture firm

By Roger Barnes
Special to CW:

When a national furniture manufacturer decided to install a preprogrammed manufacturing applications package on an IBM System/34, the promise was an operable system in three months for less than $120,000 with only one full-time DP employee. The reality was a $700,000 package modification bill, a computer system too complex for the company's operation and an annual maintenance budget of $120,000.

A Pacific Northwest agribusiness decided to upgrade its batch-oriented card system to an interactive accounting, personnel and inventory system. A Hewlett-Packard Co. HP 3000 with 40 terminals was installed, and a search was conducted for a preprogrammed applications package. The result was a system that did not have the capabilities of the old batch system, an annual DP operations budget twice as large as projected and a DP staff too busy with applications maintenance to do any project development.

The furniture manufacturer had to computerize to remain competitive. After assessing its requirements and a proposed DP budget, the company decided a packaged application would satisfy its requirements. Various vendors were contacted; documentation was reviewed; and the appropriate personnel attended demonstrations. A semidetailed requirements analysis was done, but a request for proposals was not prepared, and formal proposals were not required from the vendors.

Package with modifications

A package was chosen for its overall manufacturing control and accounting capabilities and because it had been installed successfully several times before. Prior to installation, several areas were identified where modifications were required and, with the advice of the vendor, modifications were budgeted at $50,000.

But what management was expecting and what the vendor was willing to provide for the money were different. As management saw what the computer could do, it wanted even more. Within months, the vendor was being asked to modify previous modifications.

A consultant was brought in to get the project under control, and a new programming contractor replaced the original vendor. By the time the company had invested $300,000 in modifications, it was too far into the project to stop. It could only put a moratorium on design changes and complete the programming based on the current change orders. By the

We've made it so easy to build expert systems, all you need is a pair of scissors.

It's true. With TIMM™ (The Intelligent Machine Model), just about anyone can now build a powerful expert system. Quickly. Easily. Without knowing a thing about computers. Just send us the coupon,or call, and we'll tell you all about this exciting breakthrough in artificial intelligence. Here are just some of TIMM's features:

- Knowledge engineering embedded in software
- Lets you quickly build prototype systems
- Is "domain-independent"
- Checks for consistency and completeness
- Learns by example, generalizes knowledge

A Family of VM Products

SO ADVANCED IT'S SIMPLE

In just 60 days over 100 sites installed the Simple Approach.

BACKUP/CMS
THE SIMPLE APPROACH TO BACKUPS
(VM/CMS Minidisk Backup/Restore Facility)

- Interactive use
- Incremental & full backup capability
- Dynamic password acquisition
- Tape management interfaces
- Online catalog allows a restoration with only two commands: a FIND and a RESTORE
- No batch processing of any kind

TAPELIB/CMS
THE SIMPLE APPROACH TO TAPE MANAGEMENT
(VM Tape Management Facility)

- Interactive commands
- Full support for SL or NL tapes
- Capability to share tapes
- OS/DOS tape management interface
- Manages tape drive allocation and tape requests
- Active tape catalog
- Full management & audit reports

PPT/CMS
THE SIMPLE APPROACH TO PROGRAMMER PRODUCTIVITY
(VM Programmer Productivity Tools)

- SECURE
- TSCAN
- MODZAP
- TAPECOPY
- SEARCH
- SCRATCH

- All three products can be installed and working for you in the same day, thus saving you valuable time, tape, manpower and computer resources.
- An easy to use online help facility is included with each product.
- No modifications to your VM system are required.
- VM/SP release 3.0 support available.

For under $10,000, you can put all 3 Userware™ products to work in your shop today! Why pay more?

Boole & Babbage

The single source for harder working software.

There isn't another in the world able to as advanced as For five go

1. The Millennium environment is borderless.

Unlike any other company's software packages, Millennium packages aren't walled off from each other by separate programs and commands. So you can cross instantly from one system to the next. You can ask a question in general ledger, immediately seek an answer on-line in accounts payable, and follow the track wherever it leads. Into fixed assets, purchase order management, anywhere. While traditional packages force you to work within the narrow confines of a given application, Millennium creates a limitless environment that enables you to access applications at will. With a single key, you're free to explore the vast entirety of your information universe. No other system works like Millennium, except your own mind.

2. Millennium has common functions across all applications.

Let's say you have a half dozen different packages. General ledger, accounts payable, and so on. In the past, that meant doing everything a half dozen times. Learning the different programs and commands for each application. Training users in data entry procedures for each one. From a training and service standpoint, Millennium is infinitely less complicated because the same set of functions governs all applications. You use, for example, the same real-time update procedures for accounts payable as fixed assets. Functions never change, only the data that defines the particular application. Once you learn one set of functions, you've learned them all. And you quickly find you're faced with a much lighter load of training, documentation and support requirements.

3. All Millennium systems are real-time, on-line.

Working in the borderless environment, you perform routine file maintenance on the spot as you cross from system to system. You can update fields, records or any other information in your files instantly. There's no waiting for batch processing. You get accurate, up-to-

McCormack & Dodge Corporation, 1225 Worcester Avenue, Natick, MA 01760. Sales and

software company give you anything Millennium.

od reasons.

the-second information the moment you need it. Today, not tomorrow when it's too late.

4. All Millennium systems are secure and friendly.

Although Millennium is borderless, the security is tighter than any border patrol. Totally comprehensive and user defined. You can set up any restrictions you want, right down to the field level.

Even the on-line HELP feature in Millennium is user-defined. Not only do you get comprehensive on-line documentation from McCormack & Dodge. But you're able to enter your own specific instructions and requirements on-line into the HELP data base, exactly the way you want them. This gives you complete flexibility to define corporate policies and procedures.

Millennium has a special ScreenPaint function that lets you design your own terminal screens quickly and easily. You can see and use your new screen format in a matter of seconds.

support offices throughout North and South America, Europe, Asia, Australia and Africa.

5. Millennium offers an interactive PC link.

This gives you an enormously powerful and effective managerial tool. Without leaving your desk, you can open up your mainframe to the analytical powers of your personal computer. You can selectively download specific data from the mainframe and study it, manipulate it and graph your results. When you've finished you can upload the data back to the mainframe in minutes.

Clearly, Millennium is the software of tomorrow. But only McCormack & Dodge can install it today.

Introducing Millennium. Tomorrow's software today.

COSTS from SR/25

tion modifications were halted, the system did not resemble the original package and did not run on the originally configured computer.

The main problem was that management would not stop making changes. There was no design freeze. Management did not control the modifications, change procedures or budget.

The programmers did not insist on a detailed requirements definition and instead made modifications based on their own assumptions. In this case, installing a preprogrammed application was more expensive than starting from scratch and developing a custom application.

This disaster could have been avoided with more attention and control by management and a more detailed assessment of the company's needs and the package's capabilities. Management should have developed a detailed requirements list prior to evaluating packages. A request for proposals should have been prepared and formal proposals solicited from the vendors.

After the package was chosen, detailed specifications for modifications should have been developed and agreed upon. A separate contract should have been negotiated for programming, including cost, schedules and modification approvals. Once the programming phase commenced, no changes should have been allowed until after the system had been up and running for six months.

The agribusiness company had ran running a batch-oriented card system for seven years. The annual maintenance cost of the hardware was expensive, breakdowns were frequent and the users were complaining that the system wasn't providing the information necessary to run their departments. Management decided to hire a DP manager to upgrade the system.

The new DP manager analyzed the hardware problems and interviewed the department heads to determine their requirements. Based on this information, he submitted a proposal for a new HP 3000 computer with 40 terminals. His presentation showed how he could save money and give everyone the information they needed. His request was approved immediately, and the HP 3000 was installed.

The DP manager then hired three new programmers to start rewriting the old batch systems to run on the new on-line system. He also began to look for an accounting package to run on the system. The DP manager did not understand accounting, nor did he consult with users about their requirements. He purchased a package that ran on the hardware as configured and had been used in the wholesale office supply industry.

A year and a half later, the package was not yet installed to an acceptable level, and the old hardware was still operating. The users had 207 change requests totaling 4,000 programming hours. The major problem in this case was the fact that the hardware decision was made before the applications requirements were thoroughly understood; consequently, the hardware dictated the software. When it came time to select the applications package, the users were not contacted.

Thus, the DP staff had no way of determining requirements or comparing package capabilities with requirements, and users felt left out of the process and, subsequently, weren't willing to help the DP staff or vendor install the package that had been forced upon them.

This disaster could have been avoided by taking an applications approach instead of a hardware approach to the system. The DP manager came to a small business with a small computer from a large government shop with multimainframes. The agribusiness needed a manager who was user- and applications-oriented. The analysis of the system should have been focused on detailed user requirements, and the users should have been involved in reviewing and approving the package selection and modification requirements.

Barnes is director of management services for San Francisco-based Moss Adams, certified public accountants.

GUIDE from SR/31

acteristics are required and should also describe any limitations inherent in the software.

Locate the packages. Identify software products that meet, or come close to meeting, the requirements. Read product reviews in computer magazines, scan product advertisements in trade periodicals, visit local computer dealers, contact your industry or trade association, talk to associates who have bought computer software for requirements similar to yours or call your accounting firm. Another source of information is published directories of software.

Rank the products. This is based on a tabulation of how closely the products meet the requirements. To be sure that the software is right for your business:

- Purchase or borrow the manual, and read it to understand the capabilities and limitations of the software.
- Attend a demonstration of the software — if possible, using some of your own data.
- Consider whether the people who will use the software can follow the instructions provided or will require special training.

If you do a thorough job in listing requirements in detail, one product should stand out above the others.

Schick is manager of management consulting services at Coopers & Lybrand in Springfield, Mass.

SPECIAL REPORT

In-house system cuts number-crunchers' costs

CHICAGO — Fritz & Griffin, a general accounting firm, is working at three times the volume it did a little over a year ago, when it used service bureaus to crunch numbers and prepare monthly financial statements for clients. But with the purchase of an in-house computer system, the company is paying no more to process the heavier work load.

"Cost and inflexibility of the service bureaus caused us to explore the advantages we could gain from purchasing our own system," according to Don Griffin, a partner at the firm.

"We engaged consultants to help us find the best system. We defined our current needs and projected out three to five years, knowing elastic capabilities would be needed if the system was to have a long life with us.

"In our eyes, software designed for IBM brands had an edge over other products, especially if IBM recommended or approved of the software," he said.

Fritz & Griffin settled upon software from the Management Control Systems Division of Informatics General Corp., Woodland Hills, Calif., and the IBM Datamaster computer. Today, the firm's system also has two hard disk drives, two terminals, two printers and a word processing package from IBM.

Range of clients

Fritz & Griffin is a generalist accounting concern with clients ranging from manufacturing to retailing to transportation. The firm also provides financial services to a farm, a restaurant and a private school.

"With such a varied clientele, our computer system had to fit the needs of a group of clients without regard to industry, size of company or volume of accounting needs," Griffin said. "After careful consideration, we decided the Informatics-IBM combination gave us the best system for that kind of flexibility."

For example, Fritz & Griffin functions as a complete accounting department for some clients, making their bank deposits, writing checks, submitting checks for signing and preparing a general ledger.

"To do that, we need an integrated system where the general ledger and accounts payable programs work together, and we don't have to reenter information from one program into the other," Griffin said.

"For instance, we invoke a program to pay a check and it's automatically posted into the general ledger. However, for certain clients, we bypass that function and just process checks after payment. Most of the systems we looked at couldn't do both."

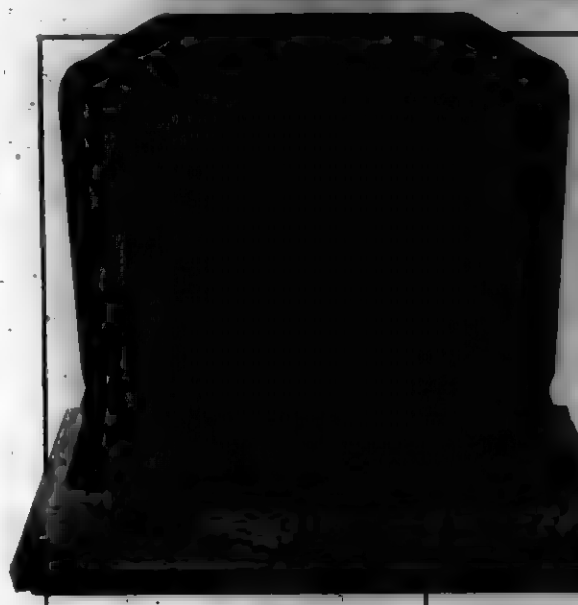
Fritz & Griffin does business differently now, because work is not sent to another location. The firm also takes some shortcuts that could not be done with service bureaus, he said.

Hash totaling was required down to account numbers with all figures tied in and zero balanced before a bureau could issue a financial statement. Accountants can now arrive at a preliminary profit figure without account number hash totals. They review an edit report to check for accuracy of posting, and then a final statement is issued.

In addition, all processing is run at night so accountants can work with fresh information every day rather than wait for mail or messenger delivery from the service bureau. "With the flexibility in our software system, we feel we can select a format for each client that will make the right impression.

"We've also been able to add or delete items depending on individual needs and even provide additional documents," Griffin added.

WITH RAMIS II ENGLISH, THE COMPUTER HAS FINALLY LEARNED YOUR LANGUAGE.



Now, you can talk to your computer the way you talk to a colleague: in plain English.

Even if you've never been on speaking terms with a computer, RAMIS II's advanced knowledge-based technology lets you ask questions, obtain answers, even create reports in only a few minutes. As a result, you can work more effectively and productively—without having to learn a specialized computer language. You just use English.

RAMIS II: ARTIFICIAL INTELLIGENCE THAT DELIVERS REAL PRODUCTIVITY.

RAMIS II English combines years of research by Mathematica in linguistics and artificial intelligence with proven expertise in developing practical, easy-to-use software products. The result is maximum fluency with minimum demands on support staff. In fact, while other systems require days or weeks of dictionary setup for each application, the *extensive built-in knowledge base* of RAMIS II English provides immediate access to most data.

RAMIS II English enables you to access data directly, without costly and time-consuming downloading or reformatting, so the latest information is always available.

Wherever your data is stored—in RAMIS II databases; in ADABAS, IMS, TOTAL, or IDMS databases; or in VSAM or sequential files—there's only one language you need to know: English. And, because English comprehension is an integral part of RAMIS II, you have full access to all of its fourth-generation capabilities, from powerful reporting and analysis to full color business graphics.

THE BENEFITS OF RAMIS II ENGLISH SPEAK FOR THEMSELVES.

Teaching the computer to speak your language is the best way to put the vast power of today's computer systems directly into the hands of *every* user from *every* department. RAMIS II English is one more powerful demonstration by Mathematica of the increased productivity available through RAMIS II—*the* real leader in complete software for business.

RAMIS II ENGLISH MAKES IT EASY TO UNDERSTAND WHY WE'RE THE REAL LEADER IN COMPLETE SOFTWARE FOR BUSINESS.

Let RAMIS II English speak for itself. See it in action at one of our regional Product Demonstration Centers. For more information, contact your local Mathematica office, call toll free (800) 257-5171, or return the coupon below.

For years, Digital's VT100 terminal has been the CRT to choose if you want the most out of your computer. It has become the industry standard for reliability and ease of use. Not to mention the largest-selling ASCII terminal in the world.

Now Digital advances this standard with the VT200 family.

Three new terminals that embody everything Digital has learned about how to make people comfortable with computers. They offer non-glare screens that can be positioned for the best viewing angle. Keys that are so well arranged on our low-profile keyboard that you increase productivity and convenience. Fifteen programmable function keys eliminate keystrokes to speed up tasks. Plain-language setup commands to easily tailor the screen to each user. Plus, a built-in printer port for hardcopy convenience.

©Digital Equipment Corporation 1984

We've even included our most advanced video capabilities—like smooth scrolling and 132-column display—as standard features.

All packaged in our sleek new design that fits conveniently on your desk. And all supported by Digital's worldwide service organization.

But the best news is yet to come. Because, despite all the advances, the VT200 family is very competitively priced.

Simply stated. Digital has a terminal for you. Once again.

For the full story, call 1-800-DIGITAL, extension 700.

Scribe supports laser printers

You've heard a lot about laser printers . . . high print quality, attractive fonts, fast, quiet, affordable. But you haven't heard a lot about software to support them.

The Scribe Document Production System supports more laser printers than any other software. Laser printers like the Xerox 2700, 8700, 9700, the IMAGEN IMPRINT-10™, the Symbolics™ LGP-1, the CMS Lasergrafix 1200™, and soon the IBM 6670.

Buying a laser printer? No matter which one you choose, you'll get the most from it with Scribe.

For more information, contact
UNILOGIC, Ltd.
160 North Craig Street
Pittsburgh, PA 15213
412-621-2277

Scribe document production software is available for DEC 10, 20, and VAX, Prime, IBM mainframes, the Apollo and Sun workstations. "Scribe" is a registered trademark of UNILOGIC, Ltd.

SPECIAL **REPORT**

System integrates payroll, personnel duties for city

PORTLAND, Ore. — With 750 employees represented by 22 different employee groups and covered by nine union contracts, the port of Portland has its hands full in administering pay and benefits. Each contract specifies different wages and benefits. Overtime rates, holiday wages and holidays and the number of personal-leave days vary depending on the union in which an employee is a member.

"A computerized system that integrates payroll and personnel functions makes it easy to perform the numerous calculations needed to generate paychecks and benefits for both our union and nonunion employees," said Carol Byers, supervisor of the port of Portland's Human Resources Information Center.

The port of Portland administers five marine terminals, a ship repair yard, three airports and three industrial parks in three Oregon counties. It also directs economic development throughout the district and supports maritime, aviation and industrial facilities along with services and related business activities. The economic impact of the port's operations on the local economy is estimated at more than $6 million a day.

Changing pay rates

A packaged software system provides the port with the ability to handle frequently changing rates of pay, such as the quarterly cost-of-living increases mandated by union contracts.

"The system also enables us to retrieve payroll and personnel information rapidly and to compile insurance, workmen's compensation, tax and other reports," Byers explained.

The port's previous computer system automated some of the payroll functions and none of the personnel functions.

Most processing was handled manually, an arrangement that limited the number of reports the port was able to produce, Byers said.

The integrated payroll and personnel system was obtained from Information Science, Inc. The system automates the processing and recordkeeping of payroll and personnel information, including job, wage and education histories, benefits, work transfers, performance ratings and other data.

This data base permits the port to update an employee's payroll and personnel records from a single entry, Byers said.

Mass updates

The port also now has the ability to perform mass updates. Changes in salary grades and ranges for an entire group of employees may be accomplished through a single entry that commands the automated procedures, Byers said.

For integrating payroll, personnel and continuous employment history functions, it required an initial investment in equipment and software of approximately $70,000, she said. For the port to develop comparable software on its own would have required an investment of at least $300,000, Byers said.

That does not include the continuing costs of maintaining and updating the system for legislative and regulatory changes, she added.

Additionally, the port was able to convert its semiautomated payroll and manual personnel systems to a completely automated system in six months, compared to the two or three years projected to develop a similar system in house, according to Byers.

The port is now able to project compensation cost and to review, in detail, time and manpower assignments.

As a result, Byers said, its executives are able to analyse productivity and contain expenses.

SPECIAL REPORT

When buying a package . . .

By Harold M. Snider
Special to CW

When investigating the option of buying a software package, there are two questions that will generate the other questions you should ask. They are: "What should it do?" and "How should it be done?"

These are the same questions you would ask when hiring a person, buying a manufacturing machine or even commissioning a new building. It is important to begin the search at the conceptual level and, as criteria are met, continue the search by asking more detailed questions.

Application software packages must be evaluated from a business perspective. It is important to know at the outset whether the package will meet your business requirements now as well as in the future.

Vendor presentations

Usually, evaluations are performed by inviting vendors of the software to make presentations to a combined meeting of business and DP personnel. After all the presentations have been reviewed by the group, packages may or may not be recommended for continued evaluation.

Meetings are then scheduled so detailed business and DP questions can be answered by the vendors. Interviews with vendors' references may also take place. Eventually, the packages will be compared and a decision made.

While this method is sound, key questions are often overlooked. Sometimes, knowledge of the answers would have influenced the final selection. Perhaps contracts would have been negotiated differently; budgets, deadlines or the overall implementation effort would have been estimated better; and roles and responsibilities of the vendor and the company would have been better defined.

Questions not asked

There are several reasons that important questions are not asked. For example:

- Vendors usually emphasize what a package will do, rather than what it won't do.
- When the package is to support a given product or service, the scope of the questioning may not include other aspects of the business affected by the package.
- When the package is to replace a current system, the focus may be on what the system does now rather than the business it will represent in the future.

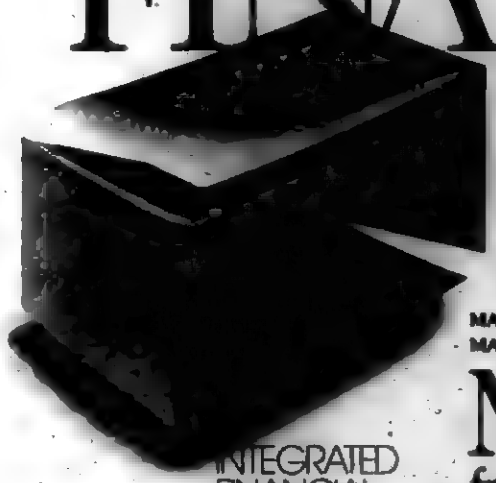
Turn Your VAX into a Total
FINANCIAL
Solution



INTEGRATED FINANCIAL MANAGEMENT SOFTWARE

ROSS INTEGRATES KEY FINANCIAL FUNCTIONS
MAPS is a new generation of software merging decision support tools and financial accounting applications into a powerful, flexible financial management capability. And all Ross products are fully on-line, interactive and bring you multi-user access.

MAPS/MODEL—Powerful financial modeling
MAPS/GRAPH—Quality business graphics
MAPS/DB—Flexible database management
MAPS/Pro—Micro modeling and graphics
MAPS/GL—Comprehensive general ledger
MAPS/AP—Full featured accounts payable

OUR SERVICE AND SUPPORT MAKE THE DIFFERENCE
We bring a commitment to our customers and products that reflects our 12 years of consulting experience. Our staff of experienced professionals can work closely with you to install our products, and to provide the ongoing training and support that make them true financial solutions.

QUESTIONS from SR/41

■ Questioners may assume topics have been covered by others in the company, usually when several groups are set up to focus on different aspects of the package.

Clearly, a framework is needed for any evaluation, one which will actually stimulate the questioning from both the business and, to some extent, the technical points of view. Applications software basically uses and creates data for some business purpose.

Determining where the application software differs from the business can be done in a structured way, if both the business and the software are described in the same terms, namely data and its relations to business processes.

The terms and chart described below will already be familiar to those organizations involved with IBM's Business Systems Planning (BSP) methodology.

A BSP study will produce an information architecture — a high-level description of the enterprise or business unit. Although it is created for strategic purposes and is required whether you are buying or building applications software, the architecture is also valuable as a framework for evaluating software packages.

One of the charts produced by the study, the data class/process matrix, indicates which data classes are created (C) and used (U) by each business process. (See Figure on SR/41.) "Business process" can be defined as a group of logically related decisions and activities required to manage the resources of the business. Processes must be defined by management. A business perspective, rather than a data processing perspective, is required.

"Data class" is a high-level grouping of data about things or entities that are significant to the organization. The data class/process matrix shows, at a high level, what information is required in order to perform the business processes.

Vendors can produce an architecture that describes their software in terms of the company's processes and data classes. For each business process, the chart must indicate which data classes are created and used by the vendor's software.

Obviously, the vendors must not be shown the architecture developed by the company, but they must be given definitions of all the terms used. Also, creation of the chart may be difficult for a marketing representative unless a reasonable amount of time is allowed for consultation with the system designers. One to three weeks' time should be sufficient.

When the vendors' charts are finished, they can be compared to the company's chart quite easily. Each square can be investigated in an orderly fashion.

Vendors can also be compared with each other on equal terms within the set framework. The charts will tend to stimulate the questioning rather than provide answers.

Potential questions
